III. *POPULAR RELIGION*. — 7. **Pre-historic figures.**—The popular religion is the earliest form that we can trace in the remains of the pre-historic ages. In the graves and town-ruins are found various animal figures which seem to show the adoration of different species. The human figures of the same age seem to be distinctly servitors to satisfy the wants of the dead, and not to represent higher beings. The lion is the most usual of such animals, and the figures are distinguished from those of later ages by the tail turning up the back, with a small hook at the end. The bull's head was often carved, but rather of a small size, as an amulet. The hawk is the next commonest sacred animal. The hippopotamus is rarely found. The frog is usual, of various sizes. Serpents were specially honoured; the more usual form is coiled round, with the head in the centre, and was made of limestone or glaze nearly a foot across, to hang up in the house, and of a small size to wear on the person. Two intertwined serpents—as on a *caduceus*—are also represented, and a serpent coiled closely to fit on a stick. The scorpion occurs as a large separate figure, and also the locust. Among animals represented, but perhaps not regarded as religious, are the elephant, stag, bull, and hare. The baboon may not be prehistoric, but is one of the commonest figures in the Ist dynasty. The dog is not represented in carving, but was frequently buried in tombs. It is notable that some of the most usual sacred animals of later times never appear in the pre-historic period, such as the cat, jackal, vulture, and crocodile. That there were definite religious beliefs, fixed in common acceptance, is indicated by the constant posture of burial, and the regularity of the offerings buried, as we shall notice further on.

8. **Magic.**—Magic apparently began in the prehistoric age. A small box was found containing three little flat carvings in slate tied together, and two carved ivory tusks, none of which had any use for work. Such ivory tusks were carved with a human head at the pointed end, and kept in pairs, one solid, one hollow. They are probably connected with the present African belief in charming a man's soul into a tusk. Many small amulets were in use—not only the figures of sacred animals, but also such as a fly, a claw, a lance-head, or a vase.

In the early historic age magic appears as the basis of the popular tales: the forming of a crocodile of wax and then throwing it into the water to pursue a victim; the bringing together the head and body of a decapitated goose and restoring it to life; the turning back of the waters and descending to the river-bed to find a lost jewel—such are the pivots of the earliest tales. There appears to have always been a strong belief in the virtue of words and names. Creation was attributed to the word or speech of the Creator, as among the Hebrews. Even animals and objects had names given to them to render them effective; without a name there could hardly be existence. In the close of Egyptian literature there is a protest against its translation into Greek: 'out of the solemn, strong, energetic speech of names . . . we do not use words, but we use sounds full filled with deeds.' In the later magic writings and inscriptions, names—generally corrupted and mistaken—are the moving power of the spells. In the later Ramesside times a conspiracy turned upon making wax figures, and sending them into the harim, to compass the death of the king. The latest tales, of the Ptolemaic age, turn entirely upon the use of magic. It seems not too much to say that an Egyptian was dominated throughout his life by the belief in the magical control exercised upon the gods, upon spirits in life and in death, and upon material objects. Cf. MAGIC (Egyp.).

9. **Domestic worship.**—The customs of domestic worship can only be gleaned from some occasional remains. In the pre-historic age the larger disks, carved with a coiled serpent, are pierced with a hole for suspension, showing that they were probably hung up in the houses; and in the Ist dynasty the usual border to the hearth was a pottery fender in the form of a serpent, doubtless copied from the serpent which they would find at dawn coiled round the ashes for the sake of warmth. In the XVIIIth dynasty there was usually a recess in the hall of the house, coloured red; and in one case, where it is preserved to the top, it had a scene of adoration of the tree-goddess above it. This was, doubtless, the focus of the domestic worship, probably having different deities painted over it according to the devotion of the master. On reaching Roman times, we have many interesting details preserved by the terra-cotta figures which were then so widely developed. The domestic shrine is represented as a wooden cupboard containing the figure of the household god, with a lamp burning before it. For poorer families, figures were made to hang up by a hole in the back to fit on a nail in the wall. The figure often had at its feet a small lamp, made all in one piece. Such figures are found by the thousand in towns of the Roman age, showing that they were probably in use in every house, or every room, like figures of saints at present among Roman Catholic populations. Of the prayers to the gods there is evidence in the epithets of Amon, 'who cometh quickly to him who calls on him'; and of Ptah, 'who hears petitions,' and whose tablets have ears carved on them.

10. **Birth, marriage, and death.**—The ceremonies at birth have not been recorded; but, as the names are often compounded from those of gods, it is probable that some religious ceremony attended the naming of the child, as in Egypt at present (see BIRTH and CIRCUMCISION [Egyp.]). Of marriages we know scarcely any more. The settlements of the XIIth dynasty are purely business documents. The demotic marriage-contracts are without any religious reference. The terms in the XXVIth dynasty agreed on for divorce by the man are confirmation to the wife of her marriage portion, and control of her children's share of paternal property, also a third of all property acquired by the pair during marriage; but in one case the divorce terms were five times the marriage gift. For divorce by the woman, she must return one-half of the marriage portion given to her. Divorce simply consisted in renouncing claims, and authorizing the woman to live with another man. In Ptolemaic times the terms were very similar. The only trace of religious terms is in one case, beginning the divorce clause by swearing by Amon and Pharaoh (Griffith, *Demotic Papyri, Rylands*, London, 1909, p. 115). In Coptic times it is said: 'Since God willeth that we should unite one with the other'; but either party could divorce freely on paying seven times the marriage gift, and no provision was stipulated

for the children. The religious sanction of marriage seems, therefore, unknown in the pagan and scarcely named in the Christian contracts, which accords with the temporary view of the deed, and the constant provision for divorce.

The great religious event to an Egyptian was his death. There is no trace of spiritual preparation or *viaticum*. The body was simply handed to the embalmers, and they prepared it without the slightest reverence or sentiment. After the seventy days came the greatest ceremony of private life—the funeral; the procession, the wailers, the recitation, the incense, the ceremony of opening the mouth of the mummy; and, after the burial, the ritual service of funeral offerings, for which endowments were left, like those for masses in Europe. See, further, art. DEATH (Egyptian).

11. Dancing.—Another development of popular religion was dancing. In the earliest royal monuments the dance of men in the festival of Osirification of the king is represented; this took place, apparently, in an enclosure formed by cloth hangings placed on poles, and the conventional figure of this was represented behind the prince, down to the latest times. Dances of the servants are often represented in the tombs of the Pyramid age; but such were probably only festive, and not religious. In the XIIth dynasty the princesses are described as dancing with their ornaments before the king, and singing his praises. The sculptures and paintings of the XVIIIth–XXth dynasties show many scenes of funeral dances; usually one woman held a tambourine aloft and beat out a rhythm on it, while others danced round. Exactly this dance may be seen now when parties of women go up to the cemetery a fortnight or a month after a funeral; an old negress is often the drummer, and the party stop every few hundred yards along the road for a dance. The dances are mentioned by Herodotus (ii. 60) among the parties going to the great festival at Bubastis. Dancing was a considerable part of the public worship of the ascetic Therapeutæ in the Roman age. At their great gatherings, held every seven weeks, they 'keep the holy all-night festival . . . one band beating time to the answering chant of the other, dancing to its music . . . turning and returning in the dance' (Philo, *de Vita Contemplativa*; see G. R. S. Mead, *Fragments of a Faith Forgotten*, London, 1900, p. 80 f.). This must have been much like an orgiastic modern *zikr*, only performed by men and women in opposite companies. That so scrupulous and ascetic a community, generally devoted to solitude, should make religious dancing so important and so mixed points to a much freer use of dancing by the unrestrained public.

12. Wayside shrines.—The individual worship took place not only in the house, but also in the wayside shrines. The open-air shrines common now in Italy are represented in Egypt by covered shrines, where shelter from the heat may be enjoyed by the devotee. These shrines, or *welys*, at present abound in Egypt, being small cubical chambers of brick covered with a domed roof, and usually containing a cenotaph of some local holy man. The native passing them will utter a short ejaculation, or will stop for a recitation, or, further, will walk round the cenotaph either inside or outside of the building. Similar shrines are frequently reproduced in the Roman terra-cotta figures, and were evidently as familiar in ancient times as now. The simplest was a low dwarf wall with a little entrance on one side, enclosing a square; a column placed at each corner supported an arched roof over it. A similar form, entirely of wood, was mounted on wheels for the purpose of carrying an image. The more solid shrines were built up in brickwork on all sides, with latticed windows, and covered by a double-sloping roof, with gable in front. When a village or town extended round an earlier shrine, and enveloped it, the little sanctuary became richer, and needed a dwelling for the priest and a storeroom. But the site could not be enlarged around; so the building was carried upward, as shown by another model. Here the open shrine was raised by two or three steps, and lamps burned on either side of the door; above it were two rooms, one over the other, and at the top was inserted a large panel bearing the figure of the god. Thus the little hovel had grown into a four-storey building, on a level with the houses around it. Sometimes the priests used to carry a portable shrine through the streets, to collect the alms of the devout; this was a small cupboard shrine about two feet high, carried between two priests side by side, probably on a yoke resting on the shoulders. From Lucian's account of the wandering devotees of the Syrian goddess, and the prevalence of wandering dervishes in Egypt at present, doubtless the alms-collecting was carried on from village to village. A figure of Horus sitting in a low-wheeled basket-chair—perhaps personified by a living boy with the attributes—shows what was taken to perambulate the country.

13. Festivals of fertility and harvest.—The popular worship on a collective scale was seen in the great festivals. How large and important they might be, we know from the size of the gathering at the festivals of the present day. The great feast at Tanta is estimated to attract 200,000 people. That it is an occasion for general licence to the loose-living part of the population doubtless descends from the customs of the ancient festivals, as shown by the accounts of Herodotus. The two great festivals kept everywhere were the fertility feast and the harvest feast. At the first the 'gardens of Osiris,' like the 'gardens of Adonis' in Syria, ornamented the house. These are sometimes found preserved, as bowls full of Nile mud, and pierced with the holes left by innumerable sprouts of corn. Another method was to make clay figures of Osiris, stuffed with corn, as sometimes found; on wetting these, the corn would sprout from the body of the god. Still larger figures are represented, doubtless from the official feast, where the statue of Osiris is lying on a bier surrounded by a large bed of sprouting corn. As the planting in Upper Egypt is stated in the calendar to begin on the 14th Oct., millet on the 18th, and barley on the 19th, this feast of the growing corn was probably that named on the 21st Oct. (Choiak 11) in the Sallier calendar as the 'day of the panegyry of Osiris at Abydos'; the following day was 'the day when he transformed himself into a *bennu* bird,' probably a bird liberated from the green couch of Osiris to represent his resurrection.

The second general festival—that of harvest—fell during April, as the harvest is reckoned to begin with this month in the south, and end with it in the north. This was celebrated by offerings to Rannut, the serpent-goddess of harvest. After the threshing the grain was piled up, as it may now be seen in immense heaps lying in the open air at the large stores; the winnowing shovels were stuck upright with the handles buried in the heap, the tossing boards or scoops were held on high before it, the corn-measure crowned the heap, and Rannut was adored (stele in Bologna Museum).

14. Great temple feasts.—The details of provision for the great Theban festivals to Amon have been preserved to us in the Harris papyrus (see Petrie, *Hist. Studies*, London, 1911). From that we gather the details of a festival of 20 days in March, and another of 27 days in August. In the March feast 10,000 persons were present on the great day, and 4000 on other days; in the August

feast 4800 on the great day, and 1000 on others. The great hall, or temple-court, was decorated with tamarisk branches, reed-grass, and hundreds of bouquets and chains of flowers. Tables of provisions of meat and cakes were set out for the priesthood and the nobles. Large quantities of food were provided for the people, mainly various breads, cakes, and fruit. Flowers for each person, to be offered by each, were supplied. Such was the general character of the great temple-festivals in honour of the local gods.

The festival of the New Year has a remarkable feature in the appointing of a mock king and his being sacrificed. This is not referred to in the ancient calendars, as it was a popular rather than a religious anniversary; but, happily, an account of the survival of it has been preserved. Klunzinger records (*Upper Egypt*, Eng. tr., 1878, p. 184):

> 'For those days it is all up with the rule of the Turks; every little town chooses for itself . . . a ruler who has a towering fool's-cap set upon his head, and a long spectral beard of flax fastened to his chin, and is clothed in a peculiar garment. With a long sceptre in his hand . . . he promenades. . . . Every one bends before him, the guards at the door make way, the governor of the province . . . lets himself be ousted, while the new dignitary seats himself on his throne. . . . At length he, that is, his new dress, is condemned to death by burning, and from the ashes creeps out the slavish Fellah.'

The modern copy of the crown of Upper Egypt, the false beard worn by kings, and the sceptre point to the descent of this custom.

15. 'Sed' festival.—In connexion with this should be noticed the great Sed festival. It appears to have been normally celebrated every 30 years, and to have been on the occasion of the king being deified as Osiris, and the Crown Prince being appointed and married to the heiress of the kingdom. Such a usage appears to be the amelioration of a custom of killing the king after a fixed interval, in order that his royal maintenance of the public life and prosperity should not deteriorate. Such a custom of king-killing was usual in Ethiopia, until abolished in the 3rd cent. B.C. It is still practised by the Shilluks in the Sudan; also in Unyoro, in Kibanga, in Sofala, and formerly among the Zulus. Thus it is strongly an African custom. Nor is it peculiar to Africa, as it occurred in Prussia, and at fixed intervals of 12 years in Southern India. There is thus abundant parallel for such a feast in pre-historic Egypt; but, before the use of records, this custom gave place to the deification of the king, who lived on with his successor. The king became Osiris, was clad as the god, held the Divine emblems, and was enthroned in a shrine at the top of a flight of steps. Before him danced the Crown Prince, and at a different point in the ceremony the assembled men danced in the same enclosure of hangings upon poles. Sacred standards were carried in procession. In some connexion with the festival there is the record of 400,000 oxen, 1,422,000 goats, and 120,000 captives. These numbers show the national character of the ceremony, whether they were dedicated or sacrificed. In the late times of the XIXth dynasty this festival of Osirification was performed much oftener, and after his 30th year Ramses II. repeated it every third year (Petrie, *Stud. Hist.* iii. 69). See, further, art. FESTIVALS AND FASTS (Egyptian).

16. Religious calendar.—The religious calendar of Egypt has never been studied, or even collected together. The materials are: (1) early lists of feasts, which were seasonal, and which usually do not exceed half a dozen occasions for funeral offerings; (2) the Ramesside papyrus Sallier iv., of which two-thirds of the year remains, stating the luck and the mythical or legendary events of each day (F. Chabas, *Le Calendrier*, Paris, 1870); (3) the Ptolemaic temple-calendars of Edfu, Esneh, Dendereh, etc., translated by Brugsch (*Drei Fest-Kalender*, Leipzig, 1877); (4) a few feasts noted by Plutarch (*de Is. et Osir.*); and (5) the modern Coptic calendar (published by R. N. L. Michell and E. Tissot). Cf. art. CALENDAR (Egyptian).

The ancient calendars are strongly local, those of the temples referring mainly to the festivals held in the temples on which they were recorded. On comparing the lists of Edfu and Esneh, which were of the same age and region, we find but six feasts identical, out of about a hundred entries. When we try to connect calendars of different periods, the shifting of the month-names through all the seasons presents the first difficulty. Owing to not observing leap-year, the nominal calendar rotated through the year in about 1460 years. Hence the question arises, which of the religious anniversaries were attached to the nominal month and day, and which to a day in the fixed year, both classes being named in inscriptions. The seasonal anniversaries must necessarily belong to the fixed year. On comparing the Sallier papyrus (of the age of Ramses II. or a little earlier) with the Ptolemaic lists, we find not a single festival or event attached to the same day in these earlier and later calendars.

That the festivals were attached to the fixed year is shown by six entries in the earlier and later calendars. We here denote the months by Roman numerals, I. to XII. for Thōth to Mesore, so as to read the intervals more readily:

	Sallier.	Ptolemaic.	Interval.
Going forth of Isis	13 III.	10 I.	302
Feast of Shu	21 III.	19 I.	303
Isis and Nebhat weeping	14 V.		308
Osiris slain (Plutarch)		17 III.	
Feast of Sokar	27 VI.	26 IV.	304
Smiting the wicked	22 VIII.		304
Feast of the Strong		21 VI.	
Feast of Horus	1 IX.	1 VII.	305

Excepting in Plutarch, who wrote later than the Ptolemaic calendars, the interval between the early and late lists is 304 days; and this shift of the calendar on the seasons would occupy about 1255 years. The date on which the Esneh calendar was compiled is fixed by the New Year feast, of the fixed year by Sothis, falling on 26 X., which occurred in 138 B.C. The date of the Sallier calendar is, therefore, 1255 years earlier, or 1393 B.C.; and this agrees well with its having the name of Ramses II. scribbled on the back of it, as he began to reign 1300 B.C. Hence for any connected view of the calendars it is needful to translate the dates of the shifting months into fixed days of the year, corresponding with the epoch of the calendar. To compile a detailed religious calendar would be beyond the scope of this article, but the principle of fixed dates is here stated, as it has not yet been published.

We will now state the nature of the religious events which were notified in the calendars. The principal classes are

	Sallier.	Ptolemaic.
Festivals and myths of great gods	98	72
Events of the war of Set	37	4
Minor gods and myths	37	30
Local worships	8	69
	180	175

17. Lucky and unlucky days.—Personal directions are given only in the Sallier papyrus. Originally every day was noted as favourable, cautionary, or evil, with some days of mixed character. Of these 223 remain, and there are also applied to these days 96 general directions as to going out or beholding things, 54 specific directions as to acts, and 15 prognostications of the course of life or manner of death, from birth on a given day. As Chabas shows, these direc-

tions are similar to the directions for action on different days of the month given by Hesiod, the list of unlucky 'Egyptian days' observed in Rome in the time of Constantine—25 in all—and the list of unlucky Jewish days stated by Salmasius —24 in all. It might be expected that the bad 'Egyptian days' of tho Romans would be the same as among the Egyptians. On a comparison of the lists, the only adjustment of calendars which yields continuous connexion is from 18 Makhir to 25 Pharmuthi, coinciding with the unlucky days 25th Feb. to 3rd May. This also is exactly the connexion between the calendars when the vague year was finally fixed, as stated by Chabas. Hence these 7 of the unlucky days retained their character from the time of Ramses to that of Constantine.

The break between Paganism and Christianity has swept away nearly all traces of connexion between the calendars. The Coptic calendar is mainly seasonal, and very seldom mentions the luck of a day. There are, however, a few days when marriage is prohibited, in both the Ramesside and the Coptic calendars; and the intervals between these appear to be connected.

Sallier.	Coptic.	Interval.
5 II.	26 IX.	231
7 V.	24 XII.	227
17 V.	2 I.	230
19 V.	2 I.	228

As these days in the Sallier calendar are connected with other evil events, they must have belonged to the fixed year, like the rest; hence it is difficult to see how a shifting calendar could have transported them 229 days. If it be so, then these fixed seasons must have become attached to the shifting calendar in 434 B.C. and have been carried on with it till its arrest in 30 B.C.; since that date it has shifted only by the difference between old and new style. The dates mentioned in the myth of Horus of Edfu do not in any way agree with the Edfu or other calendars.

18. General feasts.—The seasonal dates of the feasts which are found in any two calendars, and which were, therefore, general, may be taken as within a day of the following:

Feast of Sokar	Jan. 15
Setting up the Dad	„ 19
Feast of the Strong	Mar. 11
Feast of Ptah	„ 21
Feast of Horus	„ 21
Feast of Horus	Apr. 21
Birth of Horus	May 21
Going forth of Isis	Oct. 1
Feast of Shu	„ 11
Feast of Isis	„ 27
Isis and Nebhat weeping	Dec. 3.

IV. *FUNERARY RELIGION.*—**19. Cause of its prominence.**—The funerary branch of the religion has become better known than any other, owing to the prominence of the tombs among the other remains. This is merely a casual prominence due to the Nile deposits. The laying down of ten to twenty feet of mud over the river-valley since the flourishing ages of history has buried the remains of daily life almost entirely; only a few small towns on the desert, or the later parts of the cities which were built high up on their mounds, have remained exposed. By far the greater part of the dwellings and buildings have passed under the Nile soil and the advancing water-level, while the cemeteries, being on the desert edge, have mostly remained as accessible as at first. Hence the disproportion in which we view the Egyptians, as being more concerned with death than with life. Probably the Egyptian saw and thought much less about his forefathers' graves, miles away in the desert, than an English rustic does who walks through the graveyard every Sunday.

20. Its importance.—The tomb was essentially the house of the dead, where the soul would live; and the intrinsic fact which has made the Egyptian tombs so important to us is the custom of representing the ordinary course of life in sculpture and painting on the walls of the funerary chapel, in order to gratify the deceased with the pleasures of life. No other peoplo except the Etruscans and the early Chinese have thus recorded their civilization. The magnificence of some of this work must not, however, be put down as entirely for the dead. The great halls cut in the rock which astonish us at Syut or Beni Hasan were the quarries whence stone was taken to build the palaces of the living down in the Nile plain. It needed but little more labour and device to cut the quarry so as to serve for the tomb, and the painting of its walls was a trifling work compared with the excavation.

21. Reason of offerings.—An essential question is whether the provision for the dead depended on fear or on love; was it to prevent the ghost's returning or to gratify it in its new life? Can we view Egyptian customs as akin to those of the Troglodytes, who bound the body round from neck to legs, and then threw stones on it with laughter and rejoicing (Strabo, xvi. 4. 17)? On the contrary, we see, from the earliest times onward, that weapons were placed by the dead, which would arm them if they attacked the living; we find in the pre-historic times the skull frequently removed and subsequently placed with honour in the grave, as if it had been kept with affection, as it is among some races at present; the successors frequently visited the tomb and held feasts there; in Roman times the mummies were kept around the hall of the house; and to this day a widow may be seen going to her husband's tomb, removing a tile, and talking down a hole into the chamber. The treatment of the body, and the provision for it, all show no trace of repugnance or fear, but rather a continued respect and affection. We are bound, therefore, to look at the other offerings, of food and drink, of model houses and furniture, of concubines and slaves, as equally dictated by a wish for the future happiness of the deceased.

22. Pre-historic ritual.—In the pre-historic age there was a fixed ritual of burial, which implies an equally wide-spread group of beliefs as to the use and efficacy of the funerary provision. The body was placed in a contracted position on the left side, the hips and knees bent, with the hands together before the face. The direction was with the head to the south and the face to the west. The main classes of provision had each their regular place. The weapons were usually behind the back; the bag of malachite, and the slate and pebble for grinding it to paint the face, were before the face; the wavy-handled jar of ointment was at the head end; a small pointed jar stood at the feet; at either end of the grave beyond the body, or in a row along the side, stood the group of great jars full of ashes of the burning of offerings made at the funeral.

There was also an entirely different treatment of the body, often referred to in the oldest religious formulas of the Pyramid texts. The head was removed, the flesh taken off, the bones separated and cleaned, and then re-composed in right order, and the whole body put together again. This was supposed to purify the dead so that he should be fit to associate with the gods (see *Gerzeh, the Labyrinth, and Mazghuneh*, 1912). The traces of these customs, which probably belonged to the Osirian worshippers at very remote times, are found in a small proportion of bodies down to historic times. The latest clear group, in the Vth dynasty, had one-third of the bodies partly dis-

membered, with the hands and feet cut off and laid on the stomach beneath the swathing of the body, or with every bone cleaned and wrapped separately (Petrie, *Deshasheh*, 1897, p. 20, pls. xxxv., xxxvii.).

In almost all ages, from the pre-historic to the present, the Egyptians were equally averse to throwing earth on the dead. The earliest graves were pits roofed over with poles and brushwood, so as to leave a chamber. Later a recess was made in the side of the pit to hold the body, and fenced across the front by a row of jars. In the early dynasties a rock chamber was usual, later a brick shaft with a chamber at one side of it. Only in Christian times does the chamber seem to have been abandoned, and the open grave preferred. Under Islām, the chamber, with room for the corpse to sit up in it, is considered essential. Cf. artt. ANCESTOR-WORSHIP (Egyptian) and DEATH AND DISPOSAL OF THE DEAD (Egyptian).

23. The 'ka.'—Before we can follow the different views of the future life, we must look at the beliefs on the nature of man. The earliest tombstones, those of the Ist dynasty, show the *khu* bird between the *ka* arms; thus there was then recognized the *khu*, the 'glorious' or 'shining' intelligence, as dwelling in the *ka*, the activities of sense and perception; both of these were the immaterial entities in the *khat*, or material body. The idea of the *ka* is difficult to define, as we have no equivalent. It was closely associated with the material body, as it had parts and feelings like the body. All funeral offerings were made to the *ka*. If opportunities of satisfaction in life were missed or neglected, it was said to be grievous to the *ka*; also the *ka* must not be needlessly annoyed. Here it seems to stand for the bodily perceptions and powers of enjoyment. The *ka* could not resist the least physical force after death, although it retained consciousness and could visit other *kas* and converse with them. The *ka* could also enjoy the offerings and objects of life in representation; hence the great variety of funeral offerings, and the detail of the sculptures and paintings representing all the actions of daily life, the hunting in the desert, fishing on the river, beholding all the farm-yard, and the service of retainers, dancers, and musicians. A recent discovery adds to the complexity. Not only is the *ka* of the king represented as born as an infant at the same time, being nursed and growing up, and following the king holding a standard of 'the king's *ka*,' but we even see the *ka* holding the feather fan and fanning the king on his throne. This suggests that the king's *ka* may have had a separate physical body; and, as the Egyptian believed in horoscopes, so a child born at the same hour as the king would have the same fate, partake of the same soul, and was perhaps selected to accompany the king as his double and serve him for life. One being might have many *kas*; Rā had 14 *kas*, Tahutmes I. was the first king to have more than one *ka*, and Ramses II. had 30. The *ka* being so far separate could be taken by the Semitic mind as the equivalent of the Semitic guardian angel—an idea entirely foreign to the Egyptian: and thus it comes that we find the Semitic king Khyan with the title 'beloved by his *ka*.' Later this deification of the *ka* proceeded, and on the sarcophagus of Panahemisis we read, 'Thy *ka* is thy god, he parted not from thee, and so thy soul lived eternally' (Bissing, *Versuch . . . des Ka'i*, 1911). Here the *ka* has become a Divine principle, in-dwelling, and saving the soul. This comes fully into touch with the doctrine of the Logos in its developments. 'They possess Logos only and not Mind' (*Pers. Rel. in Eg.*, London, 1909, p. 92) is the stage of the purely human soul as the *ka*. Next, 'Thou art being purified for the articulation of the Logos' shows the Logos as a saving Divine principle, like the last view of the *ka* (*ib.* 93). The later growth was 'The Logos is God's likeness,' and 'The Logos that appeared from Mind is Son of God.'

24. The 'ba.'—An entirely different pneumatology is that of the *ba*, which is the disembodied soul figured as a human-headed bird. This is associated with the tree-goddess of the cemetery; out of her great sycamore tree she pours drink and gives cakes to the *ba*, who receives the food on the ground before the tree. Thus the *ba* is the entity that wanders about the cemetery requiring food, whereas the *ka* was thought to be satisfied with the model foods placed in the tomb. The *ba* is associated with the *sahu*, or mummy, as the *ka* is connected with the *khat*, or body. Some beautiful figures of the XIXth dynasty represent the mummy on its bier, with the *ba* resting on its side and seeking to re-enter its former habitation. Other figures in papyri show the *ba* flying down the tomb-shaft to reach the mummy lying in the chamber below. The actual source of the idea of the bird-like soul was doubtless in the great white owls which haunt the tomb-pits, and fly noiselessly out, their large round faces looking with a human expression. As to the different sources of these ideas, the *ba* belongs to the tree-goddess and the cemetery—apparently the earliest and most primitive kind of belief; the *ka* is always said to go to Osiris, or to the boat of the sun, or to the company of the gods, and belongs, therefore, to the more theologic views.

25. The 'ab.'—Other concepts were also associated with man, though seldom with any further religious views. The most important of these was the *ab*, the will and intentions symbolized by the heart. It was used much as we use the term 'heart' in 'good-hearted,' 'hearty,' or 'heart-felt'; so the Egyptians said that a man was 'in the heart of his lord,' or spoke of 'wideness of heart' for satisfaction, or 'washing of the heart' as expressing plain speaking or relieving the feelings by saying what was thought. The idea of the heart was prominent in later times, as it enters into all the throne names of the Saite period. Besides the metaphorical term of the heart for the will, the physical heart was also named as *hati*, the chief organ of the body, mentioned most frequently on the heart scarabs which were put in the place of the heart in the mummy, and inscribed with ch. xxx. of the Book of the Dead, called the 'Chapter of the Heart.'

The ruling power of man, decision and determination, was separated by the theorists, who multiplied these divisions, and was called *sekhem*, the sign for which was a baton or sceptre. The shadow was also named a *khaybet*, for which the sign was a large fan used to shade the head.

26. The 'ran.'—The essence of a name (*ran*) was very important, being the essential for true existence, both for animate and inanimate bodies. To possess the true name of a person gave power over its owner; without the name no magic or spell could affect him. A great myth, found in New Zealand as well as Egypt, is the gaining of the true name of the sun-god by stratagem, and so compelling him. Isis thus gained the two eyes of Rā—the sun and moon—for her son Horus. This importance of the name led in Egypt, as elsewhere, to the real name being avoided and kept secret, while some trivial name was currently used. On monuments it is usual, especially in the IVth and XXVIth dynasties, to find the 'great name' given, and also the common or 'little name': the great name is often formed from that of a god or a king,

so as to place the person under divine protection in his future life.

27. The under world.—The under world (Erman, *Egyp. Rel.*, London, 1907, pp. 109–114), through which the dead had to pass, was divided into the twelve hours of night, so entirely was it associated with the sun's course. These twelve spaces are variously called 'fields' or 'caverns,' the latter idea obviously because of the sun going under the solid earth. Each space has a large population of gods, of spirits, and of the dead. The special goddess of each hour acted as guide, through that hour, to Rā and his company of gods. The first hour is said to be 800 miles long, till Rā reaches the gods of the under world. The second hour is 2600 miles long. The third is as long, and here Osiris and his followers dwell. In the fourth and fifth hours dwells the ancient god of the dead, Sokar, and his darkness cannot be broken by Rā, the later god. 'Rā does not see who is therein.' Rā has his boat changed into a serpent, to crawl through the earth. In the sixth hour is the body of Osiris. In the seventh is the great serpent Apap—a tradition of the boa-constrictor. The flesh of Osiris is here enthroned, and his enemies lie beheaded or bound before him. Here also are the burial mounds of the gods—Atmu, Rā, Khepera, Shu, Tefnut, and others. In the ninth hour the rowers of the sun-boat land and rest. In the tenth a beetle alights by Rā. In the eleventh hour the ship's rope becomes a serpent, and the ship is dragged through a serpent nearly half a mile long, and, as it emerges, Rā becomes the beetle, the god of the morning—Khepera. It is notable that the Egyptian had even an exaggerated idea of the size of the earth, as that is only 1000 miles to each hour on the equator, while the hours of the under world are reckoned as 2600 miles each.

Another version of these ideas imposed great gates between the hours, each guarded by watchers and fiery serpents. Another form was that of the fields of Aalu, which had 15 or 21 gates, each guarded by evil genii, with long knives in their hands (Petrie, *Gizeh and Rifeh*, 1907, pls. xxxvi. D, E, F). Yet an earlier idea was that of a great variety of roads, which had to be known to the soul, and for which an account of sixteen roads was placed upon the sarcophagus. Another chapter concerns eight nets or snares which have to be avoided. There was also a chapter for ensuring that the head should be restored to the body after it had been cut off in the early dismemberment usage. The earliest form of these texts is in the VIIth dynasty (see Petrie, *Dendereh*, 57 f.).

28. The 'ba' in the cemetery.—The Egyptian beliefs regarding the future life were very incongruous, and various elements were mingled, regardless of their consistency or relative possibility, much as present beliefs in England mix together the Old and New Testament, Milton, and folklore, the paganism of our ancestors. To have any intelligible view of the subject we need to disentangle the complex, and regard each system of belief apart.

The most simple view was that of the continued existence of the soul in the tomb and about the cemetery. This belief still survives in Egypt, in spite of Christianity and Islām. In Middle Egypt there is still a custom of placing jars of water and plates of food in the tomb, though it is considered so unorthodox that only by casual inquiry can this be learned. In one case a mattress was put beneath the dead; but it was said that on no account was any metal put in the tomb. This survival of the primitive belief and custom shows us how easily it continued to be held throughout, along with the later dogmas of the kingdom of Osiris and company of Rā.

The soul then was thought of as a human-headed bird, the *ba*, flying in and out of the tomb. It required access to the food provided for it, which was stored in, or around, the chamber. In the pre-historic age the offerings were placed close round the body. When the larger tombs of the earliest kings were developed, the body was enclosed in a wooden chamber of beams, and the offerings were placed round it. The space was afterwards subdivided into a line of store chambers, which were later built of brick. Jars of water, wine, corn, grapes, and other food were provided by the hundred; haunches and heads of oxen, trussed geese, cakes, dates, pomegranates, all abounded; chambers full of knives and weapons, for hunting and for fighting, succeeded to the flint-knife and macehead of the earlier years; while finely wrought stone dishes and bowls of the most beautiful materials, including also the rare copper, were stored for the table service. The servitors were all quickly buried to go with their king to the under world; there was not even time for their dozens of tomb-chambers to dry before they were sacrificed and placed in rows around the great tomb.

The soul required a way of access to its provision and to the outer air. In some large tombs of the IInd dynasty a model gallery was made on the ground surface covered over by the *mastaba*; in this was placed a row of model granaries of mud, extending for ten or fifteen feet, and a little passage a few inches square led from the tomb-pit to this gallery of provisions. In tombs of the Vth dynasty a similar little opening is provided from the tomb-shaft out to the funeral chapel. In later times other provision was portrayed, though the idea was probably older than that described. The great shady sycamore trees which stood over the cemetery were looked on as the house of a kindly goddess, who was later identified as a Hathor. She provided food and drink for the wandering souls, and is shown looking out of her tree, pouring from her vase and dropping cakes from her tray to feed the *ba* before her.

29. The 'ka' and its imagery.—A different and less material view of the soul arose, and in place of a human-headed bird it was thought of as the *ka*, or will and consciousness of the person, coinciding with the sensations of the body, and therefore filling exactly the same form, but incorporeal. As the body had a *ka*, so all animals had *kas*, as they also felt; then everything that existed was by a feeling of Animism endowed likewise with a *ka*. Proceeding from this, the *ka* world was held to be self-contained, and in the full sense a duplicate of the corporeal world in which it resided. Hence the *ka* could enjoy the models of food which contained the *ka* of the food; it could enjoy the figures of men and animals, as it had enjoyed the corporeal forms when in the body. A whole world of imagery could thus be provided for the life of the *ka*; and that it was intended for this conception is shown by every part of it being stated to be for the *ka* of so-and-so. The life-like statues were for the *ka* to dwell in, that it might not wander disembodied; the more closely like life, and the more the clear eye glittered and the mouth seemed ready to speak, the happier the *ka* would be residing in it. The doctrine of the *ka* was, therefore, the great inspiration of Egyptian art.

Both of those views of the future life are so entirely free from any theological touch, or connexion with any god, that it seems difficult to suppose that they arose along with belief in any great Divinity. They seem to belong entirely to an animistic world, and to be, therefore, probably older than any of the theologies which entered Egypt. The idea of the immortality of the soul seems older than any belief in a Superior Being

(see, further, 'Egyptian' sections on BODY, NAME, SOUL, etc.).

30. **The kingdom of Osiris.**—The oldest theology of the future life is that of the kingdom of Osiris. The dead were thought of as going down to the cool and misty north, to the realm of Osiris, in the Delta. After that region became familiar the scene was moved to Byblos, in Syria; and lastly, it became the heavenly kingdom in the north-east of the sky, and the Milky Way was looked on as the heavenly Nile which watered it. In every respect it was thought of as a double of the life in the Nile valley. Agriculture was the main occupation: the souls ploughed the land with a yoke of oxen as here; they sowed the grain broad-cast, reaped the harvest of corn or gigantic maize, and threshed it out by the oxen treading the threshing-floor. All this labour was done by the dependents of the great man, who meanwhile sat at ease in the shade, and played draughts with his wife, or rowed in a skiff on the meandering canals.

31. **The Judgment.**—Before the dead could be admitted to this kingdom, some examination was needful; it was not supposed to render the evil good, but the wicked required to be set aside, and only the good might enter. This examination was the Judgment of Osiris, which is a familiar scene in the funeral papyri. The dead were brought in by the jackal-headed Anubis before the presence of Osiris enthroned, with Isis and Nebhat standing behind him. The protestation of innocence was then made by the dead, each one denying that he had committed any one of 42 crimes. This list is commonly but strangely called 'the Negative Confession' (see, for details, artt. CONFESSION [Egyp.] and ETHICS [Egyp.]). Then came the 'weighing of the heart' in a great balance which the ibis-headed Thōth read and recorded. The heart was placed in one pan, and the feather of Maat—Truth—in the other. As the ostrich feather was the emblem of lightness (being also an emblem of Shu, god of space, or the atmosphere), it is evident that the heart needed to be light, and not weighed down by sins. The ideal of innocence was being 'light-hearted,' as we say. Those who could not bear the test were condemned. Their fate was to be devoured by a female hippopotamus, which stood waiting at the feet of Thōth in these scenes. Another fate of the wicked in the Rā theology was to be beheaded and burnt in a lake of fire; but that does not seem to belong to the Osiris system.

32. **The 'ushabti' servants.**—Whether the serfs and servants of an estate were supposed to be so often bad that the supply of labour would be short, or whether each justified person was necessarily a master in the future, it was thought needful to supply images of servants to do the agricultural work. Whether these originated in the figures of servants engaged in domestic work, found in tombs of the Vth and VIth dynasties, is not clear. In the XIIth dynasty single figures of a mummy form are rarely found, engraved with the name of the dead. These do not seem to descend from the servant figures; but by their forms they appear to originate the serfs for the Osiris kingdom of the XVIIIth–XXXth dynasties. It would appear, then, that in the XIIth dynasty the mummiform figure was for the *ka* of the person himself, and was supposed to act in the future. Then, to save him labour, a group of figures of serfs was substituted. These serfs have a chapter of the Book of the Dead as a spell to vivify them into action. They were furnished with bronze models of baskets and hoes at first, which soon after were carved or painted, held in the hands of the figures or resting on their shoulders. The water-pot was added rather later. The spell on the figures commanded them to carry the sand and the water when ordered, and to do the cultivation. To accompany women there are sometimes pottery figures of girls without tools, not mummy forms like those of men, but nude. These have an older woman robed to oversee them, as the male figures have often an overseer dressed in a waist-cloth or robe. The number of the figures varies, but in the most complete tombs of the Saite age 400 was the regular supply; sometimes there is one overseer to each ten workers. The name *ushabti* is usually understood as an 'answerer' who responds to the demand for service; it has also to be explained, in the shorter form *shabti*, as referring to the figures being made of sycamore wood. The history of the changes of form and material hardly belongs to the religion.

In Greek times, after these figures ceased to be made, it was usual to write that a deceased man had 'gone to Osiris' in such a year of his age.

33. **The fellowship of Rā.**—Another complete theology of the future was connected with the sun-worship of Rā and the gods associated with him. This was bound up with the soul's going to the west; and probably Khentamenti, 'he who is in the west,' was a god of the dead in this system. Certainly he was the god of Abydos for ages before Osiris was worshipped there, and Abydos was the place specially where the desert valley in the west led to the abode of the dead. In the dark world of the dead there were innumerable perils to be avoided; and the necessary protection could be obtained by joining the boat of the sun, and so being safely led through the successive gates of the hours guarded by their evil spirits. The dead is figured sometimes as just entering the boat and approaching the company of the gods who sail with Rā through the hours of day and night. In order to enable the dead to reach the boat of the sun, it was needful that he should have a boat to go forth and intercept it in its daily round. Hence a model boat with a crew upon it was provided in the tomb, especially in the Vth–XIIth dynasties. It had all the fittings—a sail for going up the Nile, and oars for rowing down—or sometimes two boats were differently rigged according to their direction; a peg for tying up at the shore, a mallet to drive the peg, and a landing plank were also provided.

34. **The mummy and amulets.**—In none of these views—of the *ba*, the *ka*, the Osirian or the Rā company—has the material body any part. These views were probably all formed before historic times, and after the earliest dynasties we find arising, about the end of the IIIrd dynasty, a system of mummifying. Before that the body was often perfectly dried in the soil, but not artificially preserved. This embalming, therefore, was apart from all the views which we have described. It developed another system—that of protective amulets. In the Vth dynasty we find strings of amulets of carnelian or ivory placed around the wrists and the neck. The most usual forms are the jackal head, lion head, frog, bee, clenched hand, open hand, leg, *uza* eye, and scarab. After this age the amulets diminish, and in the XVIIIth–XXIIIrd dynasties only one or two glazed figures of gods were used. With the XXVIth dynasty there burst out an enormous development of the system. Figures of the gods in glazed pottery or lazuli, *uza* eyes, and scarabs in all stones and materials, rarely gold *ba* birds with inlaid wings, and gold seal rings, were arranged in rows upon the body, often fifty or more figures in all. By Ptolemaic times the amulets were larger and coarsely made in blue pottery, and they seem to disappear entirely before Roman times (cf. art. CHARMS AND AMULETS [Egyptian]).

This elaborate armoury of amulets was designed to preserve the body from being attacked or broken up, and to ensure that it should remain complete for the habitation of the *ka*. This preservation of

the body led to an entire reversal of the older ideas. In all the dynastic ages the construction of a costly tomb for the dead was quite as needful as the preparation of the corpse; in the Roman age, however, the corpse was embalmed and very elaborately wrapped, often with a portrait over the face, and then kept for many years in the house, after which it was roughly buried, without any care, in the cemetery.

V. *THEOLOGY.*—35. **Animal-worship.**—In considering the worship of the gods, we shall endeavour to separate the successive stages which have ruled in Egypt. Maspero has pointed out how the jackal-worship predominated at Thinis before the rise of the jackal-headed Khentamenti, or the still later Osiris-worship, at Abydos. He notes also how the Osirian conception of the fields of Aalu is earlier than the solar view in the *Book of Knowing Duat*, or the under world. From such traces of the growth of the theology, and the proofs of independence of the sources of the gods, shown by their compounded names, we arrive at the historical view of the successive strata of the theology. We have: (1) the pure animal-worship; (2) the animal-headed gods with human bodies; (3) the human gods of the Osiris cycle; (4) the cosmic gods of the Rā cycle; (5) the abstract gods of principles; (6) the gods brought in from foreign sources, and not originally belonging to a part of the Egyptian population.

The animal-worship is based on two main ideas: (1) the sacredness of one species of animal to one tribe; (2) the sacramental eating of an example of the sacred animal at stated intervals. That the whole of a species was sacred among a tribe is shown by the penalties for killing any animal of the species, by the wholesale burial and even the mummifying of every example, and by the plural form of the names of the gods who were later connected with the animals, such as *Heru*, 'hawks'; *Khnumu*, 'rams'; *Bau*, 'birds.'

The sacramental slaying or eating is known in the case of the bull at Memphis (Mariette, *Le Sérapéum de Memphis*, Paris, 1882, pp. 11, 14, 16) and the ram at Thebes (Herodotus, ii. 42). From that appears to have sprung the keeping of an example of the sacred animal. It is well known that, in countries where human sacrifices were offered, it was usual as a compensatory measure to keep the victim for a long time—as much as a year—in the greatest indulgence and luxury, and to deny him no pleasures. This principle naturally resulted in keeping the sacred animal which was destined to be sacramentally eaten, and feeding and honouring it in every way. The keeping of a sacred animal will not account for its being consumed, rather the contrary; but the intended sacrament on the animal will be ample reason for keeping it with all honour. Hence we seem bound to accept the sacrament as the primary idea: the tribe needed at intervals to unify itself with its sacred species by absorbing the substance of one example, like the Norse burial of portions of a king in the fields to ensure their prosperity and fertility.

36. **Sacred animals.**—The sacred animals whose local worships are known have obvious qualities for which they might have been venerated; but whether those qualities were the sole cause of their celebrity or whether the tribe had a totemistic belief in its connexion with the animals is difficult to determine. That only one species was honoured by one tribe does not prove a belief in a connexion, because the earliest stage of theologic belief has similarly only one god for one tribe. So far as this evidence goes, the animal species was just in the position of the later god to the tribe. Nor does the use of the figure of an animal as a standard prove a totemistic connexion, as many of the nomes had standards which were reverenced—such as the crook and flail at Heliopolis, or the mace at Memphis—but which could hardly be regarded as totems of the people. The principle of reverence sufficiently accounts for the standards without supposing any closer connexion in some cases.

The *baboon* was adored as the emblem of wisdom, and of Tahuti, the god of wisdom. The appearance and ways of the baboon naturally originated this belief. Four baboons were kept as sacred in the temple at Hermopolis; they are often represented as adoring the sun, from their habit of chattering at sunrise. Figures of the baboon abound in the Ist dynasty at Abydos.

The *lion* and *lioness* are found in the pre-historic figures, and in later amulets, but are not shown on monuments or with names. The goddesses with the head of a lioness are named as Sekhmet of Memphis and Nubia; Bast of Bubastis, Leontopolis, Tell el-Yehudiyeh, and Letopolis; Mabes of Nubia; and Tefnut of Denderch, el-Kab, Elephantinē, and Nubia. The spirit of the peak of Thebes—or Mert-seker—is also said to 'strike as a fascinating lion.' The destructive power of Rā, the sun, was personified as the lioness Sekhmet, who destroyed mankind from Herakleopolis to Heliopolis, at the bidding of Rā.

The lesser *felidæ* were also reverenced. In Sinai the *cheetah* and *serval* are figured as being sacred to Hathor. The *cat* was sacred to Bast, especially at Bubastis and Speos Artemidos, where Bast was equated with Artemis the hunter. The cat was also sacred to Mut, probably reverenced as a maternal emblem, at Thebes. The intensity of the popular worship of animals, even in the latest times, is shown by the well-known story of the fanatical mob tearing a Roman soldier to pieces for killing a cat.

The *bull* was worshipped mainly in the Delta, where four nomes used it as a standard. The four bull-gods most recorded are: (1) *Hapi*, or *Apis*, of Memphis, whose temple lay south of that of Ptah; (2) *Ur-mer*, or *Mnevis*, of Heliopolis, which was a more massive breed; (3) *Ka-nub*, or *Kanobos*, from whom the city was named; and (4) *Bakh*, or *Bakis*, of Hermonthis. These bulls were later connected with the gods who were worshipped at those cities. Hapi was the incarnation of Ptah, and also of Osiris as Osir-hapi; Rā was incarnate in Mnevis, and Mentu in Bakis; but these are evidently syncretic adaptations of rival worships.

The *cow* was apparently not worshipped (unlike India) except as an emblem of Hathor, probably from her source as the cow-goddess, the horned Ashtaroth, the Ishtar of Sumerian origin.

The *ram* was also worshipped as a procreative god; at Mendes in the Delta he was later identified with Osiris; both there and at Herakleopolis he became Hershefi—the strong chief; at Thebes he became Amon, and was specially the emblem of Amon to the Ethiopians; at the cataract he was Khnumu the creator. This diversity of connexions of the ram proves how his earlier worship was independent of the later gods. The burial-places and sarcophagi of the sacred rams have been found at Mendes and at Elephantinē.

The *hippopotamus* was called 'the great one,' Taurt, and always remained an entirely animal-god, never partly humanized. She was the patroness of pregnancy. Rarely the hippopotamus also appears in connexion with Set, probably from its devastation of crops, and thus it was theologized as Taurt, wife of Set. No local worship or temple of Taurt is known.

The *jackal* was the god of the dead, owing to his haunting the cemeteries and the Western desert where the soul was supposed to pass. At

Memphis he was described as 'on his hill' of the desert, and received later the name of Anpu, and a place in the Osirian family. At Asyut he was regarded as the maker of tracks in the desert, for the jackal-paths are the best guides, avoiding the valleys and precipices; thus he could guide the soul to the blessed West, and was called the 'opener of ways,' *Up-uat*, and also entitled 'he who is in the Oasis.' At Abydos he was called 'he who is in the West,' *Khentamenti*; and is later shown as a jackal-headed human figure seated on the judgment-seat of the future world. The *dog* was honoured in the pre-historic age, buried with the dead, and sometimes in special tombs of dogs; but we cannot say how far this was a part of the general canine worship, which was later confined to the wild species.

The *ichneumon*, or mongoose, was sacred at Herakleopolis; and was in antagonism to the neighbouring worship of the Fayyum crocodile, as it fed on the beast's eggs.

The *shrew-mouse* was sacred at Buto and Athribis, and also embalmed at Thebes.

Of birds, the *hawk* was that mainly adored, almost entirely in Upper Egypt. The hawk *Behudet* was worshipped at Edfu; another hawk at Hierakonpolis near el-Kab; two hawks were the standard of Koptos, and the nome of Hierakonpolis just south of Tehneh and opposite Asyut shows other centres. These hawks were later identified with Horus and with Rā, who are shown in that form. The hawk was also a god of the dead in a mummified form, as the god Sokar of Memphis. It is shown in a boat which is rowed by small hawks; these may perhaps be the deceased kings, as the king's soul was believed to fly up as a hawk to heaven (*Sanehat*). The mummy hawk was also venerated in the region of Suez, being the emblem of *Sopdu*, god of the East, found in Goshen and in Sinai.

The *vulture* was the emblem of maternity, worshipped mainly at Thebes, where the idea was later embodied as a mother-goddess, *Mut*. The vulture head-dress was worn by the queen-mother; and the vulture is represented spread out for protection over the king, and across the passages of the tombs to protect the soul. The vulture *Nekhebt* was also the goddess of the southern kingdom centred at Hierakonpolis, and was used to the latest times as the emblem of the southern dominion, as the serpent of Uazet was of the northern.

The *goose* and the *wagtail* continued to be adored at Thebes down to the XVIIIth dynasty, as is shown on tablets; the goose was then connected with Amon.

The *ibis* was identified with *Tahuti*, the god of wisdom, at Hermopolis, probably from its habit of searching and examining the ground for food. It was also mummified at Memphis, Abydos, and Thebes.

The *crocodile* flourished especially in the marshy levels of the great lake of the Fayyum, and was worshipped as the god of the province. In later times it was here united with Osiris and with Rā. It was also worshipped at Onuphis in the Delta, and at Nubti, or Ombos, where it was united with Set. The men of the neighbouring city of Tentyra carried on a tribal warfare against this god of the next nome, as described by Juvenal (*Sat.* xv. 35 ff.).

The *frog* was an emblem of multitudes or reproduction, and of *Heqt*, the goddess who assisted at birth; but there is no trace of its being worshipped, though it was a frequent amulet in the pre-historic age and the XVIIIth–XXIInd dynasties.

The *cobra* serpent was much reverenced in pre-historic times, when it appears coiled up as a house amulet to hang up, or as a necklace amulet, or coiled round a stick, or in pairs twisted together, or curled round the hearth as a pottery fender. The great pythons are shown in the mythological serpent *Apap*, and combined in the serpent-necked monsters upon the slate carvings. The *uraeus*, or cobra with expanded hood, became the emblem of judgment and death, and appears on the cornice of the judgment-hall and on the royal head-dress. An immense serpent was carved as the guardian of the temple of Athribis in the XVIIIth dynasty. Serpents were commonly mummified, and even a bone or two were encased in bronze, with a serpent figure on the top, in the XXVIth–XXXth dynasties. The serpent was looked on as the 'Agathodaimon' of the house in Ptolemaic and Gnostic beliefs. Serapis and Isis were identified with serpents, and bracelets or finger-rings ending in two *uraei* were the commonest ornament. Serapis also is figured as a human-headed *uraeus* on the popular terra-cottas for domestic use. Three goddesses were in the form of the *uraeus*: *Uazet*, worshipped at Buto in the Delta, and the symbol of the northern kingdom; *Mert-seker*, 'the lover of silence,' the goddess of the dead at Thebes, supposed to reside on the peak of Thebes; and *Rannut*, the harvest-goddess, doubtless originating from the serpents left in the last patch of corn in the harvest-field.

Several *fish* were sacred: the *Oxyrhynkhos* at the city named after it, now Behnesa; the eel, or *Phagrus*, at Phagroriopolis and Syene; the *Latus* at Latopolis; the *Maeotes* at Elephantinē; the *Lepidotus* at various places.

37. **Animal-headed gods.**—The animal-headed gods form a distinct class, as—with the exception of Horus—they are found only in this form and never with human heads. They appear to belong to the earliest theologic stage, when gods with human qualities were introduced, and blended with the earlier animal-worship. The habit of combination of forms was already usual in the close of the pre-historic age, before any figures of gods that we know. On the slate palettes are compound animal figures and human-animal figures, with habitual symbolism of standards of tribes acting as the tribes, in fighting or holding captives. The animal-headed gods are less violent in symbolism than the figures which were already usual. The earliest figure of such a god is on the seals of the IInd dynasty.

Khnumu, the creator, bears the head of the ram; and the long twisted horns of the ram are often attached to the head-dresses of Osiris, and of the kings who became Osiris, as showing their creative functions. Khnumu was especially the god of the cataract; he is represented seated as a potter and framing man on the potter's wheel. Besides his local importance he was greatly thought of in later times, when the amulets of his standing figure are often found on mummies.

Hershefi, another ram-headed god, was purely local, and is not found outside of the region of Herakleopolis, except at Mendes.

Sekhmet, the lioness-goddess, represented the fierceness of the sun's heat; she is the agent of the wrath of Rā in the myth of the destruction of mankind. Her statues are common, especially at Thebes, where hundreds of them adorned the temples. She was worshipped at Memphis, where she became the consort of Ptah.

Bastet had the head of a cat; but it is difficult, without names, to distinguish her figures from Sekhmet. She represented the ardour not of heat, but of animal passion, and her festivals at her city of Bubastis were very popular and licentious. Her name is found in priesthoods of the early Pyramid age, but her great period was during the political ascendancy of her city under the Shishaks. As a cat-goddess, she was also the patroness of hunt-

ing, and so became identified by the Greeks with Artemis.

Anpu, or *Anubis*, was the jackal-guardian of the cemetery, and the guide of the dead. His figures when acting are always human, with a jackal head, and he is most often shown as leading the dead into the judgment of Osiris, or bending over the bier attending to the mummy. His statuettes were often placed on mummies. On the other hand, no temples or local worships of Anubis are known; but he passed into the Roman adaptations from Egypt, and is figured on the Gnostic gems.

Set, or *Setesh*, was the god of the pre-historic inhabitants, and probably one with the Asiatic god who appears as *Sutekh* of the Hittites—an illustration of the Asiatic origin of the second prehistoric culture in Egypt. He is shown in the IInd dynasty and at various later times in an entirely animal form, but, when associated with other gods, in a human figure with animal head. What animal is intended is uncertain; the body form is most like a greyhound, but the peculiar upright tail with a tuft at the end is like that of the wart-hog when excited; other comparisons with the okapi, etc., have also been made. Probably the original form was lost to the Egyptians, and conventional changes hide it. At first the god of the Egyptians, his worshippers were conquered, after a long struggle, by the followers of Horus. Set yet retained some adoration in the Book of the Dead and in calendar feasts. The two worships were put on an equal footing by the last king of the IInd dynasty. After suppression, Set appears again favoured in the early XVIIIth dynasty; and in the XIXth the kings Seti I. and II. were even named after him. In later times the great popularity of Horus led to Set being entirely suppressed, and looked on solely as the evil spirit.

Sebek, or *Sobk*, or *Soukhis*, rarely appears, being only a local god. Statues of the human figure with a crocodile head were in the Labyrinth of the Fayyum in the XIIth dynasty. Rarely the converse is shown, and a crocodile with a human head, as Sebek-Osiris, appears as the Fayyum god of the dead.

Tahuti, or *Thōth*, appears with the head of the ibis, never that of the baboon; but both animals were equally used as his emblems in all periods. He is seldom figured alone, but is usual in groups of gods as the recorder of the judgment, and as performing rites over the king. As the god of learning, he was specially the patron of scribes, but was not worshipped in temples, except at his cities of Hermopolis in Upper Egypt and in the Delta.

Mentu was the hawk-god of the region from Kus to Gebalayn, but was later restricted to Hermonthis when Amon became the god of Thebes.

Hor, or *Horus*, was the hawk-god of Upper Egypt, especially of Edfu and Hierakonpolis. This form, with a human body and hawk head, was that of the conqueror of Set; the entirely hawk form is not found associated with other gods, and the purely human form appears only as the son of Isis. The hawk-headed form was popular till very late times, as Horus is so represented as a Roman warrior on horseback slaying a dragon—the prototype of St. George. The figure of Horus apart from the Osiris cycle is that of Hor-ur, Horus the elder, as a tribal god before being merged in the Osiris family.

38. **Human gods: Osiris cycle: Theban triad.**—The entirely human gods belong to two great groups—the Osiris family and the Amon family, besides the goddess Neit. These are marked off by not adopting animal forms, or being cosmic or Nature gods, or representing single abstract ideas. (*a*) *Asar*, or *Osiris*, though so familiar to us, is mainly known from late sources, which were modified by other ideas. In the Book of the Dead, the Osirian portions are earlier than the solar portions, yet both are so early that they are mingled in the Pyramid texts. We cannot doubt that the Osiris worship arose in the pre-historic age; the oldest list of Osiris centres does not include Memphis. In the early Pyramid age, Anubis only is named in the funeral-formula, but in the Vth dynasty Osiris takes his place. In the earlier dynasties only kings are entitled 'Osiris,' having undergone apotheosis in the Sed festival; but in the XVIIIth dynasty, and later, every deceased person was entitled the 'Osiris,' as having been united to the god. Neither at Abydos nor at Philæ is Osiris named on the earlier monuments, although in later times he was specially the god of both places. It seems that the extent of Osiris-worship was growing throughout the historic period; this may be due to Osiris gradually regaining an earlier position, from which he had been ousted by the new gods of invaders.

The myth of Osiris is preserved in its late form by Plutarch; the main outlines, which may be primitive, are as follows. Osiris was a civilizing king of Egypt, who was murdered by his brother Set and seventy-two conspirators. Isis, his wife, found the coffin of Osiris at Byblos in Syria, and brought it to Egypt. Set then tore up the body of Osiris and scattered it. Isis sought the fragments, and built a shrine over each of them. Isis and Horus then attacked Set and drove him from Egypt, and finally down the Red Sea.

Another view of Osiris is that of a god of fertility (see Frazer, *Adonis, Attis, Osiris*[2], 1907, p. 268). He is represented as lying surrounded with green plants and sprouting corn, and his figures were made full of corn. This was probably a view resulting from his being the ever-living god of the dead, who might be regarded as the source of returning life. The division of his body into fourteen or more parts, each buried in a different nome, appears to belong to the idea of dividing a body of a king or great man, and burying portions in various places to ensure the fertility of the land. For lists of the Osiris relics and places, see Petrie, *Historical Studies*, pl. vii.

Aset, or *Isis*, was originally an independent goddess, but by political changes she became united with the Osiris myth, as the sister and wife of Osiris. Her worship was far more popular than that of Osiris. Persons were more often named after her, and she appears more usually in affairs. Her devotion to Osiris appealed to the feelings, and her combination with Horus, as her son, led to a great devotion to her as the mother-goddess. She is seldom shown as the nursing mother till the XXVIth dynasty; but from that time the worship of the mother and child became increasingly general, and spread to Italy and over the whole Roman Empire. The temples of Isis, like those of Osiris, are of late date; the principal one was the great red granite Isaeum, now known as *Behbit el-hagar*, in the east of the Delta. Generally Isis was more a divinity of the home and person than of the temple and priest, until in Roman times her worship spread immensely through the world, and temples and priests of Isis are found in most lands of the West.

Nebhat, or *Nephthys*, is placed as the sister of Osiris and Isis, but is figured as only a complementary second to Isis. Yet she was worshipped at Letopolis, Edfu, Diospolis Parva, Dendereh, and the Isaeum. This worship and her name—*Neb-hat*, 'mistress of the palace'—seem to show that she was originally a more important consort of Osiris, who was pushed aside by the amalgamation of the Isis-worship in the group. She usually appears opposite to Isis, in the same attitude, mourning over Osiris.

Horu, or *Heru*, *Horus*, is a most complex divinity, in the various worships that were mixed together, and in the different aspects under which he became popular. The different alliances of tribes at various times led to three human forms: (1) the greater Horus, *Hor-ur*, brother of Osiris, and older than the rest of the group; (2) Horus, son of Osiris, avenger of his father; (3) Horus, the child, *Har-pe-khroti*, Harpocrates, son of Isis.

(1) Hor-ur was the son of Hathor, whose name, 'the dwelling of Horus,' shows that she derives her position largely from her son. He was specially the god of Letopolis, north of Memphis, also worshipped at an upper centre of Hathor-cult, the cities of Dendereh, Qus, and Nubti, and in the Fayyum. (2) Horus, son of Osiris, is the 'avenger of his father,' usually hawk-headed, spearing the evil crocodile, trampling on Set, driving his party out of Egypt, establishing smithies of his band of *shemsu*, or followers, and, lastly, attendant on Osiris in the judgment. He was also *Hor-sam-taui*, 'Horus, uniter of both lands,' as conquering Egypt from the Set party. (3) The most popular form of Horus was that of the child of Isis. Figures of Isis and Horus are known from the VIth dynasty, but the great spread of this form was in the later times of the XXVIth dynasty, and on to Christian changes. A cognate form was the boy Horus, trampling on crocodiles, and grasping serpents, scorpions, and noxious animals. This was a type commonly carved in relief on tablets to be placed as amulets in the house, and covered with long magical texts. The infant Horus also appears seated on a lotus-flower; but it is doubtful if this arose in Egypt before the type of Buddha, jewel in the lotus, might have been imported. Figures of Horus the child, seated in Indian attitudes, point to a connexion. Horus, as an infant carried by Isis, or being suckled by her, is the most general late type, continued till the 4th or 5th century. The absorption of this type, as an entirely new *motif*, into Christian art and thought took place under the influence of Cyril of Alexandria, by whom Mary was proclaimed as Mother of God in A.D. 431. Henceforward these figures are not of Isis and Horus, but of the Madonna and Child.

(*b*) The Theban triad were also entirely human, without any animal connexion until later times.

Amon was the local god of Karnak. He was probably closely connected with Min, the god of the neighbouring desert of Koptos; and a late legend points to Min being the earlier and Amon being a variant, as Isis is said to have divided the legs of Amon, who could not walk before, but had his legs growing together (Plutarch, *Is. et Os.* lxii.). Min is always shown with the legs joined, Amon with the legs parted. Moreover, Amon is often shown in the ithyphallic form of Min. Had the princes of Thebes not risen to general dominion, probably Amon would have been as little known as many other local gods; but the rise of the XIth and XIIth dynasties brought Amon forward as a national god; and the XVIIth dynasty from Nubia, holding Thebes as its capital, entailed that Amon became the great god of the most important age of Egypt—the XVIIIth–XXth dynasties. He thus became united with Rā of Heliopolis, the greatest god of the Delta; and Amon-Rā became the figure-head of Egyptian religion, king of the gods, and 'lord of the thrones of the earth.' Important as Amon was, he was never intruded upon the worships of older cities, and his temples are rare. Of all the territorial titles which he has, only those of Memphis as the capital, Asfun, and Habenan touch other worships. The rest are in the new cities of the Delta marshes, in the desert, or in Nubia. A special feature of his worship was the devotion of the queens of the XVIIIth dynasty and onward to the XXVIth. The queen was his high priestess; and, as such, Amon (personated by the king) was her husband, and father of her children, who were consecrated from birth by this divine paternity. The temple of Deir el-Bahri portrays the divine birth of Hatshepsut, that of Luqsor the divine birth of Amenhotep III. The family of high priests next married the royal heiress, and became the priest-kings of the XXIst dynasty. In the XXVIth dynasty the line of high priestesses of the Ethiopian family was kept in possession of Thebes, but the Memphis kings never married them, but required them to adopt a daughter of the king. Thus the high priesthood was carried on in a fictitious line. In Ethiopia, where Amon was the national god, the high priestess was always the daughter of one king, and wife of the next in unbroken female succession; during the Ethiopian rule of Egypt, a second high priestess also ruled at Thebes. The ram, which was the sacred animal of Thebes, was worshipped in combination with Amon by the Ethiopians, and Amon appears with a ram's head at Napata and Naga. The ram was specially adored by the Ethiopian dynasty (XXVth), and ram-headed scarabs are usual at that time.

Mut was the goddess of Thebes, probably even before Amon was localized from his desert form of Min. Her greatest temple was that in the quarter of Thebes called Asheru, and she is always named 'lady of Asheru.' She was also worshipped in the desert of Hammamat, and at Mendes and Sebennytos, but not imposed on the general adoration. She is shown as leading and protecting the kings, and queens often appear in her character, and with the vulture head-dress of the goddess.

Khonsu is closely parallel with Tahuti in his character as a god of time, a moon-god, and 'the executor of plans,' or god of knowledge. He is identified with Tahuti, as *Khonsu-Tahuti*, at Edfu, and so obtains the head of the hawk of Edfu. Otherwise Khonsu is always a human child, while Tahuti is a man with the ibis head. His place at Thebes is as the son of Amon and Mut, and a large temple was built to him by Ramses III. at Karnak, to which Euergetes added the immense gateway so well known.

(*c*) *Neit*.—This goddess was always represented in entirely human form, holding bow and arrows, and bearing on the head crossed arrows or shuttle. There is, however, no trace of her being connected with weaving, and it has been supposed that the shuttle was only a mistake of the Egyptians in later times, the primitive form being a long package crossed by two arrows (see Petrie, *Royal Tombs*, 1900, i. front.). The package might well be the skin of an animal rolled up, as in the sign *shed*, and so the whole might belong to a goddess of hunting. In later times the shuttle with thread upon it is clearly used for the name of the goddess. Neit was the most popular divinity in the Ist dynasty, queens being named *Neit-hotep* and *Merneit*, and many private persons also used the name. She was probably a goddess of the primitive Libyan population, and was the special divinity of the later Libyan invaders of the XXVIth dynasty at their capital Sais. During the Pyramid period the priesthood of Neit was the most usual; and in the XIXth dynasty her emblem is shown as the tatu mark on the Libyan figures. She was worshipped only in the Delta, at Sais Athribis and Zar (Sebennytos), except in the Ptolemaic temple of Esneh.

39. Cosmic gods.—The cosmic gods were apparently a later stratum of theology than those already described. They belong mainly to the Eastern Delta, and probably are due to an Asiatic immigration.

Rā, the sun-god, was specially worshipped at Heliopolis, and, when that older centre rose again above the invasion of the earlier dynasties and gave the Vth dynasty to rule Egypt, each king took a name on accession which embodied a quality of Rā, in much the same Semitic style as the 99 names of Allah. Every king of Egypt afterwards had a Rā-name, such as *Rā-men-kau*, 'Rā establishes the *kas*'; *Rā-sehotep-ab*, 'Rā satisfies the heart'; *Rā-neb-maat*, 'Rā is the lord of truth.' Rā was thus more constantly recognized than any other god, yet he has no temples in the great centres; beyond his own city of Heliopolis he is named only in connexion with Babylon in the same nome, at Xois in the Delta, and at Edfu, owing to his union with the hawk-god. He was, however, united with Amon, as the compound god *Amon-Rā*, in universal honour; and thus shared in the great worship of Amon. The need of uniting these two names shows that these gods originally belonged to different races.

Rā was not the primitive god, even of Heliopolis, as the worship of another sun-god, Atmu, underlay that of Rā. The collateral facts point to Rā having come in as the god of Asiatics; the title of the ruler there was *heq*, the Eastern title known later through the Semitic invaders; the *heq* sceptre was the sacred treasure of the temple; the 'spirits of Heliopolis' are more akin to Babylon than to Egypt; and the city was always a centre of literary learning. The obelisk of the sun seems connected with the Syrian worship of conical stones and stone pillars; and the 'city of the sun,' Baalbek, shows a similar worship.

Rā is shown as a purely human figure—as in his union with Amon; or as a hawk-headed figure owing to his union with the hawk-god of Edfu; or simply as the disk of the sun, especially when in his boat for floating on the celestial ocean. The disk has various emblems usually associated with it: the cobra in front, as king of the gods; two cobras, one on each side, which may refer to the double kingdom of day and night, or both banks of the Nile; two ram's horns as the creation-god; two vulture wings as the protecting god, or sometimes only one. The disk is often placed on the head of the hawk-god or the hawk-headed human figure.

Atmu, or *Tum*, was the god of the Eastern Delta, from Heliopolis round to the gulf of Suez. Whether he was a sun-god originally, or only became so by union with Rā, is not known. He is always shown in a purely human form. He was regarded as the setting sun, in some connexion with the Semitic origin of his name, 'the completed, *or* finished, *or* closed.' His special place was Pa-tum (Pithom, the city of Ramses).

Khepera is the rising sun, 'he who becomes *or* arrives'; only secondarily, from this name written with the scarab, was the sun represented as a scarab. He is shown mainly about the XIXth dynasty, and was otherwise scarcely known.

Aten was the radiant disk of the sun, entirely separate from the theology of Rā. It is never represented by any human or animal figure, and the worship of Rā was proscribed by the devotee of Aten. The object of worship was not so much the disk of the sun as its rays, or radiant energies; these are shown each ending in hands, which give life and dominion and accept offerings. This worship was restricted within half a century or less, traces of it appearing under Amenhotep III., the full development under his son Akhenaten, and the end of it under Tut-ankh-amon. As it appears when Syrian influence was at its height, the connexion of the name with *Adon* (Sem. 'Lord') seems clear, especially as Adonis was worshipped in Syria. From the hymns to the Aten, the worship appears to be that of the solar energy, and to have been a scientific idea apart from the usual type of Egyptian religion. Aten was regarded as a jealous god, who would not tolerate any other worship or figure of a divinity. Aten is the source of all life and action; all lands and peoples are subject to it, and owe to it their existence and allegiance.

Anher, 'he who leads heaven,' was the god of Thinis in Upper Egypt and Sebennytos in the Delta. He is always in human form, and carries a sceptre. His name shows that he was a sun-god, and he was later identified with Shu, son of Rā. He does not appear to have been regarded at all beyond his own centres of worship.

Sopdu was identified with the cone of light of the zodiacal glow, which is very clearly seen in Egypt. He represented the light before the rising sun, and was specially worshipped in the eastern desert, at Goshen, and Serabit in Sinai.

Nut was the embodiment of heaven, represented as a female figure, dotted over with stars. She was said to dwell at Diospolis Parva and near Heliopolis, but there are no temples to her, and she is usually not worshipped but grouped in a cosmic scene. She bends over, resting on her hands and feet, usually supported by Shu, the god of space, on his uplifted hands; below lies the earth, Seb, as a man. This seems to show the lifting of heaven from the embrace of the earth by the power of space.

Seb, or *Geb*, was the embodiment of the earth. He is called 'the prince of the gods,' as going before all the later gods. He thus is analogous to Saturn; and, like him, doubtless Seb and Nut belong to a primitive cosmic theology earlier than any other in Egypt. Seb is called the 'great cackler,' and the goose is placed upon his head. There seems in this the idea of the egg (named in Book of the Dead, liv.) of the sun being produced from the horizon by the earth. He is called 'lord of food,' as being provided by the earth. He was honoured at Memphis and Heliopolis, but no temples of his are known. It seems that Seb, Nut, Shu, and Tefnut remained as the cosmogony of Egypt, but had long ceased to be worshipped or to have any offerings or temples in their honour.

Shu, the god of space, was symbolized by an ostrich feather, the lightest object for its bulk that was known. His function was the lifting of the heaven from the earth; and as a separate figure he is usually shown kneeling on one knee with uplifted arms. He was honoured in the south of Egypt, at Pselcis, Bigeh, Esneh, and Dendereh, and also at Memphis; but no temples were built to him. Shu is often grouped with his sister Tefnut, and sometimes both appear together as lions.

Tefnut was also honoured in the South, in Nubia, Elephantinē, el-Kab, Erment, and Dendereh, as well as at Memphis. She appears in human form, like Shu, but is often lion-headed.

After the sun-, sky-, and earth-gods must be added the Nile-god, *Hapi*. He is always shown in human form, a man, but with female breasts, and often barred all over with wavy blue water-lines. Owing to the division of Upper and Lower Egypt, the Nile was similarly divided into two entities. Figures of the Upper and Lower Nile, distinguished by papyrus and lotus plants, are commonly shown as holding those plants entwined around *Sma*, the hieroglyph of union, as an emblem of the union of the whole country. Hapi was worshipped at Nilopolis and at the 106 little river-side shrines which marked the towing stages on the Nile. The dates of inscriptions in honour of the Nile at Silsileh do not refer to the festivals, except that of Merenptah on 5 Paophi, =19 July, in 1230 B.C.,

which might be at the rising of the Nile. A long hymn to the Nile does not throw light on the worship, but praises the productiveness of the river (*RP* iv. 107).

40. Abstract gods: Ptah, Min, etc.—The abstract gods stand quite apart in character from those whom we have noticed. They have no history or legends like Osiris and Rā; and, as abstractions, they stand at a higher level than the Nature-gods of the simpler ages. There are no great festivals connected with them, or any customary celebrations. Some were probably tribal gods, but on a different plane from those already noticed, and seem to be of a late and advanced character.

Ptah was the great god of Memphis, and became the head of the Memphite triad, and later of the ennead. He has two apparently contradictory characters—that of the creator acting by moulding everything from primeval mud, and that of the mummiform god. Whether these are not two separate beliefs fused together we cannot yet discern. The mummy form strongly implies a deified human being, and one of the dynastic race, as all the earlier peoples buried in a contracted position. There is also the duplicate belief of Ptah creating by the spoken word. A further complication arises from his fusion with the old primitive animal-worship of the bull Apis at Memphis. He was also united to the primitive Memphite god of the dead, Sokar, in the form of a mummified hawk; and was likewise associated with the later human god of the dead, Osiris, appearing as Ptah-Sokar-Osiris. As a further complication, the late figures of this fused god as a bandy-legged dwarf are entirely different from the mummiform Ptah and from the figures of the other two gods. If we were to analyze these incongruities so far as our present information goes, they might be arranged thus:

Sokar, hawk-god of dead—primitive.
\+ Osiris, god of dead—pre-historic.
\+ Ptah, therefore a mummy—dynastic.
later + *pataikoi* of Phœnicia—dwarf.

Apis, the bull creator—primitive.
\+ Ptah, creator by the word—dynastic.

Khnumu, the ram-creator—primitive.
\+ Ptah, creator by moulding, as Khnumu at Dendereh and Philæ.

Hence Ptah the artificer was simply a creator-god of the dynastic race, who became assimilated to the earlier gods of various kinds. It is impossible to dissociate from Ptah the *pataikoi*, dwarf figures which were worshipped by the Phœnician sailors (Herod. iii. 37), identified with Ptah, and given the same name. These, again, have some relation to the bandy-legged or lame god of artificers, Hephaistos. Ptah was worshipped mainly at Memphis, and also at the next nome, Letopolis, as well as at Bubastis and Mendes.

Min, or *Amsu*, as the name is sometimes transliterated, was the abstract father-god. He appears, as we have shown, to be the earlier form of Amon. Like Ptah, he is enveloped in bandages; and, as Ptah has his hands projecting and holding a sceptre, so Min has his right arm raised holding a flail, and his left hand holding the phallus. The origin of this god is indicated in a late text, where the form of a sanctuary in the land of Punt is exactly that associated with the god (*Athribis*, 8, xviii, xx). This shrine is a conical hut, like those of Punt, and the god has a black face (*Deir el-Bahari*, lxix–lxxi). These details point to Min having been introduced by immigrants from there. The oldest figures of Min are three colossi of limestone found in the bottom level of the temple of Koptos, with designs upon them, including Red Sea shells and sword-fish, agreeing with the source stated above. He was particularly the god of the desert, worshipped at Hammamat, at the end of the desert road at Koptos; at Ekhmin, which was probably the end of the other desert road from Myos Hormos; at Dendereh opposite Koptos; and at Edfu, Thebes, and Saqqareh. His figures are common in the XIIth and XIIIth dynasties; in the XIXth he was united with Amon-Rā, but in Ptolemaic times he again became important.

Hat-hor was the abstract mother-god, probably introduced as a correlative deity with Min. Her head is seen on the column in front of the shrine of Min (*Athribis*, xxiii). Her peculiar position, as being worshipped over the whole country and identified with other goddesses, points to her belonging to the latest immigrants. The myth of Horus striking off the head of his mother Isis, and replacing it by a cow's head, points to the Horus clan accepting Hathor of the dynastic people and uniting her with Isis. Hathor's head appears as the favourite emblem of the dynastic people (palette of Narmer, top, and kilt of king [*Hierakonpolis*, xxix]), and the priesthood of Hathor and the love of Hathor are often named in the early dynasties. The Hathor head appears as a capital to columns at Deir el-Bahri, and in Nubia in the XVIIIth dynasty. It formed the base of the sistrum used in her worship, and the whole sistrum and head were used as the model for capitals of columns in the XXVIth dynasty down to Ptolemaic times (see esp. Dendereh). Hathor was fused with other deities, particularly Isis as the mother, and she appears in most sites of Egypt. The fates presiding over birth and destiny were called the seven Hathors.

Maat was the goddess of truth. She had no temples, and received no offerings. On the contrary, the image of Maat is often shown as being offered to the other gods by the king. There is also a double form, the two Maats presiding over justice and truth (Maspero, *Dawn*, 187). These were shown usually one at each end of the shrines of the gods; and they appear to be the source of the cherubic figures, one at each end of the mercy-seat, known apparently as 'Mercy' and 'Truth' (Ps 25^{10} 61^{7} 85^{10} 86^{15}, Pr 3^{3} 14^{22} 16^{6} 20^{28}). Maat appears in the judgment scenes of weighing the heart, as a pledge of truth, and she is linked with Rā and Thōth, and especially with Ptah, who is 'the lord of truth.' So little personality was attached to this abstraction of 'truth' that, when Akhenaten proscribed the names of all the gods in favour of the Aten, he still kept the name of Maat 'associated with his own' in placing his motto after his name, *ankh em maat*, 'living in truth.'

Nefertum is a youthful god in human form, with a lotus flower on his head. He appears to be a god of vegetation and growth, and was associated as son of Ptah and Sekhmet at Memphis. He appears only from the XXIInd dynasty and onwards, when bronze statuettes of him and relief figures on *situlæ* are common. No temple of his is known, or any offerings to him.

Safekht was the goddess of writing. She is named as early as the Pyramid times, and often appears in the XIXth dynasty recording the festivals of the king, and holding a scribe's outfit. Her emblem was a seven-pointed star on the head, with a pair of horns inverted above it. This has some connexion with *safekh*, 'seven,' and the seven-pointed star which appears as one of the earliest emblems of divinity (*Hierakonpolis*, xxvi B, C, xxix). The group may well read *upt safekh*, 'she who has the seven upon her head'; if so, she was an early goddess marked by the early sign of divinity, and hence 'crowned with the seven' came

to be her title. Her true name thus appears to be lost.

Cosmogonic pairs of elemental gods were venerated at Hermopolis, each pair male (with frog heads) and female (with serpent heads); the male names were *Heh*, 'eternity'; *Kaku*, 'darkness'; *Nu*, 'the heavenly ocean'; *Nenu*, 'the inundation.' The female names were merely the feminine of these. Maspero regards them as the equivalents of Seb and Nut, Osiris and Isis, Shu and Tefnut, Set and Nebhat, respectively (*Dawn*, 149). There are various views of the meaning of the eight; but their names seem to harmonize with the 'majesty of light,' the succession of ages, the water used in modelling creation, named in the *Kore Kosmou*, the earliest of the Hermetic books, which retains most of Egyptian thought. These elements were called 'the eight,' *khmunu*; and Tahuti made the ninth, the god who dominated the elements. They gave the name to the city Khmunu, now modified to Eshmuneyn.

Other abstractions are occasionally named, the more usual of which are *Hu*, the god of taste, and *Sa*, the god of perception. The rarer abstractions remind us of the Roman personifications of *Pavor*, *Pallor*, etc.

41. **Foreign gods.**—The foreign gods are those which were brought into Egypt apart from an immigration of their worshippers, and which always remained exotic.

Bēs, or *Bēsa*, was originally a dancing figure of Sudanese type, dressed in the skin of the *bēs* animal, the *Cynælurus guttatus*. He is often shown beating a tambourine. How such a figure came to be associated with the protection of infants and with birth is not known; but this connexion is seen in the XVIIIth dynasty (*Deir el-Bahari*, li) and on to the Ptolemaic age (Birth-house, Dendereh). The earliest example of the figure is female, in the XIIth dynasty (Petrie, *Kahun*, viii. 14, 27); it is male in later times, but in the Roman age a female Bēs appears as a consort. Bēs had no temples or offerings, but in Roman times there was an oracle of Bēsa at Abydos. A curious intimation of this worship by the Phœnicians is the figure of Bēsa on the coins of Ai-besa, 'the island of Besa,' the modern Iviça.

Dedun was another African god, worshipped in Nubia. He was apparently a creation-god, since he was fused with Ptah, the combination Ptah-Dedun being often worshipped in the XIXth dynasty. He is always in human form.

Sati seems to have been the goddess of a tribe at the cataract. She is similar to Hathor, with cows' horns, and was called the queen of the gods.

Anqet was the local goddess of Seheyl, the island in the cataract, and is shown wearing a high crown of feathers.

Turning now to the Asiatic gods, the principal one was *Sutekh*, who may originally have been one with the Set or Setesh of the Egyptians, but the separation was pre-historic. When we meet with Sutekh in the XIXth dynasty, he is the national god of the Kheta, and has many cities devoted to him on the Upper Euphrates in Armenia (Petrie, *Student's History*, iii. 66). The Egyptians represented him with a tall pointed cap bearing two horns projecting in front and a long streamer from the peak descending to his heels (Petrie, *Sinai*, fig. 134). Similar figures of Sutekh, standing on the back of a lion, are found on some scarabs.

Baal was also sometimes identified with Set, or combined with Mentu as a war-god. Names compounded with Baal are sometimes found, as *Baal-mahar* ('Hasten, Baal'), the Punic *Maharbal* (*Pap. jud.* ii. 2, v. 3–6).

Reshpu, or *Reseph*, appears on some steles, wearing a pointed cap with a gazelle head bound on in front. He was a god of war, armed with spear and shield in the left hand, brandishing a halbert, and with a full quiver on his back (Wilkinson, *Manners and Customs*, 1878, iii. 235).

Anta, or *Anaitis*, was a goddess of the Kheta (the Aryan *Anahita*, imported like Mitra and Varuna), represented as seated on a throne or on horseback, holding a spear and shield, and brandishing a halbert. Her name appears in that of a favourite daughter of Ramses II., Bant-antha, 'daughter of Anaitis.'

Astharth, or *Ashtaroth* (Ishtar), was worshipped at Memphis, where is a tomb of a priestess of hers. She is represented at Edfu as lion-headed and driving a chariot. Ramses called a son Merastrot, 'loved of Ashtaroth.'

Qedesh appears as a nude goddess standing on a lion, her hair like the wig of Hathor, and lotus-flowers and serpents in her hands. She is placed with Min, and therefore seems to be a form of the Mother-god or Hathor; she has no weapons like Anaitis and Ishtar.

42. **Tribal history in the myths.**—Owing to the early age at which sculpture and writing began in Egypt, it is possible to trace the tribal history passing into religious myth. The war of the worshippers of Horus expelling those of Set was recorded as history, and places retained the name *samhud* as 'united to the Hud' or Behudet, hawk-god of Edfu, allies of the Horus tribe. Yet the whole of this also appears as mythology—Horus warring on Set and driving him out of Egypt. As we see, on the earliest slate carvings, the standards of the tribes represented acting as the emblem of the tribe, breaking down fortresses, holding the bonds of captives, or driving the prisoners, so, by the same habit of symbolism, the god of a tribe was said to conquer another god when his tribe overcame another tribe. The contest of Poseidon with Athene for Attica and Troezene, with Helios for Corinth, with Hera for Argolis, with Zeus for Aegina, with Dionysos for Naxos, and with Apollo for Delphi, seems equally to mark the yielding of the worshippers of Poseidon to the followers of the other gods. This is an important principle for the understanding of religious myths, but it belongs to history rather than to the present subject.

43. **Nature of the gods.**—The nature of divinity was perhaps even more limited in the Egyptian mind than it was to the Greek. The gods were not immortal: Rā grew old and decrepit; Osiris was slain. In the Pyramid texts, Orion is stated to hunt and slay the gods and to feed upon them. The gods can suffer, for Rā was in torment from the bite of a magic serpent. The gods are not omniscient; they walk on earth to see what is done; it takes time for them to learn what has happened; Thōth has to inform Rā about what he has heard, and cannot punish men without Rā's permission. Nor can a god act directly on earth; he sends 'a power from heaven' to do his bidding. The gods, therefore, have no divine superiority over man in conditions or limitations; they can be described only as pre-existent, as acting intelligences, with scarcely greater powers than man might hope to gain by magic and witchcraft of his own (cf. art. GOD [Egyptian]).

LITERATURE.—The literature is given throughout the article, especially in § 6.

W. M. FLINDERS PETRIE.

ELAMITES.—*Introductory.*—Elam, in Gn 10[22], is said to have been the eldest son of Shem. The tract occupied by the nation descended from him is a portion of the mountainous country separating the Mesopotamian plain from the highland district of Iran, including the fertile country at the foot of the hills. It is the Susis or Susiana of classical

geographers (Strabo, xv. 3, § 12; Ptol. vi. 3, etc.), and was so called from its capital, Susa (Assyr.-Bab. *Šušu* or *Šušan*, Heb. *Shûshan*). The country itself was called in Assyr.-Bab. *Elamtu* or (without the case-ending) *Elammat* (Heb. *'Elām*). The native name is given by the Assyr. inscriptions as *Anšan* or *Anzan*, also *Aššan* (*Anzhan*, *Azhzhan*), and in the native Elamite texts the kings call themselves 'of *Anzan-Šušun*' (Anzan and Susa, or Susian Anzan). Another name for the country was *Ḫapirti*. In early times two languages were current in the country—Semitic Babylonian, and Elamite, the affinities of which have still to be determined, though, from the vocabulary, Aryan roots may be suspected. As far as we can at present judge, Semitic Bab. ceased to be used officially at a comparatively early date.

Though numerous Elamite and Bab.-Elamite inscriptions have been found, it cannot as yet be said that we know much of Elamite religion. There is hardly any doubt, however, that it resembled closely that of Babylonia, influenced as it was not only by the Semitic-speaking inhabitants of Elam, but also by their Assyro-Bab. neighbours. The connexion of Elam with Babylonia probably goes back to pre-historic times, as witness the conflict of the Erechite Gilgameš with the Elamite Ḫumbaba, guardian of the stolen statue of Ištar (see *ERE* ii. 315ᵇ). From time to time, also, not only did Bab. kings rule in Elam, but Elamite rulers extended their sway over Babylonia and all its dependencies, as is stated in the Biblical account of Chedorlaomer (Gn 14).

1. From what has been stated, a true history of the Elamite religion is practically impossible. In all probability, like that of Babylonia, it was animistic in its origin, and gradually developed into a polytheistic creed. As in Babylonia, each city had its special protective deity, who, however, was honoured all over the land, and in many cases had been received into the pantheon of the neighbouring countries of Babylonia and Assyria. Thus, the patron-deity of Susa was *In-Šušinak*, identified by the Babylonians with their Ninip (*ERE* ii. 312ᵇ); *Aa-ḫupšan* was the deity of Ḫupšan; *Tišpak* (also identified with Ninip) was the deity of Dungi-Nannar; *Bêl* was lord of the neighbouring State of Ešnunnak; *Armannu* was worshipped in Rapiqa, *Lagamal* (Lagamar, La'omer) in Maur; and *Aamiltu* was 'queen of Parṣi' or Marza. Gods worshipped at other Elamite cities will be referred to farther on.

2. (*a*) The chief figures of the Sem.-Elamite pantheon were naturally those of the Babylonians —Anu and Anatu, Enlil (Ellil, Illil), and Ninlil, Ea and Damkina, Sin, Šamaš and Aa, Ištar, Merodach and Zērpanîtu, Nebo and Tašmêtu, Ninip, Nergal, Nusku, Girru, Addu or Adad (Rammānu) and Sala, Tammuz (Ištar's spouse), the *Igigi* and the *Anunnaki*, etc. (*ERE* ii. 310–313). To these may probably be added such minor Bab. deities as the son of Šamaš, *Kittu* ('righteousness'), and his minister *Mîšaru* ('justice'); *Zagaga*, one of the gods of war; *Išum*, 'the glorious sacrificer'; *Lugal-girra* and *Meślamta-ēa*, aspects of Nergal; *Ma'metu*, the goddess of fate; *Gu-silim*, 'the pronouncer of well-being'; *Uraš*, Ninip as god of planting; *Sugamuna*, explained by the Babylonians as 'Merodach of water-channels'; and many others. Though little real information concerning the Elamite gods is available, it is practically certain that many of them had their equivalents in the Babylonian pantheon, to which we owe valuable details concerning them.[1]

(*b*) The principal deity of the non-Semitic Elamites was *In-Šuš(i)nak*, called by the Babylonians *En-Šušinak*, possibly = 'the Susian Lord' *par excellence*. To all appearance he was originally the local deity of Susa. The Assyro-Babylonians identified him with Ninip, regarded as the son of Enlil, and one of the most important deities of their pantheon—indeed, he was worshipped as far west as Beth-Ninip, apparently near Jerusalem. Silḫak-In-Šušinak (*c.* 1060 B.C.) calls him 'the great lord, ruler (?) of the divinities,' 'lord of heaven and earth,' 'creator of the entire universe.' Other Elamite names of this deity quoted by the Babylonians are Laḫuratil, Šimeš, Adaene, Sušinak, and Dagbak.

Another of the great gods of the Elamites is he whose name is written with the Sumerian character *GAL*. Scheil suggests that this deity is the Bêl of the Babylonians, and associated with *Bêlti-ya*, 'my lady,' in which case this divine pair would represent Merodach[1] and Zēr-panîtu, worshipped at Babylon. From the great inscription of Šilḫak-In-Šušinak, it appears that her Elamite name was *Kiririša*, described as the lady who dominates the goddesses. This, in the Bab. pantheon, is a title of Ištar, who, however, was identified with Zēr-panîtu (*ERE* ii. 643ᵇ). The etymology of Kiririša is interesting, being apparently from the Elam. *kirir*, 'Ištar' or goddess in general, combined with Usa(n), seemingly standing for Ištar in particular (*Cun. Texts*, xxv. 18, rev. 17, 18). Zēr-panîtu, called by the Babylonians 'the lady of the gods,' has, with the name of *Nin-siš*, the explanation 'the lady of the gods, the lady of Susa.' The principal passages for the identification of the Sumerian Gala with Merodach are *Cun. Texts*, xxiv. pl. 50, 47406, obv. 12, where he is explained as 'Merodach of *kirzizi*'; but, as the document is only the 'monotheistic list' (*ExpT* xxii. [1911] 166), this identification has apparently but little value. On pl. 36 of *Cun. Texts*, xxiv. he appears as one of the *utukku*, or spirits of Bau the goddess of healing, so that there, at least, Gala was one of the minor deities.

Important as being, apparently, one of the components of the name Chedorlaomer (Gn 14¹) is the name *Lagamar*, *Laqamar*, or *Lagamal*. Except in Aššurbanipal's account of his 3rd Elamite campaign, this name always appears in Assyro-Bab. texts under the form of *Lagamal*, and his principal place of worship was Dailem near Babylon. If line 15 of *WAI* ii. 60 be rightly arranged, he was 'king of Maur,' a district probably on the Elamite border. He is described as the son (not the daughter) of Ea, and this agrees with the form, which, accepting Scheil's suggestion that it is of Sem.-Bab. origin, and means 'the unsparing,' is masculine. The *hiel* of Lagamal at Susa was restored by the Elamite king Kutir-Naḫḫunte (Scheil, *Textes élam.-anzan.* [= vol. iii. of *Mémoires de la délégation en Perse*, Paris, 1901], p. 49), who calls upon In-Šušinak to protect it.

Naḫḫunte or *Na'ḫunte* was identified with the Assyro-Bab. Šamaš, the sun-god, and was probably regarded, like the Bab. Šamaš, as the god of judgment, righteousness, and justice, as well as the god of the light of day. The Assyro-Bab. scribes mention him under the name *Naḫḫundi* or *Nanḫundi*, implying a nasal sound before the second syllable. In the list of the seven Elamite gods in *Cun. Texts*, xxv. pl. 24, *Naḫundi* appears last but one; and after the summation comes that of *Narundi*, their (the 7 gods') sister, and *Zamma-ḫundi* was *alam dua-nene*, possibly = 'their announcing image.' If Scheil's suggestion that *Naḫ-ḫunte-utu* means 'Naḫḫunte brings forth' (from the Sumerian *utu*, 'to beget') is right, Naḫḫunte may have been an Elamite god of generation. Probably, however, the name simply identified him with the Sumer. *Utu* = *Šamaš*.

[1] The boundary-stones found at Susa, which mention many Babylonian gods, were probably carried off from Babylonia by Šutruk-Naḫḫunte at the end of the 12th cent. B.C.

[1] See below, § 3.

Hadad (Assyr. *Adad*, Bab. *Addu*, also called *Rammânu* or Rimmon) seems to have been known to the Elamites chiefly by his Mitannian (Hittite) name of *Tešup*, but the Assyr. list (*Cun. Texts*, xxv. pl. 16, l. 20) gives the Elamite equivalent as *Kunzibami*, compared by Scheil with the Bab. *Kuzzubu* or *Kunzubu*, 'abundant,' or the like. With the Assyro-Babylonians he was not only the god of wind, thunder, and lightning, but also of fertilizing rain. Another Elamite name given by the same text is *Ś*(?)*iḫḫaš* (*ib.* pl. 17, obv. 40).

Ḫumban, Ḫuman, Umman. As this is a very common deity in the composition of men's names, he must have been one of the most popular of the Elamite pantheon. According to Scheil, this name is, like others, of Sem.-Bab. origin, being composed of the name Ḫum, and *ban* (from *banû*, 'to form *or* create')—'Ḫum is a creator.'[1] Ḫanni of Aiapir speaks of 'Ḫuban the great, god of the gods' (Scheil, iii. 103), and the same inscription has the divine name Ḫuban-šunkik, 'Ḫuban the king.'

The Elamite *Simut* is identified by Scheil with *Sumudu*, who appears first on the list given by Aššurbanipal of Assyria, and is immediately followed by *Lagamaru*. As Nin-uru precedes Lagamal (Lagamaru) in *Cun. Texts*, xxiv. 49, l. 4, and xxv. 1, l. 14, Scheil suggests that Simut or Sumudu and Nin-uru are the same. If this be the case, Simut was a goddess, spouse of *Guanna-si-ila* or *Uraš*, the god of planting (*ExpT*, 1911, p. 165), among the Sumero-Babylonians.

Ḫišmedik and *Ruḫurater.* These are apparently two male deities, not a male and a female (Scheil, iii. 19). The variant *Išmetik* leads Scheil to suggest that the former may be a corruption of the Sem. *Ištemik*, '(the god who) hears thee.' Similar names occur in Babylonia, and another in Sem.-Elamite is *Išni-* (for *Išmi-*) *qarab*, 'he has heard the prayer.' Scheil points out that *Ruḫurater* is probably the *Laḫuratil* of *WAI* ii. 57, 43 *cd*, where it appears as one of the names of Ninip in Elam, as stated above.[2]

Noteworthy among the goddesses is *Belala*, who, as Scheil points out, is the *Bilala* of Aššurbanipal, vi. 41. She is possibly the *Bulala* of *WAI* ii. pl. 60, l. 27, where the city which stands opposite her name is Ubasu. The nearest name in Sumer.-Bab. is *Belili* or *Belili-alam*, spouse of *Alala* or *Alala-alam*, two of the numerous male and female personifications of the heavens (Anu and Anatu). *Belili* appears as the sister of the sun-god Tammuz, who was probably as well known to the Elamites as to the Babylonians.

The common Elamite name for 'god' was *nap*, which was borrowed, to all appearance, by the Assyro-Babylonians. Whether there is any significance in the fact that *nap* is the character for 'god' doubled, is uncertain, but, if admitted, its fundamental principle would seem to be dualistic —probably male and female. In *Cun. Texts*, xxiv. pl. 39, l. 10, *Nap*, as the name of a deity, is explained as *Enlil šamê*, 'Enlil of the heavens,' the name of Enlil being written with the character for 'old'—as though 'the ancient.'

Whether this root has anything to do with the *Napratip*, a group of deities (Scheil) to whom a temple, restored by Untaš-*GAL*, was dedicated, is uncertain. Scheil regards *Napratip* as being the *Napirtu* of Aššurbanipal, vi. 43, and prefers a Sem. etymology, namely, *napiru*, 'covering,' 'protecting,' or the like. The occurrence of *Napiram*, in the same text with *Šadi*, 'my (protecting) mountain'—names which he quotes—seems to bear upon the Median mountain of *Nipur*, where the ark was regarded as having rested, and suggests a reason for the temple named *Ê-kura*, 'the house *of the mountain*' at the Bab. *Nippur*. In the Assyrian list of native and foreign deities (*WAI* iii. pl. 66, rev. 10*d*) the apparently Elamite *Napriš* occurs, and is immediately followed by 'Nergal of *Ḫupšal*,' which is, as Scheil states, the Elamite *Ḫupšan*.

3. Noteworthy among the figures of deities derived from Elam are the reliefs on the Babylonian boundary-stones of the Kassite period, by means of which the emblems on those monuments have been identified. It is now known that the emblem of Merodach was a spear—perhaps that with which he slew the dragon of Chaos; that Nusku was represented by a lighted lamp, similar to the Roman; that a stock terminating in an eagle's head was the god Zagaga (Zamama); that a seated female figure represented Gula; and that a thunderbolt stood for Addu or Hadad. A variant showing Merodach's spear-head surmounting a kind of house set on a dragon is described as Merodach combined, apparently, with the name of the god *GAL*, confirming what has been said (p. 251[b]) as to the identification of these two deities. The above, with other emblems, were probably used by the Elamites as well as by the Babylonians.

4. Concerning the Elamite gods, Aššurbanipal, the Assyrian king, in his cylinder-inscription above quoted (Rm. 1, col. vi. lines 27 ff.), gives some interesting details. The *ziqqurat*, or temple-tower, of Susa was built of enamelled brick imitating lapis-lazuli, the sacred stone of the Assyro-Babylonians, and evidently also of the Elamites. This his soldiers destroyed, as well as the pinnacles of bright bronze apparently attached to it. Šušinak, the god of their oracle, dwelt (he states) in a secret place, and no one ever saw the work (workmanship, form) of his divinity. Six deities, Sumudu, Lagamaru, Partikira, Amman-kasipar, Uduran, and Sapak, were worshipped only by the Elamite kings, and (the statues of) these, together with 12 others—Ragiba, Sungam-sarâ, Karsa, Kirsamas, Šudânu, Aapaksina, Bilala, Panin-timri, Sila-garâ, Napsâ, Napirtu, and Kindakarpu—with their priests and property, were carried off to Assyria. After this come references to the winged bulls and genii of the temples, and the guardian wild bulls (*rêmê*) protecting the gates of the shrines. There were also sacred groves—secret places—into which no stranger penetrated, and the burial-places of the kings. That the Elamite kings should have had their own deities presupposes a dynasty in early times which did not belong to the same district as the people over whom they ruled, resulting in the establishment of two pantheons, afterwards more or less united.

LITERATURE.—See especially P. V. Scheil, *Textes élamites-sémitiques* (*anzanites*), 1900 ff. (vols. ii.-vi., ix., etc., of de Morgan, *Mémoires de la délégation en Perse*); and cf. also A. H. Sayce in *ExpT* xii. (1900–01) 155 f. and xiii. (1901–02) 65; and art. 'Elam,' in *HDB* and *EBi*.

T. G. PINCHES.

ELDER (Buddhist).—Certain members of the Buddhist Order took rank as elders, and, as such, had considerable weight in the management of its business, and in the preservation of the doctrine. It was not, by any means, all the seniors in the Order who were technically so called, though the word 'elder' (*therā*) is occasionally used in its ordinary sense of such members of the Order as were of longest standing in it (*Aṅguttara*, i. 78, 247). Four qualities are mentioned as making a man an elder, in the technical sense. These are: (1) virtue; (2) memory and intelligence; (3) the practice of ecstasy; (4) the possession of that emancipation of heart and mind which results from the rooting out of the mental intoxication arising from cravings, love of future life, wrong views, and

[1] The Assyro-Bab. lists contain a god *Ḫumba* or *Ḫumma*, who, with *Ḫadaniš* (possibly Elamite), is described as one of the spirits (*utukku*) of the Nippurite temple *Ê-kura*.

[2] In the proper name *Šamši-Ruḫurater*, 'my sun is Ruḫurater,' there is probably no identification of this deity with Šamaš, the Bab. sun-god.

ignorance (*Aṅg.* ii. 22; no. 4 in this list, it should be noticed, is the stock description of an *arahat*).[1]

The number of those who were thus entitled to be called elders is not given as very large.[2] There is a frequently repeated short list of the most distinguished amongst them, 'the elders who are disciples' (*therā sāvakā*). The full number is twelve, and their names usually follow one another in the same order. They are (1) Sāriputta, (2) Moggallāna, (3) Kassapa, (4) Kachchāna, (5) Koṭṭhita, (6) Kappina, (7) Chunda, (8) Anuruddha, (9) Revata, (10) Upāli, (11) Ānanda, (12) Rāhula. But the lists are not consistent. Sometimes one, sometimes another name, especially of those at the bottom of the list, is omitted; and there are slight variations in the order. It is quite clear that neither the number nor the names were fixed at the time of the earliest tradition (*Vinaya*, i. 354–55, ii. 15, iv. 66; *Aṅg.* iii. 299; cf. *Majjhima*, i. 212, 462).

In one passage (*Aṅg.* i. 23–25) we have a much longer and very interesting list of those members of the Order who were disciples (*bhikkhū sāvakā*), specifying after each name the good quality or mental expertness in which the Buddha had declared him pre-eminent. Forty-seven men and thirteen women are mentioned, and Buddhaghoṣa (*q.v.*), in his commentary on the passage, calls them all 'elders.' All the twelve disciples except no. 7 recur in this list, and are said to be pre-eminent respectively in the following ways—that is, according to the order of the names given above: (1) in great wisdom; (2) in the powers of *iddhi* (*q.v.*); (3) in discussions as to extra (optional) duties; (4) in power of expanding that which has been stated concisely; (5) in the fourfold knowledge of the texts—the knowledge of their philological meaning, of the doctrine they contain, of the derivation of words and ideas, and, finally, in the power of extemporary exposition of them; (6) in ability in exhorting the brethren; (7) not mentioned; (8) in inward vision; (9) pre-eminent among those who dwell in the forest; (10) the best of those who knew the canon law; (11) the most distinguished among those who learned the texts, who were self-possessed, whose conduct was right, who had moral courage, and who were of service to others; (12) the best among those of the brethren who were willing to learn.

There is a touch of historical probability in the fact that no better distinction could be found for no. 12, who was the Buddha's only son, than that he was willing to learn. And, when we notice that only one or two of the whole sixty in this list were among the first disciples to be admitted to the Order, so that there were many others senior to them, we must conclude that the title 'elder' was more dependent on other qualities—such qualities as are given in the list, and in the passage quoted above—than on the mere fact of seniority in the community. Even in the *Vinaya* (the Rules of the Order), in which, as a general rule, so much weight is laid on precedence by seniority, we find the word 'elder' (*therā*) used in this technical sense (*Vinaya Texts*, i. 228, ii. 17, 61, 237 [*SBE* xiii., xvii.]).

It is sufficiently clear how this happened. In the ordinary meetings of the local chapters administering the affairs of the Order, the senior *bhikkhu* present (reckoning not by age, but by the date of ordination) presided, and the members present were seated in order of such seniority. But, when it came to talking over questions of ethics and philosophy, or discussing details in the system of self-training based on psychology and ethics, something more than seniority was required.[1] A certain number of the brethren became acknowledged as leaders and masters in these subjects. Their brethren called them 'elders' as a courtesy title. There was no formal appointment by the Order itself, or by any external authority; nor is there any evidence that a *bhikkhu* became a *therā* merely by age, or by seniority in the Order.

So far had this secondary and special meaning of 'elder' driven out the etymological meaning that it is the only one dealt with in Dhammapāla's exposition of the word at the beginning of his commentary on the *Therā-gāthā*; and the unknown commentator on the *Dhammapada*, in his explanation of the word at verse 261 (see above, note 1), actually derives *therā*, by a fanciful and exegetical, not philological, argument, from *dhīra* in the sense of 'having moral courage.' The canonical Buddhism contained in the Pāli texts was called, in the tradition, the *Therā-vāda*, that is, 'the opinion of the *therās*,' where the word is again used in the secondary sense, and refers especially to the *therās* who held the First Council (see Childers, *Pali Dict.*, 1875, *s.v.* 'Vāda').

In one passage we find the phrase *Saṅgha-therā*, that is, 'the elder of the Order.' The present writer has translated this (*Vinaya Texts*, iii. 404) by 'the eldest Therā (then alive) in the world.' This is probably right, as the number of years of his standing in the Order is immediately added. But it may also mean 'the most distinguished and venerable of the then living Therās.'

The Buddhist elders had no more authority in the Order than such as followed from the natural deference paid them for their character and accomplishments; and they had no other authority over laymen. Such slight discipline as was customary was carried out, not by the *therās*, but by the local chapters (see DISCIPLINE [Buddhist]). The *therās*, as such, had no special duties or privileges in connexion with the temporalities of the Order.

In mediæval and modern times, the kings of Ceylon, Burma, and Siam have from time to time recognized some distinguished *bhikkhu* as Saṅgha-therā; and quite recently the English Government in Burma has followed their precedent, though it left the choice of the *bhikkhu* to be so distinguished to the local Order in chapter assembled. The title *therā* is still used, in these three countries, of any *bhikkhu* of distinction. There is still, as in olden times, no formal grant of the title. In other Buddhist countries it has fallen out of use, and even in these three it is used mainly, though not exclusively, when writing or speaking in Pāli. The modern native languages have other terms, such as *nāyaka*, 'leader,' which tend to take its place.

LITERATURE.—The references to the texts are given in the article. The question has not been hitherto discussed by European scholars. T. W. RHYS DAVIDS.

ELDER (Semitic).—I. Connotation of the term.—The importance of the 'old men' or 'elders' was a natural development of the authority of the head of the family, and of the reverence felt for parents and for the aged in primitive times. Note the position assigned to Abraham, Isaac, and Jacob in all the documents of the Hexateuch. The reverence due to parents and to the aged is a favourite theme of both the OT and the NT; *e.g.*, Eliphaz the Temanite is confident, because 'with us are both the grayheaded and very aged men' (Job 15^{10}); and in Sir 3^{3} 'He that honoureth his father maketh atonement for sins' (cf. Pr 30^{17}, Mk $7^{10ff.}$ etc.).

[1] So at *Dhammapada*, verse 261, an elder is defined as a man in whom there is truth and religion, kindness, self-command, and training.

[2] There is an anthology of verses ascribed to elders, both men and women, included in the canon under the title, *Therā-therī-gāthā*. It contains poems of 263 male and 74 female poets. *Therās* are also often mentioned in the various episodes in the other books, but most of them occur among the above 337.

[1] The same difficulty was felt when the *bhikkhu* presiding at a chapter had to recite the Pātimokkha. If he could not do so, a junior *bhikkhu*, who could, took his place (*Vinaya Texts*, i. 267).

Similarly in the Code of Ḥammurabi (*e.g.* § 195) severe penalties are prescribed for those who fail in respect and duty towards parents.

Here, therefore, we have one of the many cases where a word in common use acquires a technical meaning while its ordinary meaning still persists, so that a difficulty may arise as to whether it simply means an old man or an 'elder' in the technical sense. Very early there must have been many old men who were not 'elders,' although all 'elders' would be old. Later on, an 'elder' came to mean simply a chief, usually mature or elderly, not necessarily old. There might be shaikhs, just as there are aldermen, in the prime of life; Presbyterian elders are not always old.

Amongst the nomad Arabs there is one supreme shaikh for a tribe, but there is also a *Diwān*, or council of shaikhs. In the OT, the 'elders' almost always, if not invariably, appear as a group or council; and the Heb. term *zākēn* in the technical sense is used in the plural.[1] Is 3^{2} 9^{15} are not real exceptions even if *zākēn* means 'elder' in these passages, for the word in each case is collective. Gn 24^{2} (cf. below) seems a real exception; but possibly *zākēn* here means 'senior' and not 'elder.' Gn 43^{27}, taken alone, might be 'your father, the shaikh,' but this is unlikely in view of the stress laid in 44^{20} etc. on the advanced age of Jacob.

In primitive society the head of a family or clan, like the captain of a ship, would discharge many functions which are assigned to separate individuals in a more advanced civilization. He would be leader in war and peace, priest, judge, often the repository of, and chief authority on, tribal tradition, and possibly doctor. It is natural, therefore, that, as society developed, the title 'elder' or 'shaikh' was sometimes borne by various people in authority and by the members of different professions. Thus in the OT we read not only of elders of cities, tribes, etc., but also of Eliezer as the 'elder' of Abraham's household (Gn 24^{2}), of the elders of Pharaoh's household (Gn 50^{7}), of the elders of David's household (2 S 12^{17}),[2] of the elders of the priests (2 K 19^{2}, Is 37^{2}, Jer 19^{1}).

In later Judaism, *zākēn* is a scholar or teacher of Rabbinical law, and the synonym *ṣîbh* is used in the same sense.[3] Amongst the modern Arabs 'shaikh,' or 'elder,' is used with a wide variety of meaning.[4] It has, of course, the familiar meaning of leader of a tribe; the name is also applied to the heads of the great Muslim sects, to the magistrates set over districts of a city, and to the chiefs of various trades and industries, and even of thieves. A professional devotee, or 'saint,' is also called a shaikh, and the title is also borne by priests[5] and schoolmasters, the title 'shaykah' being given to a female teacher.

Thus the 'elders' or 'shaikhs' would be of very different degrees of importance. In the OT, where we nearly always find them acting in groups, and not as individuals, we have the elders of a district or city (1 K 21^{8}), of a tribe (Gilead, Jg 11^{5}; Judah, 2 S 19^{11}, 2 K 23^{1}), and of Israel (1 S 4^{3} etc.). If we may regard Succoth as typical, the elders of a country town were fairly numerous, and probably included the heads of all families of any standing, for we read that in Succoth there were 77 princes and elders (Jg 8^{14}).

Both the name and the institution of 'elder' or 'shaikh' were wide-spread; we find them not only in Israel, but in Egypt (Gn 50^{7}); amongst the

Canaanites (Jos 9^{11}); Moabites and Midianites (Nu 22^{7}); and at the Phœnician town of Gebal (Ezk 27^{9}). According to Winckler, one of the Amarna letters[1] is from Irkata, a Phœnician city, 'and its elders.'

The available evidence suggests that the quasi-patriarchal authority or influence associated with the term 'elder' usually existed at an early stage of social development. Robertson Smith, for instance, speaks of 'the senates of elders found in the ancient states of Semitic and Aryan antiquity alike.'[2] Probably in some cases persons corresponding to elders or shaikhs bore titles not derived from a root meaning 'old,' more especially later, when 'elder' had become a technical term equivalent to 'chief' or 'counsellor.' Thus it is often suggested[3] that the Canaanite noble, met with in Egyptian inscriptions, and referred to as *marna*, 'our lord,' corresponded to the Israelite elder.

Nevertheless, the title 'elder' for a person of authority, learning, or other distinction continues to this day. The Gr. *γερουσία* and the Rom. *senatus* are still represented by the 'senates' of modern States and Universities. The elders can be traced through the whole history of Israel and Judaism; the title and the office were taken over by Christianity, and are still found in priests, presbyters, and elders; and modern Semites still have their shaikhs.

On the other hand, it seems probable that various other titles are synonyms of 'elder'; we have already referred to the Syr. *marna*, and may note also the N. Sem. *malk* (see below). In Hebrew there are many titles more or less synonymous with *zāqēn*. The interchange of terms in the narratives of Gideon and of the relief of Jabesh-Gilead by Saul suggests that *'îsh* in the sense of 'householder' or 'head of a family' may be such a synonym.[4] Then there are *rā'shê hā'ābhôth*, 'chief fathers,' heads of the clans (Nu 36^{1}); the 'prince' or 'captain,' *nāsî'*, the head of the tribe (Nu 2^{3}); the chiefs or, lit., 'corner-stones' of the people, *pinnôth hā'ām* (Jg 20^{2}, 1 S 14^{38}); and, in Ex 24^{11} only, the *'ăṣîlîm*, 'nobles,' of the Israelites.[5] Other terms for chiefs, rulers, officials, such as *sārîm*, *ḥōrîm*, *s^egānîm*, seem sometimes equivalent to 'elders.' *Z^ekēnîm* is also coupled with *rā'shîm*, 'heads,' *shōph^eṭîm*, 'judges,' *shōṭ^erîm*, 'officers,' to make up a description of the leaders (Dt 29^{10} 31^{28}, Jos 8^{33}). Probably these terms are partly synonymous. But 'father' in such phrases as 'father of Tekoa' (1 Ch 2^{24}) means 'founder' rather than 'chief.'[6]

2. History of the institution.—In early times, *e.g.*, in Israel in the nomadic and pre-monarchical periods, the position of the elder corresponded with that of the shaikh amongst the modern Bedawin. He was the head, or one of the heads, of his family, clan, village, or district; the leader in war; the chief counsellor in war and peace; the arbitrator in disputes; but his power was moral, and depended on the force of his personality; he could advise but not command, persuade but not coerce.[7] As Doughty says, 'The sheykh of a nomad tribe is no tyrant'; 'the dignity of a sheykh in free Arabia is commonly more than his authority.'[8]

According to Doughty, the office of supreme shaikh descends by inheritance. McCurdy,[9] however, quotes authorities to show that the office was rather elective, seldom remaining in the same

family for four generations. No doubt customs differed; the application of the hereditary principle would depend on the qualifications of the heir, and it would sometimes be modified by election within a given circle. Thus, amongst primitive nomads, the elders or shaikhs represented three different kinds of influence or authority: that of the father or head of the family—patriarchal; that of 'age or reputed wisdom'—personal; that of a legitimate government—official. These three were not necessarily associated in the same persons in the more advanced and complex social order of agricultural and city life; the title 'elder' attached itself often to the office apart from age or hereditary right. At the same time, the status and character of the elders were not always or altogether changed by the abandonment of nomad life. McCurdy states[1] that the habits and relations of the old patriarchal life were not discarded in the permanent institutions of the fixed settlements. The influence of the patriarchal system can be traced in the establishment and regulation of the Semitic cities; and we may find there a reproduction in type, if not in name or in detail, of the essential elements of the old tribal government. Throughout the N. Sem. realm the simple constitution of the city or State included a head, *malk*—a name corresponding with the Heb. *melek*, 'king'; a circle of nobles or 'great men'; and the general body of the common people. The *malk* and the 'great men' were usually hereditary. As the word *malk* in Aramaic is lit. 'counsellor,' McCurdy suggests that the *malk* was originally the chief elder of the clan which founded the settlement.

We have already pointed out that the title 'elder' persisted through the whole course of Jewish history; and it is a familiar fact that, within certain limits, the paternal authority was equally persistent.

Nevertheless, the changed conditions gradually modified the social life. The family remained the unit, but the group of families, the kindred, the clan more or less gave place to the community of the district, village, or town.[2] The fixed home, the regular cycle of agriculture, involved a more stereotyped social life, a greater authority on the part of the local chiefs. In Israel, for instance, as we have said, the elders appear in groups, each group forming the ruling council of a district, city, tribe, or even of the nation. Apparently, local government always remained largely in the hands of the elders,[3] though, with the development of society, there was a differentiation of offices; and other notables—priests, judges, military leaders—shared the authority of the elders. In Arabia there is sometimes the *ḳâḍi*, or judge, side by side with the shaikh.

The rise and increase of the royal power further limited the authority of the elders, by the interference of the financial, military, and judicial activity of the king, his ministers and representatives. We may summarize what can be gathered from the earlier documents as to the elders in Israel under the 'judges' and the monarchy.

In the history of the Exodus in JE,[4] we frequently meet with the 'elders of Israel' or 'of the people,' as associated with Moses in the leadership of the people, or as intermediaries between him and the people (Ex $3^{16.18}$ 4^{29} 12^{21} $17^{5.6}$ 19^7 etc.). In Ex 18^{12-27} [E], Moses, Aaron, and all the elders of Israel entertain Jethro; and Moses by his advice appoints 'heads over the people, rulers of thousands, rulers of hundreds, rulers of fifties, and rulers of tens.' It is not clear how far we have here an organization and supplementing of the elders, or how far this is meant to be an independent, parallel set of officials. In Nu 11^{24b-30} [from an early source not certainly identified], seventy elders are associated with Moses in his prophetic inspiration. There is no mention of elders in E's code, the Book of the Covenant (Ex 20–23), but there are 'judges' (21^{22}). We meet with the 'elders of Israel' or 'of Judah' at intervals throughout the history (Jos 7^6, 1 S 4^3, 1 K 8^1; in D, Dt 27^1;[1] Ezk 14^1 [during the Exile], Ezr 6^{7-14}, 1 Mac 12^6 *γερουσία*, 14^{20} *τοῖς πρεσβυτέροις*), associated with the high priest (cf. Mt 21^{23}). The members of the Sanhedrin were called 'elders,' *zᵉkēnîm*.[2]

This body of 'elders of Israel' exercised great influence in the early monarchy; they command the army (1 S 4^3), demand a king from Samuel (8^4), and confer the kingdom (2 S 5^3). They are less prominent in the later monarchy, power falling more and more into the hands of the royal ministers and officials (1 K 4), but become important again in and after the Exile; and, finally, the Sanhedrin claimed to represent the 'elders of Israel,' more especially the 'seventy elders' associated with Moses. In the 3rd cent. A.D., R. Joḥanan says that the members of the later Jewish council, the *Bêth-dîn*, must be 'tall, of imposing appearance, and of advanced age; and they must be learned, and must understand foreign languages as well as some of the arts of the necromancer.'[3]

We have seen that, over against the 'elders of Israel' we have the local elders of a city or district, who are the local authorities of whom we hear most. For instance, the elders act on behalf of Succoth (Jg 8^{14}) and Gilead (11^5). In the legislation of D the elders are prominent as the local authorities; they deliver up the murderer for punishment (Dt 19^{12}); they represent their city in the ritual for the expiation of murder by an unknown hand ($21^{2ff.}$); the disobedient son, the wife charged with infidelity, and the man who refuses to marry his deceased brother's widow are brought before them ($21^{19ff.}$ $22^{15ff.}$ $25^{7ff.}$, cf. Ru $4^{2ff.}$). After the Exile we have the 'elders of every city,' in Ezr 10^{14}.

On many points we have no express information as to the elders. We are told nothing as to their qualifications, and very little as to their rights, privileges, authority, or duties. Probably throughout the history the local elders were the heads of the leading families; but it is not clear who the 'elders of Israel' were. They may have been in theory a gathering of all the local elders, and in practice a gathering of such as were able or inclined to be present on a given occasion. If so, the elders of a district would usually be represented in proportion to their proximity to the place of meeting. If we read anywhere of *the* elder or shaikh of a town or district, we might think of the 'elders of Israel' as being made up of such district elders, but the latter do not appear in our documents. It is, nevertheless, possible that the 'elders of Israel' formed a national council with a comparatively small number of members, each with a definite official status, acquired by inheritance, or some principle of selection or election.

As to number, the Sanhedrin (*q.v.*) comprised about seventy, perhaps because seventy elders are mentioned in the account of the Exodus; but these are seventy *out of* the elders (מִזִּקְנֵי יִשְׂרָאֵל), implying that the total was much greater (Ex 24^1, Nu 11^{16}). Seventy-seven 'princes' and 'elders' are mentioned at Succoth.

Probably the authority of the body of elders, whether local or national, was largely of the same undefined character as that of the shaikh of an

Arab tribe (see above). It was liable to be set aside by that of the king or any leader of an armed force, and it depended largely on the personality of the elders and the extent to which they represented public feeling.

A combination of our various pieces of evidence, Babylonian, Israelite, Arab, etc., suggests lines of development which are probably typical for the Semitic peoples generally. We have first the shaikh or shaikhs of a nomad tribe, then the elders of a town or district in a settled community. These furnish in some way a council of elders for an entire State. In a more advanced stage of social development the influence of the elder is subordinated to that of royal and other officials, but the elders long persist as a local institution, and recover much of their importance in such crises as the Captivity of Israel. On the other hand, the term 'elder' or 'shaikh' sometimes lost its original meaning, and came to be used for a chief of any kind.

ELEATICS.—See PHILOSOPHY (Greek).

ELECTION.—1. **Definition.**—Election is a purely religious idea, originating in an interior necessity of the spiritual life, as the natural explanation of the source of its saving impulses. The movement in the soul against sin is directly traced to a cause supernatural to the sinner. Righteousness is never an ordinary thing, or a common privilege that may be ranked beside others. It is laid to the responsibility of God, whose peculiar work it is. And, as it is of His inception, its continuance and successful fruition likewise are by His agency. It began with Him, and He will perfect it, by that faithfulness which, if it be too strong to describe it as 'irresistible grace'[1]—the compulsion of sovereign might—is indeed the pertinacity of unwearied love, of strong, wise, unerring Fatherhood over erring, weak, and foolish childhood. This is the very nerve of the doctrine in all the stages of its growth. The free return of man to God springs from the passionate communication of God to man. Election is the antecedent to revelation.

Election is to be distinguished from predestination (*q.v.*), with which it is at times confounded. The terms are not synonymous (for election, Heb. בָּחַר, Gr. ἐκλογή; for predestination, יָעַץ, יָצַר, Gr. προορίζω), nor is their connotation identical. The idea of predestination runs through Scripture, if that idea be understood in the sense of the all-creating, all-controlling activity of God over and in and through all things, but it is in no respect so central and essential to the revelation of His redemptive purpose as the idea of election. They are, however, closely related. Predestination has reference to the all-embracing, comprehensive design of the Divine will in all its work—creation, providence, salvation; election refers to the special application in redemption. Again, while predestination and election embrace speculative and religious contents, they retain them in different proportions; predestination being the more speculative, election the more religious. The problems of the former arise first in the reflecting stages of religious development, when an answer is required to the question, 'How is the individual related to the universe?' Election is not due to the philosophical instinct; it is an affirmation of the religious consciousness, expressing its certitude of the Divine, and therefore objectively valid, foundation of its religious experience. It meets the interior anxieties of the soul for saving grace. The discussion of predestination belongs to theodicy, of election to dogmatics. Further, the doctrine of election is Biblical and theistic. It occupies a foremost place in the Scriptures of both the OT and the NT. It derives its meaning and force solely from the system of revelation they record. It is grounded in the insistent conviction of the saved soul that salvation is derived from God. It is inconsistent with any view of the Divine Being which denies His personality and the beneficent character of His relation to men. It implies the reality of man's alienation from God, his sinfulness, his inability to work out his own salvation, and looks to the mercy of God to manifest a way of escape from sin and of return to Himself in reconciliation. It is thus also the presupposition of His gracious operation in the hearts of those who believe, prescribing its method and determining its result. Its definition can be gathered only inductively from the Scriptural data and believing experience, where alone we have the actual facts as they are presented in the history of His elect servants. Few doctrines have suffered so much from neglect of this consideration. Its treatment has been constantly vitiated by the intrusion of associations extraneous to its vital character and the Biblical premisses, and prejudicial to its truthful exposition. What these last are must be discovered in accordance with the canons and principles applicable in all doctrinal formulation, viz. the gradual evolution of the idea, the close connexion with the history of events, the emergence into ever-increasing purity and universality, and the fulfilment with self-consistent and complete form in Christ, 'the Elect One'[1] (Lk 9^{35}).

2. **Systematic statement.**—(*a*) The systematic presentation of election may begin with *its source in the Divine love.* God is Love. Love is His nature. It is to be viewed not so much as one of His attributes—it is the one quality concerning which it is predicated of God that He *is* (1 Jn 4^{8})—but rather as the Divine constitution in which all the attributes are combined. It is the substance of His character, regulating the relationships within the Godhead. It is also regulative of His relation towards His creatures, including mankind. It is possible to trace God's righteousness, faithfulness, mercy, and justice to love as their foundation and essence. But, even where this conception of the Divine nature appears untenable and love is viewed as an attribute, all other attributes must be regarded as reconcilable with love. Whether essence or attribute, the love of God is the fountain of His electing grace. On the former hypothesis, it is more manifestly so; on the latter, God's love is liable to be subordinated to His glory identified with His righteousness or holiness, and a moral severity, inspired by ideas of earthly sovereignty and justice, is infused into His gracious acts, so absolute as to rob them of tenderness, compassion, and beneficent efficacy. Where this procedure is followed, election is, as a rule, described as an act of the Divine sovereignty—the Calvinist tendency.[2]

Although, under stress of criticism, every suggestion of caprice or arbitrariness is properly excluded from the idea of sovereignty, and its exercise is asserted to be conditioned by the Divine Attributes, it is, nevertheless, the case that love is conceived by Calvinism as a constituent of holiness, possessing but slight constraining force, and powerless to furnish those motives of the most persuasive sort that are requisite to enable sinful men to succeed in the work of salvation, *i.e.*, in exercise, sover-

[1] Calvin's phrase, as it was Augustine's.

[1] This is usually regarded as the genuine reading.

[2] Cf. Shedd, *Dogmat. Theol.*, 1889–94, i. 424; Cunningham, *Hist. Theol.*, 1863, ii. ch. 25 (where also the sphere of Divine sovereignty is argued for as the sphere of Divine mercy); Candlish, *Fatherhood of God*[5], 1870.

eignty is more judicial and retributive than gracious and salutary. Nor, on this view, has philosophic Calvinism yet offered an adequate rationale of the origin of election. It seeks refuge in mystery. It is forced to look for God's ultimate reasons for His acts in a sphere inaccessible to human understanding—'He has sufficient reasons secret to us.' Doubtless; but that is reasoning on abstract principles, and not from His actual procedure, His manifested nature and character. The Scriptures give no hint of such secret resort. There the goodness of God is exhibited as revealed in its highest exemplification in redemption, wherein He seeks to win sinners from their depravity to His own life of holiness and happiness, and Himself supplies the means whereby they attain those blessed ends. In that work mere justice has no concern. God is just; and, while the punishment of the sinner who clings to his sin is in accordance with justice, the notion of distributing to every transgressor exactly what he deserves is a different matter; the notion that the justice of God, or the claims of His law, must needs be satisfied by the sinner's endurance of punishment, is an un-Scriptural notion. God is not a Shylock. The punishment for sin administered by His righteous love has quite other motives. It is a means to an end. His holiness is a constituent of His love—not love a constituent of His holiness. His righteous love desires for the sinner his highest good, the Divine life itself, a holy displeasure against sin, a sincere penitence for participation in sin, a separation from its unholy influences, and liberation from the penalties incurred by yielding to them. This desire is the permanent condition of the heart of God towards sinful man. His attitude towards men and His activity on their behalf are directed by this desire. It prompts Him to His methods for its satisfaction. It precedes and creates the evil-doer's repentance. It provides the means enabling God to surrender His resentment. It leads to His self-sacrificing effort to regain men, and restore them to a better state of mind and heart. The desire issues from love. That love is conditioned by nothing in God that can act as a restraint on its exercise or hinder its operation. Holiness is its centre. But holiness enters in to hold it to the right thought of what is to be imparted, and to the right means of imparting it. The Divine mercy and righteousness are not antitheses, and need no reconciliation; they spring from the same root in the Divine love. Calvinism has high merit in having vindicated God's nature, as the source of election, against the claims of man's works or faith; for grace is the free and undeserved gift of God's love. But Calvinism fails in its analysis of the Divine nature. Modern theology here abandons its guidance; sees in the dispensation of grace something higher than a dispensation of justice; and, in the glory of God for which it works, the good of His creatures; and ascribes to the Divine Personality, as its most essential and fundamental content, a holy compassion, whose most imperative necessity is to seek the salvation of all men[1] (Jn 3^{16}, Ro 3^{22}, 1 Ti 2^{4} etc.).

(*b*) The idea of election is *progressively unfolded in the history of redemption*. It pervades both the history and the prophecy of the OT. The story of the Hebrews is the story of Divine grace striving against human sin. It begins with the promise of restoration made to primitive man after his fall (Gn 3^{15}), the appreciation of Abel's sacrifice over Cain's (4^{4}), and the rescue of Noah from the Flood (ch. 6). It takes more definite shape in the calling of the patriarchs, Abraham (12$^{1-3}$ 13$^{14-17}$ 18^{18}), Isaac (26$^{2-5}$), Jacob (28$^{13-15}$ 46^{3}), Judah (49^{10}), and Joseph (45^{7} etc.)—a calling which detached them from their heathen surroundings, and impressed upon them, and, through them, on the race that was to spring from their loins, the ineffaceable stamp of their separateness. In the promises made to them, and in the so-called Blessing of Jacob (Gn 49), we possess the earliest testimony to the nature of the hopes inspired by the Divine choice. It was an election to *blessing* and *influence*: 'I will bless thee, and in thee shall all the families of the earth be blessed' (Gn 12$^{2.3}$).

The patriarchs were made to understand that God was with them, directing their destiny, and through their instrumentality fulfilling His purpose of goodwill to the peoples. The blessing they were to receive and bestow was of material good. The warrant for their conviction rested in the Divine covenant, whose corroboration was recognized at once in outward event and inner assurance. To the minds of the patriarchs the facts of their lives pointed plainly to this one unmistakable inference. A Divine order is discerned in their troubled lives, wherein even the evil was made subservient to the Divine plan. Their narratives close with the intensest faith in God's goodness to their race. All their experience was solely of God's favour and in pursuance of His own counsel. His counsel, however, is not inscrutable; it is a counsel of blessing (32^{26} 43^{14} 48^{4}) and help (48^{15} 49^{25} 50^{20}), first to the chosen people and, through them, to all peoples.

A fresh stage was introduced by Moses. He laid the foundations of a civic and religious polity creative of a sense of *corporate* or *national individuality*, based on the election of Israel by Jahweh to be His chosen people. A new covenant was established, with the object of nurturing a new spirit, under a new and more exalted conception of God's name. The ritual and moral ordinances were designed to educate this consciousness. They imparted a unity of feeling and sense of benefit and of responsibility—but not in themselves, for they were merely the institutions of the neighbouring peoples; the new enrichments were to be traced to the new name of Jahweh (Ex 3^{14}). Israel's God was never a reflexion of the national spirit; the national spirit received its impress from His image. Jahweh was the framer of Israel, and the mould in which He cast it was that of His own nature. Its institutions had little in them that was peculiar; what gave them meaning, transfiguring them and rendering them serviceable media for conveying Israel's formative influence, was anterior to them—the revealed name of their God. Corresponding to Jahweh must be His people; that was the substance of Mosaism. To produce that correspondence, and to realize its specific obligations, was the task of Mosaism. Henceforth the idea of election comprises both concepts. With the Divine goodness rests the credit. The signal proof of it was the deliverance from Egypt. Jahweh sends His servant Moses. He is compassionate. He spares the people and averts His judgments. His chastisements witness to the same; they are the inflictions of solicitous care and guidance. Individual election to specific service is not lost sight of, as, *e.g.*, in the consecration of one tribe to discharge priestly duties, and in the nomination of persons extraordinarily gifted to exercise their gifts in the common interest. It is, however, national and political election for which Mosaism stands.

Throughout the monarchical period significant modifications appear. They are associated, first, with the foundation of the theocratic kingdom, and, next, with the progress of prophecy. The conception of the king as the 'Lord's anointed' (1 S 16^{13}) powerfully influenced expectation in the direction of a more *personal*, *spiritual*, and *universalist* interpretation. The anointing set forth the visible embodiment of the true relation between the chosen and God. The true king was God Himself; but He appointed another to rule for Him. He stood to His substitute in the most intimate connexion. Nothing less was involved in the solemn transference of the title 'son' from Israel to Israel's king than the assumption that henceforth the holder of the promised sovereignty was to be an individual of the reigning house.

It is not easy to fill up the outline of the 'son' with its just content. But, under the teaching of the prophets, it may be held to include similarity of nature, closeness of fellowship, identity of aim, unity of honour, and heirship. 'Thou art my Son'—likeness; 'Ask of me, and I will give thee the heathen for thine inheritance'—universal sway (Ps 2$^{7f.}$). Both ideas are embodied in material form, to begin with, in the king; and become the starting-point of what is sometimes termed 'figurative prophecy,' in which they are presented as existing in him, not as he then was, but *ideally*—a process consummated in the picture of the perfect Servant of Jahweh (Is 53–66), in whom election is to the graces of the Spirit (61$^{1-3}$), by a new covenant (59^{21}), embracing all hearts and lives filled by the Spirit (ch. 60, Jer 11, etc.) who fulfil the one condition of repentance and whose names are written in the book of life (Ezk 13^{9}, Dn 12^{1}, Mal 3^{16})—a process not substantially altered, if in detail enriched, until the baptism of John.

Thus from Adam to Christ—first in a man, then in a family, then in a nation, then in a kingly dynasty within the nation, then in prophets, and finally in Christ—the Divine choice runs. There is an evolution of stages that set forward a continuous progress, each prognostic of the next, and all in organic line, from ideas material and political to an idea more ethical and spiritual, whereby

[1] Cf. Fairbairn, *Christ in Mod. Theol.*^{6}, 1894, p. 406: 'the essential graciousness of His Being and the necessary grace of all His acts.'

the hope of earthly prosperity is transformed into yearning for the blessings of the inner life of love and suffering—an evolution palpitating throughout with the truth of human experience and feeling as well as with the impulse of supernatural movement. Everywhere these two factors converge in election—the Divine will and the nation's conformity to it. The election is never absolute or unconditioned. Jahweh is a moral ruler, and deals with the elect as with all, on moral principles, the eternal principles of His own nature.[1] Nor is it conceived in theoretical interests; it is not a mere satisfaction to intellect; it is a revelation to piety, the simple setting of practical facts in their proper relation to God.

(*c*) Election comes to *its perfect expression in Christ*. Historical in Israel, it becomes personal in Christ. The NT teaching derives its specific features from His, and His teaching founds itself on the OT development. We may summarize it as follows. The Jewish nation had been the recipients of special privilege, and were truly the elect people of God (Jn 4²²; cf. Mt 15²⁶, Lk 7³⁰, Ro 9⁴⁻¹⁶, Gal 3⁴⁻⁹, Ac 7), exhibiting a stage in the realization of the Divine purpose. Their election was purely of His grace (Jn 1¹³ 17²⁻⁶, Ro 9¹¹, Ac 13¹⁷), and was forfeitable through unfaithfulness to its conditions. By them its blessings were to be extended to all peoples. The official religious leaders had been unfaithful, and had failed to retain the nation in its privileged position. Election now centres in Christ and in all who, through Him, are the true 'seed of Abraham,' not by physical descent simply, but by doing His works and following after the righteousness that is of faith. The association of the benefits of salvation with Christ entails new positions of great interest, prompting new affirmations of faith and hinting at new problems of speculation. With Him the type yields to the reality. He establishes a new covenant founded on a new relation—the Kingdom of God, which for the elects' sake has been prepared before. He, the Elect One, also has been prepared before from the foundation of the world (1 P 1²⁰, He 7).[2] The nature of election is in conformity with the nature of the Kingdom, viz. election into a common life under one rule. It is a universal Kingdom; the choice is made by God's love of humanity, not by favour to any particular nation. It is boundless in extent and everlasting, being for man as man. There is therefore a universal call, the manifestation of God in Christ coming into contact with the minds of men. It is also a spiritual Kingdom. The call to enter it can be complied with only by fulfilling its spiritual conditions—repentance and faith. Christ is the pattern and exemplar of it. He is the Elect One (Lk 9³⁵ 23³⁵), with whom, the Servant of the Lord, He explicitly identifies Himself (Lk 4¹⁶⁻²⁴), and who is upheld in His election by the Father. The call is addressed to all men (Ro 1⁶, 2 Th 2¹³ etc.), but all do not continue in it (Mt 20¹⁶ etc.). Those who do are the true elect (κλητοί, ἐκλεκτοί), for whom the Kingdom was prepared from before the foundation of the world (25³⁴ etc.); for whose sake God shortens the sufferings of the last times; whose prayers He hears, whom He knows, and who are to rejoice because their names are written in heaven. To give the Kingdom to them is the Father's good pleasure. They prove themselves the elect of God in that they are obedient to the call of Christ. The origin of their faith is carried back to the eternal counsel of God. This faith itself originates not so much in their own receptivity as in the work of Christ and power of God. The process of their election is their continuous discipleship, referred, like its inception, to the will of God. Not only in purpose, but in fact, are these in election.

In all the foregoing no attempt is made to solve the implicit difficulties; the knots are there, not for solution, but for combination. In St. John we find that the result of Christ's work is due to Divine cause: those come whom the Father gives, those who do not come to Christ are the children of the devil. Again, those who come are those who love the truth and light, those who come not love darkness. All, *i.e.*, that happens here happens in human freedom, yet under Divine causality. According to St. Peter, election fulfils itself in sanctification of spirit (1 P 1¹·² [in 1 P 2⁸ reprobation seems indicated; the ethical condition of 'disobedience' is not to be excluded]). St. James sees Christians to be what they are by God's election, begetting by the word of truth, and working in them faith (Ja 1¹⁸–2⁵). St. Paul's doctrine comprises so many elements that very divergent views of it have been taken. On close examination it will be found to add nothing radically new. The Thessalonians (1 Th 1⁴) know themselves elected of God, because they have accepted the message of salvation (with 2 Th 2¹³ etc., cf. 1 P 1²·⁵·²³ etc.). The kernel of the Apostle's teaching is to be found in Ro 8²⁸⁻³⁰ (rather than in 9–11),[1] where election is the strongest assertion of assurance. Amid the anxieties of the age, the believer is not to be dismayed, since to those whom God loves, and who are His elect, all things work together for good—a certainty which opens out a broad prospect into the deepest thoughts of God, who foreknows and foreordains; and whom He foreknows and foreordains He calls, justifies, and glorifies. It is a pure triumph-song of faith, declaring its own eternal salvation for its own comfort and strengthening. In the other *locus classicus*, Eph 1⁴⁻⁶, the ground of election is God's good pleasure and free grace; its aim the holiness of the elect and their standing in the adoption of children. According to Eph 4⁴, election accomplishes itself by incorporation into the one body, the believing community, which is effected by the acceptance of the Gospel. In the Pastorals the Apostolate is ordained to work faith in the elect. In other Epistles the assurance of election is confirmed in the conceptions of it as a πρόθεσις τῶν αἰώνων, and as being bound up with the world-plan. The ideas throughout are moral, not theoretical, expository rather than explanatory: the statement of present experience and undeniable personal conviction that the action of God, the protection of God, and the purpose of God are upon the believer, within him, and around him, going before him and preparing him unto the eternal issue. It is a thought in entire harmony with the general doctrine of the NT. Humanity is fallen, is incapable of saving itself by its own forces, and can be redeemed only by an act of pure grace. Election has followed a course of evolution, the realization of God's plan, since the call of Abraham, in the history of his nation, culminating in Christ. St. Paul clearly formulates the intention of the Jews' election, that 'all may be saved.' There is no mention of the exclusion of any by Divine decree. He, indeed, never suggests that men may not resist God's will; nor does he ever allow us to suppose that they may not defeat God's purpose. But salvation is offered to all. Its determining cause is the free decision of the individual. Its condition is faith in the gospel. God confers on man the power to believe through the presentation of the gospel. Unbelief arises from neglect of the use of the means of grace. There is, at this point, a moment of determinism in the Pauline doctrine.

[1] In the well-known chapter of Jeremiah (18), Israel is not mere clay, nor is God a mere potter; the heart of the parable is the Divine desire to secure the Divine impress on the clay.

[2] These are points in which the NT teaching is in direct affinity with later Jewish apocalyptic; cf. *Book of Enoch*.

[1] See p. 259ᵇ, small print.

Man is so fast in the bondage of sin, so turned towards evil, that God's Spirit must accompany the word to produce saving faith. The Apostle thus asserts both election and man's liberty. He makes no attempt to reconcile them. Was the necessity urgent? St. Paul was a mystic in the higher reaches of his thought. The religious life to him was, in its last analysis, a rhythm of life within life, in which desire determined the flow of gifts from the including greater to the included less. So God meets man in the many phases of his shadowed mind, and gives Himself or what is His as man will receive; and, as He gives, the inner springs of man's self are touched, yielding the secrets of freedom and faith. The God-possessed life is the self-possessing life. Of the mechanism of the soul that sets itself against God, St. Paul had no experience: he could not describe it. Still less could he posit a decree of reprobation to explain it. In the case of the sole rejection he knew—that of the Jews—the casting away was temporary, and to be wrought against. Even so it might fare with evil, when its meaning should be taken up into the master-meaning of good, and its whole history, while playing a real part, should be known as but an episode in the history of good.

From the foregoing we deduce these three assured positions: (1) the ideal Son, who is the Mediator of the Divine life, the bestower of the Divine Spirit, the express image of the Divine Person; (2) the ideal community, the elect race, the chosen body, which is to exhibit the virtues and graces of the Son; (3) Jesus, pre-ordained in the eternal counsel to be the agent of its election, its Head, Lord, and Christ, through whom God calls, begets, and sanctifies the elect. In the Person, Work, and Church of Christ the many-sided foreshadowings and hopes of the OT find fulfilment. The correspondence of the fulfilment with the prophecy is not forced. We see the great lines of thought of the history and prophecy proceeding to an unknown, unimaginable end, and in the NT meeting in Christ in a wholly new combination, the spring of fresh forces and larger hopes for mankind. It is the consummation in Life of what was prepared in life.

If the Divine purpose is to be read in the light of its evolution, *can we justly speak of non-elect?* The term has no warrant in Scripture. Has the idea? In answer, the following considerations may be deemed relevant: (1) Election is always of *some* with the benefit of *all* in view, the special *few* for the universal *many*. (2) Election is neither in the OT nor in the NT rigorously restricted to the elect body: other nations besides Israel do work for Jahweh in the execution of His redemptive purpose—as, *e.g.*, Egypt, Cyrus, etc.; similarly in the NT 'in every nation he that feareth God' (Ac 10^{35}) and 'all nations of men on all the face of the earth,' concerning whom God 'hath determined the times before appointed, that they should seek the Lord, if haply they might feel after him and find him' ($17^{26.27}$; cf. Eph 3^{6}). (3) The Christian hope is universal, 'not for us only, but also for the whole World' (1 Jn 2^{2}; cf. 1 Ti 2^{4} 4^{10}, Tit 2^{11}). (4) The prophecy of 'a dispensation of the fulness of the times' (Eph 1^{10}; cf. Ph $2^{10.11}$, Col $1^{19.20}$), when whatever shall ultimately exist shall be reconciled to God, is an idea including the redemption of physical nature, with the destruction of suffering and death; the redemption of human nature, with the destruction of sin; and the redemption of the world of angels, with the destruction of the spiritual forces opposing themselves now to the Kingdom. (5) Although there is a limit to absolute universality of salvation, the cause of limitation is not in God or His counsel. Intimations of impossibilities occur, but these are not referred back to God's ordainment; they arise from the condition of the spirit of men themselves. To the wicked God shows mercy—giving time and place for repentance. All shall be made alive who *can be*. If it should be that God's judgments pass from a disciplinary stage to a penal, it is through the impenitence of those who are the subjects of them. A decree of non-election is unthought of (in Ro 8, Eph 1, the reference is to believers only). Election is to life. And the life of the elect is the leaven of all. Yes, but all are not receptive; what then? The problem is not solved. God wills all men to be saved. But all are not saved. Is the Divine will then frustrated? An intractable residuum in human nature is contemplated. Before it does God's resourcefulness fail? There will be a restitution of all things. Can it tolerate on its borders a quenchless Gehenna? The antinomy is left—a position acceptable perhaps to the practical religious mind, but perplexing to the reason. The final relation between the elect and the reprobate, and between the reprobate and God, is unknown. There is no experiential material on which to construct; and God's procedure is hid. Conscience, not intellect, adjusts the problem.

The well-known chapters 9–11 of Romans are best understood as a parenthesis, treating of a very special objection. Its theme was a burning problem to the Apostle, hence the length at which he treats it. Its argument is wholly apart from his central experience, and in line with the current Judaic scholastic teaching. It reminds us that St. Paul was a Jew, 'learned in the traditions'—as well as a Christian. Its principal elements are these: (1) The recognition of the absolute sovereignty of God; the Jews who rejected Christ and those who accepted Him both made their respective choices in subjection to the Divine appointment. (2) This Divine election was for a certain definite purpose; the unbelieving Jews were blinded in order that the Gentiles might obtain the salvation that was through Christ. (3) The blinding thus inflicted upon a portion of the Jews was temporary, and, when the purpose was accomplished for which this Divine appointment had been made, the ban would be removed; through the ministry of the Gentile Christians the unbelieving Jews would be converted to the true faith and all Israel would be saved. The absolute result was sure: if any failed it was because they did not make their calling sure. That this line of thought on election had its exponents in the Jewish schools may be felt in the Book of Wisdom (cf. the interesting essay by Eduard Grafe in *Theol. Abhandlungen Carl von Weizsäcker gewidmet*, Freiburg, 1892). 'Double predestination' is affirmed, but whether in the Augustinian or in the Calvinistic sense is another question. The Apostle's object is to set forth a wider election-doctrine than that of the Pharisees (cf. Gore, *Romans*, 1899, ii.; Sanday-Headlam, 'Romans,' in *ICC*, 1895, *ad loc.*), and to reduce every motive for Judaic pride. He has not in view either the relation of God's causality and man's freedom or the 'double predestination.'

3. Subsequent theological reflexion.—Until the time of St. Augustine this is neither profound nor precise. Patristic thought is unspeculative. It is pervaded by a strong practical sense which shrinks from theoretical problems suggested, but not solved, by the Apostolic teaching. The mental attitude of the Fathers is determined by a close adherence to the received sacred pronouncements, and by the endeavour to repel whatever in contemporary cults appeared plainly contrary to them. In their view the unit of election tends to be not the individual destiny, but the redeemed race. Again, their point of departure is not the decree of God, but the believing experience of the saved. Moreover, personal election being a moment of personal faith—faith's assurance of its own eternal worth—it cannot conjoin with itself any assertion of reprobation, since that can be no element of faith. That Jesus is 'the Elect' of God, that His election has no other object than the election of His Church, that the Church lives to bring the world to God—these are the primary contentions. Both the Greek and Latin doctors maintain the Divine sovereignty, man's liberty and responsibility, and the reconciliation of both in God's foreknowledge.[1] Differences first appear in the meanings attached to those doctrines; and the

[1] Not necessarily foreknowledge of man's merit. The question was not seriously discussed.

meanings emerge in their particular cast from alien prepossessions, *e.g.* in the East from philosophy, in the West from law. The Greek divines, influenced by the universalist strain in St. Paul's teaching, formulate a more genial concept of man's freedom; the Latins, appealing to his determinist strain, dominate man's will by God's sovereignty.

Tertullian[1] is an exception. He unites with the Alexandrians in a view of the will which erects it into an independent faculty, having 'freedom in both directions,' knowing both good and evil, and able to choose between them. This is not St. Paul's doctrine: he asserts of the will simply freedom from conflicting motives. East and West alike inculcate a doctrine of synergism, according to which the renewal of the soul is the result of two factors—Divine grace and man's freedom. But what is the part taken by each factor? Does the mercy of God take the initiative, or the will of man? Does the exertion of man's will precede the Divine aid? In what sense is the will free? Increasingly the West exalts the Divine goodness; the East enlarges the range of human freedom, and accords saving merit to man's effort. In harmony with such positions, election is a pre-ordination of blessings and rewards for such as are foreseen to be worthy of them. There is no predestination to sin, although there is foreknowledge of it. Justin Martyr is strenuous in repudiating Stoic fatalism. Men, he affirms, have it in their power to cast off sin by exerting their will. With Irenæus sin in men and angels is a free act. Why some fall and others do not is a mystery. There is no interference with human freedom. The blindness in those who reject the Gospel is the result of their own character. It is the same with the Greeks; Methodius expresses this common conviction when he writes that 'sin is an act of personal freedom.' Of special interest is Victorinus the Rhetor, who pushes the logic of the West to its extreme limit, short of Augustine's, of whom he is the direct precursor. Much varying comment is made on isolated statements[2] in St. Paul's Epistles, which often assume a greater importance than in the original context, and are usually discussed less in relation to the Apostle's system of doctrine than under personal predilections.

With Augustine the whole subject assumed new and front-rank prominence. His doctrine has little historical background. It was mostly a new creation from a new standpoint, drawn not from earlier Christian sources, but from the ideas which he had imbibed from his philosophical studies operating on the convictions of an intensely awakened conscience. The secret of Augustine lies in his inner growth. To appreciate aright his contribution to Christian philosophy, two considerations must be kept in view—his peculiar spiritual discipline, and the subordination of his reason to his faith. His philosophy, if he has one, is ancillary to his religion, which is real, positive, and profound. It was gradually, as polemical occasion incited, worked out; it cannot be presented as a systematized whole, bristles with unreconciled antitheses, offers unceasing suggestion, and is to be interpreted in its spirit and method rather than in its immediate conclusions. Amidst the enervation and confusion which resulted from his doubt and despondency, and from the secular catastrophes of his age, there were two truths that continued to cast an absorbing image on his mind—a conviction that the human mind was a thing apart in the universe, and that a Divine mind embraced the whole in an all-seeing vision. How reconcile this incarnate perversity of a world with the being of God? The two foci of his 'system' are a monistic doctrine of unity and the theory of original or racial sin. The world is but the expression of God; God's own immediate will is the sole cause of all things. In the view of God's eternal knowledge the natural man is evil, wholly depraved, morally insufficient, and helpless, from the identity of the race and Adam (so tremendous an effect is attributed to the Fall): 'the will has power indeed for evil but not for good, except as helped by the Infinite Good.' Original sin is the basis of predestinating election. The whole human mass was so justly condemned in the apostate root that, were none rescued from that damnation, none could blame God's justice. Those who are rescued are rescued gratuitously; those who are not only show what the whole lump, even the rescued themselves, deserved, had not undeserved mercy succoured them (*Enchiridion*, 99; cf. *Ep.* cxciv. 6, 8). If the will of man turns to good, that is due to gracious Divine efficiency. Man's regeneration is entirely the work of grace. Grace is efficacious and irresistible; its action on the soul is the result of direct Divine agency. Only those predestinated to eternal life are regenerated; they are also endowed with the gift of perseverance. Grace is indefectible. They are the elect. The elect are few in comparison with the non-elect (a doctrine attributed to Scripture, and confirmed by observation); yet the latter are somehow created for the benefit of the former. Election is not grounded on foreknowledge of human faith or conduct; no account is given as to why some are elected and others not; there must be two classes to manifest the Divine mercy and justice. 'Over the mass of corruption there passed two acts of the will of God—an act of favour and grace, choosing part to be partakers of everlasting glory; and an act of justice, forsaking the rest and adjudging them to endless perdition; these, vessels of wrath, those, of mercy.' There was no positive and efficient decree of any to eternal death; the decree of God was simply to leave the wicked in the state of perdition to which they had come. Augustine teaches preterition.

The Augustinian doctrine depressed several positions hitherto unquestioned, and initiated a controversy which proved of unequalled influence throughout the mediæval period, and which at the Reformation still interested the intellectual world. God as Will, not Mind; man's free will as dependent on Divine causation and not inalienable in its own constitution; grace as controlling, not assisting, human effort; and all the logical consequences of the conceptions of absolutism in God and determinism in man—these ideas fill the horizon of the Middle Ages, partly by way of attraction, partly of repulsion. The strict Augustinian argument is well sustained by such theologians as Gottschalk, Aquinas, Bradwardine, and others, who exalt the Divine grace, and at times teach the twofold predestination. The doctrine of merit is represented in such commanding minds as Rabanus Maurus, John Scotus Erigena, Duns Scotus, etc. The dominant point of view, however, is seen in Aquinas, who looked upon merit in the strict sense of the term as the affect of grace, and grace as the effect of predestination. He argues with Augustine that the reason why grace is rejected is man's own fault—not on the ground of the existence of man's free will, but on account of his disinclination to grace by reason of original sin. He places the rejection in the faulty will of the race and not in the choice of the individual.

Throughout the period the controversy shifts its base from the sound facts of experience; and its net results are of less value for the idea of election than for that of predestination. Logical considerations are the determining factors. Little of practical import accrues. The modern world tacitly settled down to a modified Augustinianism. In the Roman communion strict Augustinianism, while not formally repudiated, has, under the influence of Jesuit ascendancy, not been favoured. The Council of Trent made no further definitions. Various hypotheses as to the connexion between electing grace and man's free will have been ad-

[1] The phrase 'liberum arbitrium' is due to Tertullian.

[2] As, *e.g.*, 'Whom he did foreknow he also did predestinate' (Ro 8^{29}); 'Whom he will he hardeneth' (9^{18}); 'Jacob have I loved, Esau have I hated' (9^{13}).

vanced by Roman divines, and only those of the Jansenists have been condemned. The general current of opinion has been against unconditional election, in favour of synergism. In the Reformation teaching the general spirit of Augustinianism has been maintained; at first more faithfully with Luther and the Lutheran Church in its subjective value; with Zwingli and Calvin in its objective worth; more recently with both Lutheran and Reformed unconditional election has been abandoned. Yet synergism has not won fresh credit. Pelagianism, it is universally felt, has been finally refuted. God is sovereign, and man is free; both truths are to be retained, as Augustine blunderingly argued. The path to their reconciliation, according to modern thought, is to be found in a less juristic and more moral conception of Divine sovereignty, and in a less indifferent and more determinate theory of the human will. Present-day mental science, even with the help of the doctrines of heredity and environment, has not succeeded in rendering any form of materialistic determinism cogent to the modern mind. In so far it helps to confirm the belief of the bulk of the Christian Church in all ages that man's destiny is in his own hands. It prevents us equally from any assertion of predestination in its extreme personal sense. Election in the sense of our circumstances and surroundings being made for us and not by us—this is simple and obvious enough. But that we are not the necessary result of our circumstances and surroundings is the plain testimony of our conscious life. That conscious life which speaks saying, 'Thou oughtest,' wakes a no less certain echo within, which says, 'Because I ought, I can.' That 'can' abides for ever, however enfeebled it may become.[1] The social pressure may as a matter of fact be made subservient to its increase: since social coercion, if it be reasonable, is a condition of moral robustness. Similarly man's independence is secured in dependence on God. The essence of freedom is self-surrender to the Divine will.[2]

LITERATURE.—There is a very large literature on the subject, in the major part of which 'election' and 'predestination' are used interchangeably. A copious bibliography will be found at the end of W. A. Copinger, *Treatise on Predestination, Election, and Grace*, London, 1889. Every modern writer on NT theology and every commentator on 'Romans' and 'Ephesians' deals with the subject—largely by way of simple exposition. The two most notable writings of the modern period are Thomas Erskine of Linlathen, *The Doctrine of Election*, London, 1837, and Schleiermacher, *Lehre von der Erwählung*, Berlin, 1836.

ELEMENT.—See ATOMIC THEORY.

ELEPHANTA.

ELEPHANTA.—Elephanta is an island on the W. coast of India; lat. 18° 58′ N.; long. 73° E.; about 6 miles from the city of Bombay, and 4 from the mainland. The native name of the island is *Ghārāpurī*, which has been interpreted to mean 'city of purification,' or, in the form *Gārāpurī*, 'city of excavations,' of which *Purī* was probably the earlier form. The Portuguese gave it the name of *Elephanta*, from a life-sized figure of an elephant, hewn from an isolated mass of trap-rock, which formerly stood in the lower part of the island, not far from the usual landing-place. This figure fell down many years ago, and was supposed to have disappeared; but it was discovered in 1864–5, and was removed to the Victoria Gardens, Bombay, where all that remains of it now stands. The elephant had originally a small figure on its back, called by some a young elephant, by others a tiger (Yule-Burnell, *Anglo-Indian Gloss.*, *s.v.* 'Elephanta'). Another image, that of a horse, which once stood S.E. of the Great Cave, has disappeared. The island is famous for a splendid series of rock-cave temples, which, according to local tradition, were excavated by the Pāṇḍava heroes of the *Mahābhārata* epic, while a still wilder legend attributes them to Alexander the Great, to whom popular tradition ascribes many great and ancient structures, even in parts of the country which he never reached in the course of his invasion. Fergusson, comparing them with other works of the same type, assigns their construction to the 10th cent. A.D.; Burgess dates them earlier—in the latter part of the 8th or the beginning of the 9th century. There is said to have been an inscription over the entrance of the Great Cave, which, if discovered, would probably decide the date and the name of the king under whom they were excavated. This slab, according to Diogo do Couto, the Portuguese annalist, was removed by his countrymen; but, if it ever existed, it has now disappeared.

The temple in the Great Cave is, like all Brāhmanical rock-temples in W. India, dedicated to Śiva; and, according to Stevenson, it belongs to the Smārtta school of that sect. Burgess, however, is inclined to believe that it may be older than the present sectarial divisions, and that it was excavated when all the Śaivas held nearly the same doctrines.

In all there are six caves, of which four are fully or nearly complete; the fifth is almost entirely filled up, and the sixth is supposed to have been intended merely to provide cells for anchorites. The most important of all is the Great Cave, which, excluding the porticoes and back aisle, forms an irregular square of about 91 ft. in both directions. This contains that striking piece of sculpture, a colossal bust, known as the *Trimūrti*, or 'triad' ('trinity' being an inappropriate expression for this Hindu combination of gods), which stands at the back of the cave, facing the entrance. It undoubtedly represents Siva as the supreme deity; but there has been much difference of opinion as to the designation of the three faces. That in the centre is probably Śiva, the creator of the universe; or, as some say, Brahmā, who, according to the legend, sprang from the left side of Śiva to create the world. That on the left of the spectator is believed to be the Vedic Rudra, in later times identified with Śiva, the Destroyer. The third face of the triad, that on the right of the spectator, has a gentle, placid, almost feminine look; and, though generally, and perhaps rightly, regarded as that of Śiva in the character of Viṣṇu, has by some been identified with Pārvatī, the *śakti*, or consort, of Śiva. Like many of the Elephanta sculptures, this group has been sadly mutilated, even in recent times, by thoughtless or mischievous visitors. It has now been placed under the protection of a guard. Enough, however, remains to show the wonderful beauty and dignity of the sculpture. On each side of the recess in which the *Trimūrti* stands are figures of the giant warders, minor gods on their promotion, who act as protectors (*dvārapāla*) of the god. The shrine (*garbha*) of the temple contains in the centre a base, or altar, in the middle of which is the *liṅgam*, or phallic emblem, of Śiva, cut from a stone of harder and closer grain than that out of which the temple has been excavated.

'This plain stone, the mysterious symbol representative of Śiva as the male energy or production, or source of the generative power in nature—as the *yoni*, or circle in which it stands, is of the passive or female power—is *the idol* of the temple, the central object of worship, to which everything else is only accessory or subsidiary' (Burgess, p. 9).

In the compartment east of the *Trimūrti* is a

[1] Cf. Henley, 'I am the master of my fate;
I am the captain of my soul.'
For a splendid assertion of the same from the side of mysticism, see Maeterlinck's *Wisdom and Destiny*, Lond. 1902.

[2] Cf. Tennyson, 'Our wills are ours, we know not how;
Our wills are ours, to make them thine.'

group of many figures surrounding a representation of the androgynous Śiva, an image half male and half female, known as Arddhanārīśvara, accompanied by Viṣṇu riding on the bird Garuḍa (whom Fergusson would connect with Assyrian beliefs), Indra, and Brahmā, who are here represented as in attendance upon Śiva. The similar compartment on the west side is occupied by Śiva and Pārvatī, the mountain-goddess, his consort. The figures are not really nude (which is a Jaina rather than a Brāhmanical habit), the drapery being carved in the conventional style, which represents only the thicker folds and hems.

Passing to the west porch, we come to the famous group of the marriage of Śiva and Pārvatī, who here represent the primordial pair from whose union the fertility of the soil and the increase of the human race, cattle, and crops are assured. The scene, unfortunately now much damaged, seems to depict the meeting of the bridal pair, accompanied by Brahmā, Viṣṇu, or Sūrya, the sun-god, the mother of the bride, and Sarasvatī, the goddess of eloquence, who blesses the union. Following this scene come representations of Śiva and Pārvatī in Kailāsa, the paradise of the god; and under it the ten-faced Rāvana, king of Laṅkā or Ceylon, whose exploits are recorded in the *Rāmāyaṇa*.

Opposite the marriage of Śiva is one of the most remarkable sculptures in the cave—the face of the principal figure indicative of rage, the lips set, with tusks projecting from the corners of the mouth. This has usually been considered to represent Vīrabhadra, one of the Śaiva incarnations (*avatāra*). It is more probably Bhairava, an incarnation of Rudra, who seems to be derived from the non-Aryan demonolatry—one of the most common objects of worship among the Marāthā people, by whom he is also known as Kapālabhṛt, 'skull-wearer,' or Mahākāla, Time personified as the Great Destroyer. In this aspect Śiva was worshipped by the Kapālika sect, naked mendicants who wore skulls round their necks, and drank from a cup formed out of a human skull (see AGHORĪ). Farther on, Śiva is depicted performing the Tāṇḍava dance, which he does in the character of Bhūteśvara, 'lord of ghosts and goblins,' haunting cemeteries and places of cremation, attended by troops of imps, trampling on rebellious demons, heated by drink, and followed in the dance by his spouse Devī—another example of the absorption, in the cult of the god, of much of the non-Aryan devil-worship. Here he also appears as Mahāyogī, the 'great ascetic,' his image closely resembling that of Buddha, with whom this side of his cultus was doubtless closely associated. Burgess (p. 41) explains this resemblance as

'due in part to the circumstance that the Brahmans excavated their cave temples in imitation and rivalry of the Bauddhas. The Bhikshus or Bauddha ascetics wore yellow robes, and in imitation of them probably the Shaiva Yogis and mendicants adopted tawny-coloured clothes. Buddha was regarded by his followers as the Great Ascetic, and this may have tempted the early Shaivas to give prominence to a similar characteristic in the representation of their favourite object of worship.'

The second rock-temple has been injured, and little of the sculpture remains capable of description or identification. The third temple is still more dilapidated. In the fourth there were, according to Diogo do Couto, two images of Vetāla, lord of demons, and of Chaṇḍī, or Durgā in her malevolent aspect; but these have long since disappeared. The Great Cave is still used at Śaiva festivals, and a fair is held at the feast of the *Śivarātri*, or 'Śiva's night,' on the 14th of the dark half of Māgha (about the middle or end of February), when a fast is observed by day and a vigil by night, and there is special worship of the *lingam*.

LITERATURE.—The literature connected with Elephanta is voluminous. The best account of the place, on which this article is largely based, is that of J. Burgess, *The Rock-Temples of Elephanta or Ghārāpuri*, with excellent photographs by D. H. Sykes (Bombay, 1871; reprinted, without illustrations, in 1875). This is supplemented by Pandit Bhagvānlāl Indraji, in *BG* xiv. 59 ff. The earliest traveller's account is that of Van Linschoten (1598), ed. A. C. Burnell, Hakluyt Society, i. 291. This was followed by Diogo do Couto (1616), *Do muito notavel e espantoso Pagode do Elefante*, quoted by Yule-Burnell, *Anglo-Indian Gloss.*, p. 341. Among accounts by other travellers may be noted: Fryer, *New Account of E. India and Persia* (1698), p. 75; Ovington, *Voyage to Suratt* (1696), p. 155 f.; Grose, *Voyage to E. Indies* (1757), i. 59 ff.; Ives, *Voyage from England to India* (1773), p. 45; Niebuhr, *Voyage en Arabie et en d'autres pays circonvoisons* (1774), ii. 25 ff.; Macneil, *Archaeologia* (1783), viii. 270 ff.; Goldingham, *Asiatick Researches* (1795), iv. 409 ff.; Lord Valentia, *Voyages and Travels* (1809), ii. 159 ff.; Forbes, *Oriental Memoirs* (1813), i. 423, 452 ff., 441 ff. (2nd ed. 1834, i. 265 ff.); Erskine, *Trans. Literary Society* (1813), i. 189 ff.; Maria Graham, *Journal of a Residence in India* (1812, 2nd ed. 1813), p. 45 ff.; Fergusson, *Rock Temples of India* (1845), p. 54 f.; Fergusson-Burgess, *Cave Temples of India* (1880), p. 465 ff.; V. A. Smith, *A Hist. of Fine Art in India and Ceylon* (1911), p. 215 f.

W. CROOKE.

ELKESAITES.

ELKESAITES.—The adherents of a form of religion having baptism as its leading feature, which arose *c.* A.D. 100, probably in trans-Jordanic Palestine. It was intended to mark a renewal in Judaism, and was originally a Jewish sect.

1. The literary tradition.—(1) *Sources.*—The sources of our information regarding the Elkesaites and their founder are far from abundant.

Eusebius (*HE* vi. 38) speaks of the 'perversion of the Elkesaites' as something quite ephemeral in character, and quotes from a homily of Origen on Ps 82 a passage which refers to the proceedings of Elkesaite missionaries, to their sacred book, and to their offer of remission of sins. For any more definite knowledge regarding the sect, as well as for light upon its not wholly insignificant history, we are entirely dependent upon the heresiologists Hippolytus and Epiphanius. The former narrates the doings of the Elkesaite Alcibiades in Rome, while the latter recounts the results of the Elkesaite propaganda in Syria; but to both writers we are even more indebted for their extracts from the Elkesaite book of revelation. This document was known to them only in its Greek form; in a passage containing references to dimensions which is quoted by both, the reduction of the Oriental measures to Roman miles is given by each in identical terms. The copy of the book which Hippolytus used was that which Alcibiades had taken to Rome. It contained some lines referring to Elkesai as a righteous man, who had received the book (see below, § 3) and delivered it to others. These lines, and other two or three passages of which we shall speak below, were wanting in the copy used by Epiphanius, and were, in fact, written by Alcibiades himself in Rome. The style of the Gr. translation, or else the condition of the MS, was such that both Hippolytus and Epiphanius were now and again compelled simply to guess at the construction, with the result that mistakes have crept into their accounts. But their references and quotations are in the main of such a character as to give us the impression that the book was not a large one, and that hardly anything of real importance in its contents has been wholly overlooked. As yet, however, the task of using the fragments as materials for a connected history of Elkesai and his work has never been taken in hand, and it is the aim of the present article to make good this defect.

In connexion with the various points dealt with in what follows, cf. Hippolytus, *Philosophoumena* (*Refutatio omnium hæresium*), ix. 13-17, x. 29 (Miller, pp. 292-297, 330); Epiphanius, *Hær.* xix. xxx. 17, liii. (pp. 40-44, 141, 397, 461 f.), *Epitome*, xix. xxx. (ed. Dindorf, i. 352, 359). The account given by Theodoret (*Hær. Fab.* ii. 7) is wholly dependent upon these older authorities, and contributes nothing to the emendation of their texts. The Arabic records of the Mughtasila (see below) are given in the original, with a German tr., by D. Chwolsohn, *Die Ssabier u. der Ssabismus*, ii. 543 f., and by G. Flügel, *Mani, seine Lehre u. seine Schriften*, Leipzig, 1862, pp. 48, 83 f., 133 f.

(2) *The name.*—The Elkesaites are so named from an Aram. formation which the Gr. tradition represents as ἠλχασαι (Hipp.) or ἠλξαι (Epiph.). The second element of this word may quite likely be a transliteration of Aram. כסי, 'hidden.' The first syllable, according to Epiphanius, corresponds to חיל, 'power.' The name as a whole would thus mean 'hidden power,' and one may quite reasonably believe that the founder of the sect—if, let us say, he was, like the Apostle Paul (2 Co 10¹⁰), a man of insignificant presence—was so designated by his followers; the epithet applied to Simon Magus (Ac 8¹⁰) would furnish an analogy. But the Arab. form of the name borne by the founder

of the Mughtasila (baptists of the Euphrates), viz. الحسيح, as read in the manuscripts of *Kitāb al-Fihrist*, precludes the aspiration of the first letter, and therefore also the derivation of ηλ from חיל, 'power.' The Arab. spelling, in fact, seems rather to suggest that the original expression was אל כסי, 'hidden God.' Still, as the Arab. name bears no vowel-signs, and also lacks the diacritical points without which the last three consonants cannot be exactly determined, it may be pronounced in various ways, and its real meaning may have been something quite different. The conventional form 'Elkesai' makes its appearance for the first time in Theodoret, who derived it from Origen's Ελκεσαιται; this, again, is a variation of Ελκεσαιοι, and the form Ελκεσαιος gained currency only through a confusion between the name of the sect and the surname of the prophet Nahum, האלקשי, of which it is the regular Gr. transliteration in the LXX.

A view that has received considerable support is that the name 'Elkesai' applies to the sacred book itself, and not to its author at all. But there are no good grounds for accepting this theory, which, moreover, involves a quite useless distinction. As we shall see presently, there was a real personality behind the book.

(3) *The Book of Elkesai.*—Tradition affirms that Elkesai was in possession of the volume—as a book of revelation—from the very outset of his career, but it gives widely varying accounts of the means by which he obtained it. The Elkesaite missionaries with whom Origen was acquainted are said to have held that it fell down from heaven. Another account—or perhaps two—was inserted by the above-mentioned Alcibiades in his own copy of the work, immediately before the text, which began with the chapter describing a vision vouchsafed to Elkesai. Hippolytus deciphered as much of this inserted note as he was able, and reproduces it thus:

> 'The righteous man Elchasai received the book from Sera [or Serai (? a city or 'the Seres,' *i.e.* the Chinese)] in Parthia, and entrusted it to one named Sobiai, as having been revealed by an angel who was twenty-four σχοῖνοι in height, six in breadth,' etc.

On this we would remark that the original writer of the note obviously did not know how the book had come into existence, and that his fictitious statement was really designed to stimulate interest in the work, on the principle that curiosity plays most assiduously around things of remote origin; while, again, the phrase 'revealed by an angel,' so far as regards the words ὑπὸ ἀγγέλου, merely represents an idea in the mind of Hippolytus himself, who thus sought—unwarrantably and wrongly—to connect the statement of Alcibiades with the vision recorded in the text of the book: probably a few words at the end of the note were illegible.

Apart from these prefatory lines, and a few passages subsequently interpolated or recast, the book undoubtedly owes its existence to the founder of the sect. But it would, of course, be altogether wrong to suppose that the founder delivered no fresh oracles (commandments, directions about ritual, predictions, etc.) while engaged in disseminating his teachings and governing his adherents. The deep veneration accorded to his descendants at a later day goes to show that in his lifetime he had acquitted himself among his intimate disciples as a man of God, while many features of his book point so clearly to the speaker's conviction regarding his Divine call as a prophet that it is impossible to believe otherwise. Now, if we examine the extant passages of his work in the light of this idea, and take into account not only their diction but also the diversified character of their matter, we come inevitably to the conclusion that the Book of Elkesai came into existence by some such process as subsequently took place in the case of the Qur'ān, *i.e.* by piecing together the separate sheets on which the prophet's utterances had from time to time been transcribed. After Elkesai's death his followers could fall back upon the written record, and could promise salvation to all sinners 'as soon as ye hearken unto this book'; but, while he still lived, he must assuredly have insisted—as did, of course, also his disciples—upon submission to himself as Divinely inspired. The theory that the prophet, as occasion arose, uttered his oracles, commandments, decisions, etc., which were then written down upon separate sheets and circulated among his followers, is that which best accords with the contents of the extant texts.

2. Personality and work of Elkesai.—As regards the life and personality of Elkesai, all that the literary tradition tells us is that he was a product of Judaism, was regarded as a righteous man, and announced the new means of obtaining remission of sins in the third year of the Emperor Trajan. We learn, further, that the Essenes and Ebionites accepted him, *i.e.* either the man himself as a prophet, or, at a later period, his distinctive teaching. But the surviving extracts and other citations from the sacred book give us so definite an impression not only of his doctrines, but also of his personality and his labours, that we are able in many cases to reconstruct the attendant circumstances without great risk of error.

(1) *Doctrine and ritual.*—Elkesai required his adherents to practise circumcision, to observe the Sabbath, and, in general, to live according to the Jewish Law. He also sanctioned marriage. It is probable that the prohibition of flesh-eating ascribed to him, perhaps erroneously, by Epiphanius extended only to participation in the sacrificial meals of the heathen. He insisted strongly on the practice of turning towards Jerusalem in prayer, and forbade that of praying towards the East—an injunction meant, no doubt, for the heathen, and perhaps also the Essenes, among his followers. He believed in the One God of Judaism and in the Last Judgment. He also shared the Jewish belief in various classes of angels, and he identified the evil angels with the stars in the northern region of the sky.

Elkesai was not a learned man. The extant fragments of his book show not the slightest evidence of his having studied the Jewish Scriptures. He imagined that he was proficient in astrology, and he had heard of the elements of which the world is composed; but in these things likewise his knowledge was of the scantiest. In an astrological passage of his book the days 'when the moon travels past, or in the same path with them [the stars of the north],' are designated 'days of the dominion of the evil stars,' on which accordingly no task should be begun. One of these days was the Sabbath. But the third day was also evil: 'when another three years of the Emperor Trajan have elapsed . . .' war would break out among the ungodly angels of the north, and a convulsion of all ungodly kingdoms would ensue. The prophet had, of course, the Roman Empire in his mind, and, as the catastrophe did not take place, this unfulfilled prediction is a positive corroboration of the tradition that Elkesai lived and taught before the end of the reign of Trajan.

The principal feature of the Elkesaite form of religion was its practice of baptism. Elkesai proclaimed that total immersion of the body—the garments being retained—in the waters of a river or a spring was the means whereby the Divine

remission of all sin was to be appropriated. That which other forms of religion sought to secure by sacrifice on altars was effected here by the waters of baptism. The rite must be performed 'in the name of the great and most high God,' or [? conjectural reading] with adoration of Him; and the candidate had to declare, immediately before his immersion, that he would henceforth abstain from all sin and all improbity in life and conduct.

Precisely the same ceremonial was to be observed when immersion was resorted to for the cure of disease and similar troubles, as, *e.g.*, the bite of a mad dog or of a venomous animal. Those who suffered from phthisis and those who were possessed with demons were ordered to immerse themselves in cold water, *i.e.* in a river or a well, forty times in the course of seven days; and, if they were unable to do this for themselves, the immersion had to be performed, and the requisite vows uttered, on their behalf, by others. This sacramental bath, as we interpret it, was designed to expel the demons and disease-spirits who seek to destroy the body. In all religions, no doubt, certain sacramental ceremonies, such as baptism, laying on of hands, anointing, communion, are believed to work similar effects on the bodily condition, but among the Elkesaites the belief was an officially formulated doctrine. One of their formularies for immersion survives in full. But, as it contains a reference to 'this book,' *i.e.* the Book of Elkesai, and also gives the series of the Elkesaite 'witnesses to the oath' (see below) in a later transcript dating from a time when the Greek translation was about to appear, the rubric in question has not come down to us in its original form.

We do not venture to affirm that the use of the sacrament set forth in this fragment was not appointed by Elkesai himself and first arose in the community at a later date (see 2 K 5[14]).

Elkesai must have instituted still another sacramental ceremony—of which, however, we hear only indirectly (see below)—viz. a communion with bread and salt. A ceremony of this kind, designed to ratify a covenant, was known among the Jews (cf. Lv 2[13], Nu 18[19], 2 Ch 13[5]); it betokened fellowship at the same table, and thus expressed a solidarity of life or interest amongst the parties. In the Elkesaite celebrations, however, the bread and salt must have been credited with magical virtues—beneficent in their nature, of course, yet capable of producing the opposite effects in the case of faithless or otherwise unworthy participants, just as is said with regard to the Christian Eucharist (1 Co 11[29f.]). The precise nature of the beneficent effects in the case before us remains unknown; the *Contestatio Iacobi* (in the [pseudo-] *Clementine Homilies*), cap. 4, reads like a reminiscence of the Elkesaite practice.

(2) *The 'witnesses to the oath.'*—The Elkesaite practice of invoking the elements as witnesses of the baptismal vow presupposes the belief that the saving effects of sacramental rites might be changed into the opposite effects; it was supposed that they would prove fatal to those who took the oath falsely. Elkesai enjoined that such an invocation should be made at the ceremonial bathings, the elements being called to witness the vow of a holy and upright life that had to be uttered, before immersion, by all desirous of securing the promised boon.

With the ceremonial elements (bread and salt) he here associated those of the cosmos, to which mankind must likewise look as the source not only of blessing but also of the worst of evils. Elkesai knew of the pentad of elements—earth, water, fire, air, and æther, as enumerated in the teaching of the Greek schools from Aristotle's day. In his ignorance, however, he substituted for 'air' its most palpable manifestation, viz. wind, or the winds. 'Earth,' again, he interpreted as 'the earth,' and maintained accordingly that the heaven likewise should have a place among the elements; while, to balance this addition, he rejected fire, which, from its association with sacrifice, he was unwilling to admit into his scheme. The ceremonial and cosmic elements, as thus elucidated, formed the series of the 'seven witnesses' to which the Elkesaites made appeal when they performed the rite of immersion. The underlying idea, as we may surmise, was that those who did not keep their vow became liable to all the evils which these elements might produce. Hence, if an Elkesaite fell again into sin, it was a matter of the utmost moment that he should repeat the ceremony without delay.

(3) *Personality of Elkesai.*—The baptism of Elkesai alike in its object—the remission of sins—and its preliminary condition—the pledge of a changed life—reminds us of the mission of John the Baptist. But there was little in common between the two men. It is true that, in the earlier period of his career, Elkesai, like John, believed in an impending convulsion which would dissolve the existing world-order. But tradition furnishes no ground for believing that he expressly set before himself the task of preaching repentance to his own people and arousing their conscience. The general tone of his admonitions (as, *e.g.*, when he gives a reason why fire should not be trusted, and why water is better) scarcely suggests the impassioned propagandist. With perfect composure of spirit he enjoins that proselytes—his converts from heathendom had first of all to embrace Judaism—shall not be baptized on the Sabbath. He looked for success not to some sudden thrill of emotion which predictions of woe would excite among the people, but to the approval which those who believed in a Divine retribution would accord to his teaching. He thus counted upon the convincing power with which his declarations and arguments, instinct as they were with the note of assurance, would impress all who were prepared to listen to them with a serious mind. As one who received revelations, he must have been an 'ecstatic,' but he was no less a man of practical judgment, with a clear eye for ways and means.

On the other hand, Elkesai did not lack that inner experience which forms the dynamic of all outstanding personalities in the religious sphere. We have an evidence of this in his secret watchword, which, it is true, he communicated to his disciples for use in their prayers, though in the wholly unintelligible form obtained by reversing the sounds of each several word. The proper form of the saying was אנא סכהר עליכון ביום רינא רבא, *i.e.* 'I am a witness over you in the day of the Great Judgment.' He thus cherished the expectation that at the Last Day his personal testimony would be accepted as decisive before the great tribunal—an idea which reveals the intensity of his religious conviction.

(4) *His converts and followers.*—The prophet found disciples not only among the Jews, but also among the heathen whom the Jews called 'God-fearing' (*φοβούμενοι τὸν θεόν*). He laid upon his heathen converts the obligations of circumcision, Sabbath-keeping, turning towards Jerusalem in prayer, and abstinence from the flesh of pagan sacrifices. When, after having given him their allegiance, they were tempted by their relatives to return again to the sacrificial feasts, he cautioned them kindly with the words, 'Children, go not unto the gleam of fire, but follow rather the voice of water.'

(*a*) *The baptized.*—There is reason to believe that Elkesai at first directed his attention mainly to the 'God-fearing,' or, at least, that he drew the

majority of his followers from their ranks. This seems to be implied by the concluding words of the lines prefixed to the copy of his book used by Hippolytus: words to the effect that the author had entrusted the work, as a revelation, to a certain 'Sobiai.' Now, this name (Σοβιαί) is—apart from the terminal vowel, which is wanting—an exact transliteration of the Aram. *ṣᵉbīʿaiyā*, which is the passive participle of a verb signifying 'to stain,' 'to wash,' and also 'to bathe'; and, as a definite plural, it would in this case mean 'the bathed,' 'the baptized.' This term, then, as found in the prefatory note regarding the book, *i.e.* regarding its actual contents, the utterances of Elkesai himself, may be taken as indicating that his earliest adherents were not of Jewish race, but heathens who had submitted to the proselyte baptism of Judaism only in order to secure the salvation proclaimed by him. His injunction against baptizing proselytes on the Sabbath proves beyond question, indeed, that he not seldom gained accessions from the ranks of heathenism.

(*b*) *The Essenes.*—Among the Jews the sect of the Essenes (*q.v.*) accepted the teaching of Elkesai. From the time of the Jewish war this group of zealous baptists had settled in the district to the east of the Jordan, where they had opportunity to follow their practice of ritual bathing in streams and wells. Elkesai's teaching was in many points akin to their own. Burnt-offerings had already been discarded by their fathers, even while the altars of the true God were still burning at Jerusalem. It is likely enough, too, that a belief in astral deities would prevail in a community which worshipped the sun at his rising. Whether the Essenes abandoned that worship in compliance with Elkesai's general injunction against turning to the East in prayer, we do not know. That in their other prayers they observed the *qibla* towards Jerusalem may be inferred from the fact that they had been in the habit of sending dedicated offerings to the Temple.[1] Nevertheless, they must have in some degree maintained their distinctive character and their separate existence as a community, else Epiphanius could not have spoken of the remnant of their adherents in his day as a definite group among the Elkesaites.

(*c*) *The Jewish Christians.*—The teaching of Elkesai found an open door also among the Jewish-Christian communities whose language was Aramaic. Amongst these—the existing representatives of the earliest churches founded by the Apostles of Jesus and their associates—the recollection of the baptism preached by the forerunner of Jesus would still be of some influence; and, moreover, their long-protracted waiting for the Saviour's return from heaven, as well as their disappointment that one 'sign of the time' after another had proved abortive, must inevitably have tended to predispose them to welcome a new revelation. With a view to winning their whole-hearted allegiance, Elkesai circulated among them a document in which he related how there had appeared to him two figures of monstrous size, a male and a female, facing each other like a pair of statues; the male was the Son of God, the female was the Holy Spirit.[2] In order to gain credence for this story, he averred that the figures—of equal magnitude—stood between two mountains, and that he was thus enabled to ascertain their dimensions: they were twenty-four σχοῖνοι high (ninety-six Roman miles), etc. He also took care to represent the vision as a token of God's approval of himself and his work, stating that these beings are invisible to man, and had manifested themselves to him only by way of exception. The story was quite in keeping with the religious notions of these Jewish Christians. The 'Gospel' of the Nazaræans in Berœa, according to Origen and Jerome, contained a reputed saying of Jesus in these words: 'My mother, the Holy Spirit, took me by one of my hairs, and conveyed me to the top of the lofty mount Tabor.' In any case the imposture—we can call it nothing else—was successful. Epiphanius asserts that the Ebionites and the 'Nāṣōræans,' like the Essenes and the 'Nazaræans,' were imposed upon by the heresy of Elkesai, and, while this statement does not apply to all Nazarenes or Jewish Christians, we can quite well believe that a large proportion of the pre-Catholic Christians of Syria, and especially those occupying the district to the east of the Jordan—probably it was the latter only who as yet called themselves *'Ebyōnīm*, 'the poor'—yielded their allegiance to Elkesai. In a later age the Catholic Christianity of the East surrendered in similar fashion to Islām, and with less excuse. Cf. art. EBIONISM.

(5) *The presumptive close of Elkesai's career.*—Elkesai had thus become the hierarch of a confraternity which, if it did not count its members by tens of thousands, had nevertheless a considerable influence, and enjoyed a fairly wide expansion. Presently he had, of course, to deal with the cares and troubles incident to a position like his. The members of his communities came to him with their grievances. As Jews, they were subject to the tyranny and chicanery of special taxation; as monotheists, who would not bow to the gods of the State or the statues of the Emperor, they were exposed to persecution of all sorts. Elkesai, willing to save them from the worst possibilities of these oppressions, issued a further document to his faithful followers, permitting them in the last resort to deny their faith with the lips, while still loyal to it in their hearts. So long as they withheld their inward assent, it was no sin, in times of persecution, to worship idols, to take part in the sacrificial meals associated with such worship, and, in short, to renounce their religion in words. Elkesai vindicated this policy by adducing the example of a Jewish priest called Phinehas, who, during the Babylonian captivity—under King Darius in Susa—was saved from death by an act of homage to Artemis.

When we bear in mind that this was a case where a religious leader of strongly self-reliant character granted to others an indulgence which promised no personal advantage to himself, we cannot but see in the action a certain humane consideration and a high degree of tolerant kindliness. But leniency in religious things is not what we look to find in the founder of a sect—not, at least, until the closing stages of his career, when the fires of enthusiasm are quenched and the mind has attained to peace. We may thus venture to surmise that this dispensation was Elkesai's last proclamation—the message of a man no longer young, whose sole remaining wish was to prove an attentive shepherd to his flocks, and leave among them a legacy of gracious memory. Are his people persecuted? Be it so; let them hoodwink the ungodly, and the devil. In the great Day of Judgment it is their leader's testimony that will count. He, Elkesai, will then bear witness, on behalf of his faithful ones, that their denial was but make-believe, not the expression of their inmost thought. It must have been in some such frame of mind and with some such conviction that he issued his permission to deny their faith.

It is probable that this dispensation in its original form included an instruction which Hippolytus wrongly interprets as referring to the whole book. The instruction is in these words:

[1] Jos. *Ant.* XVIII. i. 5.

[2] We must remember that the Semitic mind quite naturally represented the Holy Spirit as female, the Semitic equivalents of 'spirit' being feminine.

'Read not this discourse before all persons, and guard these precepts carefully; for not all men are trustworthy, nor are all women upright.' The phrase 'all persons,' as we think, was meant to be restricted to the Elkesaite fellowship; since, if it be taken unconditionally, the reminder that 'not all are trustworthy or upright' would be a pointless truism. The message which thus sanctioned, under special pressure, a feigned denial of the faith was intended only for those members of the sect whose loyalty and uprightness were beyond question. To have delivered it to all the members without discrimination would have been to risk such a misapplication as might in no long time have brought Elkesai's whole life-work to nought.

The silence of tradition as to the close of Elkesai's life may be taken as an evidence that he died a natural death. We cannot so much as guess when he died, nor would it be of any great moment even if we knew the exact date. Suffice it to know that he ended his days with his faith unperplexed, and at peace with his followers, as may be inferred from the fact that the veneration accorded to him as a religious leader was still maintained towards his descendants. The form of religion associated with his name continued to flourish for centuries after his death.

3. Elkesaism after the death of its founder.—(1) *The translation of the sacred book.*—We have already seen how the separate sheets issued by Elkesai, so far as they could be recovered, were gathered together to form a book. Now, at that period many people in the larger towns of Syria understood and spoke Greek as well as Aramaic, and in this way the teaching of Elkesai must have become known also to Syrians who spoke Greek only. Among these, *i.e.* in the more cultured circles of the cities, it found friends and adherents, who at length began to express a desire for a Greek rendering of the highly-revered document.

The Greek version of the Book of Elkesai, as Epiphanius records, enumerated the seven witnesses to the oath in two diverse forms. The series given in the surviving directions for immersion we recognize as the later. In this list, owing to the twofold meaning of the Semitic word רוח, we find 'spirits,' and even 'holy spirits,' instead of 'the winds'; for 'the æther' we have the inhabitants thereof, angels, 'the angels of prayer,' who receive the prayers of men and convey them to the throne of God—a Jewish as well as a Christian belief. Instead of 'bread,' again, we have 'the oil,' which may have been meant to suggest a sacrament of unction, but probably denotes here—together with the salt—simply the material used in the preparation of nearly all foods, for it is evident that the Elkesaites amongst whom these changes had been effected were not aware that the series of witnesses ought to include only cosmical and ceremonial elements, and did not know what the practice of invoking them had originally signified. 'Holy spirits' and 'angels of prayer' are not elements, nor are they the sort of beings who would wreak injury on perjured souls. Hence the fact that Epiphanius, in the other passage which dealt specially with the seven witnesses, and which has not survived, still found the original designations—the winds, the æther, the bread—need not surprise us: it can mean only that the translator felt what was there said about these things to be quite inapplicable to holy spirits, angels, and oil.

(2) *Progress among Greek-speaking Jewish Christians.*—The Elkesaite faith, thus equipped with the Greek version of its sacred book, exercised an influence also in certain circles which did not accept it fully, and this influence was by no means slight. A considerable number of the Greek-speaking Jewish Christians of Syria felt attracted by the strange work, and appropriated many things—ideas as well as practices—they found in it. Now, Epiphanius possessed a volume which, as he supposed, contained the teachings of a certain 'Ebion'—it was, of course, simply an Ebionite work—and from which he quoted a commandment requiring that after cohabitation a man shall bathe 'often, and in his clothes,' as also a prescription for sick people and those who had been bitten by a venomous animal, directing them to bathe in water and invoke four pairs of names, these being compiled from the two lists of the seven Elkesaite 'witnesses' (*Hær.* xxx. 2. 17, pp. 126 A, B, 141 B).

(3) *The Elkesaite mission to the West.*—About the year 220 of our era a group of Elkesaites in the Syrian littoral who possessed the Greek version of their sacred book were of a spirit so vigorous and enterprising that they sought scope for it in an attempt to propagate their doctrines in other parts of the Roman Empire. They proposed to send missionaries to the West, and that these should appeal to the Catholic Churches and show their book to the members, asking them to hearken to its message and assent to it, and should then, on condition of their doing this, invite them to undergo immersion for the remission of sins. Upon one chapter of the book in particular they placed no small reliance, as it seemed to be precisely of such a character as would dispose the Christians to look favourably on the book as a whole. This was the Christological section, which probably does not go further back than the Greek version, and which contained the doctrine that 'Christ' had appeared often in the course of the world's history.

Epiphanius confesses that he did not fully understand the passage in question, and that, in particular, he could not make out whether the Christ spoken of was the Lord Jesus or another. Finally, or rather by way of supplement, in *Hær.* liii. he adds a short note connecting—on quite fallacious grounds—the figment of the two gigantic forms with a certain doctrine of Jewish-Christian gnosis, according to which Christ was the Adam created in Paradise, and in his several advents simply assumed for the time the body of Adam. Hippolytus, on the other hand, says explicitly that the Elkesaite Christology proceeds upon the Pythagorean idea of transmigration, and actually quotes in this connexion a word (*μεταγγίζεσθαι*) associated with that doctrine. But, when he tells us that in the Christological teaching of the Elkesaites Christ was said to have been 'born of the Virgin this time,' we feel that he is supplementing from his own creed; for, had this been expressly stated in the document, Epiphanius could scarcely have had any dubiety in the matter, but would have known that by 'Christ' the Elkesaites meant the Lord Jesus.

From the remaining data of the two heresiologists, so far as they agree, we infer that the later Elkesaite Christology was somewhat as follows: Christ is a higher being; was fashioned in Paradise as Adam, and since then has been born—not merely once, as now, but repeatedly in the course of previous ages—in various personalities as a man like other men, or has appeared as a phantom. It is hardly open to doubt that in the fragment under consideration it was implied that not only Jesus, but also Elkesai, was an incarnation of the Christ, and, indeed, that the latest and most notable manifestation of the great being was none other than Elkesai, not Jesus of Nazareth. Now Elkesai himself cannot have believed this, as he had made it known that the Son of God had appeared to him in a form of enormous proportions; and it is much more likely that this fact was overlooked by the later generation of his adherents. The Christological section, as the present writer thinks, first saw the light at the time when the Elkesaites—in Apameia or elsewhere—were preparing copies of their book for their Western mission. The period and the locality both tended to favour the delusion that the Catholic communities would be satisfied with such a Christology. It seems to have been at this time also that an addition was made to the directions for the sin-purging rite of immersion, the formula 'in the name of the great and most high God' being supplemented by the words 'and in the name of his son, the Great King.' The smaller interpolation was meant, of course, to serve the same purpose as the larger.

The apostles of the Elkesaite faith, thus fur-

nished with a revised edition of their book, then set forth to the conquest of Catholic Christendom. Origen, in a discourse directed against them, says that they ventured to approach 'the Churches.' But they were quite unable to win a firm footing anywhere. Nor is this to be wondered at, as the enterprise rested upon a wholly defective apprehension of the doctrines, the rites, and the general conditions of the Catholic world.

Our further knowledge of the undertaking is restricted to the efforts of Alcibiades, a citizen of the important town of Apameia on the Orontes, who directed the Elkesaite mission in Rome. He found the Roman Church in a condition that seemed altogether favourable to his designs, and he determined to take full advantage of the fact. Bishop Callistus (A.D. 217–222) had shown himself unwilling to exclude sinners from the fellowship of the Church, even for sins of the flesh, the usual penalty of which had been excommunication. It was asserted by his opponents that this leniency had caused the prevalence of precisely that kind of sins; but Callistus maintained that Christ forgave all whose intentions were good, and so would *he* forgive all. The learned Hippolytus, who is our informant here, and who was chosen bishop by the dissatisfied party, deplores that the sinners were now arrogating to themselves the name 'Catholic Church'; he also states that the attempt to introduce a second baptism was first made in the time of Callistus (*Philosophoumena*, ix. 8, p. 290 f.).

The circumstances thus noted by Hippolytus find a striking echo in two of his quotations from the Greek book of Elkesai—the only passages with which we have not yet dealt. They are as follows:

'My children! if one has lain with any kind of beast, or with a male, or with his sister, or his daughter, or has committed adultery or fornication, and desireth forgiveness of his sins, so let him, as soon as he has hearkened to this book, be baptized the second time in the name of the great and most high God, and in the name of his Son the great king, and purify and cleanse himself, and take to witness the seven witnesses recorded in this book: the heaven and the water and the holy spirits and the angels of prayer and the oil and the salt and the earth.'

'Again I say, O adulterers and adulteresses and false prophets [*i.e.* heretical teachers], if ye will be converted, that thereby your sins may be forgiven, so ye likewise shall have peace and a portion with the just, as soon as ye have hearkened to this book and are baptized the second time, in your clothes' (*Philos.* ix. 10, p. 294 f.).

Here we recognize at a glance the hand of the reviser: the reference to 'this book,' the name of the Son of God added to that of the most high God, the list of witnesses in its later form. But we also note, as something altogether new, the passive use of 'baptize'; the sinner is to 'let himself be baptized,' or 'be baptized,' and, moreover, 'for the second time.' We cannot well imagine that the latter changes in the two texts had been made in Syria in anticipation of the projected mission to the Christians of the West. For one thing, it is quite incredible that any missionary religion would from the outset entertain the thought of finding its converts in a class of persons that could only cover it with odium. For another, it is certain that the text used by Epiphanius either did not contain these particular directions for the sin-cancelling ablution at all, or, at least, did not contain them in the form which Hippolytus found in the copy originally belonging to Alcibiades—the form, that is to say, providing expressly for sinners usually regarded as of the grossest type, and containing the summons to the second baptism. Neither of these features could have escaped Epiphanius, nor would he have failed to denounce them. In point of fact, the two passages—or, so far as regards the first, its extant version—must have been composed by Alcibiades himself, after he had made approaches to the dominant party, the Callistians. He addresses the Christians in exactly the same manner as their own teachers, viz. as 'children' (a form which, it is true, had been used also by Elkesai), seeking thus to coax them to his side, and keep them there; for he had but one end in view—the formation among them of a community that should hold the Book of Elkesai in reverence. The idea of the second baptism must have struck him as full of promise for his purposes; and so, with a view to its adoption, he composed the two verses quoted above, containing respectively the ritual for gross sinners and the invitation or summons to the second baptism. For the former he found a pattern in Elkesai's prescription for the bite of a mad dog, and the style of the original is cleverly imitated in the successive 'or . . . or . . .' of the interpolation.

But it was all a beating of the air: these accommodations to Roman Christianity were of no avail. Under Bishop Callistus, sinners were sure of lenience and remission without exorbitant penances, and this, moreover, within the pale of their ancestral Church; what further end could be served by their becoming Elkesaites?

The sole remaining expedient of the Syrian missionaries was to make a prodigy of the Book of Elkesai, which, as a matter of fact, they themselves no longer fully understood. It is possible that some inexperienced or uneducated or unintelligent Christians were drawn to them by a liking for the occult and the fantastic, and here and there formed a little Elkesaite group. But any such community must have been short-lived, for there was no practical interest to bind the members together. In short, the result of the Elkesaite propaganda in Catholic Christianity was such that Eusebius could speak of the movement as having arisen, and then presently died away.

(4) *Later fortunes of the sect in the East.*—In those parts of Syria where Catholic Christianity supplanted Jewish Christianity Elkesaism gradually dwindled away, and in the Hellenized section of the inhabitants it became completely extinct. But in that district of the country which lay at a distance from the main highways, and in which it won its earliest victories—among a population speaking Aramaic exclusively—it stood its ground, and even made a further advance.

(*a*) *The Sampsæans.*—Before Epiphanius left Palestine (A.D. 367), he heard of a sect living in the country eastwards from the Jordan and the Dead Sea, viz. the Sampsæans (Sampsenes, Sampsites), who believed in one God, and worshipped Him by ablutions. They held that life arose from water. They vaunted Elkesai as their teacher, and in their midst lived two women, sisters, who were descended from him. The members were accustomed to bend the knee to these women, and even to follow behind them for the purpose of securing their spittle and the dust from their feet, preserving these in capsules, which they carried as amulets. In most matters of creed and ritual they were at one with Judaism; nevertheless they were not Jews. Their distinguishing peculiarity was their reverence for the Book of Elkesai, and they did not own the authority of either the Old or the New Testament. Incorporated with them were the Ebionites, the Nāsōræans, the Nazaræans, and the Ossæans. With reference to this point, Epiphanius states that the last-named sect, *i.e.* the Essenes, had 'now' renounced Judaism, and no longer lived in the manner of the Jews.

The only conclusion we can draw from these data is that the Elkesaites had given up that particular feature of Judaism which formed at once a bond of union and a principle of isolation for the Jewish people, *i.e.* their observance of legal purity in food and drink, and their consequent refusal to eat with the heathen. Now the coincidence of this defection with the occurrence of a new name of a decidedly heathen cast forms a sufficient ground for thinking

it probable that a group of Syrians of non-Jewish race had united with the Elkesaite baptists, and accepted their sacred book, but did not observe the Jewish regulations about food. The name 'Sampsæans,' if we may trust the accuracy of its traditional form, means 'the sunny ones,' or 'the sunlike,' not 'sun-worshippers' or the like. It prompts the conjecture that the 'Sampsæans' were really a family, and indeed one of high standing. They would seem likewise to have been well-to-do, perhaps also on a good footing with the civil authorities, and on these grounds to have rapidly risen to great influence in the Elkesaite fellowship. The two great-granddaughters of the prophet willingly accepted their obeisance, while the Elkesaites by birth did not refrain from sitting with their new associates at meals; and it was for the sake of the latter that the former discarded the Jewish laws regarding food, and thus broke away from the community to which they—as a somewhat unacceptable party, it is true—had hitherto belonged. Socially, therefore, the older group may be said to have united with the newer, rather than the newer with the older, and this circumstance took effect also upon the nomenclature. The Sampsæans did not surrender their high-sounding name. They were the most eminent section of the order; they became its leading group, and, when outsiders occasionally spoke of the whole community as the 'sun-like ones,' the older Elkesaites actually felt flattered, and, indeed, soon began to apply the new name to themselves.

The Elkesaite baptists may have maintained for centuries their tranquil existence in the little-visited district watered by the Eastern tributaries of the Jordan, but the voice of tradition is henceforth silent with regard to them.

(*b*) *The Mughtasila.*—The name of Elkesai—but only the name—crops out once more in an ethnographic note in the *Kitāb al-Fihrist* by Ibn Abī Jaʿqūb al-Nadīm (ed. Flügel, Leipzig, 1871–72, p. 340). The note refers to a religious community whose adherents inhabited the wide-spreading swampy region traversed by the Euphrates in its lower course, and were locally known to the Arabs as *al-Mughtasila*, i.e. 'those who wash themselves.' We are informed that 'these people are numerous in the marsh-lands, and they are, in fact, the Sabæans of the marshes.' They must accordingly be regarded as identical with the Sabians (also meaning 'baptists') mentioned in three passages of the Qurʾān (ii. 59, v. 73, xxii. 17) as a people who, together with Jews and Christians, are to have liberty in the exercise of their religion. This privilege was accorded to them in virtue of their monotheism and their possession of sacred writings. The note continues: 'They maintain that people should wash [often], and they also wash all they eat. Their leader is called الحسيح; he is the person who founded their faith.' Chwolsohn reads the name as *al-Ḥasaiḥ*, Flügel as *al-Ḥasīḥ*; but, as we have already seen, this transliteration can rest upon conjecture only. The note also ascribes a dualistic cosmology to the sect, stating that they believed in a male and a female order of beings, and asserts that at an earlier time, as regards the two original principles, they agreed with the Manichæans. On this point al-Nadim makes another interesting statement (Chwolsohn, i. 125 f.), viz. that the father of Mani (who founded Manichæism in the 3rd cent. A.D.) joined the Mughtasila, and educated his son in their faith, and that the latter began to proclaim his own doctrine at the age of twenty-four. The baptists of the Euphrates can thus be traced back to the end of the 2nd century. They were known to Muhammad as monotheists and possessors of sacred writings; and some time afterwards an inquirer learned from them that their founder and lord was called Elkesai—or some such name. Now, not every religion has a lord and founder. Islām, however, tolerated only such forms of religious belief as were like itself in this respect. Thus the Mughtasila, in meeting inquiries regarding their origin, had the most cogent of reasons for putting forward some name that might stand as co-ordinate with names like Moses, Jesus, and Muhammad, and accordingly the reference in the *Kitāb al-Fihrist* cannot rank as historical evidence. All that the note proves is that the priestly or learned class among the Mughtasila had heard of the name of Elkesai as that of a religious leader, or teacher, while this again may signify nothing more than that a copy of the Book of Elkesai, inscribed with his name, had fallen into their hands. If, moreover, the volume was for a considerable period their sole possession of the kind, they would come to honour it as their oldest document; and in this way might arise the tradition that the book contained doctrines which its author had delivered to their ancestors at the birth of their religion. A religious document of that kind, even when its possessors do not follow it in practice—and almost, indeed, in proportion to their inability to understand it—tends to become a holy thing, whose very name inspires reverence. Thus we need not assume that the Mughtasila ever really lived as Jews, observing circumcision, the Sabbath, or the *qibla* towards Jerusalem.

The monotheism of the Mughtasila was, with some of them, only a pretext; 'to this day,' says the Arabic writer, 'they have among them some who worship the stars'; besides, it was combined with dualistic tenets, and accordingly, like that of Mani, must have been derived, not from Judaism, but—either by means of actual contact, or through the studies of the priests—from Parsiism. That the Mughtasila performed their ablutions by bathing may be presumed from the fact that they lived in a marshy district; but on the same grounds it seems unlikely that they deemed it essential to use river or spring water. We cannot say whether or not they practised immersion. That Elkesai himself had proclaimed his doctrine among them is *a priori* improbable, even if it should be thought possible that in his day they were Jews, or had provisionally become Jews. Success among them would have induced him to remain in their midst, just as his success in the district to the east of the Jordan kept him there; and, moreover, it was in the latter locality that his descendants lived.

4. **Origin of Elkesaism and its place in the history of religion.**—With reference to the historical connexion of Elkesaism with other religions of similar character, the main question turns upon its practice of baptism. Let us state at once that what we have to deal with is not the mere fact of religious washing or bathing, but the requirement of total immersion in a river or spring, with the garments on, as a necessary condition of remission of sins or bodily healing.

Judaism never at any time made such a demand, although the Essenes, it is true, bathed in loin-sheets, and must in cis-Jordanic Palestine have had to content themselves with the water of ponds. We meet with the practice in Southern Babylonia, among the Mandæans, and also in the far East, among the Hindus. As regards the latter, we find Manu enjoining that those guilty of certain sexual sins must expiate them by bathing in their clothes (*Laws*, xi. 175 [*SBE* xxv. 466]); and the Hindus, from similar motives, practise immersion in rivers. The Mandæans likewise bathe in the river Euphrates for remission of sins, being clothed in white for the occasion, just as they

formerly wore white garments in their daily life (see W. Brandt, *Mandäische Religion*, Leipzig, 1889, pp. 91, 92, 224).

That this religious rite was brought to Palestine by way of the Euphrates from India we cannot believe, if for no other reason than that it is not again alluded to in the code of Manu, which probably attained its present form *c.* A.D. 1000, so that the practice can hardly have been at that date a long-established or popular one in India. The probability is rather, indeed, that it migrated from the Euphrates towards the East, just as the Mandæans themselves spread eastwards from that river into the interior of Persia.

The resemblance between the practice of the Mandæans and that of Elkesai is striking. But in the former we do not find anything to correspond with the vow which Elkesai demanded from his adherents at their immersion, or with the invocation of the seven witnesses. Nor did the sacramental elements of the Mandæans consist of bread and salt. Their oldest sacred writings were composed in the period of the Sasanians, or even earlier, but they contain no mention of Elkesai. The Mandæans believed that their deity dwelt in the North, beyond the mountains whence the great rivers come, and it was towards that point that they turned in prayer. These facts forbid the assumption that they owed their religious ritual to Elkesai.

Nor are we able to affirm that, contrariwise, the Elkesaite ritual was derived from Babylonia. We may, indeed, regard it as possible, and even probable, that the Mandæan cult was the older, but this does not admit of proof. For his doctrines Elkesai did not need to go so far. Babylonia was the cradle of astrology, but this 'science' had already spread over a great part of the world. In conformity with the belief that water is the source of life and health, the Parsi theologians fancied that the two trees 'All-seed' and 'All-heal' germinated from the sea, or from the waters of a wholesome spring. A similar idea, however, had long found a footing on Jewish soil, where it can be traced back to the passage in Ezk 47 describing the future glory of the land.

Do we find any light from Bab. antiquity upon the Elkesaite immersion? In the ancient Babylonian texts hitherto published, though we there find mention—in a religious connexion—of such acts as drinking clear water, suffusing, laving, washing, cleansing, and sprinkling with the waters of wells or springs, of the Euphrates, the Tigris, or the sea, we have as yet discovered no definitely attested instance of immersion. The earliest known reference to the practice in the Semitic world is still the case of Naaman the Syrian, who dipped himself seven times in the Jordan in order to be healed of his leprosy (2 K 5[14]).

In the civilized belt of country around the Mediterranean Sea, which extended on the East beyond the Jordan, we find the religious rite of immersion associated with that conception of the new birth which enters largely into the mysteries. With that idea, therefore, it is no doubt genetically connected, and, like the mysteries generally, is to be traced to the esoteric doctrines of priests. The association of immersion with the vow and the seven witnesses, as found among the Elkesaites, seems to imply that their founder had become acquainted with the ceremonial of one or other of the mystery-cults practised by a priesthood or a religious association. His own ritual is modelled after some such solemnity, and he may well have taken the practice of immersion—the central feature of the ceremony—from the same source.

So far as we can judge, it did not fall to the lot of the Elkesaites to have an active share in the rise or development of any religion that survived their own. It has been asserted that their doctrines had an influence upon the system of ideas embodied in Islām, but this has never been proved.

[1910] 99 ff.), *Elchasai; ein Religionsstifter und sein Werk*, Leipzig, 1912 (contains also a survey of former studies of Elkesaism).

W. BRANDT.

ELLORA.—Ellora is a town in the dominions of the Nizām of Haidarābād; lat. 20° 21′ N.; long. 75° 13′ E.; famous for its rock-caves and temples. There is some doubt as to the true form and derivation of the name. The form accepted by Burgess is *Verulā* or *Elurā*, which has been identified with a place called *Vellūra* in the *Bṛhat Saṁhitā* of Varāhamihira (xiv. 14; *IA* xxii. 193); or with *Elāpura*, which may mean 'cardamom town'; while others connect it with Tamil *Elu-ūru*, 'rule village' (see Fleet, *BG* i. pt. ii. 391). Fleet writes the name *Ellōrā*. The place is still considered sacred, and is the site of a shrine of Gṛṣṇeśvara, one of the twelve sacred *liṅgam*-temples of India. This was probably connected originally with the caves, but, when these were desecrated by Aurangzīb (*q.v.*), it was transferred to the neighbouring village. The caves, according to Burgess (p. 4), are about half a mile E. of the village, and lie nearly N. and S. along the W. face of the hill, on the summit of which the modern village of Rozah stands. They extend a little over a mile in a straight line. The caves at the S. end are Buddhist; those at the N. end Jaina; while those between these groups are Brāhmanical.

1. **The Buddhist caves.**—The Buddhist group at the S. end consists of twelve excavations, which were constructed in the period between A.D. 450 and 650 or 700. Of this group three caves are especially important. That numbered X in the list of Burgess is the great *chaitya*, or rock-temple, the only one of the kind at Ellora, and locally attributed to Viśvakarma, the architect of the gods.

'It is a splendid temple, with a fine façade and large open court in front, surrounded by a corridor, and worthily concludes the series of Buddhist Chaitya caves, which, taken together, are perhaps the most interesting group of buildings or caves in India. We can now trace the sequence of these, from the early wood-fronted examples at Pitalkhorā, Kondānē, and Bhājā, through the stone-fronted caves of Beḍsā and Kārlē (*q.v.*) to the elaborately decorated façades of the two latest at Ajantā (*q.v.*), till at last it loses nearly all its characteristic external features in this one at Ellora' (Burgess, p. 9).

It contains a great *dāgoba*, or relic-shrine, and on the front of it an immense mass of rock is carved into a large image of Buddha, attended by the Bodhisattvas, Avalokiteśvara and Mañjuśrī.

The second is the *Doṅ Ṭhāl* cave, so called because it was long supposed to consist of only two storeys. In 1876, however, the lower storey was cleared of the earth which had completely buried it. This cave seems to have been left partially incomplete, and was intended to serve both as a temple and as a monastery.

The third great Buddhist cave, known as the *Tīn Ṭhāl*, or three-storeyed cave-temple, was suited rather for worship than for use as a monastery.

'This is of its class,' writes Burgess (p. 16), 'one of the most important and interesting caves at Elurā. In no other series do we find a three-storeyed Vihāra carried out with the same consistency of design and the like magnificence as in this example, and from these circumstances there is a grandeur and propriety in its appearance that it would be difficult to surpass in cave architecture. The greatest interest, however, lies in its being a transitional example between the styles of the two great religions which divide between them the architectural magnificence of the place. On comparing it with the Das Avatāra cave, that all but immediately succeeds, it seems almost as if the builders of this cave had been persuaded to change their faith, and by gentle means to adopt the new religion, and not that they had been converted by persecution, as has been very

generally supposed. So gently, indeed, does the change seem to take place, that we can hardly detect it in the architecture, though the sculptures announce it with sufficient distinctness. But the mode in which sculpture is substituted in the upper story of the cave for the arrangement of cells in the older and genuine Vihāras shows that a change was creeping over the form of the religion long before it pronounced itself by the acceptance and adoration of the new gods.'

2. **The Brāhmanical caves.**—The *Das Avatāra* cave, as its name, 'the Ten Incarnations,' implies, is purely Brāhmanical. It contains sculptured images of all the greater gods. An inscription indicates that it was finished, or was at least in an advanced condition, in the middle of the 8th cent. A.D. The other chief Brāhmanical caves are the *Rāmeśvara* and the *Dumar Lenā*, the latter one of the finest of its kind, and interesting as being almost a duplicate of that of Elephanta (*q.v.*).

But of all the Brāhmanical monuments none is more remarkable than the *Kailāsa*, named after the paradise of Śiva, also known as *Rang Mahal*, 'painted hall,' which was constructed in the reign of Krishna (Kṛṣṇa) I., the Rāṣṭrakūṭa king of Mālkhed (*c.* A.D. 760–783; see ARCHITECTURE [Hindu], vol. i. p. 742[a]). The Kailāsa is an undoubted copy of the old structural temple of Virūpākṣa at Pattadakal in the Bījāpur District, and this again, a temple in the Dravidian style of S. India, is strikingly like the old temple of Kailāsanātha at Conjeeveram (J. H. Marshall, *Arch. Survey Report*, 1905–6, p. 112; Smith, *Early Hist.*[2] p. 386 f.). 'It is,' says Burgess (*op. cit.* p. 26), 'by far the most extensive and elaborate rock-cut temple in India, and the most interesting as well as most magnificent of all the architectural objects which that country possesses.' Fergusson (*Indian and Eastern Arch.* [1899], p. 334, ed. 1910, i. 342 ff.), says:

In it 'we have a perfect Dravidian temple, as complete in all its parts as at any future period, and so advanced that we might have some difficulty in tracing the parts back to their originals without the fortunate possession of the examples on the Madras shore. Independently, however, of its historical or ethnographical value, the Kylas is in itself one of the most singular and interesting monuments of architectural art in India. Its beauty and singularity always excited the astonishment of travellers, and in consequence it is better known than almost any other structure in that country, from the numerous views and sketches of it that have been published.'

And he goes on to show that it reverses the methods of the Buddhist caves which adjoin it, being not a mere chamber cut in the rock, but a model of a complete temple, such as might have been erected on the plain. In other words, the rock has been cut away both externally and internally, leaving the structure completely isolated from the cliff, of which it once formed a part. The disadvantage of this mode of construction naturally is that the building stands in a pit. But it remains an example, probably unique, of unsparing labour devoted to the construction of a religious edifice. Among the important groups of sculpture which it contains are that of the destruction of Mahiṣāsura, or the buffalo-headed demon (which gives its name to Mysore), slain by Chaṇḍī or Durgā; those of Śiva in his various manifestations; and the shrines of the river-goddesses—Gaṅgā, Sarasvatī, and Yamī or Yamunā.

3. **The Jaina caves.**—Lastly come the Jaina caves. Of these the two principal are

'very extensive works, superior both in extent and elaboration to any of the Brāhmanical caves, excepting, of course, the Kailāsa, and the Viśvakarma among the Buddhist ones. Though two storeys in height and extremely rich in decoration, the Indra and Jagannāth Sabhās are entirely deficient in that purpose-like architectural expression which characterized the works of the two earlier religions. They have no cells, like the Vihāras, and are nothing like the Chaitya halls of the Buddhists, nor do they suggest the Chāvaḍis, like the Dumar Lenā of the Hindus. Rich and elaborate though they certainly are, the plan is compressed, and all their arrangements seem to result more from accident than from any well-conceived design, so that they lose half the effect that might have been produced with far less elaboration of detail' (Burgess, p. 44).

They are much later in date than either the Buddhist or the Brāhmanical caves. It seems that the Jainas occupied the place after the decadence of the Rathoḍ dynasty in the 9th or 10th cent. A.D., and their only desire was to mark the superiority of their religion, then becoming important, by rivalling the works of their predecessors.

LITERATURE.—This article is based on the excellent monograph, 'Report on the Elura Cave Temples and the Brāhmanical and Jaina Caves in Western India,' by J. Burgess, forming vol. v. of the *ASWI*, 1883, which is fully illustrated with photographs, drawings, and plans. This is in continuation of Fergusson-Burgess, *Cave Temples of India* (1880), in which see pp. 367–384 for the Buddhist caves; 431–463 for the Brāhmanical; 495–502 for the Jaina. Also see J. Fergusson, *Hist. of Indian and Eastern Architecture* (1899), pp. 127, 334–337, 445, ed. 1910, i. 120 ff., 127 f., 159, 201 ff., 342 ff., ii. 19 f.; V. A. Smith, *A Hist. of Fine Art in India and Ceylon* (1911), p. 210 ff. The place is fully described by Syed Hossain Bilgrami and C. Willmott, *Historical and Descriptive Sketch of H.H. the Nizam's Dominions* (1883), ii. 440 ff. For illustrations also see W. H. Workman, *Through Town and Jungle* (1904), p. 158 ff. The earlier account by J. B. Seely, *The Wonders of Elora* (1st ed. 1824), has been superseded by later investigation.

ELYSIUM.—See BLEST (ABODE OF THE), STATE OF THE DEAD.

EMANCIPATION.—*Definition.*—Emancipation in its more general sense signifies the liberation of the individual from the yoke of the community and its institutions, or from that of tradition and custom; or, again, the liberation of a smaller and weaker community from the coercion of a larger and more powerful. As the restrictions in question may vary greatly in kind, and may relate to various aspects of life, emancipation, too, may assume different forms. Before we discuss the moral character of the movement towards freedom, we shall make a general survey of the whole field. We may distinguish between the emancipation of thought and emancipation in the sphere of action, though for the most part the two have proceeded hand in hand.

1. **Emancipation of thought.**—Thought becomes emancipated when it casts aside the traditional views and prejudices which have impeded its free movement in the past. We do not, of course, apply the term 'emancipation' to every case where erroneous traditions are abandoned, but only to cases where the general consciousness of a community is concerned, and where the restrictions upon thought had the sanction of some coercive authority. Thus, in particular, the moral consciousness may become emancipated from ethical conceptions hitherto hallowed by tradition and established by public opinion; religious thought may similarly pass from under the bondage of sacred traditions and ecclesiastical authority; there may also be an emancipation of science, as when it frees itself from the fossilized prejudices that have erewhile hampered its progress; or of art, as when it is delivered from some hoary religious tradition, or from the incubus of an antiquated school or style. Emancipation of this sort is always allied with the spirit of criticism, as in Greece, for instance, where the Sophists impugned the morality of tradition and of popular religion, and the philosophers sought to undermine current beliefs regarding the gods, and where hieratic art was at length overthrown by the great artists. Similarly Buddhism brought about an emancipation from the ascendancy and authority of the Brāhmans by proclaiming a *universal* redemption from suffering; while Christianity broke the yoke of the OT legalism by imbuing the mind with the life-giving spirit, in place of the dead letter. Thus, too, the sciences freed themselves from the despotism of mediæval theology—by the device, first of all, of a twofold truth, and then by the growing conviction that they must pursue truth by their own methods, and must treat this pursuit as an

end in itself. Finally, the human mind attained to the conception of complete liberty of thought in all its phases, and in course of time this was claimed as a right. The prerogative of freedom in religious belief, in scientific inquiry, in the utterance of one's convictions, came to be regarded as inalienable, and the State was called upon to preserve it inviolate. True, a certain liberty of thought had been conceded in the Greek world; nevertheless, charges of impiety (ἀσέβεια) were not unknown, as in the case of Protagoras, Diagoras, Anaxagoras, Stilpo—to say nothing of Socrates; and at length the Athenian schools were closed by Justinian. Complete emancipation of thought was first claimed as a legal right by the modern champions of Natural Law, and has been won only after the severest conflicts. Only in modern times, too, has æsthetic thought sought to deliver itself from ecclesiastical and national influences, by insisting upon a free secular art.

2. Emancipation in practical life.—The process of emancipation, however, bears not only upon thought but upon practical life, and its progress in this sphere seems to accelerate as we approach the present day. To begin with, the individual has become more and more independent.

(*a*) In ancient times *slavery* was defended even by Aristotle; it was viewed with disfavour by the Stoics, while in the Roman Empire it was greatly mitigated by law; it was still recognized, as, *e.g.*, by Aquinas, in the Middle Ages, and was maintained even in the 19th cent. by the Southern States of N. America; now, however, it is entirely abolished in Christian lands, and, outside Christendom, prevails only amongst the Muhammadans. But the caste system of India is for the lower classes almost worse than slavery, and in the United States, where slavery no longer exists, there still remains the negro question, as also the problem of conferring civil rights upon the liberated race under conditions which will ensure a proper exercise of the privilege. In fact, the general policy of the higher races in regard to the lower is one of the most formidable questions of the day, as it can hardly be denied that the developed civilization of the former, allied as it is with superior physical resources, has often been employed in oppressing the latter. In these respects the process of emancipation still lags far behind.

(*b*) The emancipation movement embraces also the question of *women's rights*. Among ancient peoples the position of woman was a very limited one. In *China* her subordination to man is in line with the principles underlying the entire social order. Women, according to Confucius, are not easily dealt with.[1]

'If you are intimate with them, they will not obey; if you keep at too great a distance, they are angry with you. Woman is always dependent—as a daughter, upon her father or elder brother; as a widow, upon her son. She is under tuition and discipline to her husband.' She ought to keep within the house; her duty lies there. 'On the higher side, she must give due homage to her father-in-law; on the lower, she must serve her husband, and nurture her child.'

Nevertheless, Confucius holds that marriage is the be-all and the end-all of mankind; that woman is the paramount person in the sphere of love, and that reverence is her due. Certainly divorce is easily procured by the husband: infectious disease, antipathy, excessive loquacity, form sufficient grounds. But the man may not disown his wife if her parents be dead, or if, though now rich, she was originally poor and of mean extraction. Confucius also enjoins the care of widows.

Nor did *Buddhism*, in spite of its universalism, place women on a level with men; its highest morality demands entire abstinence from sexual intercourse. Nuns, by the rules of their order, rank lower than monks. 'Inscrutable as the way of a fish in water is the nature of women, those thieves of many devices, with whom truth is hard to find' (*Chullavagga*; cf. Oldenberg, *Buddha*[5], 1906, pp. 169 f., 385 f.).

In *Brāhmanism*, again, marriage is made much more of: every one ought to marry. Still, according to the *Laws of Manu*, the husband is the head of the wife; she must do nothing to displease him, even if he give himself to other loves; and, should he die, she must never utter the name of another man. If she marry again, she is excluded from the heaven where her first husband dwells. Unfaithfulness on the wife's part is punished with the utmost rigour. 'A woman is never independent.' She cannot inherit, and after her husband's death she is subject to their eldest son. The husband may even chastise her with the bamboo-rod. It is Brāhmanism, nevertheless, which gives us the saying: 'If the wife be made unhappy, the sacred fire soon dies out; if she execrates her home, its end is at hand' (*Laws of Manu*).

Among the *Persians* the recognized necessity of preserving the germ of life is in full harmony with their views of life in general. Marriage is, therefore, reckoned a duty; and every marriageable young woman must ask her parents to give her a husband. Chastity is well guarded, but, as in the *Laws of Manu*, the woman is subject to the man. Every morning the wife must nine times ask her husband what he wishes her to do; she must honour him as the pure honours the pure. In the later Gāthā period, however, women are more on an equality with men; they are not to be excluded from communion with Ahura Mazda, but are to rank along with men in every respect.

In *Muhammadanism*, women are secluded in the harim. They are denied all freedom of action, and all participation in matters intellectual. Certainly the Prophet raised the status of women above that assigned to them in ancient Arabia; in particular, the woman was no longer a mere heritable chattel of her deceased husband's estate, but was herself capable of inheriting; while, again, a free woman could not now be forced into marriage, and, in cases of divorce, the husband was required to let the wife retain what he gave her at marriage. Moreover, women of the upper classes might occupy themselves with poetry and science, and even act as teachers, while those of lower rank not seldom shared the joys and sorrows of their husbands, as mistresses of their households. The mother likewise must be treated with respect. Nevertheless, the seclusion of the harim tends to keep women in a subordinate position; their intercourse with one another is limited, and their education is neglected, though in the higher orders of society their existence is not devoid of comfort. The compulsory practice of veiling shows how little they are trusted.

Among the ancient *Jews* polygamy still persisted, and divorce, more especially in the later period, was easily procured. The wife was placed in subjection to her husband; still, marriage was reckoned honourable, and a virtuous wife was deemed of more value than rubies (Pr 31[10ff.]). The mother was highly esteemed, and the widow was regarded as a worthy object of benevolence.

While polygamy was the rule among Oriental peoples, the case was otherwise in Greece and Rome. Among the *Greeks* women were certainly confined to their own apartments, and they did not share in the education given to men; the only exception to this is found in the *hetæræ* of a later time. Yet Greece was not without cultured women, such as Sappho, while Penelope's constancy and Antigone's sisterly affection were proverbial. The *Ecclesiazusæ* of Aristophanes depicts women as so

[1] Cf. *SBE* iii. 26, 27, 28; Plath, in *Abhand. bayr. Akad. d. Wissensch.*, hist.-phil. Kl., esp. xiii. (1875).

far emancipated that they became a ruling power in the State. In the *Republic* Plato would have the State assume the task of distributing the women amongst the men, but at the same time he puts them in a position of perfect equality, insisting only upon their physical inferiority. Notwithstanding all this, however, it remains true that in Greece genuine intellectual intercourse was sought not in married life, but in friendship amongst men.

In *Rome*, according to the law of the XII Tables, the wife was under the absolute control of the husband—like a daughter, in fact. At a subsequent period, however, the matron was accorded a higher homage; witness, *e.g.*, the definition of marriage: *Matrimonium est maris et feminae coniunctio, omnis vitae consortium, iuris humani et divini communicatio* ('Marriage is the union of man and woman, complete community of life, joint-participation in Divine and human law'). The growing independence of women is also indicated in the laws regarding inheritance. According to the XII Tables, women could not inherit at all; by the Prætorian law they inherited in the third class; Justinian placed them on an equal footing with men in cases of intestacy. Further, the right to dispose of property by will, at first denied to women, was at length granted, in the event of their having detached themselves from their own family in due legal form. But the institution of marriage was much impaired by the egoistic tendencies of Roman law. Celibacy became common. Women were allowed no choice in the matter of marriage, and they had no effective safeguards against being repudiated. Even Cicero put away his first wife, in order to pay his debts with the inherited property of a second. But it was always possible for women to evade their legal disabilities by underhand means, and even to intermeddle with political affairs—a state of things attended with the direst moral results.

Christianity, emphasizing from the outset the value of personality in the sight of God, proclaimed the equality of the sexes. This is shown by the injunction regarding divorce, which, recognizing no justification for that proceeding save *porneia* (Mt 5^{32} 19^{9}), left nothing to the man's caprice. The fact that the principle of equality was not pushed forthwith to its full consequences is due to the ascetic temper of the Early Church. While marriage was regarded as a symbol of the relation between Christ and the Church (Eph $5^{22ff. 31f.}$), St. Paul also views it as a safeguard against immorality (1 Co $7^{2.9}$). Widows took a prominent part in the life of the Early Church, and an order of deaconesses was instituted, but the idea of man and woman as complementary to each other was not urged so strongly as their equality. It was but natural, therefore, when the moral factor was at length overridden by that of religion in the narrower sense, that monks and nuns should be placed on a level, and that, in particular, as marriage was counted inferior to the celibacy of the *religiosi*, the distinctive character of women should be ignored. When, further, the less estimable estate of marriage was made a sacrament, and declared to be indissoluble, the effect was, on the one hand, to subordinate the individual to the institution, and, on the other, to extrude the ethical element altogether. As it was the special prerogative of the mediæval monks to make methodical pronouncements upon moral questions, this theory of marriage continued to hold its own; though Aquinas laid stress upon the element of friendship between man and wife, and upon the woman's freedom to marry or to remain single, even against the will of her parents; and though Duns Scotus declared that matrimony was a more exacting state than monachism. While woman's place in the marriage relation was thus one which ill consorted with her distinctive nature, a kind of counterpoise was provided by the romantic and enthusiastic love which inspired the chivalry of the Middle Ages, though its object was not the wedded wife. Chivalry, however, was in part an expression of the ancient Teutonic idea that women have a mysterious power of prescience denied to men. Virginity and maternity were combined in the homage paid to Mary, who represents the love and grace of God. Such conceptions of the female nature, however, were not carried into the sphere of moral practice; they existed only in the imagination of knights-errant and monks—or of poets, such as Dante, whose Beatrice becomes his guide to heaven (cf. also the *Vita nuova*), and Petrarch, whose Laura forms the theme of his muse. This pseudo-spiritual severance of the visionary ideal from moral reality has a merely æsthetic value, and fails to bring the true dignity of women into definite and practical recognition. The two disparate views regarding women are just what might be expected from the dualistic spirit of the Middle Ages—a period in which religion and morality were not as yet in harmony, and solicitude regarding the other world led to disparagement of the present.

A change in the position of women was ushered in at the Reformation. Married life now came to be looked upon as the sphere in which their true vocation was to be realized, and its proper realization, moreover, was regarded as a mode of serving God. Further, divorce was sanctioned in cases of adultery, and the innocent party was permitted to marry again. But, while it was fully recognized that woman, as a moral personality, had a right to a sphere of active service, yet her distinctive value was no better appreciated than the value of individuality in general. Her real independence, as resting upon her peculiar nature, was explicitly enunciated for the first time by J. G. Fichte, who gave prominence to the idea that, in virtue of her emotional temperament, her function is to give herself freely for others, and that to love and to be loved are necessities of her nature. Schiller likewise extols the dignity of women, holding that their peculiar gift lies in their ability to combine the moral and the gracious—in a natural harmony of spirit denied to men. Schleiermacher, too, attaches special importance to the female character, regarding it as designed both to enrich and be enriched by the male, so that a true marriage is the only means of making good the defects of each, and of developing an all-round human being. It was Schleiermacher in particular, who, after the example of Goethe, pointed to the refining influence of women—*die Virtuosin der Geselligkeit*—upon social life and morals. It is beyond question that the vindication of women's rightful status, and of their proper vocation in the home and in society, was due to these writers. No doubt, the distinctive character of woman was urged by the Romanticists in such a one-sided way as to imply that for any given individual there is one, and *only* one, definite partner, and the institution of marriage was sapped by romantic subjectivity—the theme of Goethe's *Wahlverwandtschaften*—though Goethe does not pander to inconstancy. Others followed with philippics against compulsory marriage, which, as was alleged, frequently results in the moral and physical ruin of the woman; while, on the other side, Schopenhauer contended that women should be put under restriction, on the ground that in their very nature they require a guardian, and are made for obedience.

In the process of the emancipation of women, however, the problem of the wife eventually gave place to that of the unmarried, and in recent times

this question has been taken in hand by women themselves. In Germany married life was until lately regarded as the normal vocation of women, but this view was obviously irrelevant in regard to those who remained single simply because there are more women than men. In England the modern movement began with Mary Wollstonecraft's *Vindication of the Rights of Woman*[2] (1792) —a work which drew its inspiration largely from France; but it is rather to the whole-hearted advocacy of J. S. Mill, half a century later, that we must trace recent advances in the cause of female emancipation, as also perhaps the present agitation for full political rights. More particularly in the United States the stage has been reached where women no longer look upon marriage as their specific calling, but seek complete equality with men as a matter of principle. Endeavours are accordingly being made to give them access to all the various professions, in order that they may gain an independent footing in society; and even to grant them the franchise, as a step to public life in State and Church—in a word, to remove every disability of sex. When this state of things is appealed against by pointing to the physical difference between the sexes—a difference which reveals itself also on the mental side—the theory of evolution is brought into court for the purpose of showing that by habit, heredity, etc., women may in time develop those particular qualities of which their circumscribed position has till now impeded the cultivation. But in truth the differentiating tendencies of Nature herself may well be regarded as depreciating such factitious development. We dare not disregard the inherent heterogeneity of the sexes. After all, marriage is grounded in the natural order, and any other career for women is but an expedient which, as adapted to her individual capacity, will, in default of marriage, secure for her a position of economic and moral independence such as a moral personality requires. The 'free love' which some propose to substitute for marriage would differ from prostitution only in degree. 'Marriage reform' still lacks clear definition. The true method of emancipation is that which assigns to each sex the task adapted to its peculiar character and gifts, thereby investing it with its own moral dignity and honour; and which, in particular, places women in a position to understand the distinctive life of men, and to share their interests, while men on their part undergo the correlative discipline. Marriage must continue to rest upon the intimate friendship which gains moral stability in fulfilling the common task of maintaining the home and rearing children.

We learn from the above outline that there has been a gradual advance in the emancipation of women, an advance which is based upon a proper estimate of their personality, but which also tends to assume debased and unnatural forms when the distinctive qualities of the sex are ignored. The probable result of disregarding these qualities would be a recrudescence of the ancient view of women, viz. that they are essentially equal to men, though of weaker mould and, accordingly, of lower status—a view which was discarded only by allowing for the specific characteristics of womanhood, and by conceding to women a position of equality in keeping with their special gifts.

(*c*) We see a corresponding development of freedom in the relation of the individual to the *family*. In Rome, the law of the XII Tables invested the father with authority to sell his children, and even with the power of life and death; and in the era of the Republic a son of full age was still under paternal jurisdiction in domestic matters, though otherwise a free citizen. So strongly was the unity of the family insisted upon, that a son could neither possess nor acquire independent property during his father's lifetime. The procedure in connexion with a son's emancipation (here we have the original usage of the word) was, according to the XII Tables, that the father sold his son three times to the so-called *pater fiduciarius*, who had promised not to take the contract in earnest. But the power of the *paterfamilias* was circumscribed by use and wont. In the event of a capital sentence, the father invoked a family assize; and eventually, in the Imperial period, even this right was annulled, and the father was compelled to carry the case to the authorities. The legal authority of the father over his descendants, and the amenability of the individual to family jurisdiction were still further modified by Christianity, which paid higher regard to the individual, making him more and more independent of the family; while it based the family on a moral and emotional, rather than on a purely legal, foundation, the legal aspect being now attended to by the State. The Christian principle that spiritual qualities are of more value than corporeal, and that even children, as souls in the making, are of infinite worth, was a condemnation of the savage custom of exposing weak infants—a practice defended even by the most enlightened Greek philosophers. The Christian view necessarily led to a restriction of the right to punish children, and to the civil protection of their life and health, even against their parents. With this we may compare the modern law, which prevents careless parents from standing in the way of their children's education.

The ideal of education upheld by the great thinkers of Greece was that the family should transfer its responsibilities to the State—a position natural enough in view of the defective condition of family life in Greece. Among Christian peoples the place of the State was in a measure assumed by the Church, which took in hand the work of education—an arrangement which still to some extent prevails in Roman Catholic countries. The family thus became subordinate to the Church and the *religiosi*, and education was handed over to the monastery and the convent. The countries of the Reformation, however, where the family had maintained its independence in a markedly higher degree, recognized the educative value of home life, as specially adapted to train the heart and the disposition. Provision was made, however, both for attaining knowledge and for developing talent and intelligence by the institution of public schools, the maintenance of which fell upon the State; though in England private education was still recommended by Locke. The augmented demands for intellectual culture, and for its dissemination (within limits) amongst the people at large—as even Luther had desiderated—practically made it incumbent upon the State to undertake the development of natural talent, and more particularly of the mental faculties. In some countries school-attendance was made compulsory, the children's right to be educated being thus enforced even against the parents, while reformatories and industrial schools were provided by the State in the interests of children whose moral training was criminally neglected at home.

In all this we discern a progressive liberation of the individual from the ascendancy of the family, though the latter by no means ceases to operate as a genuine educative factor. Similar progress has been made in regard to the *aim* of education. The conviction that a man's education should be directed towards making him an independent personality has become more and more explicit.

Recent educational science pays special attention to the transition stage between youth and full manhood, and regards it as the definitive task of education that the pupil, once he has outgrown the discipline of home and school, should be trained with a view to the attainment of his ethical majority.

In this connexion Schleiermacher draws a distinction between aristocratic and democratic families, pointing out that the family relationship is much more effectively maintained in the former than in the latter. But he specially urges that parental authority on its moral side should gradually pass into friendship, while the filial respect he insists upon is not meant to exclude freedom of decision on the part of those who have reached maturity; the parents, in short, shall then be no more than counsellors.

Thus the family, once a legal institution, has become the moral community of the home, enjoying, nevertheless, the protection of the law; the rights of the individual members, especially of those under age, are protected by the State, even against the family itself; while, in a moral and legal respect, increasing regard is paid to those who have attained maturity and independence, more particularly with a view to their becoming founders of new families.

(*d*) The emancipation of the individual has also a *social* reference. In *India* a man is bound to his caste, and cannot rise above it. In *China*, where the system of caste does not prevail, the individual's position in the social organism is defined by religion and by a most elaborate ceremonialism, which tend to impede the spontaneity of social life. In regard to property, however, the conditions are more favourable, and land can be tilled or sold as the proprietor pleases. In ancient *Greece* social life had not as yet freed itself from national life; the individual, as Aristotle expresses it, was primarily a ζῶον πολιτικόν, while the theory and practice of the State set forth in the Dorian system of Plato's *Republic* hardly left room for personal independence in social and economic relations. Nevertheless, in regard to social life, Greece shows a certain advance upon Brāhmanic India, since it no longer made birth the criterion for participation in public life—a reform explicitly decreed in the laws of Solon, which, however, still countenanced slavery. In the period after Alexander the Great interest in the State began to wane before social life and friendship, which had been extolled by Aristotle, and especially by Epicurus, in whose opinion the State was simply a contract for the attainment of mutual security. This social fellowship, however, did not embrace family life: it was friendship amongst men, or occasionally, with *hetæræ*. Nevertheless, the interests of the individual came gradually to the front.

In *Muhammadanism* the Qur'ān is the great authority in matters not only of religion, but of morality, law, and social order as well. The Prophet, or his vice-gerent, the Khalīf, is invested with power to regulate the tenure of property; the system, more particularly as regards the land, may be called socio-theocratic. Social life is at a low level, resting as it does on the separation of the sexes; and, wherever a better state of things prevails, it is not due to Islām.

The theocratic standpoint likewise dominated social life among the *Jews*. But, while the land was regarded as belonging to God, yet the social and religious legislation, though not always carried out in practice, served to strengthen the family on its economic side, as is shown, for instance, by the regulations regarding the jubilee, the Sabbatical year, gleaning, etc., which were designed to avert utter impoverishment. With some exceptions the various crafts, such as tillage and cattle-rearing, were held in high respect. The consciousness of being the chosen people of God bound the Israelites more closely together, while the simultaneous festivals, the observance of the Passover, and the Sabbath, with its mandate of rest for man and beast, tended to promote the social side of family life. The moral import of the social and economic independence of the family and its head is set forth in the Law, and it was in view of this ethical end that statutory barriers were raised against impoverishment.

In *Rome*, again, we see a certain progress in the realization of social independence. The long-continued conflict between plebeians and patricians, the outcome of which was to equalize the two parties, bore rather upon political than upon social life; yet it was not without significance for the latter, as it made clear that social privileges were no longer to be the appanage of birth, but the reward of meritorious public service. The later period of Roman history, however, was marked by the formation of numerous associations, which, on the whole, were an expression of the desire for freedom in social matters; in fact, Julius Cæsar recognized not only the ancient gilds and the autonomous societies, but also the independence of municipalities. By making life secure, and by giving the *paterfamilias* the right to dispose of his property, Roman law maintained a formal freedom; it also guarded the right of association for social and religious ends. But, as those liberties were without ethical character, the relative enactments simply led to an increase of selfishness, enabling the privileged few to reduce the rest to penury.

In *Christianity*, which so strongly emphasized the ethical value of personality, even property was viewed in a moral light, and men became aware that they were responsible to God in the management thereof. The conception of Christian equality in social and economic relations found expression first of all in a magnificent benevolence, and the great end of riches was believed to be relief of the poor. But the idea of equality in the sight of God had also a vast influence upon the social life of Christian communities. Certainly distinctions of class were not done away with; nevertheless, all were equal in the eyes of religion—a thought which had found expression in Stoicism, though without any practical issue. Christianity also effected a deliverance in the sphere of custom, Christians either breaking away from heathen practices, or else, as was often the case, transforming them, and feeling themselves individually responsible for the reform—a line of action urged especially by Tertullian in the one-sided, but all the more powerful, appeals of his shorter ethical works, and also by Clement of Alexandria, who, however, treated ancient usages with a more tender hand. Doubtless men were then so profoundly concerned with the world to come that they retained but little interest in earthly goods, and social life was largely confined to religious intercourse. Even in the primitive Church we find warnings against wealth and its perils, and in no long time it came to be believed that property was grounded in selfishness (Ambrose), and that voluntary poverty was a mark of superior sanctity; while, similarly, those who abandoned the world and the family for the desert or the cloister were held in high repute. Be it remarked, however, that the endeavour to escape from the world and to be inwardly free from its enticements was itself the outgrowth of a genuine emancipative movement.

Even in the mediæval feudal system with its class divisions, and in the system of trade gilds which prevailed in the cities, there grew up a renewed interest in social life, the general trend of which was likewise favourable to individual security. Notwithstanding a man's class disabilities and his dependence upon his gild, and in spite of frequent conflicts between the various

ranks of society, his economic freedom was promoted by the expansion of agriculture, commerce, and the industrial arts. The peasantry, too, had access to tribunals established on their behalf; and, while the gilds frequently imposed restrictions upon freedom of action, they also afforded protection and security.

As against the Church's authority over the individual, the Reformation asserted the 'freedom of a Christian man' as the watchword of personal liberty, thereby universalizing, on religious ground, the advantages which, on social and political ground, the powerful had arrogated to themselves in the previous century. Moreover, the Reformation, affirming on principle the moral dignity of labour and of the secular calling, laid the foundation of a new organization of society, which was wrought out in subsequent centuries. Luther's contention that wages should be proportionate to work has a wonderfully modern ring. Then the Mercantile System, laying stress upon manufactures, commerce, and the use of money (in place of barter), helped to facilitate the transport of goods, the process being furthered also by the Physiocrats, who, notwithstanding the importance they assigned to agriculture, yet contended for complete freedom of trade, made war upon gilds, Government concessions, and the burdens of the peasantry, and thereby helped to forward the liberty of the subject. Finally, Adam Smith and his school, repudiating the compulsory element in the gilds, and advocating open competition, set the seal upon individual freedom, and their investigations were doubly important from the fact that, as regards both the acquisition of property and the liberty of the subject—matters in which they had the support of the philosophy of Natural Law from the time of Locke—they bore upon the natural foundations of society, and served to assign to the individual his rightful place in the larger system of national and international life. In the French Revolution, the principles of freedom and equality advocated by Natural Law brought about the abrogation of innumerable privileges, and the emancipation of the 'third estate.' But the weak point in the movement was the people's lack of moral preparation, and the failure to recognize natural differences among men. The general rights of man, which from the religious point of view are based upon the equality of all before God, but which were traced by the Revolutionists to men's equality in the eyes of moral and civil law, were urged so ruthlessly, that the actual disparity of men in their moral, mental, and physical qualities was ignored.

While the principle of open competition freed the individual from the limitations of his class and his trade, yet the new system of production, with the requirement of capital, introduced fresh difficulties, the solution of which has been undertaken by Socialism. Socialism (*q.v.*) begins by recognizing the actual inequalities of men, tracing these not to diversities of natural gift—this being assumed rather to be equal in all—but to disparities in the possession of productive capital. Though an open door has been set before the individual, and the obstacles to the development of his faculties cleared away; though equal political rights have been conceded to all, and the class distinctions which stood in the way of social advancement removed; of what avail is it all, asks the Socialist, if men have no choice but to enter the lists of competition with unequal resources? The individual's dependence upon capital must, therefore, be brought to an end if his emancipation is ever to be complete; and this object is to be attained by making productive capital a national asset. In order to give practical effect to the idea, it is proposed to turn the State into a great industrial company, which would guarantee to every man the due remuneration of his labour. In point of fact, however, such an emancipation would result in the loss of personal freedom; and, as the worker would then possess no capital, but gain at most sufficient wages—in the form of work-certificates—to procure him the means of enjoyment, the system would but pander to the selfish desire for happiness, and check the impulse to produce, which thrives only where it is free. We must, nevertheless, recognize that both the policy of open competition, which emanated from England, and the Socialistic movement, which first arose in France, were prompted by the spirit of emancipation; only, these movements are concerned with the material rather than with the moral side of man's nature, and with what is common to all rather than with the peculiar qualities of the individual. A higher respect is, therefore, due to those who emphasize the ethical aspect of the social problem and the ethical significance of property, and who desiderate a true personal independence, guaranteed by such a system of ownership as would enable each to discharge his proper function in the social organism, and, so far as possible, remove that financial servitude which keeps him from fulfilling his vocation as a man and as an individual. A similar object is aimed at by the renascent tendency to form corporate societies standing midway between the individual and the State—societies in which a man may act as a voluntary member, and from which he derives a certain support and security. A practical attempt to deliver the working man from the power of capital is made by the Trade Unions, which secure a proper representation of his interests, and treat with capitalists and their combinations upon equal terms. Again, provision is made in Germany for old age and sickness by compulsory insurance, while in Great Britain old age pensions are now paid by the State, and there and in America the same purpose is served in part by funds accumulated independently of the State. The emancipation of factory-workers, miners, and rural labourers is sought in ameliorative legislation.

The emancipation movement makes itself felt in the sphere of social intercourse precisely as in that of economics. Social intercourse is regulated by custom; and here also a beginning has been made with that levelling process which looks to the worth of personality as such. While formerly distinctions of rank were rigorously observed, in modern times the sense of equality has been intensified by international intercourse, by the recognition of human rights and of the ethical value of labour in general; and this manifests itself in the respect and courtesy shown even to social inferiors. It is, of course, true that this tendency towards the democratization of society is counteracted by a tendency towards differentiation, which is constantly splitting society into new and mutually exclusive groups. But, as the various ranks are arranged no longer according to birth, but according to occupation or profession, there may grow up in the professions themselves an ethic and etiquette which do away with the distinction of birth, while, again, the equal respect paid to the several professions—the moral value set upon work in general—practically opens to every man the door of any calling for which he may be qualified, and so breaks down the rigidity of professional caste. Both of these modifications may have an effect upon custom, and in this respect, too, modern society exhibits a movement towards the emancipation of the lower classes from the thraldom of their position—a movement which has made most headway in the United States. Recent ethics has made it increasingly clear, however, that custom is not a thing fixed and stable, but is ever being moulded afresh

by the action of individuals, and that every man shares in the responsibility for its right development.

Coming now to the larger communities, the State and the Church, we find the process of emancipation at work in various forms. It may manifest itself in the relation between the individual and either of these communities, or, again, in the relation of these communities to each other.

(*e*) First of all, as regards the tie between the individual and *the Church*, we must distinguish between countries like Judæa and Persia, where there was a national religion established by law, and where every citizen was bound to conform to its authority, alike in belief and in practice, and countries like Greece and Rome, where religion was, indeed, a matter of the State, but where no pressure was put upon a man so long as he did not overtly violate the sacred institutions. In Rome, the devotees of the *religiones licitæ* were allowed absolute liberty, on condition that they observed the worship of the Emperor; while in Greece it was possible for a free philosophical religion to develop from the popular cults. Christianity was at first a voluntary association of believers, in which every man could act a part congenial to his gifts; but in process of time it was transformed into an infallible school of doctrine, a sanctuary through which salvation flowed, a seminary which prepared men for heaven. The Roman Church, in particular, insisted upon the spiritual incapacity of the people, and held all its members in thrall to its dogma and its discipline alike. The emancipation of the individual really began with the Reformation, which made the *personal* assurance of salvation, the *testimonium Spiritus Sancti internum*, a matter of superlative moment, and regarded the Church as *principaliter* the community of believers. But the Churches of the Reformation had their own fixed Confessions and Liturgies, and presently came to take their stand upon the infallibility of Scripture. In no long time, therefore, personal liberty fell again into abeyance, and all the more completely that the task of maintaining doctrinal purity was practically handed over to the State. At length, however, under the influence of modern philosophy, and of natural and historical science, the religious spirit wrenched itself free from ecclesiastical authority; the Church itself became the subject of critical inquiry, and the system of National Churches was partly superseded by the policy of public tolerance for all religious communities. It is, again, the United States which has made most progress in the latter direction, for there the individual may choose at will among the various denominations, and move as he pleases from one to another; though, on the other hand, diverse tendencies within the various communities themselves are less willingly tolerated. In Europe the system of privileged Established Churches is still very general—Churches which more or less strenuously maintain their traditional worship, doctrine, and usage, and hold their members in a position of dependence. Yet within these Churches we find various types of thought existing side by side, more especially in the Protestant communities of Germany and Switzerland, and in the Church of England; and religious freedom broadens out more and more, though not altogether without opposition. It is worthy of special note that the right of the individual to take part according to his abilities in reforming the Church from within is more and more recognized.

(*f*) Again, the sphere of individual participation in *the national life* has been gradually enlarged. The great monarchies of the East—Babylon and Egypt—gave the mass of the people no voice in the control of public affairs. True, the Greek States and the Roman Republic obliged their citizens to take part in the government, but the enfranchised classes were small in number, and their privileges were subject to the condition that the State should superintend their moral training. As a matter of fact, it was the feudal State of the Middle Ages that made a beginning with personal enfranchisement with respect to the law, and with the people's right to vote supplies—witness the English Magna Charta of 1215; to the same period we must also trace a weakening of the central authority by the growing independence of territorial and local rulers—a state of matters exemplified by the *condottieri* of Italy. To these signs of progress we must add the nascent theories of Natural Law, according to which the State derived its authority from the people, as was held by Occam and others. The severance between social and national life which is gradually being effected in the modern world is an index of the increasing prestige of the individual and the class in relation to the State. Finally, comparing the views of Natural Law held by a man like Locke with ancient theories of the State, we see how great an advance has been made in the matter of personal interests; for, according to Locke, the function of the State is merely a legal one, viz. to protect the individual and the family in life and property.

Reference must also be made to the view that the State is based upon a contract of its citizens, and that, accordingly, its part is to act in their interests. The French Revolution was an attempt to carry out the principles of liberty, equality, and fraternity, and to abolish the privileges of the favoured classes; and since then most European countries have adopted constitutions which not merely compel the citizen to obey and to pay taxes, but also enable him to take a greater or smaller share in the national life by the exercise of his vote. Schleiermacher in his *Politik* puts the matter thus: government on the one hand and subordination on the other should be shared by all, every man being in one aspect a ruler, and in another a subject; while W. von Humboldt, in his work entitled *Ueber die Grenzen der Wirksamkeit eines Staates*, makes it incumbent upon the State to furnish the strongest possible guarantee of the citizen's right to free self-development. When we consider the expansion of the leading States of to-day, and the share in their government which is nevertheless guaranteed in varying measure to their inhabitants, we see what an advance has been made upon ancient conditions; for, after all, the democracies of old correspond rather with the oligarchies of modern times. Once more, it is the United States which has gone furthest in applying the principle of personal liberty, inasmuch as, on the one hand, the Government has its functions circumscribed, no longer holding the citizen in tutelage, while, on the other, every citizen is free to take a part in public life. At the same time, the experience of that country shows that civil emancipation requires a certain standard of education in the citizens, and that its necessary complement is compulsory school attendance. In Europe, on the other hand, more especially in countries where the monarchy still bears a despotic and autocratic character, we find a growing tendency to Anarchy (*q.v.*), manifesting itself either in a nihilistic onslaught upon the existing organization of society, or in the subversive theories of thinkers like Tolstoi, who would abrogate all State authority in favour of the freely rendered love of one's fellow-man. Certainly the warrant for personal participation in the government of one's country, to which at the same time obedience must be rendered, is to be found alone in the right of moral self-determination: in fact, the growth

of the sense of moral responsibility amongst the people, and of their respect for the constitution and the law, forms an accurate index of their capacity for a responsible share in the national administration. Accordingly, in reference to the French Revolution, Schiller and other German writers maintained that the nation which would take its destiny into its own hands must possess an inwrought moral character, lest liberty of action should degenerate into pure caprice and unreason. Similarly, it was Kant's conviction of the ethical value of personality—the idea of moral autonomy—which led him to urge that free moral action was based upon law, and that a legally constituted State was essential to the realization of moral freedom. Since in the modern State the first principle of legal administration is the equality of all before the law; since punishment has lost much of its former barbarity, and is designed mainly to preserve law and order; since the State makes it its task to protect the common rights of man, and since this protection covers not only life and property, but also liberty of conscience, of thought, of inquiry, and the freedom of the press; we may regard it as certain that the law-abiding citizen may claim public protection for his most sacred interests, whether material or spiritual, and may look upon the law as the sponsor of his absolute right to cultivate his mental and physical faculties to the best of his ability. Perhaps the South American Republics afford the most striking illustration of how little is gained by a purely formal freedom, *i.e.* a freedom unsupported by that moral responsibility which manifests itself in unconditional reverence for the law—not that the law need be regarded as incapable of improvement or as unalterably and finally fixed, but it ought to be obeyed so long as it stands. This aspect of the matter was admirably set forth by Schleiermacher when he said that the most perfect form of national life is that in which freedom as such is never sought after.

(*g*) *The emancipation of the State from the Church* comes into consideration only in cases where the former has been dominated by the latter. In antiquity the two communities, the political and the religious, were as a rule too closely identified for any attempt on the part of the former to free itself from the latter. In Egypt the State passed under the ascendancy of the priesthood in the period of the Theban domination. Amenhotep IV. transferred his court from Thebes to Tell el-Amarna, and sought to throw off the priestly power and even to introduce, on his own initiative, a solar monotheism, letting himself be worshipped as the reflexion of the sun. This drastic proceeding, however, proved ineffective, and gave place to an absolute theocracy, the priesthood again gaining the upper hand in the Ethiopian dynasty. A similar movement manifests itself in the Jewish theocracy, as when Saul set himself in opposition to Samuel, while David came to the throne as the true theocratic king. In Greece the State was in no way subject to the hierarchy, save at Delphi, where for a time the constitution was theocratic, while in Rome the religious interest was really subordinate to the political. Once the Christian Church in the Western Empire had become a power co-ordinate with the State, Augustine laid the foundations of a theory which actually exalted the theocratic community above the civil, and the Middle Ages witnessed an attempt to carry the theory into practice.

The Church, it was declared, fulfils a higher function than the State: the latter has to do with the *terrena felicitas*, the former with eternal salvation. The secular purpose of the State can, therefore, be consecrated only when the civil power places itself at the disposal of the religious. Views of this tenor, aiming at the ascendancy of the Church, come more and more into vogue until the rise of Jesuitism. Indications of the movement had begun to show themselves in the pseudo-Isidorian *Decretals*, at the Synod of Paris (A.D. 829), the *de Institutione Regia* of John of Orleans, and the *Constitutio* of Odo of Canterbury. While Aquinas, in his *de Regimine Principum*, apparently assigns an independent position to the State, he nevertheless holds that, as the Church has the superior function, the civil power must give way whenever the Church so enjoins, and also that the Church itself must in all cases decide when its own higher interests justify such a demand. In fact, the prevailing idea of the Middle Ages was that the Church and the State were as sun and moon, the latter deriving its light from the former. In the reign of Ludwig of Bavaria this view was maintained in the *Summa de Potestate Ecclesiæ* of Augustinus Triumphus, as also in the *Summa de Planctu Ecclesiæ* of Alvarus Pelagius, the Spanish Franciscan. The Jesuits contended that all authority belongs primordially to the Church, which receives the same directly from God, whereas the power of the State is wholly derived from the people. Endeavours to carry out these theories in face of the Imperial authority were made by Gregory VII., who was filled with the ideals of the Clugniac order, and also by Innocent III., while Boniface VIII. even claimed the right to parcel out territory by a stroke of the pen. The State was gravely imperilled in its own domain by the spiritual jurisdiction and the sway of the priests as exercised in the confessional. Above all, the Church's claim to release the subject from an oath given to an unbeliever—some refractory ruler, let us say—and even to depose princes, was a standing menace to the sovereignty of the State.

Such views, however, did not even then pass unchallenged. For one thing, the Saxon and Salic emperors, down to Henry IV., deemed themselves the guardians of the Church, while the Hohenstaufens, especially Frederick I. and Frederick II.—the latter in his Sicilian Laws—tried to emancipate the State from the Church; for another, writer after writer took up the controversy in defence of the State's rights. Early in the 9th cent., for instance, Abbot Smaragdus of Verdun, in his *de Via Regia*, spoke of the king as the earthly counterpart of God; Henry IV. found a champion in the Italian jurist Petrus Crassus; while Frederick II. in his own *Letters* upheld the national prerogative, and had the support of Peter of Vineis and Thaddæus of Suessa. Dante's *de Monarchia* had a similar end in view. In the time of Ludwig of Bavaria the independence of the State was still more strenuously advocated by the Franciscan William of Occam, by Marsilius of Padua in his *Defensor Pacis*, by Leopold of Babenburg in his *Tractatus de Iuribus Regni et Imperii*; and in France, in the time of Philip IV., the cause was maintained by Dubois in his *de Recuperatione Terræ Sanctæ*. As against the assumptions of the Church, Machiavelli asserted the absolute independence of the State; as against the idea of the universal empire, he advocated the unity of the Italian nation, though all he claimed for the State was its supremacy in regard to its finance and its external power and prosperity.

The emancipation of the State from the Church in countries dominated by Roman Catholicism can come about only through conflict with the Church itself. Even to the present day the Roman Catholic Church claims to be absolutely supreme in all questions which it regards as bearing upon its interests—a contention which finds frank expression in the Syllabus of Pius IX. The result is that, whenever a Roman Catholic State unfetters itself from ecclesiastical bondage, it assumes an openly irreligious character: the views of Machiavelli afford a typical illustration. But, as it is impossible that a people can live permanently without religion, Roman Catholic nations tend to pursue a policy of vacillation between the two extremes: on the one hand, an irreligious and secular standpoint, where there is no concern for anything but material prosperity, and, on the other, a position of subjection to the Church; Spain and France furnish instances (cf. CONCORDAT). The liberation of the political from the ecclesiastical interest can in fact attain a permanent footing only when the State aims at something higher than material prosperity and enjoyment, and when at the same time the Church confines itself to spiritual affairs, and is concerned solely with the fostering of the religious life. The numerous tentative statements of this conception made in the Middle Ages, as, *e.g.*, by Frederick I. of Hohenstaufen, Dante, William of Occam and his allies, could win no real acceptance while the Church remained unreformed, as was shown in the case of France, which had to renounce the ancient Gallican liberties of Louis IX. in favour of modern Ultramontanism, and is now endeavouring to free itself from the latter. Cf. art. ERASTIANISM.

In the process of emancipation of State from Church, a crucial and epoch-making stage was

reached at the Reformation. The Church's function was now in principle limited to the religious nurture of the soul; the Church itself was viewed as the community of faith. It was, therefore, impossible for the Church to obstruct the State, as the latter too had a Divine commission—to foster justice, to maintain order, to ensure liberty of moral action on the basis of law. In point of fact, as the individual depended no longer upon the Church's mediation, but could win the assurance of salvation for himself, and as he recognized that he had been elected to realize himself as a free moral agent, and thus to become something more than a passive unit in the national life, his new-born conviction was really an augury not only of his own personal liberty as a citizen, but also of the emancipation of the State itself. Calvinism, which interpreted the consciousness of election to life as an incitement to moral practice, was marvellously adapted to endow the nations with a freedom based upon personal responsibility, and thereby to procure the liberation of the State from the Church, as is well shown in the history of Calvinistic lands.

(*h*) Finally, we must consider *the emancipation of the Church from the State.* In ancient Greece and Rome the civil power was paramount in religious things; religion was, in fact, an affair of the State. This is still the case in China, where the machinery of government is regarded as a Divine manifestation, and where the moral and religious training of the people is in the hands of public officials. Within Christendom, too, the Eastern Church was subject to the State; doctrine was a State concern, and was frequently enforced by Government authority. The Donatist controversy turned not only upon the idea of the Church, but upon the Church's liberation from State control (see DONATISTS). While the mediæval Roman Church claimed the right to dominate the State, it was rather the Byzantian principle which re-emerged in Lutheran countries at the Reformation: it was held that the State, as a Christian entity, ought to concern itself even with the defence of the faith; and the territorial principle *cujus regio ejus religio* held its own for a time. Once more, however, it was Calvinism that upheld religious liberty against the usurpations of the State: witness the history of Holland, Scotland, and the United States. These countries actually carried out the idea that religion, being a matter of the inmost heart, should in no way be constrained by the civil power—a principle which, it is true, had been strongly advocated in Reformation times by dissenters like Denk and Sebastian Frank. Even the system of Established Churches was set aside, notably in the United States. It was held that the Churches should be quite independent of the State, requiring nothing from it save legal protection: only on these conditions could the freedom of the Church as a *societas fidei* be realized. Certainly, were the Churches to attempt to suppress freedom, and to dragoon the people to accept their formulæ, the civil power would be called upon to safeguard the liberty of the subject, since it is of the very essence of a free Church that the members should belong to it voluntarily, and should not be coerced in any way. The outcome of such a freedom is that the religious spirit unfolds itself in the most varied forms. State Churches, in fact, can compete in this respect with voluntary Churches only by admitting a wide variety in their doctrine and practice. Cf. art. ERASTIANISM.

(*i*) Bare mention may also be made of the fact that emancipation is understood by some in an absolute sense, *i.e.* as *personal liberty without any qualification whatever.* Such freedom is conceded to the man of genius, as, *e.g.*, by Romantic writers like Schlegel—in his theory of Irony; or to the man of power, as in Nietzsche's *Herrenmoral.* But all this really amounts to an emancipation from morality—a condition 'beyond good and evil.' Such an emancipation, like the Solipsism of Max Stirner's *Der Einzige und sein Eigentum* (Leipzig, 1893), is sheer delusion.

3. Moral and religious bearings of emancipation.—From the foregoing survey we see how emancipation has broadened out more and more, manifesting itself now as the liberation of thought, now as the deliverance of the individual from the bondage of society and of organized communities, and again as the liberation of one community from another, each exhibiting a growing sense of its peculiar function, and striving to fulfil the same in its own way. It is admitted by the various schools of thought—whether as a subject for blame or for praise—that the process of emancipation is in the last resort the supersession of authority by antonomy. In this striving after freedom many read hostility to religion, a tendency to break away from the Divine government, the atomizing and levelling of society, the growth of the notion that justice is to be determined solely by the individual (who appropriates what rights he can), the imminent dissolution of discipline and order—all ending at length in moral chaos. To others, however, as to J. G. Fichte for instance, the real tenor of the process seems to consist in the transmutation of authority into liberty, of natural gifts into qualities personally acquired and developed, of tradition into freedom of thought and act; in the ceaseless renovation of communities—not as dead institutions but as living organisms—by the unobstructed effort of their members; and in the growing capacity of each separate community to undertake and execute its specific work, without alien interference, but with its own resources, and according to the principles of its constitution—no community having authority over any other, but each being supreme within its own domain, and each in reality best serving the interests of the rest by attending to its own affairs.

It is a fact beyond question that the human personality must possess the moral right to express itself in action, and is, therefore, entitled to a measure of emancipation adequate thereto. Moral personality has two sides. There is first of all the universal side, in virtue of which every man ought to have an equal right to practical self-expression, and upon this postulate rest the general rights of man asserted by the advocates of Natural Law—including not merely protection of life and property, but freedom of conscience and thought as well. Then there is the individual side, which postulates that each person, as such, should possess the right to develop his special talents in his own way; nor is he to be levelled to the general average of society, as is demanded by certain schools of Socialism. It is clear, nevertheless, that an emancipation of the individual issuing in a ruthless self-assertion at the cost of others would subvert the real rights of the latter, while, as a matter of fact, men are meant to work as complementary to one another. It is, therefore, of capital importance that an adjustment be made between the general rights of moral personality and the right of the individual to act for himself. Every human being must be free to act in his proper vocation, and must at the same time pay due regard to the corresponding right of others.

The relation subsisting between the individual and the various groups—the family, the corporate body, the class, civic society, the State, the Church, custom—is conditioned by the postulate that as a moral personality he shall have the right to act spontaneously, and according to his abilities, in these several relationships, and hence also to assist

in the continuous renovation of the communities themselves; emancipation is, therefore, necessary as a means to that end. Again, however, the various communities must preserve a certain continuity, must demand that recognition be given by the individual to the constitution and order without which they could not exist. Hence there emerges once more the need of an adjustment, the condition of which is that, while the existent economy of these communities is treated with respect, it shall leave room for development and reform, and consequently for efforts directed thereto, such progress shaping its course according to the distinctive character of the several communities.

Finally, as regards the interrelations of the various communities, it is required that each of these shall possess such a measure of freedom as will enable it to develop according to its own principles, and to do justice to its specific aim and object. But, since none of these communities is absolutely independent, since, in fact, they circumscribe one another, they must enter into mutual relations. So far as their external activities are concerned, the province of each must be delimited in such a way as to obviate the possibility of collision with any other. This end is secured by the law, the guardian of which is the State, while it is the State likewise which must guarantee the complete liberty required by each community in the working out of its peculiar task.

In a word, emancipation is a necessary moment in that liberation of the moral personality and the moral community without which they cannot adequately realize their appropriate moral end. But this fact also indicates the limit of the process, viz. that the individual and the community alike must regard themselves as each having a place in the whole moral organism, and as working towards the Highest Good, or—in terms of religion—the Kingdom of God. Emancipation taken as an end-in-itself, and as the repudiation of moral responsibility, is worse than useless, and results in moral chaos; but, if we regard it as a means of setting the moral powers free for action, so that they may most efficiently contribute their special quota to the realization of the whole ethical process, then emancipation is seen to be a demand of the moral law itself.

A. DORNER.

EMERSON.—1. Life and writings.—Ralph Waldo Emerson, essayist, poet, and the most famous representative of the Transcendentalist school of thought in New England, was born, the third of seven children, in Boston, Mass., on 25th May 1803. His father, William Emerson, was minister of the First Church (Unitarian) in Boston; his mother, Ruth Haskins, was a woman of strong and gracious character. Emerson took a genuine pride in his descent from a long line of Christian ministers. It gave him 'a certain normal piety, a levitical education'; he counted himself happy in having a star which rained on him influences of ancestral religion. His aunt, Mary Moody Emerson, did much to shape his character and thought —'the kind aunt whose cares instructed my youth, and whom may God reward!'

He was educated at the Boston Grammar School and Latin School, and then at Harvard, where he graduated without any great distinction in 1821, two of his brothers proving much more brilliant than he. The family circumstances being straitened by his father's early death, he had to teach in a school in order to help himself through college, and again after graduation; but it was a task in which he was not happy, feeling himself shy and awkward, 'toiling through this miserable employment without even the poor satisfaction of discharging it well.' His thoughts turned towards the Christian ministry. A month before he came of age he wrote: 'I deliberately dedicate my time, my talents, and my hopes to the Church.' He studied theology at the Harvard Divinity School, was approved as a preacher in 1826, and in 1829 was settled as colleague-minister of the Second Church in Boston. This chapter in his history was not to be a long one. He gradually conquered the chest weakness which at first made public speaking difficult. But in 1832 he resigned his charge, feeling that he could no longer conscientiously administer the Lord's Supper in the accustomed form. His grounds were partly those of criticism and interpretation—he did not think that Christ designed a perpetual commemoration with the help of symbols; and partly those of personal taste and experience:

> 'This mode of commemorating Christ is not suitable to me. That is reason enough why I should abandon it. . . . I will love him as a glorified friend, after the free way of friendship, and not pay him a stiff sign of respect, as men do those whom they fear.'

In other ways he felt that in the pulpit, and amid the accepted traditions of worship, his wings were bound. This year he wrote in his Journal:

> 'I have sometimes thought that, in order to be a good minister, it was necessary to leave the ministry. The profession is antiquated. In an altered age we worship in the dead forms of our forefathers.'

The same year there occurred the death, from consumption, of his young wife, Ellen Louisa Tucker, whom he had married in 1829. Thus set free from all ties, he paid his first visit to Europe (described in the beginning of *English Traits*), and returned to America to write and lecture, sometimes also preaching as occasion offered. In 1834 he settled at Concord, occupying first for some years the 'Old Manse,' made famous by Hawthorne, and in 1835 married Lidian Jackson (*d.* 1892). For a time he preached on Sundays to the Church in East Lexington, but more and more he felt that the lecture-platform was his real pulpit, and in 1838 he gave up preaching. None of his sermons has been published except that on the Lord's Supper, preached at the time of his resignation from his Boston charge; but we may judge of the tone and quality of his preaching from many passages in his essays and lectures, in which the preacher reappears scarcely disguised. There are many testimonies to the sweetness of his voice, the dignity and sincerity of his manner, and the beauty of his language in preaching and in prayer. But probably his preaching, like his poetry, appealed to a select circle.

The clearest light on these earlier years, and indeed one of the most valuable means we possess for the knowledge of the essential Emerson, has

recently been given in the long-delayed publication of his private Journal, edited by his son and grandson. Four volumes have, so far, been issued, covering the years 1820–38. Early in life he began a notebook system, one chief purpose of which was, apparently, to enrich his conversation and deliver him from 'cheap, extemporaneous, draggle-tail dialogue.' He included quotations which had impressed him; his own comments on these and other matters; extracts from letters written by him and to him, especially from his correspondence with his aunt Mary; and all the spontaneous overflow of his mind according to the outlook and feeling of the moment. It was, in part, a deliberate literary exercise as well as a storehouse of memories and seed-thoughts, as when he took a fancy to imitate for a time the *Rambler* or *Spectator*. This Journal was the foundation of his published writings, and contains the rough-hewn outlines of some of his most famous utterances. The whole is of the most intense interest as a revelation of the man. The lover of Nature is here continually—and the indomitable optimist, except at a certain youthful period of ill-health and depression. Here are the gravity and dignity that gave to so many of his later utterances an oracular and prophetic tone: 'Why has my motley diary no jokes? Because it is a soliloquy, and every man is grave alone.' Here are hints of the remoteness and reserve which were characteristic to the end: 'Aristocracy is a good sign . . . no man would consent to live in society if he was obliged to admit everybody to his house that chose to come.' Here is his own confession of the wayward and disconnected thinking which some of his critics have regarded as his chief defect: 'My wayward Imagination. . . . I have come to the close of the sheets which I dedicated to the Genius of America, and notice that I have devoted nothing in my book to any peculiar topics which concern my country.' Here may be traced the beginning of the Swedenborg influence, which left so deep a mark upon him, especially in its feeling for the unity of Nature and its foreshadowing of the idea of Evolution; it reached him first through a 44-page pamphlet, entitled *The Growth of Mind* (Boston, 1826), by Sampson Reed, a young apothecary. The pamphlet does not contain much that would now arrest attention, but to Emerson it had the 'aspect of a revelation.' But the most interesting ingredient in the Journal is the youthful anticipation of doctrines of which, in later years, he was to be the prophet. The Essay on Compensation is here in germ. When he was 22 he wrote:

'I say that sin is ignorance, that the thief steals from himself, that he who practises fraud is himself the dupe of the fraud he practises: that whoso borrows runs in his own debt, and whoso gives to another benefits himself to the same amount.'[1]

The doctrine of self-reliance is equally prominent; cf. this (*æt.* 20): 'I see no reason why I should bow my head to man, or cringe in my demeanour.' This, again, in a letter to his aunt, anticipates his frequent championship of the individual soul, its rights and dignities:

'I hold fast to my old faith, that to each soul is a solitary law, a several universe. The colours to our eyes may be different,—your red may be my green. My innocence to one of more opportunity shall be guilt.'

So we watch in these volumes the gradual unfolding of the thinker and the man. At 17 he dreams of standing 'in the fair assembly of the chosen, the brave and the beautiful'; at 20 he writes: 'I burn after the *aliquid immensum infinitumque* which Cicero desired.' And, as we turn these pages, we feel that he is already far upon the way.

From the time of his settling in Concord his life ran a comparatively easy and peaceful course, not without its financial struggles and its private sorrows, such as the death of his eldest boy in 1842 (commemorated in *Threnody*). His second visit to Europe was in 1847, when the lectures on *Representative Men* were delivered, and his third in 1872. The rest is summed up in his lecturing tours; his correspondence, notably with Carlyle; his reception of innumerable visitors; his happy communion with his family and with Nature; and the publication of his various works. The first of these—*Nature*, published in 1836—deserves special notice because of its relation to the movement of which Emerson became the principal seer. Though the little book was greatly admired by a few, twelve years passed before 500 copies were sold.[1] Its value lies not only in its intrinsic beauty and suggestiveness—it contains some of the most poetic prose that Emerson ever wrote—but also in that we look back upon it now as a kind of preface to all that is covered by the word 'Transcendentalism.' It is difficult to frame this movement in any exact definition; it was more a spirit that could be felt than a set of doctrines which might be tabulated. It had links of connexion with Kantian idealism; it owed much to the influence of Coleridge, Carlyle, Goethe; also to Edward Everett, who popularized in Boston the newer stirrings of European thought. But there was at least as much in it of New England as of Europe: it was a reaction against the intellectual conventionality that reigned in Unitarian as in Calvinistic circles; it was a cry for new life, or partly a cry and partly a breath that came in answer to the cry. The movement gathered to itself supporters, some that were notable, such as Margaret Fuller, some eccentrics and extremists, many that were obscure in name but lofty and eager in spirit.

To get the essence of the Transcendentalist spirit, one might take this sentence from *The Dial*:

'They [the Editors] have obeyed, though with great joy, the strong current of thought and feeling which, for a few years past, has led many sincere persons in New England to make new demands on literature, and to reprobate that rigor of our conventions of religion and education which is turning us to stone, which renounces hope, which looks only backward, which asks only such a future as the past, which suspects improvement, and holds nothing so much in horror as new views and the dreams of youth. With these terrors the conductors of the present journal have nothing to do.'

The same spirit is more briefly and positively expressed in the first paragraph of *Nature*:

'The foregoing generations beheld God and Nature face to face; we, through their eyes. Why should not we also enjoy an original relation to the Universe?'

It is obvious that this relates itself closely to Emerson's favourite gospel of self-reliance: the Transcendentalist is one who trusts the deepest voices of his own being, and holds himself gladly free to follow the new light that new days bring to him. Yet he, of all men, is most truly loyal to the past; he is but doing what great souls of all ages have done before him.

'This way of thinking, falling on Roman times, made Stoic philosophers . . . falling on superstitious times, made prophets and apostles . . . and, falling on Unitarian and commercial times, makes the peculiar shades of Idealism which we know.'

This sentence from the lecture on *The Transcendentalist* hints at the way in which Emerson reconciled to his own mind his reverence for the past with his still greater reverence for the intuitions and revelations of the living present.

Nature was followed by two public utterances, which were also significant and prophetic. The oration on *The American Scholar* was delivered at Cambridge in 1837—an event, Lowell says, 'without parallel in our literary annals.' It has been described as an intellectual declaration of independence for America;[2] it was a call to the sluggard

[1] There is a passage to the same effect written when he was 19. Cf. the opening of the Essay itself: 'Ever since I was a boy . . .'

[1] Cf. a sentence in the Journal, when he was 18: 'Greatness is a property for which no man gets credit too soon; it must be possessed long before it is acknowledged.'

[2] Cf. Emerson, in *The Dial*, April 1843: 'The American Academy, the Historical Society, and Harvard University

intellect of the American continent to look from under its iron lids:

'We have listened too long to the courtly muses of Europe; . . . we will walk on our own feet; we will work with our own hands; we will speak our own minds.'

The influence of this address in calling forth an American literary consciousness can scarcely be over-estimated; the mind of a nation challenged itself through the voice of a man; the younger thinkers of the time heard it as a call to courage and self-respect—the 'Stand upright' of the angel in Daniel (10[11]) repeated for modern ears. This was followed the next year by the *Address* to the Divinity Class in Cambridge—an utterance which caused much controversy, in which Emerson took no part. Its significance for us lies in its revelation of his religious position. It was the doctrine of self-reliance applied to the loftiest things—a re-assertion of the great Stoical doctrine, 'Obey thyself'; a prescription, 'first soul, and second soul, and evermore soul,' for the deadness of conventional thoughts and forms; a call to rise to Christ's conception of the greatness of a man. The address shocked the orthodox by seeming to belittle the historic basis of Christianity and the accumulated witness of the past; it alarmed some who did not count themselves specially orthodox, by its sheer courage of reliance upon instinct and intuition. Many things here are characteristic, and the reader who knows this utterance well knows much that came after. There is the deep and passionate moral sense, which to Emerson was the very nerve of religion; when a man attains to say, 'Virtue, I am thine, save me, use me . . . then is the end of creation answered and God is well pleased.' There is a glimpse of his critical and independent relation to historical Christianity,—his feeling that he has hold of something larger than the Churches were giving,—his conviction that the best method of honouring Jesus was to show the same courage as He showed and to live as He did, by intuition and conscience, and faith in the grandeur of the soul. There is also a note which may almost be called Messianic: 'I look for the new Teacher, that shall follow so far those shining laws, that he shall see them come full circle.'[1]

But Emerson's religious position as a whole is best summarized in a phrase from one of his letters to his aunt Mary: 'I belong to the good sect of the Seekers'; and his relation to all the dogmas is in one sentence in his Journal (1830): '*Alii disputent, ego mirabor*, said Augustine: it shall be my speech to the Calvinist and the Unitarian.' Perhaps he read a little of himself into the 'bright boys and girls in New England,' when in 1842 he wrote to Carlyle: 'They are all religious, but they hate the Churches.' It is evident from the *Address* and from other utterances that the historical element in Christianity never appealed much to him: 'We shall look back, peradventure, to Christianity as to a rosary on which, in the morn of existence, we learned to count our prayers.' It was this which enabled him to delight in Swedenborgian interpretations of Scripture, which were utterly inaccurate and unhistorical; it was enough for him that the sentiment was true and eternal. Apparently, however, even he was sometimes afraid lest the temper of negation and criticism might carry men too far.

'It is not good to say with too much precision and emphasis that we are encroached upon by the claims of Jesus in the current theology: it brings us into a cold, denying, unreligious state of mind.'

That state of mind was never Emerson's own. His positive assertions were always so essentially religious and believing that they have lent wings to many who have small sympathy with the more negative side of his position.

Emerson's writings appeared in the following sequence: in 1841, *Essays* (including 'History,' 'Self-Reliance,' 'Compensation,' 'Spiritual Laws,' 'Friendship,' 'The Oversoul,' etc.); in 1844, *Essays*, 2nd Series (including 'The Poet,' 'Experience,' 'Character,' 'Manners,' 'Nominalist and Realist,' 'New England Reformers,' etc.); in 1849, *Miscellanies* (including 'Nature,' 'The American Scholar,' the 'Address to the Divinity Class,' 'Man the Reformer,' 'The Times,' 'The Conservative,' 'The Transcendentalist,' etc.), and in the same year *Representative Men*. In 1851 he united with W. H. Channing and J. F. Clarke in the *Memoirs of Margaret Fuller Ossoli*. In 1856, *English Traits* appeared; in 1860, *Conduct of Life*; in 1870, *Society and Solitude*; in 1875, *Letters and Social Aims*; in 1878, *Fortune of the Republic*. His first volume of *Poems* was published in 1846; *May-day and other Pieces* appeared in 1867; *Selected Poems* in 1876. After his death the following appeared: in 1884, *Poems* (new and revised edition), another volume of *Miscellanies*, and one of *Lectures and Biographical Sketches*; in 1893, *The Natural History of Intellect*, and other papers. In 1903, the re-issue of the *Complete Works* began in the Centenary edition; and in 1909–10 the first four vols. of the *Journal* were published.

Emerson died at Concord, where his peaceful home had been for nearly half a century, on 27th April 1882.

2. **Characteristics.**—Emerson's works are a collection of miscellaneous counsels and oracles, and not the logical working out of any system of thought. But a few things stand out visibly through the whole.

(*a*) One is his immense and inexhaustible value as *an ethical teacher*. Even those whose religious position is different from his owe him in the ethical realm a vast debt of gratitude—not least for his gospel of self-reliance, his insistence on the duty of self-respect and the obligation to listen to the imperial voice of one's own soul. Linked with this there is his deep sense of the worth of the individual.

'God enters by a private door into every individual. . . . Everybody knows as much as the *savant*. The walls of rude minds are scrawled over with facts, with thoughts. They shall one day bring a lantern and read the inscription' (*Intellect*).

If this emphasis on self-trust has its dangers, Emerson guards against them by instilling a sense of responsibility and of the greatness of life; he shows us in prose and poetry the scorn that is in the eyes of the passing days if we do not make good use of their gifts:

'Truly it demands something godlike in him who has cast off the common motives of humanity and has ventured to trust himself for a taskmaster' (*Self-Reliance*).

Two qualities make him an ethical teacher most bracing and helpful to the young. One is his note of good cheer—his sense of the ethical value of hope. Here comes in the doctrine of compensation; his sense of the utility of scepticisms; his vision of the glory of living in the present age.

'I rejoice that I live when the world is so old. There is the same difference between living with Adam and living with me as in going into a new house, unfinished, damp, and empty, and going into a long-occupied house where the time and taste of its inhabitants has accumulated a thousand useful contrivances, has furnished the chambers, stocked the cellars, and filled the library. . . . O ye lovers of the past, judge between my houses! I would not be elsewhere than I am' (*Journal*, ii. 71).[1]

The other is his general manliness and closeness to life, his insistence on concentration, on thoroughness, on discipline; this is even clearer in the later writings, where there is perhaps less mysticism and more guidance for the highway—his head is

would do well to make the Cunard steamers the subject of examination in regard to their literary and ethical influence. . . . We go to school to Europe. We imbibe a European taste. Our education, so-called—our drilling at college and our reading since—has been European, and we write on the English culture and to an English public, in America and in Europe.'

[1] On this, see art. by W. Robertson Nicoll, mentioned under Literature. Cf. the passage at the end of 'Worship' (*Conduct of Life*) on the new church to be founded on moral science, 'at first cold and naked, a babe in a manger again.'

[1] Cf. *The Problem*, the poem in which, after his praise of 'the Shakespeare of Divines,' he concludes:

'And yet, for all his faith could see,
I would not the good bishop be.'

less in the clouds and his feet are more upon the earth. He can be very searching, this sage of the highway:

'A day is a more magnificent cloth than any muslin; the mechanism that makes it is infinitely cunninger; and you shall not conceal the sleezy, fraudulent, rotten hours you have slipped into the piece, nor fear that any honest thread, or straighter steel, or more inflexible shaft, will not testify in the web' (*Power*).

(*b*) Along with this ethic there goes a something that is not quite a theology: let us call it an *almost theology*—a firmament that is not fashioned according to the ancient star-maps, but is real enough to provide a sky for the earth and a dew for the tender grass. The typical piece here is the *Oversoul*. Why should I so boldly trust my intuitions? Because intuition is reception: one chief part of our business in this world is to receive. Emerson had been a critic of the accepted theologies from his youth up:

'It seemed to me when very young that on this subject (*Compensation*) life was ahead of theology, and the people knew more than the preachers taught.'

The critic in his turn has often been criticized for his theological indifferentism and for his leanings towards Pantheism. Yet, if he leaves God vague and undefined, readers of different standpoints can read their own beliefs into his large conceptions and get great help from his essentially religious spirit. 'Shall I not call God the Beautiful, who daily showeth Himself so to me in His gifts?' That is almost enough theological definition for him. If a Christian preacher were turning Emerson's pages in search of illustrations for Scripture texts, there are two texts that would draw to themselves a special number of thoughts and phrases. One is St. Paul's counsel, 'Let each man be fully assured in his own mind' (Ro 14^5); the other is the Psalmist's prayer, 'Let the beauty of the Lord our God be upon us' (Ps 90^{17}). Here at least is much to live by—a glory in the heavens and a firm path upon the earth. In regard to the doctrine of immortality, he was also lacking in definition, though he was optimistic throughout. Sometimes he spoke vaguely and impersonally, sometimes more warmly and in terms of a personal hope.

'All the comfort I have found teaches me to confide that I shall not have less in times and places that I do not yet know.'

In his later years he is said to have spoken sometimes of reunion with those who had gone on before.

(*c*) Through all the writings there appears most vividly *the man*. The very limitations and defects of the teaching, which are plain enough, are the limitations of the man. He had not the gift of ordered and consecutive thinking: he wrote once to a friend:

'I do not know what arguments are in reference to any expression of a thought. I delight in telling what I think; but if you ask me how I dare say so, or why it is so, I am the most helpless of mortal men.'

A good deal of criticism is disarmed by this frank confession. Beside his avoidance of life's more tragic and terrible themes in his teaching, there may be placed the fact that in common life he hated to hear people speak of their ailments. Some may regard this as a virtue and others as a defect; but most people who speak of their distempers weaken themselves by so doing, and he may have deliberately chosen in his writings to leave the shadows to others and to point the sunlit path where men could have the maximum of courage and strength. There are indications in the earlier pages of the Journal that he was by no means without a sense of personal sin, especially at the time when his life was first enriched by love, and humbled by his call to the ministry. Did he outgrow these feelings as if they were 'the soul's mumps and measles and whooping-coughs'? One thing is sure, that, even if he left behind the shadow of sin, he did not leave behind the shadow of sorrow; and his journals give hints of a life not all complacency, with veiled depths of brooding and pain. But through it all there breathes the spirit of a singularly lofty character—the man who is more than all his words. His later years were surrounded by a reverence such as is given to few men while they are still alive. Lowell wrote in 1868:

'For us the whole life of the man is distilled in the clear drop of every sentence, and behind each word we divine the force of a noble character, the weight of a large capital of thinking and being.'

Even to those who are much further removed, that force and weight still make themselves felt; to few writers are they bound by so strong a tie of personal admiration.

3. Poetical genius.—Widely different estimates have been made of Emerson's worth as a poet. Some tell us that here is the Emerson who counts, and that all else is nothing by comparison: others again are offended by his comparative lack of form and music, and deal with his poetry in the somewhat condescending and ungracious fashion adopted by Matthew Arnold. Appreciation will always vary according to the value placed by the critic upon melody or upon thought: some will despise the ship because she labours in making progress; others will prize her because of the wealthy freight she bears. Emerson's description of one of the Persian poets who influenced him so greatly might be applied to himself—'a river which makes its own shores': when the river is doing that, it may break through the ordinary channels of expression, and cut across the conventional and ordered beauties of the lyric landscape; but he who has eyes for force and fullness will find something here to study and to admire. Yet even the critic who seeks form and melody might find something to haunt his heart in the slow undulations of the poem beginning—

'I heard or seemed to hear the chiding Sea
Say, Pilgrim, why so late and slow to come?'

or in the severe dignity of *Days* and *Terminus*, or in the tenderness of *Threnody*, or in the lyric simplicity of *Thine eyes still shined*, and *If my darling should depart*. Lord Morley's estimate is just: 'Taken as a whole, Emerson's poetry is of that kind which springs, not from excitement of passion or feeling, but from an intellectual demand for intense and sublimated expression.' It will, therefore, have its appeal to a limited number. The Muse is here who

'ransacks mines and ledges
And quarries every rock,
To hew the famous adamant
For each eternal block';

and, though there is at least a little of the kindred Muse who

'lays her beams in Music,
In music every one,
To the cadence of the whirling world
Which dances round the sun,'

the impression left on the whole is one of grave severity which will always find a fit audience, though never a large one.

4. Influence.—Few writers of the 19th, or indeed of any century, have exerted a wider influence than Emerson. 'A strain as new and moving and unforgettable as the strain of Newman or Carlyle or Goethe'—so M. Arnold describes the impression made in England when Emerson's message first began to sound across the sea. That influence has grown steadily, and has left its mark on many notable lives of varying type; it would be easy to gather testimonies from many biographies (*e.g.* those of Tyndall, R. W. Dale, Henry Drummond) where this indebtedness is confessed. And, though there are some who feel that he did not do complete justice to certain great happenings of long

ago which are still 'towering o'er the wrecks of time,' they will join with others in their gratitude for an influence so high, so pure, and so helpful. And they will put Emerson among the most accessible of the books which are able to lead them away from the shallows and the common-places, 'into the heart of sacred cities, into palaces and temples.'

LITERATURE.—The *Journal* alluded to above, 4 vols. 1909–10; the authorized Life by J. E. Cabot, Boston, 1887; the monograph by O. W. Holmes (*American Men of Letters* series, Boston, 1885); *Correspondence of Carlyle and Emerson*, 1834–1872, ed. C. E. Norton, Boston, 1883. There is an excellent bibliography of Emerson by G. W. Cooke (Boston, 1908). The following are also useful: O. B. Frothingham, *Transcendentalism in New England*, Boston, 1876; Moncure D. Conway, *Emerson at Home and Abroad*, Boston, 1883; A. Bronson Alcott, *R. W. Emerson, Philosopher and Seer*, Boston, 1882. Of articles, lectures, etc., the following may be mentioned: Lecture by A. Birrell, 1903; art. by W. Robertson Nicoll in *N. Amer. Review*, clxxvi. (May 1903); J. M. Robertson in *Modern Humanists*, London, 1895; Morley's preface to *Collected Works*, London, 1883; M. Arnold in *Discourses in America*, London, 1885; Lowell in *My Study Windows*, Boston, 1871, and subsequent editions. The works have been published in the Riverside ed. (12 vols., Boston, 1883–94); and the Centenary ed., Boston and New York, 1903, etc.; also in England, 6 vols. ed. Morley (1883).

J. M. E. ROSS.

EMOTIONS.—The present article will deal with the emotions in their ethical bearings, *i.e.* considered as springs of moral action. For the more strictly psychological aspect, see art. MIND. Emotion may be regarded as a compound of feeling and impulse. It belongs to the natural constitution of man, and is distinguished from both intelligence and moral volition. The significance we assign to the emotions in Ethics will vary according to our view of the foundations of morality.

I. *HISTORICAL SKETCH.*—**1. The emotions in Greek ethics.**—Greek ethics from the time of Socrates was essentially based upon knowledge; and as this intellectual conception more and more prevailed, the place of the emotions tended of necessity to become correspondingly less.

(1) *Plato* enumerates three faculties of the soul, viz. the appetitive (ἐπιθυμητικόν), the impulsive or spirited (θυμοειδές), and the rational (λογιστικόν), each having its appropriate virtue; and these three re-appear in the State (which is but a magnified personality) as the several ranks of artisans, warriors, and philosophers. This view gives due recognition to the emotions, since each faculty has its own virtue, and the harmony of all is justice, defined as τὰ αὑτοῦ πράττειν ('each doing its part'). In accordance with his theory of 'goods,' which does not exclude pleasure, Plato aims at the harmony of all the faculties, declining to suppress either desire or courage. Thus the virtue of the appetitive faculty is its obedience to and service of the rational; the same holds good of the spirited part, whose independence, however, is to some extent recognized in Plato's demand that it shall side with reason. Just as in the individual the supremacy must belong to reason—the charioteer of the two steeds—so is it in the human macrocosm, the State, which ought to embody the Idea of the Good. Here, then, neither pleasure, nor desire, nor courage is discarded; they are but subordinated to the harmonizing rule of the rational faculty. Again, however, since Plato really regards the latter alone as authoritative, and since in the State the classes corresponding to the ἐπιθυμητικόν and the θυμοειδές, more especially the former, exist only to obey,—the philosophers having within themselves a sufficiency of light, and being, in fact, the only true men,—desire and emotion now appear as something supplementary, having no concern with the pure Idea or with virtue as such. Thus Plato's estimate of the emotions varies according as the ideal he contemplates is absolute, or one accommodated to the actual world. In relation to the former, the emotions have no value; in relation to the latter, they fill a necessary place in a harmonious earthly life, so long as they discharge their function under the control of reason, and thereby contribute to the harmonious activity of the good man and of the State. Plato's sincere concern for the realization of such a harmony is seen in his theory of education, which prescribes Gymnastic, that valour may be braced for the task of keeping desire in leash; and Music, that it may be preserved from truculence. Yet he is equally emphatic in holding that Music must not enervate, as the strains of the Phrygian mode are wont to do, and that, in particular, the drama must not inflame the emotions, which ought rather to be restrained by reason.

(2) A still greater influence is assigned to the emotions by *Aristotle*. For him, as for Plato, the highest virtue consists in knowledge, which in its perfection is Divine; but he differentiates the ethical from the dianoetic virtues, and associates morality with the natural life. Just as he finds true happiness in a virtuous activity, and yet recognizes other sources of happiness,—the organic appetites, or, at all events, wealth, honour, friendship, absence from pain,—so he attaches the ethical virtues to the natural impulses and the πάθη. The πάθη belong to the good side of human nature, but require training. The emotions are, therefore, not to be suppressed, but to be kept within proper bounds. In this way he distinguishes between θηριότης (sub-human grossness) and virtue. The intermediate stage is self-denial, in which the desires, not yet overcome and still active, are being fought against; while true virtue is first attained in the 'mean,' in which the desires are reduced to due proportions, and thereby brought under the sway of reason. Thus, according to Aristotle, none of the πάθη, *i.e.* the affective states of the soul, which give rise to pleasure or pain—covetousness, anger, fear, love, hate, desire, sympathy, envy—are in themselves bad: they are simply natural; but, in order to become ethical, they must be duly restrained. He thus recognizes certain psychical states which are capable of virtue, but not fully virtuous, *e.g.* modesty, which stands midway between shamelessness and bashfulness. They are all, in fact, natural emotions, which provide the requisite raw material for morality, but are not themselves moral. As contrasted with the dianoetic virtues, the ethical consist in the restraining of desire and emotion within the limits of the mean through rational intelligence and discipline—an end partly subserved by Art, whose function it is to purify from passion. Aristotle simply proceeds upon the theory that, as human beings, we require the goods of the body as the means of happiness, and that human virtue can rest only upon the measured control of our natural endowments and impulses. From human nature itself there issues a sort of non-purposive, instinctive action, but this is marked by instability. Virtue, on the other hand, is a stable and permanent condition, a proficiency based upon conscious volition (ἕξις προαιρετική ἐν μεσότητι οὖσα τῇ πρὸς ἡμᾶς, ὡρισμένη λόγῳ); as ethical virtue, therefore, in contrast to dianoetic, it is the facility with which the πάθη and desires are brought within rational measure by habit. The particular virtues are then set in relation to such goods as pleasure, wealth, honour, society. Thus, valour has to do with pain, temperance with pleasure; in social intercourse, liberality stands midway between avarice and prodigality; meekness stands in the mean with respect to anger, as does the love of honour with respect to glory. Nevertheless, even Aristotle ranks the dianoetic virtues higher than the ethical, and follows Plato in regarding knowledge as the supreme good.

(3) This characteristic attitude to knowledge is adopted also in the later Greek systems, viz. Stoicism and Epicureanism. (*a*) The *Epicureans*, indeed, base their ethics on pleasure, but with them the supreme end is not, as with Aristippus, the mere momentary enjoyment, but *ataraxia*, which is not so very remote from the *apathia* of the Stoics. It is remarkable that, while, after the age of Phidias, Art tends to become more emotional, philosophy seeks salvation in freeing itself from the πάθη. Though Epicurus rejects sensual pleasure, he is still concerned with pleasure of a kind, namely, that which lasts beyond the momentary thrill. Since, however, the goods which yield pleasure are liable to change, he lays great emphasis upon the feeling of security, which is partly supplied, and indeed guaranteed, by the State; and also upon the *ataraxia* which can be maintained in the face of death itself. Epicurus desires to eliminate the transient factor in the emotions, to guard against both pain and fear, to oust the passions as being the source of suffering. In the condition of *ataraxia* the emotions are really restrained by knowledge, though pleasure is not excluded when unattended by pain. Rational intelligence must teach us how to live content with little, and without such pleasures as are not indispensable. This assumes a certain antagonism between the world and the pleasure-seeking man; and thus the latter must pass from all momentary excitement to the mood of *ataraxia*, which lasts, and is to be won by means of intelligence. Here we have a restriction of emotion which contrasts with the views not only of the Cyrenaics, but also of Aristotle; the idea of an actual mastery of the passions, or of using them as a means of self-realization, is alien to Epicurus; but, as his criterion of judgment is simply pleasure or pain, and since pleasure is not to be had, the sole aim of virtue is the utmost possible avoidance of pain, *i.e.* the independence of outward circumstances guaranteed by *ataraxia*. It is specially noteworthy that emancipation from fear is here regarded as the aim of the wise. The more timid the Epicureans are, and the more inclined they are, as eudæmonists, to shrink from the perturbations of pleasure and pain, the more eagerly do they shun every occasion of fear and press towards *ataraxia*.

(*b*) In this negative aim the Epicureans are at one with the *Stoics*. The moral problem of the Stoics is how to attain to *apathia*. They set the emotions at the very heart of individual morality; in fact, as their cosmopolitanism is no more than an ideal, their morality is simply the morality of the individual. The Stoic wise man is one who is free from all sorrow, engaged in purely rational action, and perfectly blessed therein. Moreover, a man must either be entirely wise, or else a fool. The passions constitute for the latter a false form of judgment, which springs from suffering, from dependence upon earthly things, for, under passion, everything is judged from a transient and limited point of view. The wise man, on the contrary, places himself in the articulate system of nature, and lives in harmony with nature's order. Thus, according to the Stoics, the passions are pleasure and pain, and, in regard to the future, fear and desire. Their grand aim is the attainment of *apathia*, *i.e.* complete freedom from the emotions. But the perfect happiness which the Stoics find in the perfect knowledge of the wise man is a stable condition of mind, which does not depend

upon suffering, but is rather the agreeable sensation that accompanies freedom and energy, while even the pleasure yielded by the external world is unwarranted, being a kind of suffering. It is true that the Stoics did not carry their view of the exclusive value of virtue, any more than their theory of *apathia*, to its logical issues. After all, there do exist certain minor objects of human desire, such as health, riches, friendship, etc.; and, though happiness does not depend upon these, yet there is a certain gratification in possessing them—hence the doctrine of *apathia* cannot be fully carried out. Nevertheless, the Stoics hold that the wise man will not become the slave of such things. In reality, virtue is sufficient for happiness, and, though the wise man cannot evade the feelings of pleasure and pain, he can rise above them. Like the Epicureans, the Stoics stand at the culmination of Greek thought; they withdraw from the external world to the internal, and find the 'life according to nature' in that life alone which is in harmony at once with the law of nature and with that of reason. They set a high value upon self-preservation—an end which, being in full accord with perfect freedom, manifests itself in indifference to painful experiences, and permits the wise man to evince his oneness with the supreme, all-pervading Deity.

The main trend of Greek ethics is towards the supremacy of reason, and, while in Plato and Aristotle reason appears as the harmonizing principle that controls emotion, it is for the Stoics and Epicureans the sole principle, since all natural enjoyment of the world and its goods has ceased, and a mood of pessimism dominates everything. There had been, as the Stoics believed, but few wise men in the past, and a multitude of fools. Their ideal is to be wholly free from all painful experiences whatsoever—in a word, from the πάθη. Thus, wherever knowledge is regarded as the formative ethical force, and the will is associated with the process of judgment, the emotions can have no proper place in Ethics at all, and, in fact, must be assigned finally, as in the Stoa, to defective understanding.

2. In Jewish and Early Christian ethics.—The emotions perform a very different function in a sphere where morality is an affair of the will, as, *e.g.*, in Judaism. In Jewish ethics the will is determined by the emotions of fear and hope—fear of punishment and hope of reward. The commandments are given by God's absolute will, and, as it is the same authoritative Will, and no mere natural nexus, which determines alike the penalty of transgression and the recompense of obedience, it is clear that the moral dynamic of volition cannot be knowledge of the Good as something in itself valuable, but only fear and hope. It is true that trust in God and love to God had also a place in Judaism; but it was a subordinate one, and they were much obscured by the other two.

The emotions had a recognized place also in the primitive Christian ethic, and have retained this in sundry forms till the present day. Despite the ascetic, pessimistic strain intermittently heard in the NT ethic, the emotions fill an important rôle. For one thing, love is looked upon as the supreme ethical motive: love, as an amalgamation of feeling with a definite and permanent direction of the will, is the emotion which in Christianity is exalted to the grand creative affection of the soul. Love to God is the standing motive of the moral and religious life. The natural impulses and feelings are, indeed, reckoned sinful—not, however, because they are intrinsically corrupt, but because they have assumed the command and taken the wrong way. Self-seeking and love of the world have supplanted the love of God. Emotion, accordingly, is not to be eradicated, but simply turned to its proper use, and this is achieved when it becomes the support and inspiration of good volition. But such volition is directed towards God, and love to God embraces love to man, since all men are called to become the children of God, while, on His part, God is the Father of all. Thus, according to the Fourth Gospel, the Christian is filled with an enduring joy, a happiness that cannot be taken away. His besetting emotion is a permanent and blessed spirit of love, which predisposes him to good works. Fear of punishment and hope of reward may still remain—vestiges of Jewish ethics,—but perfect love driveth out fear. Nevertheless, the pre-eminence of love in primitive Christianity does not involve the suppression of other emotions; they, too, are to be made auxiliaries of the spiritual life. St. Paul is a man of singularly fervid emotion—one in whom even anger is made to subserve his great task. And although, *inter alia*, the expectation of the Parousia was a specially potent factor in causing men to set less store than they now do by such earthly boons as marriage, social position, property, art, etc., and so to repress the natural feelings that cluster around these things, yet, as a compensation, the peculiar heritage of the individual was placed upon a new basis, inasmuch as every man had a vocation of infinite value, and every condition of life could be consecrated by the operation of a right spirit within. Here, then, provision was made for a deepening of spirit and a refinement of feeling such as are possible only where so high an estimate is placed upon personality.

In its further development, Christian morality presently shows a tendency to coalesce with Greek ideas, at least on the native soil of the latter. In *Clement of Alexandria* the Stoic *apathia* coalesces with the Christian principle of love. Along with the distinction between *gnosis* and *pistis*, between the esoteric, intellectual religion and the popular, there emerges the demand that the Christian Gnostic must be *εἰς ἀπάθειαν θεούμενος* ('deified unto *apathia*'), *i.e.* delivered from all passion—from the πάθη which originate in the distractions of sense. He must rise to the sphere of calm, clear knowledge; and, while not spurning the goods of the natural life, he must be independent of them. Nevertheless, he does not show himself apathetic towards his fellow-man; he, too, has a heart. Thus the possessor of *gnosis* does not repudiate his relations with the natural, and his *apathia* is toned down to something not unlike the Platonic 'temperance.'

In the West, the challenge of Christianity to the older civilization is much more emphatic. True, we find *Tertullian* speaking of the *anima naturaliter Christiana*; nevertheless, his ethical teaching—particularly in his Montanistic period—is hostile to all culture, and is directed towards the complete excision of desire, so that he might almost be called a Christian Cynic. Personally, however, he is highly emotional and passionate, and, especially as a Montanist, prone to let himself be carried away—even to the point of ecstasy—by feelings commonly thought to be symptomatic of inspiration. As a protest against the moral degeneracy of his age, he demands that Christians shall withdraw themselves from the public life of heathendom, which fosters the passions the Christian must eschew. Theatrical performances and second marriages are special perils. Tertullian advocates a stringent penitential discipline, and revives the opposition to all æsthetic culture of one's natural powers. He aims, not at the regulation, but at the complete exclusion, of all that culture bestows, even the culture of the emotions. Hence, too, the impassioned character of his renunciation of the heathen world. His fervour concentrates itself upon moral reform of a Christian, *i.e.* first of all, an anti-pagan type. In the white heat of his enthusiasm, 'conformity to nature,' which he regards as also in line with Christianity, appears to him to consist in perfect simplicity of life, in the repression of *cupiditas* and *concupiscentia*. Pagan civilization has fanned the flames of passion and desire, and has taken man away from his natural and simple condition.

As this antagonism to heathen culture develops, however, it eventually becomes an antagonism to all that is natural, which is declared to be corrupt. *Ambrose* desiderates a complete independence of earthly joy and sorrow: 'non in passione esse sed victorem passionis esse beatum est.' Property is grounded in selfishness: 'pecuniae contentus est iustitiae forma.' Our possessions are to be placed at the disposal of love by works of beneficence. *Augustine* knows only of a human nature that is entirely corrupt with original sin—a *massa perditionis*. With him, emotion has no standing save in religion, in man's ardent love of God, which at its highest he combines with the eudæmonistic anticipation of future reward and the fear of future punishment.

3. In monastic and mediæval ethics.—Monasticism rejects all earthly goods—as a condition of entire consecration to the love of God. Since the natural is here regarded as wholly alien to the Divine, or at least as of no concern in religion, all natural propensities and feelings die away in love to God. Morality being in itself inadequate, all the more decisively is emotion transferred to the sphere of religion; and the monastic mysticism of the West allows a much greater scope to the emotional element in that sphere than does that of the East,

just because the West lays the main emphasis upon a will wholly surrendered to God, and the East upon knowledge. Even the ecstatic love of God spoken of by Dionysius the Areopagite is much less emotional than the Divine *furor* of many a mediæval mystic, and the subjective factor comes out still more forcibly when the enjoyment of God, the exuberant bliss of Divine intercourse, is emphasized. According to Plato, it was a blessed thing to gaze upon the Idea; but Augustine and the mystics of the Middle Ages lay yet more stress upon the will which is zealous for God and brings beatitude to man. But while religious emotion thus threatens to absorb every other concern of life—just as the fervent zeal of the Church counted earthly interests as nothing in comparison with religious interests, and so sent the heretic to the stake—yet mediæval morality is not without a mundane aspect, as appears in the ethics of Abelard and Aquinas.

(*a*) *Abelard*, indeed, lays all emphasis upon the disposition, but he sees in Christianity the assertion of that law of nature which was recognized and obeyed by the philosophers of old. The good is to be willed for its own sake; hence penitence must be something more than external works, and must have, not fear of punishment, but love to God, for its motive. Abelard accepts the ancient cardinal virtues; in short, he does not propose to set up an antithesis between natural and Christian morality, and so he traces all the virtues to their one source in character—to love—while he also regards sin as issuing from the heart, and holds that even penitence must spring from love. But this deriving of morality from love does not involve a contradiction between love and human nature, for he gives no recognition to original sin.

(*b*) We find a different estimate of natural morality and the emotions in *Aquinas*: with him, indeed, *gratia infusa* and love are supernatural gifts of the Spirit; still, he accepts the cardinal, as well as the theological, virtues; and, since in his doctrine of goods he is ready to do justice to the State (though ultimately subordinating it to the Church), he discerns various stages in the cardinal virtues themselves. Nevertheless, even the highest of these stages only serves to accentuate his antagonism to the natural. The cardinal virtues are *exemplariter* in God; the lowest grade is political virtue; and, as it is the duty of man to turn to God, so far as in him lies, there are, between the *exemplares* and the *politicæ*, intermediate forms, viz. the *purgatoriæ* and those of the *purgatus animus*. Whereas the political stage is bound up with earthly things, and chastens the natural emotions, the *purgatoriæ* work negatively towards making man like God, so that, e.g., *temperantia* relinquishes earthly things, so far as nature permits; while, again, *temperantia* at the level of the *purgatus animus* has done with earthly cares altogether. Aquinas's doctrine of the several grades of virtue amounts, then, to this: the political virtues are genuine virtues; the higher species curb desire and feeling as far as possible, while the highest of all do away with them entirely. Nevertheless, he still thinks in terms of dualism, for, according to him, true perfection consists in withdrawing from the world: 'Nutrimentum caritatis imminutio cupiditatis.' Thus, on the one hand, the ancient virtues, even in the political sphere, are recognized, and the natural affections not proscribed; yet, on the other, both are in the end construed ascetically, under the idea of grace, so that there remains at last only love to God in contradistinction to all that is of the world, and the cardinal virtues are merged in the grace that is poured from above.

Not only, however, was it impossible in mediæval ethics to suppress the affections, or deny their claims on a lower stage of virtue; they were actually made subservient to religion and the Church. A supernatural love to God, annulling every earth-born affection, was, of course, the ideal; but, when this ideal failed the Church in her capacity of teacher, she appealed to fear, menacing the transgressor with penalty—in hell or purgatory or the present world—and so engendering a spirit not so much of hostility to evil as of mere abject terror. Such emotions as love, fear, hope, and repentance in the ecclesiastical sense, operated with tremendous power in the Middle Ages, while the actual moral practice of life was but little regarded.

4. In modern ethics.—In the modern period down-trodden human nature comes to its own, so that morality is now based entirely upon it. Philosophical ethics has at length cast off the trammels of theology, and we may distinguish three tendencies in its development, viz. the *Rationalistic*, which in sundry forms bases morality upon human reason, and is thus akin to the classical view; the *Naturalistic*, which would find a foundation in impulse and feeling; the *Synthetic*, which aims at combining the other two. Alongside of these has existed since the Reformation a *Theological* ethics, in both a Protestant and a Roman Catholic form. We commence with this.

(*a*) In *Roman Catholic ethics* the bilateral view of a fully-developed monastic morality and a virtue that is political and earthly has been not only maintained but strengthened. On the one hand, in the monastic system all the natural affections are repressed; the *Jesuits*, in fact, demand the obedience of a corpse, and so train the whole man that, deprived of all personal volition, he hears his conscience in the command of his superior, in face of which every desire and emotion must be still. On the other hand, just because such a vocation is not possible for all, and because a morality of that type is uncontrolled by any unifying principle, the widest possible scope is given to casuistry; and this likewise has been carried to its furthest limits by the Jesuits.

(*b*) *Protestant ethics*, it is true, started from the assumption of the radical corruption of human nature, not, however, as seeing in religion something alien to man, but actually conceding a certain intrinsic value to the goods of this life. Thus, *Melanchthon*, in the first edition of his *Loci*, holds that selfishness, as contrary to the love of God, is the cardinal propensity of man in his state of original sin, and that the unchastened affections are but the various aspects of this selfishness, constantly repressing or modifying one another according to their several degrees of intensity, yet never attaining to any moral worth; still, we cannot fairly infer from his words that the emotions are incapable of being utilized in the service of love. Above all, the Christian has assurance of his salvation; he has the internal testimony of the Holy Spirit, with the attendant feeling of security and blessedness from which he acts—just as, according to *Calvin*, the motive of moral conduct is found in the consciousness of election, since the indwelling Spirit manifests Himself in a man's will and feeling, and he acts from courage, as one assured of final triumph. A Christian's activity, however, is not confined to the Church, or wholly directed to religious ends, for every calling is sacred, and love to one's neighbour, as *Luther* maintained, can be practised in every sphere of life.

Now, all this might have led to an ethic which would touch the character to its noblest issues, which would do justice to the earthly life, and which, accordingly, far from crushing the natural promptings of feeling and desire, would enlist them in the service of love—a consummation exemplified, for instance, in the Protestant estimate of conjugal love. But as man's inherent corruption came to be increasingly emphasized, and as his relation to God gradually came to dwarf every other relation, it became more and more difficult to vindicate the natural, emotional, impulsive life, or to see anything but sin in its spontaneous manifestations. This tendency is exemplified in *Pietism* (*q.v.*), which, in its timid scrupulosity, looked upon the natural life as full of temptations and obstacles to religion. All that is bright and genial in life was frowned upon; courage and joy were crushed by fear and repentance—though these, it is true, had to do with sin rather than with punishment. Protestantism, in fact, with its emphatic assertion of man's native corruption and its all-absorbing interest in the Divine, on the one hand, and with its lofty estimate of the earthly calling and of the culture of the Christian's natural disposition, his feelings, affections, and desires, on the other, ha

not even yet emancipated itself from an inner conflict—the antinomy which strikingly re-appears in the most recent expositions of Protestant ethics (cf. Luthardt, Franck, H. Weiss, and others).

(c) *Naturalistic ethics*, having freed itself from theology, finds its starting-point in the instinctive feelings themselves. This school has found its main expansion in England and France.

Agrippa of Nettesheim had called attention to the function of hate and love in the realm of nature generally, as also to their effects upon human nature, and the influence of passion upon conduct. *Thomas More*, in his *Utopia*, had promised the highest possible degree of unruffled gratification for one and all. The sensualistic *Telesius* had drawn attention to the impulse of self-preservation, to which he traced the emotions, thus recognizing their function in the interests of life itself, and finding virtue in the rational perception of what is useful or injurious. The Aristotelian *Cremonini*, too, had asserted that the dynamic of life was not the intelligence *simpliciter*, but rather the soul which knows and *loves*, and that, the emotions being rooted in the bodily frame, morality must needs rest upon a natural science of the soul; conduct, in fact, is connected with matter, and is dependent upon the natural warmth of the temperament, and the feelings arising from it. *Montaigne* also would connect morality with nature, and insists that it is tied to the *complexions et inclinations naturelles*.

It was *Bacon* who first tried, by the scientific method of historical and psychological induction, to derive morality from experience, who combined it with the natural impulses, with the *lex suitatis* and the *lex communionis*, and maintained that the emotions must be taken into consideration as being the stimuli of the will, which is the grand factor in morality. According to Bacon, the proper function of ethics is so to regulate the emotions as to secure their obedience to reason, that is, to the laws won from experience, which enable us to harmonize the interests of self-preservation with the interests of social life. He thus discriminates the two fundamental impulses, the self-regarding and the 'other-regarding,' which have continued to play their part in Naturalistic ethics till the present day.

Hobbes, with his 'homo homini lupus,' emphasized the impulse of self-preservation in its most extreme form, making it the rationale of the State, whose function it is to keep the self-directed impulse within bounds. The social motive, he holds, is not primordial, but springs from fear, which, begotten by the individual's desire to protect himself, and by his sense of weakness, compels him to compromise with society. The State exists for the sake of peace and security, which enable the individual to live according to nature within the limits prescribed by the law; in other words, the individual, in virtue of that security, should have all the enjoyment the State can allow. Hobbes's politics and ethics are thus based upon the desire of self-preservation and fear—the necessary results of the war of each against all others.

The doctrines of Hobbes form a standing element in *English Utilitarianism*, though the latter lays a stronger emphasis upon the idea of political liberty. Utilitarianism received its classical expression from the hands of *Bentham*: its cardinal principle is the greatest possible good for each and all. It bases morality upon the pursuit of happiness, and its sole aim is the greatest happiness of the greatest number.

In support of his thesis, Bentham appeals to psychology; he tests pleasure and pain by reference to differences among individuals, as a means of discovering rules by which pleasure may be most effectively secured and pain avoided, and thereby the highest possible amount of happiness obtained. These rules attain to universal validity by means of the various sanctions—the natural, that of public opinion, the political, and the religious—the authority of which, again, is derived from the pleasures or pains associated respectively with obedience or disobedience to the rules themselves. Thus pleasure and pain, hope and fear, are made the motives for the observance of the very rules of conduct which are designed to secure the greatest pleasure. Here morality becomes a doctrine of prudence—the art of calculating the greatest happiness.

A simpler and less artificial form of the theory that the ethical motive is formed by the pleasures and pains connected with the instinct of self-preservation is found in the doctrine that unrestricted competition always gives the victory to the fittest, and that, accordingly, moral progress is the result of natural selection. For, after all, it is the instinct of self-preservation which produces that struggle for existence in which the strongest survive. The dynamic of social progress is thus found in the desire for power.

Another form of naturalistic ethics would found morality upon a combination of self-love with the *social instinct*—a favourite resource with the *Scottish School*, who, after the example of *Cumberland* and others, put natural benevolence on a level with selfishness. According to the Scottish School, moral goodness springs from benevolence—the sympathetic impulse—which produces the immediate reflex-feeling of approbation.

This principle holds a special place in the theories of *Hutcheson*, *Hume*, and *Adam Smith*. Morality rests upon sympathy—sympathy first of all with one's own motives; it is really the retributive impulse—whether in the form of gratitude or of revenge—that we commend. Similarly, the sympathetic emotion has to do with those who come into active relations with us. The immediate emotional judgment assumes in particular cases an ethical character, and is formulated in general rules. Of decisive importance for morality are those sympathetic emotions which are designed to temper the others, particularly hope and fear. *Hume* traces national character, love of fame, and the imitative faculty to sympathy, and he likewise regards custom and tradition as expressions of the sympathy that subsists between successive generations. The State, too, owes its existence to sympathy—to the sense of a common weal; and to custom, in the form of loyalty to the laws and the authorities.

But, just as Hobbes was unable to ignore the social factor in morality, so those who ground their ethics upon sympathy cannot leave the purely individual interest out of account; and thus, while sympathy with what produces the good or evil of others is the determinative factor, stress is also laid upon the satisfaction experienced by the individual who yields himself to that sympathy.

Herbert Spencer, too, places altruism, which rests upon the social impulse, above egoism, though from a somewhat different point of view, asserting that man, after long experience and by means of the discipline which connects pleasure and pain with the growth of the social and sympathetic propensities, finally comes to see that, by aiming at the good of others and the common good, he really serves his own ends better than by indulging his egoistic impulses. *J. S. Mill* also makes happiness the leading principle of his ethics, and lays the chief emphasis upon the adjustment of the individual interest to the social. *Helvetius*, one of the French representatives of the ethics of emotion, called attention to the fact that in the last resort it is self-love which prompts us to act for the common good—though in such manner that we combine private with public ends. Man, indolent by nature, is roused to a sense of personal interest only by passion, and it is, therefore, of importance that the higher passions be regulated by habit, and that, in particular, the State, by its appeal to pleasure and pain, shall mould them, and by its discipline counteract the work of chance. *Holbach* (*Système de la nature*, 1821) believes that reason is nothing but the capacity for selecting the passions which conduce to happiness. At a later period *Comte*, *Taine*, and *Littré* based ethics upon the principle that the sympathetic impulse of altruism ought to prevail over egoism, thus emphasizing, in contrast to the English view, the ascendancy of the social over the individual factor. *Feuerbach* likewise held that morality reposes upon the desire of happiness, upon a reconciliation of the claims of the *I* and the *Thou* ('Tuism'). The pessimistically tinged theory of *Schopenhauer*—practically that of Buddhism also—which regards pity as the source of morality, may be classed as a variety of the 'sympathetic' hypothesis.

(d) In sharp antithesis to the foregoing views stands *Rationalistic ethics*, which would reduce the emotions to their lowest level. But if the ethics of emotion cannot entirely dispense with the intellect, neither can the Rationalistic school disregard feeling; for it is a fact of everyday observation that emotion is controlled only by emotion, and that the will is never moved by pure reason alone.

Spinoza and Kant may be taken as representatives of this Rationalistic view. *Spinoza* sets out from self-conservation. The absolute Substance, with its attributes of thought and extension, is something active, and the various modes share, and maintain their existence, in this activity; in so

far, however, as these modes are finite, they are wrought upon by others, and suffer. To this suffering correspond confused ideas, imaginations; and from these proceed the perverted emotions that rest upon the errors of an understanding subject to suffering. The primary affections are pleasure, pain, and, in relation to the future, desire. Pain we associate with some external arrest of power; pleasure, with an increment. But we judge things wrongly, in so far as we regard them from our own restricted point of view. Spinoza gives a magnificent exposition of the way in which the various affections are derived from the primary forms—by their relations either to time, to their respective objects, or to each other. The characteristic idea of this deduction is that, when man is under the inexorable control of the affections which may co-exist in a state of strife, he is in a condition of servitude. Accordingly, these affections are without value for moral ends, and must be cast aside. This is accomplished when we regard all things *sub specie æternitatis*, by means of the *amor Dei intellectualis*, the adequate ideas which dissolve the imaginations, and the activity of our rational essence, as directed upon the passions. The true good does not war against happiness; it shares in the active self-conservation of God, and reveals itself as creative intelligence. In this activity man is satisfied and blessed; he has the *acquiescentia in seipso*, and its concomitant *hilaritas*. Spinoza thus excludes the affections in so far as they rest on suffering, and will recognize only the happy consciousness that is bound up with the soul's own pure activity. So long as man is subject to the domination of the affections, it is well for him, in the interests of society, to let the more harmful be kept in check by the less harmful; as, for instance, when the State resorts to the fear of punishment, or concedes a partial indulgence to the less noxious affections, in order to counteract a greater danger by a less. The ethical view, however, goes deeper; it has regard only to the pure activity of the soul, with its attendant blessedness. According to Spinoza, therefore, the essential constituent of morality is the subjection of the affections to the authority of reason, which frees itself from the imaginations and keeps watch upon their inner movements. It is unnecessary to point out how closely he is allied to the Stoics.

The ethics of *Kant*, based upon the autonomy of the *a priori* practical reason, sets aside every motive which springs from inclination and passion. The only true ethical motive is reverence for the moral law. Kant's aversion to desire is such as lays him open to the charge of dualism, and gives an ascetic character to his ethical teaching. On analysis of this reverence for the law, however, we find that the element of feeling is by no means ignored. For, according to Kant, the moral law ought to kindle our hearts to a nobler pleasure, imbuing us with a true pride in the majesty of our practical reason, while also humbling us for our shortcomings. It is, in fact, this inner discord which gives rise to the sense of reverence for the law. Further, in the *Critique of Judgment*, Kant assigns an even more important function to emotion, basing the æsthetic judgment upon a spontaneous feeling, which he holds to be purely intellectual in character. This æsthetic judgment of emotion, again, with its claim to universality, he regards as preparatory to morality, as it habituates us to the love of the beautiful apart from any sensuous interest, and even to admire the sublime in opposition to any such interest.

A corresponding intellectual interpretation of morality was upheld in England by *Cudworth* and *Clarke*, who take their stand upon the intrinsic necessity of the moral relationships. According to Clarke, there exist eternal, unchangeable, and rationally instituted laws of righteousness, equity, goodness, and truth, which, like Kant, he combines with the idea of future retribution.

(*e*) *Synthetic or Mediating ethics.*—In *England*, however, the representatives of an *a priori* Rational ethics are eclipsed by those who would *combine* reason and emotion, of whom the most outstanding is *Shaftesbury*. Shaftesbury goes back to a 'moral sense'—a feeling of self-approval which attaches to the equipoise between selfishness and benevolence. When this equipoise, this inner adjustment, with its accompanying sense of satisfaction, becomes the object of thought, a judgment of approval is the result. In the harmony of our being, therefore, we discover an ideal of perfection, which, as appropriate to our nature, also involves a state of happiness. Religion, too, is estimated according to its capacity of strengthening or weakening our moral feelings. The Deity, being immanent in Nature, is the source of that cosmic harmony which finds an echo in our moral constitution. In fact, philosophy itself, according to Shaftesbury, is a passion for all that is good and beautiful. We are always seeking for unity and articulation amidst the manifold, and it is likewise these that we aspire to in the moral field—especially in the sphere of our emotions. We ought never to be moved to action save by inclinations that are worthy of the good disposition, and are at the same time in harmony with the system of which we form a part. Hence the propensities which make for the good of the whole should restrain those that are self-centred, since our individual good is involved in the general good. It is love, it is enthusiasm for the good, that elevates man; the enjoyment of love and friendship is really a participation in the harmony of the universe. Shaftesbury was wholly optimistic, believing, as he did, in a world-soul that works towards universal harmony and animates mankind. As against the sensualistic tendencies of his time, he speaks in the name of the rational, insisting upon harmony and unity, and yet not repudiating the affections, without which a moral life is, as he thinks, impossible.

While Shaftesbury holds strongly to the conviction that virtue is the manifestation of what is good in us, *Price* would rather emphasize the idea of duty. The latter derives morality from the primordial consciousness of obligation, and thus makes it its own support; it is not to be traced to states of feeling, since these are always controlled by reason. But though the ethical rests upon the rational, yet its operation is so far conditioned by emotion—by a lively spontaneous feeling that gives intensity to the process of rational intuition.

The *intuitive Scottish School* likewise founds morality upon immediate rational perception. Thus *Dugald Stewart* defines the ethical as a tendency—now become a principle—to act under the authority of conscience. The moral can be apprehended only by a direct intuition in conscience. Pity and sympathy lend support to this intuition, and beget an inclination to follow the lead of conscience. A similar attempt to conjoin rational intuition with emotion was made by *James Mackintosh*, who held that feelings of pleasure and displeasure in matters of character, so far as these feelings become springs of action, are given in conscience, which contains the norm for our conduct, and which is perfected by a process of reflexion that clarifies these immediate judgments of feeling; while, again, the natural altruistic tendencies urge us to obey the behests of the inner monitor.

In *Germany* the endeavour to bring the emotions within the scope of ethical rationalism has

been made in various ways by Leibniz, Schiller, J. G. Fichte, Herbart, Schleiermacher, and others.

Like Shaftesbury, *Leibniz* is an optimist, and has a very mild view of evil. He believes in the pre-established harmony of the monads, the highest of which, since they can increase the intelligence which constitutes their nature, are capable of development. Each intelligent monad aims at perfection, at becoming an increasingly clear and rich reflexion of the world. Moreover, each will have regard to the others; each will rejoice in its own self-preservation only as it yields itself to the social impulse—the craving for the universal, for the all, for the harmony of love. This longing exists in every rational being, and is rooted in the nature of the universe. In this way Leibniz combines the natural and rational desire for perfection with the desire for happiness. The two are not at variance, for the intelligent monads cannot attain happiness save in harmony with all. Reason is thus in full accord with the natural impulses, and both work into each other's hands in the ethical sphere. Even the endeavour after perfection, belonging, as it does, to the very nature of spiritual beings, is bound up with pleasure. The feeling of perfection, or rather of advance towards perfection—for we never get beyond the process—is the highest pleasure; it is the joy of enhancing our own being; but along with this personal progress must always go a development of our interest in the good of others, since that is the only way in which we can become clear and truthful mirrors of the world. Self-love and love to others are quite compatible, and each is rooted in our rational constitution. Clearness of knowledge gives us insight into our own nature, and teaches us how to set our various emotions in right and natural relations by cultivating a stable disposition of heart appropriate to our nature, and by subordinating the momentary promptings of feeling to that permanent quality of soul which lays hold upon the highest. The possibility of this is given in our nature, which ever presses towards a universal harmony; and it is the part of religion, as faith in the pre-established harmony of the world, to reduce the discordant elements to unity.

Schiller also, following the lead of the ancients, intones the inner harmony of reason and sense. Obedience to reason must be amalgamated with joy. Sensuous desire must retain its function in the moral field; sense adds to the intensity of the ethical factor. Here, in fact, emotion is utilized as a means of deepening the moral law; reason exercises her authority so infallibly that she can safely admit the feelings to a subsidiary place in the ethical life. This condition is realized in the refined soul, while the truly noble spirit can adjust the claims of the sensuous and the moral in such a way as to make manifest the absolute superiority of reason to sense.

Of *Fichte* also it may be said that, though his ethics is of an entirely rationalistic cast, he does not take up so rigid an attitude towards desire as did Kant. He insists upon the free activity of reason, and the transformation of authority into liberty, into the spontaneity of intelligence. By treating our nature, however, as the material of duty, he is able not only to set forth a profusion of goods as the fruit of human activity, but also, by bringing into prominence the creative aspect of the moral character—its power of original production—to find a place for emotion in the moral realm. He recognizes a feeling of freedom and love, which, with the impulse of reason, furnishes a motive for conduct. Although we cannot on any account let pleasure have the last word, yet the complex of impulse and feeling in our nature forms the 'material of duty.' In point of fact, Nature herself has made provision for the ethical life; thus, the distinction of sex is the necessary antecedent of the family, and the hereditary resemblance between child and parent is the postulate of all fruitful education. Fichte does justice to individuality and its aspirations by his demand that every one should take up his peculiar ethical call with the insight of genius, and choose his profession freely; as also by tracing conjugal love, especially on the woman's side, to an act of willing surrender.

Herbart, too, unites emotion and reason. To begin with, he deduces five ethical ideas[1] from our judgments of pleasure or displeasure regarding relations of will. These five are inner freedom, perfection, benevolence, justice, and equity. He does not regard these relations of will as being even qualitatively free from emotion. But in the same way the ideas which are connected with the relations of individual wills have as their correlatives the various 'systems' of society; for example, the administrative system corresponds to benevolence, the system of culture to perfection—the highest possible development of every capacity; and spiritualized society—as presenting a great harmonious whole in which the individual as well as the various systems are articulated in perfect unity—to inner freedom. Here Herbart formulates, in contrast with Kant, an ideal doctrine of goods which has in view the highest good of each and all in its harmonious embodiment. If he thus gives prominence to the æsthetic view, he also explains that other pleasurable feelings may be enjoyed in the spiritualized society. He is not so far from the Scottish School. Moreover, he is at pains to show how the psychological mechanism may be enlisted in the service of these ideas, namely, by so utilizing all educational resources in their favour as to enable them to expel the antagonistic states of mind—feelings or motives—and permanently to maintain the upper hand.

[1] Herbart's five ideas are connected with Whewell's 'five axioms.'

We come, finally, to *Schleiermacher*, who still more pointedly combines the rational theory of ethics, as a speculative science, with the natural life as a whole and with the emotions. We see this in his general definition of ethics as the science whose task it is to exhibit the action of reason upon man's nature; in his derivation of all the natural endowments, all the psychical faculties of man, from that action; in the emphasis he lays upon natural individuality; and in his doctrine of goods, which makes human nature the symbol or organ of reason. In particular, we see it in the position which he concedes to feeling and the emotions; witness the fact that, in the main, he traces religion itself to feeling. Nevertheless, he too lays it down that the emotions must not of themselves stimulate to action; the feelings must be controlled by reason, and should act merely as indicators (*Anzeiger*) for our knowledge of particular moral tasks. After all, however, he is as little disposed to repress the emotions as to repress human nature itself. Emotion itself must become the organ of the ethical. Schleiermacher expressly opposes the Stoic *apathia*, and holds with Schiller that virtue shows itself in the facility with which the emotions are put into requisition. Thus he refuses to identify chastity with *apathia*, and maintains that, while sensual gratification should never be a motive *per se*, it is not to be discarded; it comes to its natural right when permeated by the spiritual. Patience, too, is something more than *apathia* towards unpleasant experiences. Such experiences cannot be allowed to stimulate the senses to independent action, but ought rather to prompt men to manifest their moral refinement. In a word, Schleiermacher desiderates the moral beauty which appears when the emotions are brought into harmony with the moral character, and work congenially in the service of the moral reason. Again, while he will not allow the attainment of pleasure and the avoidance of pain to rank as an independent moral end, yet—more particularly in his *Christian Ethics*—he regards serenity of soul, the bliss that attaches to the Christian consciousness of God, as yielding a motive for conduct. This quite accords, moreover, with the standpoint of his *Philosophical Ethics*, in which he even describes reason as a creative energy which is combined with pleasure with a view to action. In his *Monologues* he had already spoken with enthusiasm of the ethical genius of the individual who spends himself and all he has in the service of the community.

Summary.—The antithesis between rational and emotional ethics is of outstanding importance for the *development* of ethical theories. Those who find the basis of morality in reason alone insist most strenuously upon the immutability of ethical principles. Such is the case with Greek intellectualist ethics throughout, as well as with the modern rationalistic schools of Spinoza, Clarke, and Kant. The same holds good of those who find the ethical foundation in the Deity, and who place the emotions of hope and fear in the service of His established laws. But the case is completely altered when morality is founded upon the emotions. Here, in place of immutable norms fixed in reason, we find the psychological investigation of the origin of morality. To speak of an unchangeable moral law now becomes a mere irrelevancy, since moral law has no unconditional validity, but merely shows how the desire for happiness may best be satisfied, and how private or public good may be most effectively furthered. The emotions depend upon the external ever-changing world, finding their satisfaction in it alone, or, at least, not apart from it. An ethical doctrine which is founded upon emotion has, therefore, never more than a relative validity, and such injunctions as it gives apply only to particular circumstances. The naturalistic theory must, accordingly, have regard to the various forms of the moral consciousness, and must investigate that consciousness psychologically and historically both in its origin and in its variations, yet without ever reaching an absolutely valid moral law. For happiness can never get beyond the relative, as is shown by English and French Eudæmonism, and, most clearly of all, by Bentham's Utilitarianism.

It is a different matter when rational ethics gives recognition also to the emotional side of human nature. Here, on the one hand, the unconditional character of morality is upheld; while, on the other, the way in which the moral law is actually and concretely realized is not always the same. This suggests the idea of a historical progress,

and thus arises the problem of how to harmonize, *by a process of moral development*, the whole natural endowment of impulse and feeling with reason. Accordingly, we find Schleiermacher maintaining that ethics must lay down the base-lines of the philosophy of history; but it was pre-eminently Hegel who gave currency to the idea of development, viewing the whole process of history as the evolution of reason. Though he gave, it is true, an intellectual interpretation of Nature, regarding it merely as a stadium of the Idea (a view which, of course, does not concern us here), he nevertheless distinguishes between Nature and Spirit *in concreto*, and sees the consummation of ethics neither in a natural Eudæmonism nor in the Kantian Rationalism, but in *Sittlichkeit*, 'established observance,' in which the antithesis between Nature and Spirit is reconciled, *i.e.* raised to a higher unity. If, according to Hegel, reason realizes itself in the State, yet he does not regard civic life as incompatible with the community of feeling, *i.e.* marriage; or with the community of interests and its complex of needs; or with the community of citizenship, or, in fact, with any particular relationship of the individual life that is partly conditioned by emotion; on the contrary, he finds a place for all of these, just as he finds the characteristic feature of the Christian period in the fact that it gives due recognition to the interests of the individual and his desire for happiness. The course of history shows us that the tendency to combine the rational and the emotional aspects of morality is constantly gaining ground.

II. *ANALYSIS AND EXPOSITION.*—It remains to consider the nature of the emotions and their varieties, as a step towards inquiring how we are to estimate them ethically and to utilize them in practice.

1. Nature and structure of the emotions.—What are the emotions? It is safe to say, for one thing, that they belong not to the theoretical but to the practical, side of our psychical life; not to thought or imagination,[1] but to feeling and volition. In what respects, then, do they differ from feelings and volitions, seeing that they are not identical with either, but rather form a connecting link between them? The emotions often arise as immediate reactions upon particular feelings. But such immediate and instantaneous reactions may, by dint of repetition, superinduce a permanent condition. Anger, for instance, is a transitory state, but there is also an irascible disposition, *i.e.* a propensity to react in an angry way. Accordingly, the manner in which the subject reacts upon his feelings will be determined by his peculiar nature, his temperament, or his peculiar blend of temperaments, by character, sex, etc.—in a word, by his individuality, which, again, is modified by his family, national, or racial type. Moreover, this individual disposition is by no means limited to one's natural constitution; it may be acquired—a fact that underlies the plasticity of the emotions. But, while the emotions are thus reactions upon feeling, we must not forget that there are also moods of feeling, involving a permanent tendency towards certain forms of action; and these moods must likewise be reckoned amongst the emotions.

The emotions have often been called passions, and traced back to 'suffering' (*passio*); here, again, we must bear in mind that such suffering is not always momentary, and that the influence of an object may last beyond the period of direct stimulus. Here the influence is really that of the *representation* of the object; and in this case the imagination works towards the expansion and intensification of the emotion; and, indeed, may become so habituated to represent certain objects as to produce fixed ideas, which, again, by becoming fused together with the feelings that evoke them and the volitions that issue from them, may act as a permanent stimulus to the emotions.

The emotions have also been frequently identified with the impulses; but impulse is really a mode of the will, and may either spring from the nature common to man or be the resultant of a long series of volitions, which, gathering strength by hereditary transmission, at length become established in the later generation. Thus, for instance, the desire of fame and of power, in their nobler forms at least, seems to presuppose a social life of some permanence, and a certain degree of culture. Impulse as such, however, is not emotion; rather it becomes emotion only when the object to which it is directed affects the feeling, and prompts the will to act. This is what takes place in particular instances; but, as has been said, the object may be so persistently present to the mind as to give a sustained tone to the feelings, which, again, gives a definite bias to the will. The emotions, then, are distinguished from spontaneous impulses by the fact that they are traceable to some impression, or feeling, and emerge as a tendency to react upon this stimulus. We may say, therefore, that the emotions are combinations of feeling with movements or acts of will, and that they may have either a transitory or a lasting character, according as they are immediate reactions upon a definite object, or upon habitual states of the soul which rest upon a more or less persistent combination of feeling and volition; these, in turn, depending upon the object affecting the soul. Moreover, it goes without saying that these habitual states may find vent in momentary outbursts.

Then we must also distinguish between the momentary strength of an emotion and its durableness. An emotion may be strong for the moment, but have no persistence, as, *e.g.*, when it is evoked by a merely passing stimulus from the object; and, conversely, an emotion may never manifest anything like intensity, and may yet work all the more pertinaciously; compare, for instance, an angry outbreak with cool, calculated hate.

2. Varieties of emotion.—The emotions exhibit a multitude of variations, quite apart from the distinction between transience and permanence. Thus, the feeling and its accompanying tendency to react may, as called forth by the object, be one either of pleasure or of pain. If pleasurable, the motive will be one of sympathy with the object; if painful, one of antipathy. Then the emotions may be classified with reference to time—according as they are related to the past, the present, or the future. In connexion with the past, pain produces repentance, while pleasure brings satisfaction, with a wish for renewal of the conditions; and either of these, again, may be transitory or enduring. Pleasure in regard to the present calls forth desire; while pain arouses aversion, or, in a more intense form, anger. Pleasure in regard to the future becomes hope, with the inclination to make the thing hoped for a reality; pain in relation to the future becomes fear, with the inclination to obviate or ward off the thing feared. Obviously these emotions may also vary in intensity, *i.e.* they are susceptible of quantitative differentiation. But these quantitative differences must not be confounded with differences which depend upon whether a man is by the bent of his mind stronger in feeling than in will-power, or *vice versa*. Should feeling predominate, then, *e.g.*, repentance will be

[1] Imagination, of course, may influence our emotional life *indirectly*.

not so much a motive prompting a change of will for the better as a sentimental regret, which, as it inhibits the will, has an enfeebling effect; similarly, contentment will degenerate into luxurious remembrance, instead of inciting the will to hold fast in the present by what the past has given. If volition, however, be the stronger, the reverse will be the case. Moreover, pleasure and pain may, so far as their influence on the will is concerned, become quite neutral, and less dependent upon time-differences; desire will then become love, and aversion hate. Again, all these modifications of emotion may be further differentiated by reference to the kind of object that excites them. Thus, feeling in passing over to volition will always be initially a feeling of self, a feeling of excitation; but this feeling of self may be of very different kinds. In the first place, one may be affected either in body or in soul. But the bodily frame itself has different aspects: there is the need, for instance, of self-preservation, or of preserving one's peculiar type. Should it be affected by a corresponding body, a fresh group of emotions displays itself, associated with food or sex. When reflexion has been sufficiently developed to raise a man above mere momentary sensations, he will desire permanently satisfying objects; the sexual impulse will become love, and hunger will be transformed into the desire for possessions sufficient to satisfy permanently his bodily needs. The latter emotion may likewise vary as one wishes to use, to preserve, or to augment one's property. Prodigality, niggardliness, and avarice have their source here; but also liberality, thrift, and diligence. It is personal differences alone which prompt one man to liberality or prodigality, another to thrift or niggardliness, and a third to avarice or diligence.

Again, the affective state of the mind has to do with its relations to other minds. The fundamental fact is that the mind is influenced by others in such a way as to experience pleasure or pain, and thus arises sympathy or antipathy. Sympathy and antipathy also involve the feeling of self, springing respectively from the sense of being attracted or repelled by others, according as the impressions which are received work upon the will in a pleasurable or a painful manner. Here, also, of course, individuality counts for much. Further, we must take into consideration whether sympathy or antipathy in regard to another is aroused by his personality as a whole or only by certain aspects thereof—some being attractive, others repellent; in the latter case we have an unstable emotion, one vacillating between sympathy and antipathy. Once more, from the sympathetic emotion, so far, at least, as it rests upon the consciousness of others' equality with ourselves, springs the desire to recompense. Should another afford us pleasure, we incline to return the favour: this is gratitude. But should he pain us by doing us a disadvantage, the result is the feeling of revenge. A further principle of division might be found in the question whether our sympathy and antipathy relate to individuals or to communities.

Finally, a man's sympathy or antipathy may either be such that his thoughts dwell most upon his own pleasure or pain; or such that the feeling for others predominates in his mind. In the former instance, he will be sympathetically moved towards another only in so far as the experience is absolutely free of pain, and, in fact, when the sympathy itself affords pleasure. In the second case, he is so much at one with the other as to enter into his feelings. The former kind of sympathy goes no further than a man's own advantage, changing even to antipathy when that disappears. He really seeks his own advancement in his recognition of the other; his authority over the other will enhance his sense of his own power. The desire for glory or power rests upon a sympathy of this sort, which vanishes whenever the other ceases duly to respond. Such sympathy may in an extreme case manifest itself as compassion, for this is, of course, directed upon suffering, which, however, should properly arouse antipathy. Compassion is, in fact, a sympathetic antipathy. But the sympathy will at once become something else if the other's feeling causes me discomfort. Indeed, if I am pained in any way while another is pleased, there may emerge antipathy towards him in the form of ill-will and envy; and, if I am in any degree inferior to him, my antipathy may show itself in a desire to disparage; while, again, if I am conscious of my merits in comparison with him, the result will be pride.

It is otherwise if I can enter into the feelings of another. I then recognize his superior merits (should these exist), and in the frank admission of them I have a feeling of admiration—something higher, that is to say, than a recognition whose aim is merely to have oneself recognized, to use another as a means to one's own glory. Similarly, I can now regard another's defects or misfortunes with pity, which disposes me to help in amending his defects or alleviating his misfortunes. These two kinds of sympathy may also manifest themselves when two individuals fix upon a single object, which one alone can have. If the feeling of self prevails, jealousy will arise; if sympathy predominates, the one individual will be ready to renounce for the other's sake. Again, however, one may have a very weak or a very strong feeling of self-reliance. If the former, there will emerge a tendency to belittle one's own merits in comparison with another's—the sympathetic emotion of self-abasement, which often appears as sensitiveness. Very different is the emotion which arises when sympathy is associated with self-confidence. In this association the self-confidence may be by no means insignificant in itself, as, *e.g.*, in benevolence, which in no way implies uncertainty as to one's own merits, or any inclination to self-disparagement. Similarly, a self-esteem in reference to others may not lead to conceit and ambition, when a man desires to convince others of his own merits without seeking to underrate theirs.

There may thus be an extraordinary variety amongst the emotions. For the sake of completeness, we may also note that one emotion may restrain another, either for a time or permanently. Desire of power or of fame, for example, may keep the appetites in abeyance. Similarly, certain emotions may coalesce and thereby strengthen each other; thus, revenge may join hands with envy, domineering with pride, or greed with ill-will.

3. **Moral value of the emotions.**—What ethical value shall we set upon the emotions? Are they simply evil, or partly good and partly evil, or, again, are they in themselves morally colourless, but, like other faculties of the mind, capable of being made subservient to the moral life? These questions find various answers. Naturalistic ethics must necessarily regard the emotions as morally indifferent: they exist *before* morality. On this view, it is the psychological mechanism which gradually secures an adjustment among the conflicting emotions. We learn by experience, it is said, even in our own interests, to prefer the other-regarding impulses to the self-regarding, the permanent to the transient, the spiritual to the corporeal. By formulating rules in virtue of our faculty of abstraction, it is said, we set up a standard by which the emotions are consciously valued, and a choice amongst them consciously made; all this, how-

ever, has meanwhile been done, unconsciously, by our psychological mechanism. The result is called the *moral* standard; though, in point of fact, what we so designate is only a fingerpost pointing to the greatest possible advantage. But this theory, according to which the choice amongst our emotions is really made for us in experience—the understanding merely deducing the laws from the facts—is founded upon error. For, if the psychological mechanism establishes a certain hierarchy among the emotions by natural selection, we have not really transcended egoism at all. For, even if the egoistic emotion is overpowered by the altruistic, it is simply because, as a matter of experience, the former fares all the better thereby. In reality, therefore, it is not so overpowered; on the contrary, the psychological mechanism is actually guided by it. Along this line, therefore, no genuine adjustment can ever be arrived at. The truth is, moral life begins only when the understanding forms universal laws, when the difference between the ideal, the 'ought,' the law, on the one hand, and, on the other, the actual condition of things is first realized. Then there appears something *new*, viz. the craving of our nature for unity, which the adjustment made by our psychological mechanism cannot satisfy. Such adjustment, in fact, will always be precarious, as the egoistic emotions will ever and anon break out in spite of all our altruism. The desire for unity, however, spontaneously presses towards harmony and activity; while, on the contrary, the emotions are unstable, and, being stimulated by external objects, have no true spontaneity, and always end in mere enjoyment, mere passivity.

Hence we need not wonder that the naturalistic theory has been challenged again and again by a rigid and one-sided rationalism, which will countenance no rule in the moral realm except that of reason alone, and spurns the emotions as something irrational. But this standpoint is shown by history to be untenable. The Stoics were compelled to abandon the rigorism of their *apathia*, and to concede that in some degree even the wise man feels pain—though he does not allow himself to be mastered by it—and that he too may have *εὐπάθεια*, such as good-will and joy. Further, the Stoics doubted whether the life of the wise man were meanwhile possible, and spoke of an approximation merely, in which a man should be immune from diseases of the spirit, but not free from emotion. Spinoza also, while discarding the emotions, was unable to regard them as other than a necessary product of the *natura naturata*; and Kant came at length to the conclusion that the propensities are not evil in themselves, just as in the sphere of the beautiful and the sublime he recognizes a certain mutual relationship between the sensuous and the spiritual.

If the moral reason, then, cannot be merely the inductive reading of our psychological mechanism on its emotional side, and if it does not necessarily involve a rigid exclusion of the emotions, or, in other words, if we can neither identify it with the formulated results of our psychological mechanism nor concede a dualism between it and emotion, the only course open to us is to grant an independent, co-ordinate position to both reason and emotion—with the proviso, however, that reason be always credited with the power of harmonizing and unifying the emotions for its own ends. As we have seen, this view is held by a large number of modern thinkers. They regard the emotions as the data and material which reason has to elaborate. If the emotion arises from a movement of the will combined with feeling and prompted by an object, it is the function of reason to examine and regulate the process.

The question as to the moral character of the emotions is, therefore, to be answered generally by asserting that in themselves they are neither good nor evil, but become so only as they respectively submit to or repudiate the supervision and guidance of reason. This holds good of all kinds of emotion. Reason must assign the limit of their momentary intensity, and likewise regulate their duration and persistence, for it tolerates the continuance of such kinds only as coincide with its own fundamental aims. Emotions of pleasure are no more proscribed as such than those of pain. What is alone of moment is, on the one hand, to determine their measure, and, on the other, to take account of their object. Anger, for example, as excited volition, is not to be summarily condemned; only it must be made subservient to reason, and be directed against that which is truly reprehensible. Again, neither the impulse of self-preservation nor that of sympathy is *per se* blameworthy; they require only to have their respective scope and their mutual relationship defined by reason. Under such conditions the emotions will not become demoralized. Love of power rests upon an exaggerated, but in itself perfectly innocent, desire for influence; envy, upon the complete subjection of the altruistic impulse to the in itself quite legitimate impulse of self-preservation—all sympathy being crushed by the selfish wish to possess what is another's. Similarly, the organic emotions have their rightful place, requiring only that adjustment which reason must make in view of organic needs; they must be brought into proper relations with one another and with the spiritual emotions. The emotion attaching to property, as regards both its preservation and its use, must be reduced—in conformity with the function which reason assigns to property in the moral sphere—to its due proportions in the desire to earn.

In short, the emotions as such are not evil when subject to the guidance of reason, but, just as human nature must be brought into harmony with reason, so must they be made to minister to the ends of reason. If left to themselves, they tend to degenerate, since they cannot then be kept within due measure, or be fully harmonized with one another.

4. Rational control of the emotions.—Finally, if it be asked how reason acquires dominion over the emotions, we look first of all to its power of framing ideals. Its task, alike as regards the guidance of the several emotions—with due allowance for their individual modifications—and as regards their mutual relations, must be clearly defined in the light of actual, concrete ethical ideals. It is obvious that a proper comprehension of the meaning and value of emotion for moral life is the necessary condition of right conduct. Such comprehension, however, does not guarantee its being realized in practice. It is often asserted that emotion is modified only by emotion, that reason without emotion remains a dead letter; and this is certainly the case. The dictates of reason, therefore, must be combined with love, which we may call the positive norm of emotion; then will reason become effective. The ideal must become the object of love; then will this supreme affection—enthusiasm for the ideal—work its effect upon the other forms. Such enthusiasm cannot, of course, be manufactured. It is something free—the unforced persistent glow of love for perfection, the practical interest in the ideal of reason.

To generate this archetypal affection is the business of education, which, however, would be all in

vain unless human nature provided something for it to work upon. But reason and its ideal are not alien to man. It is man's *own* reason which exhorts him to follow its behests. So long as he refuses to identify himself with this consummate affection—with his own ideal—he feels an inner discord. Education may prompt towards this enthusiasm, but it cannot furnish, still less force it. If we appeal to such motives as fear of punishment or hope of reward, we may succeed in curbing certain emotions, and even in partially establishing a habit of restraint in others, and thus prepare the way for real moral conduct by removing obstacles to the attainment of the good will; but enthusiasm for the ideal is not to be acquired in this way; for, if we confine ourselves to such motives, we have not passed beyond selfishness after all. The ideal must be loved for its own sake. This supreme affection is engendered only through the individual's own act, for which education provides but the stimulus. Like devotion to the beautiful, or ardent love to the Divine, enthusiasm for the good is absolutely free. Ought we, then, to call it an emotion at all, since emotion always springs from some impression on the mind, which feeling transmutes into a motive? We must remember, however, that such an impression has a place even in the affection we speak of. For one thing, the educator may hold up the example of those who, possessed by this enthusiasm, are capable of moving our hearts. For another, while we recognize the ideal as our own, yet it always towers above our actual attainment, as if to impress us with love for our better part. Finally, the ideal comes to us in the impressions wrought by God within the soul. The mental impression in question, therefore, results, not from any external object, but from our being apprehended by our reason's own ideal or by the Divine spirit within us. The same thing lies at the root of what is called moral passion, though this is likewise a free motive to action.

Without moral passion the moral ideal cannot be realized. But it is far from adequate in itself. When the emotions, excited by the various experiences of life, are asserting themselves in their full strength, to attempt to oppose them by moral passion alone is futile. But enthusiasm for the moral ideal has undoubtedly a restraining effect upon the urgency of emotion; and, this being so, such restraint makes it possible for reflexion to intervene before the response to stimulus takes place. Thus reason, which both determines the end to be attained and apprehends the actual conditions, can assign the measure and the course of the emotion, and, taking advantage of the congenial enthusiasm for the ideal, can carry its purposes into effect. But even something more than this is required in the task of controlling the emotions, namely, a certain psycho-physical habituation. With these resources, then, it is possible for reason to subject impulse to its own all-embracing ideal, to attain, by habit, ever nearer to a complete harmony of the emotions amongst themselves and to the right proportion of each, and so to utilize them in practical life as to give them the place which, in the light of the moral ideal, is rightly theirs.

We note, in closing, the recent spread of a romanticism which would base morality upon the instincts, and declares war upon all intellectual interpretations; which yields the ascendancy to spontaneous feeling, and would exclude all *ratio* in favour of the Unconscious that is revealed in emotion—a new form of ethical and æsthetic naturalism. Such a theory, however, cannot possibly discover the proper measure of the emotions, as it really keeps the moral reason out of its rights.

A. DORNER.

EMPEDOCLES.—Empedocles was a Sicilian philosopher who was famous also as a statesman, poet, orator, physician, and wonder-worker.

1. Life and writings.—Empedocles belonged to a wealthy and distinguished family of Agrigentum (the Greek *Akragas*). His grandfather, also called Empedocles, won a victory with a racehorse at Olympia in 496 B.C. The philosopher himself took an active part in the troublous politics of his native city, after the expulsion of its tyrants (Diog. Laert. viii. 63–67; cf. Plut. *adv. Col.* 32. 4, p. 1126 B). He was a resolute democrat, and is said to have refused an offer of royal power; yet we read that in later years his enemies caused this champion of the people to be banished. There is much that is marvellous, much that is vague and contradictory, in the accounts of his life which have come down to us, principally in Diog. Laert. viii. ch. 2. The Sicilian historian Timæus, who lived in the 3rd cent. B.C., and preserved many such notices, did not know for certain the place or the manner of his death. Even his date is not exactly determined. Aristotle (*Met.* i. 3. 984*a*, 11) speaks of him as a younger contemporary of Anaxagoras (*q.v.*); Gorgias is said to have been his pupil (Diog. Laert. viii. 58; Quint. iii. 1). Apollodorus fixed his birth in 484; and his death, at the age of 60, in 424. But Zeller (*Pre-Socratic Phil.* ii. 117 ff.) has adduced grounds for placing his birth from eight to ten years earlier, *i.e.* in 492 or 494.

The chief works of Empedocles were two poems with the titles *περὶ Φύσεως τῶν ὄντων* and *Καθαρμοί*. The former, dealing with physical science, was in two books, if, with Diels, we prefer the reading *βίβλια β'* in Suidas *s.v.*, although Tzetzes (*Chil.* vii. 522) erroneously makes them three. Of these poems we have fragments extending to 440 lines. Aristotle, who in a lost dialogue gave Empedocles full credit for Homeric inspiration and forcible diction (Diog. Laert. viii. 57), nevertheless took him for his illustration when maintaining, in the *Poetics* (i. 1447*b*, 17), that metrical form does not convert prose into poetry. Empedocles was the last to use verse as the vehicle of philosophic exposition; and Anaxagoras reverted to prose, with which the Milesians had started.

2. The four 'roots.'—In his physical theories Empedocles was an eclectic. Like Leucippus, he had studied the Eleatic philosophers; but he rejected their chief doctrine, that of the One, and reverted to pluralism. He assumed four primary matters—Fire, Air, Earth, and Water; or, mythologically expressed, Zeus, Hera, Aidoneus, and Nestis. These primary matters, which are as indestructible and unchangeable as the Sphere of Parmenides, he called the 'roots' (*ῥιζώματα*) of all that exists. The term 'element' (*στοιχεῖον*) did not come into use until later, but it is clear that Empedocles had grasped the conception of an element, in the sense of modern chemistry, as opposed to a compound body; for by the mingling and separation of these four roots the world of particular things is produced. Thus he made bone, flesh, and blood—which last is the seat of intelligence

—consist severally of air, earth, fire, and water united in determinate proportions.

Besides the four roots there were two other constituents of the universe, called Love or Friendship (φιλία, φιλότης, Ἀφροδίτη) and Strife (νεῖκος, κότος). These were moving causes answering to attraction and repulsion respectively; but also, it would seem, corporeal substances which rush into and out of the 'Sphere' (Diels, 21 B, 35 [i.[2] 185], Ar. *Met.* xii. 10, 1075*b*, 3). Alternately predominating, they govern the rhythmical evolution of the world, which passes from a state of complete aggregation of the elements to the opposite state of their utter disintegration, and back again in an unending cycle. When Love has succeeded in expelling Strife, the four roots are entirely aggregated in a chaotic medley, termed, from its shape, the Sphere; but at this epoch all particular existence is extinct. Again, particular existence is just as impossible when Love is expelled by Strife, and the four roots so completely severed that there is no mingling. But in the intervals between these epochs Love and Strife work together, and a world of particular things results from their joint action.

3. Cosmogony.—The formation of our world, it would seem from Aristotle (*de Cœlo*, ii. 301*a*, 15), began when Strife forced its way into the Sphere, and brought about its disruption by creating a vortex motion which successively separated off (1) air, (2) fire, and (3) earth saturated with moisture. Thus first of all 'bright ether' (air) flew off to the extremity, and became a crystal vault or encircling shell, to which the fixed stars are attached. Within this again was formed a sphere consisting of two hemispheres, the one filled with fire, the other, which is dark, with a mixture of fire and air. The revolution of these two hemispheres round the earth produces at each point on its surface the succession of day and night, and also keeps the earth in its place in the centre, in the same way as a cup with water in it may be swung round and round at the end of a string without the water being spilled. The analogy is at fault, for it is centrifugal force which keeps the water in the revolving cup, whereas the earth is presumably at rest.

According to Empedocles, there are two suns, or, rather, he held the apparent sun to be a sort of burning-glass, equal in size to the earth, wherein are collected those fiery rays which come from the true source of light, the fiery hemisphere. These rays first strike the earth, and are thence reflected on the hemisphere opposite, if the text of Aetius (ii. 20. 13; Diels, 21 A, 56 [i.[2] 162]) be sound. Empedocles thus wrongly extended to the sun the recent discovery that the moon shines by borrowed light. The moon itself he held to be mainly composed of 'air' condensed or congealed, obviously assuming that its phases correspond with actual changes in its shape. One great achievement of modern astronomy he certainly anticipated; for he held that light travels, and takes time to travel, from one point to another (Ar. *de An.* ii. 7. 418*b*, 20; *de Sensu*, 6. 446*a*, 26). He thought that the axis of the universe, originally perpendicular so that the north pole was in the zenith, had been displaced by the pressure of the air.

4. Organic life.—Empedocles also had his views on the origin of life. Plants and animals alike spring out of the earth, and grow because the terrestrial heat tends upwards. Existing species, however, in no way resemble the crude and shapeless structures first evolved, such as men with oxen's faces, which were incapable of maintaining or reproducing themselves. This wild fancy differs from the modern doctrine of evolution in overlooking modification by inheritance, and in assuming separate organs to have been evolved before the wholes they combined to form. Its single point of agreement is the truism that no species has survived which was not adapted in some degree to its environment. Empedocles' scientific imagination may also be seen in his mechanical theory of respiration, on the analogy of the water-clock (Diels, 21 B, 100 [i.[2] 200]), and of the spinal vertebræ (Ar. *de Part. An.* i. 1. 640*a*, 19); but more particularly in a theory of sense-perception based upon the entrance, through symmetrical passages or pores (πόροι), of films (ἀπόρροαι) emanating from external objects. This account of the mechanism of sensation best suits taste and smell; it may have been, as Diels thinks, derived from Leucippus; the application to vision (though adopted in great part by Plato) is beset with difficulties. The unique fact of perception proper Empedocles sought to explain by means of another principle, that like moves towards, and is recognized by, like. The sentient subject knows earth, water, air, and fire because these elemental substances are found in his own composition. This principle must be carefully distinguished from the attraction of like to unlike personified in φιλία, or Love. Thought, again, is a corporeal process (Ar. *de An.* iii. 3. 427*a*, 26); there is no such gulf as Parmenides presumed between sense and reason. The value of the senses as sources of knowledge is implied throughout the poems, and the passage (Diels, 21 B, 4 [i.[2] 174]) which, as interpreted by Karsten and Zeller, would concede superior claims to reason has been set right by Stein's punctuation.

5. Religion and Ethics.—In the cosmos as here set forth there would seem to be no place for religion; yet Empedocles speaks of gods. (1) There are the 'long-lived gods, greatest in honour,' who are products of the mingling of his four elements, and, as such, are set down side by side with 'trees and men and women, beasts and birds, and fishes bred in the waters' (Diels, 21 B, 21 [i.[2] 180]). These, be it remarked, are not deathless, but merely long-lived; it is not impossible that they are what he elsewhere calls the daemons. (2) As already noted, he also deifies the four elements and the two efficient causes. (3) Further, we find the Sphere spoken of as a 'blessed god,' but this again may be merely a poetic description. It need not imply monotheism, any more than the parallel expressions of the pantheist Xenophanes.

In his other poem, the *Purifications* (Καθαρμοί), Empedocles poses as a moral teacher and religious reformer. He is the favourite of heaven, and the inspired votary of Apollo; he lays claim to a Divine origin and superhuman powers. He recounts his successive transmigrations. The tone of the whole poem is mystic, as opposed to the scientific spirit of the περὶ Φύσεως, and bears many resemblances to Orphic and Pythagorean doctrines. There is one passage where a god is described in terms perhaps borrowed from Xenophanes: 'He is not provided with a human head upon his limbs; two branches do not spring from his shoulders; he has no feet, no swift knees, no hairy members; he is only a sacred and unutterable mind shooting with swift thoughts through all the world' (Diels, 21 B, 134 [i.[2] 212]). This god has been by some identified with the Sphere; but how could the Sphere be said to shoot with swift thoughts through all the world? It would seem, therefore, more reasonable to follow Zeller and Diels, who think that Apollo is meant; for from an early date, as J. Adam remarks (*Religious Teachers of Greece*, Edinburgh, 1908, p. 249), 'Greek religious thought naturally tended to spiritualise Apollo.' Empedocles also tells us of demons, who, 'having polluted their hands with blood,' are condemned to wander for thrice ten thousand seasons in all manner of mortal forms through the universe until

their sin is expiated; 'and one of these,' he says, 'I now am, an exile and a wanderer from the gods' (Diels, 21 B, 115 [i.[2] 207]). Here is the doctrine of retribution for guilt, and here, too, that of metempsychosis.

The moral teaching of the Καθαρμοί consists mainly of tabus based upon the belief in transmigration, and its corollary, the kinship of all animate and inanimate things. Empedocles describes a period when men lived at peace with each other and all the world, and bids his followers abstain from all animal food, and from beans and laurel-leaves.

It is an interesting, though perhaps insoluble, problem to determine how the *Purifications* is related to the poem upon *Nature*. Are we to suppose, with Diels, that in the one Empedocles taught science to a circle of students, and afterwards in the other addressed a popular audience with religious fervour? Or is Bidez right in assuming that the Καθαρμοί was the work of his youth, and the περὶ Φύσεως the fruit of riper study in mature life? That the same thinker should at the same time have endorsed the apparently contradictory doctrines of both poems is advocated by Burnet (*Early Greek Philosophy*[2], p. 269 ff.). Such a view is possible only to those who recognize in Empedocles not so much a philosophic mind as an enthusiastic poet and seer, careless of logical consistency.

R. D. HICKS.

EMPIRICISM.—Empiricism denotes primarily the scientific investigation of the world which we experience through our senses. In the world so experienced we are continually apprehending uniformities of different kinds; scientific empiricism brings together groups of sense-phenomena apprehended as exhibiting the same uniformities, and endeavours, by further observation and experiment, to apprehend more clearly the special nature of the uniformities within each group, and the precise conditions on which their presence depends.

Thus, to study the nature of two-dimensional space, we bring together figures in two dimensions, and by a further process of minute sub-grouping obtain figures in which we apprehend more distinctly the nature of the triangle, the circle, etc., and from the mutual relations of their parts in definite figures apprehend as necessary certain further conclusions with regard to the nature of those figures. In all cases it is through the construction that we come to apprehend the nature of the figure; we apprehend, *e.g.*, the universal truth 'Things which are equal to the same thing are equal to one another' only by considering a particular instance. But in some cases the construction is more elaborate; *e.g.*, in Euclid i. 47 the figure is extremely complex, and presupposes the construction of triangles, etc. Empiricism, therefore, aims at re-grouping the phenomena studied, according to their uniformities, in continuous series, beginning with the relatively simple and passing to the progressively complex. Progress in Mathematics and the other empirical sciences depends on finding the right 'construction,' in discovering a method which will enable us to apprehend more definitely the way in which the elementary parts are connected in any given case. What is aimed at is precise formulation, such as, *e.g.*, the exact reciprocal relation between the sides and angles of the equilateral triangle; but in the present state of all the sciences this exact formulation is rare, and it is only by the examination of fresh groups of problems that we are enabled gradually to reform our present inexact formulations.

By proceeding, then, in these two ways: (1) by continually attacking fresh problems, and (2) by perpetually revising the stock of acquired formulations, Empiricism hopes to obtain an ever wider and deeper knowledge of the world which we come to experience through our senses; it admits that the uniformities hitherto studied have very rarely received adequate formulation, and that its 'laws' are only relatively true; but it hopes to advance, within this sphere of relative truth, to laws which ever more adequately express the nature of the reality which it studies.

In one direction this ideal of ever-improving, but ever-relative, knowledge is definitely limited. There is one main presupposition of Empiricism which, as such, it cannot question or even examine, but must simply accept. This presupposition is expressed, on the objective side, as the 'Law of the Uniformity of Nature'; this means that the apprehensible world, as such, has a definite nature of its own, and works according to laws which remain universally valid, though only partially apprehended by us, through unstable sense-organs and at particular moments of time; the stars continue to revolve in definite orbits through all the advances of science, from Aristotle to Copernicus, from Copernicus to the present day; the stream pours forth its waters into the sea, the sea still dashes upon its rocky strand, though every living eye is closed in slumber.

From the side of the subject, this presupposition is expressed by saying that the mind is a *tabula rasa*, a waxen tablet upon which the external world imprints its forms. Its *esse* is *percipere*; more than that we cannot say. There can be no scientific 'theory of knowledge'; for Empiricism maintains that our apprehensions appear to contain uniformities only because they are apprehensions of objective uniformities; that the so-called 'Necessities of Apprehension'—causation, substance, etc.—are so only because they are apprehensions of necessities in the Object; that the 'Laws of Thought' are laws for thought only because they are laws of the things which thought apprehends. In short, the uniformities and necessities belong wholly to the apprehended Object; on the side of the Subject we have simply apprehension—apprehension of just those objective uniformities and necessities.

The main principle of Empiricism being, then, that through sense-experience we come to apprehend the universal laws which express the nature of the apprehensible world, it follows that error, or false thinking, is impossible. We may fail to apprehend; we cannot misapprehend. Where we have not yet found the right construction, the right method for observing the nature of a certain uniformity, we fail so far to apprehend its full nature. But, when we say, *e.g.*, '2+2=5,' the possibility of self-correction shows that we did not really *think* so, that we were simply not attending, and so failed to apprehend. When we attend and have the features of the problem clearly before us, we cannot fail to apprehend the correct conclusion. In fact, error is always due to some sort of inattention, *i.e.* to

psychological causes, against which scientific Empiricism has its special safeguards.

A proposition is 'proved' when we have discovered the right construction, the method which enables us to apprehend clearly the connexion of the elements within the given problem; the statement of the conclusion so apprehended is said to be 'true.' In the present state of the sciences, many propositions are held to be 'provisionally true' if a few advanced scientists confirm each other's observations; but the aim of science is always to present its results in such a form that the observations can be verified by any intelligent student. This aim is most clearly attained in the text-books of Mathematics and Physics. A statement, then, is true when we find the right construction and observe its truth directly. It follows that the claims of the 'Law of Contradiction' or of the 'Principle of the Inconceivability of the Opposite' to present us with a 'formal criterion of truth' are inadmissible. These so-called 'criteria' are, in fact, virtual re-statements of the general principle of Empiricism, viz. that the apprehensible world has certain definite characteristics; but truth consists just in particular truths, in apprehension of just these particular definite characteristics. Consequently, in order to apply to particular cases, the 'criteria' have to become particularized, in which case there is no longer one criterion, but as many criteria as there are problems to which they are to be applied. Moreover, Empiricism insists that a particular statement is not true because its opposite is inconceivable, but that its opposite is inconceivable because the statement is true. There can thus be no formal criterion of truth, and progress in knowledge depends always on our possessing insight into the particular nature of particular scientific problems.

Owing to a number of historical causes, these main outlines of Empiricism have been seriously misunderstood by Empiricists themselves, as well as by their opponents. Hume's separation of the particular sense-experience from the universality and necessity apprehended through that experience makes these appear mere fictions of our imagination; a too mechanical adherence to the *tabula rasa* metaphor has misled many into supposing that they can apply physical laws to the explanation of apprehension itself; and J. S. Mill attempted to prove empirically the presupposition of Empiricism itself—the Uniformity of Nature. But these and similar vagaries in the writings of the Empirical School are to be regarded as aberrations from the simple tenets of scientific Empiricism.

See, further, such artt. as EPISTEMOLOGY, HUME, LOCKE, MILL, IDEALISM, PHILOSOPHY, and the Literature cited under them. R. C. LODGE.

EMPLOYERS.—The term 'employers' is a relative term; it connotes employees and a relation of contract between the two parties; corresponding terms in common use are 'masters' and 'men,' 'capitalists' and 'labourers,' though the latter are not now exact equivalents. The fundamental facts from which the relation springs are that one set provides work and pays for it, the other performs the work and receives payment. The classification is a result of an economic division of labour according to function in the operations of wealth-production or conduct of business; and it gives rise to a parallel distribution or division of the proceeds of production as profits and wages. To be more precise, the function of the employer is to find out the work to be done, to plan, to organize, and direct it; he takes the risk contingent upon its performance, and on this account is often called the *entrepreneur*, or undertaker; he becomes a kind of middleman or go-between in the equalization of demand and supply—the demand being that of the consumer for goods, and the supply that of the various kinds of labour necessary to satisfy that demand. The employer is thus an essential factor in the refined and intricate system of modern industry.

In earlier times, and under simpler conditions of life, when the market was quite local and small, the employer provided the capital for the undertaking; under modern conditions, with wide markets and large production, he very frequently conducts the enterprise with the aid of borrowed capital. The facilities afforded by a widely diffused system of banking and a highly organized money market, together with the method of combining many different capitals on the joint-stock principle of enterprise, have enabled large amounts of capital to be placed under the direction of men who have special ability for controlling it for purposes of business. Under such circumstances the employer becomes mainly the manager of capital or the agent of its owners; he is entrusted with its command because he possesses in a peculiar degree the special faculty of business management, together with technical knowledge of the industry of business in which the capital is embarked. The separation of the functions of capitalist and employer is the outcome of an economic evolution which has introduced greater complexity and subdivision into the methods of production and exchange. It has proved a highly efficient form of differentiation, firstly in securing the direction of affairs by specialists, and secondly by utilizing much capital which might otherwise only be hoarded and would therefore be idle, or which indeed might not have been saved at all, did not such openings for its employment arise.

The function of the employer has become so important in modern industry that he is often regarded as a fourth factor in production; land, labour, and capital being the three factors formerly recognized as the requisites of wealth-production. The huge scale on which manufactures, commerce, and transport are now organized has created a demand for great financial and technical skill, and as a consequence single individuals of exceptional talent now control a vast number of financial interests and determine the employment of multitudes of labourers. On their good management depend the success of the venture, the return to the savings invested in it, and the earnings of a host of employees. These 'captains of industry' receive very high remuneration, and many of them, from their superior ability, derive a surplus profit of a kind which has some of the chief economic characteristics of rent.

Many important problems arise out of the relations of employer and employed. In the Middle Ages the apprentice to a craft duly became a journeyman, and in course of time generally evolved into a master on a small scale; that is, he became an independent producer and an employer of other apprentices and journeymen. Under modern conditions only a small percentage of workmen can ever become employers, and, indeed, the employer class tends to be confined to specially trained men drawn from those ranks which enjoy unique opportunities for acquiring the wide and varied knowledge and experience which are requisite for successful organization. The employees constitute a large and distinctive class, whose common interests as wage-receivers lead them to combine in special organizations. Trade Unions have been devised in order to secure for the employees greater power by bargaining collectively for their share of the product; other functions are to provide mutual help in times of sickness or want of employment, and a machinery for regulating

the conditions which affect their safety, comfort, and health, and determine the hours of labour in their several industries. Trade Unions obtained legal recognition only in 1825; they have advanced gradually in power and influence, and are now a very potent instrument in determining the economic conditions of industry. Their evolution has been attended with many struggles and disastrous strikes, which have at times paralyzed the activities of industry and entailed much suffering and economic loss. They are, however, now a recognized and important institution in the negotiations between employers and employees.

The perfect co-operation of capital and labour in production is a matter of universal interest, since on it depends the supply of wealth. It is to the advantage of both capital and labour that each should be highly efficient; divergence of interests arises in the division of the proceeds, and it is in the determination of the shares that the conflicts of capital and labour arise. At the period of the Industrial Revolution, and for a long time after the introduction of machinery and power into industry, the exploitation of labour by capital worked very unjustly for the employee. Trade Unionism introduced a new principle in collective bargaining, and strengthened labour in its attempts to secure its fair proportion. Meanwhile many economic reforms have taken place, and a century of factory legislation, the spread of education, and the increase of skill have all contributed to advance the position of labour, and have enabled the employees in organized industries to compete on equal terms with the employer. At the bottom of the scale of workers there is still a class whose wages are abnormally low and whose industry is often described as 'sweated.' Their condition is due to the low efficiency of their labour, the extreme ignorance and weakness of the employees themselves, and their inability to organize and combine. Social investigation has been active in exposing the circumstances of these labourers, and legislative action has been adopted for amending their position. This is, however, a problem which cannot be considered here.

Various schemes have been devised to diminish the friction between employers and employed, and to provide means for fair distribution of the product. The system of co-operation (*q.v.*) originated in an attempt to free labour from the control of capital, and to combine the interests of employer and employed in the same set of individuals, the labourers themselves providing the capital for their own employment. The weak point, however, resides in the difficulty of management. Experience has shown that no large industry can be successfully conducted without the guidance and direction of highly qualified managers. The kind of ability which they possess is relatively scarce and always commands a high price. Thus, though co-operation does in some respects curtail the functions of the employer, it does not dispense with his services; a price has to be paid for efficient management, and to the manager must be entrusted authority and discretion. Thus the employer as organizer becomes inevitable in co-operation of any kind, but most of all in productive industry where the commodity has to compete in the open market with the produce of rival firms.

The profit-sharing system is another method for reconciling the conflicting interests of intelligent workers and employers. It makes for higher efficiency by a combination of good feeling with an assurance of fuller reward, yet it is dependent upon the excellence of management and the skill and ability of the employer. No better instance of the economic working of this more fraternal system of production can be adduced than the case of the South Metropolitan Gas Company, so admirably conducted for many years by Sir George Livesey.

Socialism, again, seeks to replace private enterprise by State-production and to substitute for competition the principle of public control of capital and the means of production; it also encounters the same economic necessity for skilled management. The employer may be theoretically the State, but actually business of every kind is dependent for its success upon the organizing skill of individuals, and the problem of efficient management will become very serious if the position, direction, and control of State employees becomes dependent upon political influence or a bureaucracy. The equivalent of the employer must be found, and in the absence of the test of competition other avenues to the appointment of the directing staff would endanger the economic success of the proceedings. All organization involves grading, and officers are as essential to an industrial army as to a military force. Work must be organized; some persons must have authority to direct and command; their class becomes virtually an employing class as regards discipline and management; and, if it does not determine absolutely the rate of wages, neither can it guarantee that degree of efficiency which must ultimately determine the wages in amount.

From this brief review of the chief modes of conducting industrial enterprises, it will be obvious that the employer plays a vital part in the system of large industry, and that its success depends in a great degree upon his specialized skill. Competition for the rank of employer in business concerns which are conducted on a huge scale is exceedingly acute. The successful employer is a case of the survival of the fittest in a contest where no quarter is given. A large proportion of those who start as employers in smaller businesses fail in the struggle and disappear, their places being taken by others more able, or, in some instances, less scrupulous. The magnitude of modern industrial concerns offers to men of extraordinary business faculty great opportunities; it has also led to a grading of employers. Much of the work of direction is relegated by the chief to subordinates and heads of departments. The highest controllers of industry resemble a great general or chief engineer. In some cases this faculty amounts to genius; success depends upon the combination of many attributes —judgment, foresight, grasp of circumstances, promptitude, decision, firmness, and resourcefulness. The reward of success is proportionally high, and consists of wages plus a high rent of ability. The share of profits which recoups capital and risk will go as gross interest to the shareholders who provide the capital; the share which passes to the chief organizer is determined by his talent. This analysis reduces the employer in large production to a wage and rent receiver; he is really a worker of exceptional capacity receiving a high monopoly rate of pay for his services, like an eminent physician or a distinguished barrister. Thus the conflict in sharing is not merely between labour and capital, but also between groups of labourers of different degrees of ability; capital, as such, getting a return which covers interest and risks, the remainder being distributed between ordinary labours and the special labour of organization and control—all under the play of competition.

It is evident that many of the problems of modern industry cluster round the functions of the employer and the relations they involve; their fuller analysis and discussion, however, would go much beyond the proper limits of the present article, which is mainly descriptive and suggestive of the field of inquiry. See, further, artt.

Economics, Employment, Socialism, Trade Unions.

Literature.—The subject is discussed under the divisions of Production and Distribution in all systematic treatises on Political Economy. The Works of J. S. Mill, Walker, Marshall, Sidgwick, and Nicholson should be consulted. W. Bagehot, *Economic Studies* 2 (1888), A. Toynbee, *Industrial Revolution* 6 (1890), W. S. Jevons, *The State in relation to Labour* 3 (1882), and S. Webb, *Industrial Democracy* (new ed. 1902), throw valuable light on the relations of capital and labour.

G. Armitage-Smith.

EMPLOYMENT.—1. **Connotation of the term.**—'Employment' may be held to mean the exercise of a function of any kind. The function in question may be exercised by a person on his own initiative and to his own advantage, or it may be exercised voluntarily or obligatorily by one person for the advantage of others or for mutual advantage. For the purposes of the present article 'employment' may be considered as the rendering of service through the exercise of a function in accordance with mutual obligations implied, imposed, or voluntarily assumed.

2. **Relation of employer and employed.**—In primitive slavery there is an implied obligation of protection and of opportunity to acquire maintenance on the part of the slave-owner, in correspondence with an obligation of service imposed upon the slave. In modern serfdom there is at least a similarly implied obligation on the part of the serf-owner, and in some cases an obligation of maintenance of the serf is imposed upon him by the State, when the opportunity in question has not been productive. (Thus for a long period in Russia the serf-owner was obliged by law to provide his serfs with grain when harvests were deficient.) In voluntary employment of free labourers by employers, there is an implied obligation of civil treatment and facility for the rendering of the service agreed upon; there are the obligations imposed upon both master and servant by customary and by statute law; and there are the explicit obligations in respect to hours of labour, remuneration, and notice of quittance, which form the subject of a written or verbal contract.

The incidents of the transition from voluntary or quasi-voluntary employment to personal bondage, and from that condition, through land bondage or otherwise, to hereditary serfdom and back to the system of voluntary employment, have no doubt varied in different countries and according to the different periods over which the process extended.

The economic history of Russia affords by far the most luminous details of the course of development, chiefly because the main incidents of it occurred during a comparatively recent period, and because they have been indicated in a large number of formal documents. From that history it may be gathered that the debt dependence of the free hired labourer arising from advances for the building of his dwelling, or for expenses during sickness or other incidents involving absence of earnings, led to a contract by which he obliged himself to work for his creditor, the wages otherwise due for his work being placed against the interest only, or against the principal of the debt and the interest together; or, alternatively, wages and loan alike being cancelled and the debtor entering formally into serfdom. The immobility of the propertyless debtor was secured by police measures, and the peasant was thus tied to the soil, while the piling upon him of obligations and taxes completed his ruin. This process was in effect fully worked out in the 18th cent., and the decay of the system followed. The introduction of mechanical industry on the large scale rendered the employment of skilled labourers necessary, and although, in the early stages of Russian industrial enterprise, forced labour was largely employed by *ascription* of peasants to factories, there was, from the beginning of the 18th cent., some employment of free hired labourers in industrial establishments. The presence, in the same factory or mill, of free and of obligatory labourers was anomalous, and from this and other causes the decay of serfdom began. The system of factory employment was subjected, in the end of the 18th and the beginning of the 19th cent., to the competition of the isolated industry of the cottage (*kustarni izba*), under which the cottage craftsman manufactured for sale to the merchant, who offered an immediate market for his product. The profitable character of the business, together with the absence of large accumulated capitals, prevented the merchants from becoming also employers. The exploitation of the independent and isolated craftsman was simpler and less exposed to risk than the exploitation of grouped workmen in a factory. The advent of steam power threw the economical advantage on the other side, and gradually the factory gained at the expense of the cottage. In the factories to which peasants were ascribed, wages were credited to them against their taxes, and against their obligations where these were defined; where the latter were not defined, nothing was usually paid. The practice of defining obligations having increased, and in some cases the practice of paying taxes directly to the State having been introduced, a class of free hired labourers seeking employment gradually emerged. The emancipation of the serfs in 1861 did not at once throw the whole of the peasant masses into this class, but it greatly reinforced it. When this event occurred, large numbers of the peasants who had been ascribed to factories immediately abandoned their employment and returned to their villages, creating a temporary scarcity of artisan labour and an advance of industrial wages.

The system of serfdom, with its attendant industrial ascription, was undoubtedly subversive of human dignity; but it involved employment for every one. Where there were few or no free labourers, and where every one was either master or servant, there could be no unemployment.

This at all events was the theory. Flights of peasants, however, occurred from estates (in Russia) when, owing to deficient harvests or mismanagement, the peasants were unable to subsist on their own earnings and their proprietors were unable or unwilling to support them; and these fleeing peasants were of course landless and unemployed.

The phenomenon of unemployment may be regarded as coincident with the development of free hiring. Unemployment—occasional, periodical, or permanent—may be considered as the price which the working masses have paid for the abolition of obligatory labour. The conditions of employment have historically been subjected to determination—by the State, by the municipality, by justices of the peace, by the gilds, by unions of the employers, and by trade unions—as regards hygienic conditions and protection from machinery in factories, as regards safety of mines and ships, and as regards the amount of wages either by way of fixing a minimum or a maximum wage, or, in respect to the periods and methods of payment, to the attachment of wages for debt, or to the security for their payment in case of the bankruptcy of the employer.

3. **The State and employment.**—The policy of the modern State with reference to factory legislation was in general opposed by the advocates of *laissez-faire* in the first half of the 19th century. The expediency of sanitary legislation for factories, etc., can no longer be regarded as matter of controversy, so far as the general principle is concerned, although every extension of it is necessarily subjected to criticism. The expediency of the control of the State over the terms of the contract which is made between the employer and his workpeople is by no means so universally acknowledged, although the State does, as a rule, prevent by law the payment of wages in the form of goods (under the Truck Act) or in public-houses. It does not now prescribe the rate of wages.[1] An argument for a national minimum has, however, been advanced by Mr. Sidney Webb (*Industrial Democracy*, London, 1897, ii. 766 ff.). He considers such a measure as the only means of putting an end to 'industrial parasitism,' and as a natural complement to the national hygienic minimum which he thinks has already been carried into effect in factory legislation (see, however, Zwiedineck-Südenhorst, 384–385). The *principle* of a minimum wage for the mining industry obtained legislative sanction from the British Parliament on the occasion of the great coal strike of March 1912.

The policy of an authoritative fixation of a minimum wage is open to the criticism that such a measure would tend to the non-employment of those whose labour might be insufficient to justify the minimum payment, unless the minimum were fixed at a very low point; yet such persons might be able to earn a part at least of their sub-

[1] Justices of the Peace are, *e.g.*, forbidden to fix wages by 5 Geo. IV. c. 96.

sistence by being permitted to work for inferior wages. Mr. Webb might answer that such cases of 'industrial parasitism' should be otherwise provided for, because their presence in the labour market tends to depress the wages of the group to which they belong.[1] The reactions of a minimum wage would, however, be extremely difficult to forecast even if much more numerous data than now exist were available (cf. Zwiedineck-Südenhorst, *l.c.*). The policy of fixing a minimum wage by a trade union is open to the objection that the minimum is also a maximum, and that the highly efficient workman is obliged to work at the same rate as the less efficient. Even when the wages are paid by piecework, the workman who works harder than his fellows and makes more money finds it difficult to continue to do so because of the opposition of his comrades, who conceive that his proceeding may tend to bring down the piecework rate (see, however, on the whole subject, 'The Device of the Common Rule,' in Webb, *op. cit.* ii. 715 ff.). The policy of fixing a maximum wage by the public authority is open to the objection that, unless the maximum is placed at or above the rates current in other districts to which workmen may migrate, there will be a tendency for workmen to go where there is no legal maximum.

In the 14th cent. the municipal governments of some of the Italian towns fixed, in the assumed interests of the employers, a maximum rate of wages. Venice did not do so, with the result that labourers flocked there, and wages in that city became lower than elsewhere.

4. The ethical aspect.—On its ethical side, the relation between employers and employed appears at present to be passing through important phases, although the direction of the movement is not always obvious. The principle known in Scotland as *ca' canny*, involving the performance by the workman of as little work as possible, may not be widely or frequently, but is certainly in some industries occasionally, applied both in Europe and in America. On the other hand, remorseless exploitation of the workers probably still exists in both industrial continents and in Japan, especially with regard to unskilled or inferior skilled labour. Apart from the possibility of improvement, from an ethical point of view, on both sides, of the relation, there is to be considered the certainty of economic deterioration which must follow in the event of these tendencies going far, with consequent reaction towards a relation sounder alike from an economic and from an ethical point of view. The 'class conscious' working mass, which, according to the Marxist doctrine, must eventually completely overcome its antagonist, the 'class conscious' employing class, may carry the process to the bitter end, or the conflict of classes may be arrested by a sense of *la solidarité humaine* arising in both classes. Particular schemes like those of Godin and Leclaire, the movement for co-operative production, and the like, must be regarded as of less importance than the mass movement. Whether or not this movement is making for increased social, as opposed to class, consciousness, is at present extremely hard to determine. There appears, however, to be a certain general tendency in that direction—the ethical relations of the classes being probably somewhat improved by the gross increase in production, and by the consequent mitigation of the struggle for existence. A check to this increase, considered in relation to the growth of the population, would undoubtedly involve a check to the ethical advance.

5. Concentration of capital and industry.—The rôle of the employer in modern industry becomes more important, and his corresponding responsibilities become greater, with the accumulation and concentration of industrial capital. The employer also becomes more impersonal. Although very large enterprises are frequently associated with the name of one individual (especially in the United States), the actual share of that individual in the management of the enterprise is usually confined to the determination of some matter of wide policy, and even in this his course is generally influenced by his partners. The ultimate control of all large enterprises must rest with the body of its stock-holders at a particular moment. In many large industrial concerns the number of stockholders is at least as numerous as the number of employees. Both are highly fluctuating bodies,—one body changes its *personnel* daily in the bourses, and the other changes daily in the workshops. The concentration of industry, which has gone far in the United States, has been accompanied by grave difficulties of management, the bold financier being rarely patient enough in respect to detail to secure the economies which have been anticipated from the concentration. The mere fact of concentration does not, however, appear to have been adverse to the interests of employees; the chief antagonism to it has arisen from the small trader, whose profits have been reduced by the competition of the large joint-stock company or group of companies combined in a merger or trust. From a theoretical point of view, the function of the employer, as such, is to administer his business in such a way as to secure its continuity by the creation of a sufficient reserve against the accidents of trade, and to secure the goodwill of his employees in such a way as to retain an efficient working *personnel*. The increasingly impersonal character of employment may not improbably mitigate the class struggle, because of the diffusion of the capitalistic interest, and even its transfusion into the working class itself.

In the United States and Canada, for example, the relatively high wages in some industries enable certain groups of workmen to accumulate considerable sums of money. These sums are invested by them not merely in houses or in land, but also sometimes in industrial securities, probably rarely in the industries to which they themselves belong, generally rather in others.

Four important recent incidents in the evolution of employment demand mention in this place; these are: (*a*) the appointment of Arbitration and Conciliation Boards, either by the Government or voluntarily by agreement between the parties; (*b*) collective bargaining between groups of employers and groups of workmen; (*c*) the establishment of Labour Exchanges; and (*d*) the project of insurance against unemployment.

(*a*) *Arbitration Boards* in England probably owed their existence to the *conseils des prud'hommes* of France and Belgium, which were organized early in the 19th century (cf. H. Crompton, p. 19 ff.). The first Board of this kind in England appears to have been formed in 1849, for the purpose of dealing with a dispute in the silk trade at Macclesfield (*ib.* 124); another followed in 1853 in the printing trade (*ib.* 131); but the most important early Arbitration Board was that formed in 1860 for the purpose of dealing with disputes in the hosiery trade at Nottingham (*ib.* 19). The practice has been widely adopted in Great Britain, in New Zealand, and in Canada—with qualified success. In none of these countries has it altogether prevented strikes; but it has in some measure diminished their number. The various inquiries which have followed the appointment of arbitrators or the action of a permanent Conciliation Board have shown conclusively the impossibility of arriving at a just wage. The decision of the Board must, therefore, invariably involve either a compromise, in which both sides give way somewhat, or a victory for one party or the other. In

[1] The employment of pensioners, of persons of independent means, and of women and children who do not require to earn the whole of their subsistence, undoubtedly depresses the wages of their groups.

the first case, neither party is wholly satisfied; and in the second case, if one is satisfied, the other is not. This is true of all litigation; but in industrial disputes arbitration is expected to conduce to peaceful settlement in a sphere in which positive law and even precedent afford no guide, which in litigation they do. The decision of the arbitrators has not, and cannot have, the force of law, because, under present industrial conditions, a large body of men cannot be forced against their will to work for a particular employer for wages determined by a third party (see, however, *Labour Laws of New Zealand* [as cited in Lit.] and *New Zealand Year-Book*). The history of the great strikes in England in 1911 and 1912 is significant in this connexion.

(*b*) *Collective bargaining* grew out of the practice of arbitration. It has been strenuously objected to by employers, but in most of the staple trades it has come to be recognized. It is frequently accompanied either by periodical fixation of rates of wages, or by an automatic sliding scale (as in the coal and iron trades).

(*c*) *Labour Exchanges, Labour Registries, or Labour Bureaux* of a private character are of long standing, and so is their regulation by law. Of late years there has been an increasing hostility to such agencies, especially those which concern themselves chiefly with the employment of sailors. In order to replace private agencies and to extend the functions of Labour Exchanges, public institutions have been established in Germany, France, Belgium, and Great Britain. In all these countries the operations of such institutions have now become very extensive. (Cf. Board of Trade Reports, cited in the Lit.)

(*d*) *Insurance against unemployment* has existed, in fact, for many years in the unemployed benefit funds of the Trade Unions. Local Unemployment Insurance Offices were established in Berne in 1893, in Cologne in 1896, in Leipzig in 1903, and elsewhere. (Cf. Board of Trade Reports, as above.) Insurance against unemployment was included in the National Insurance Bill (cd. 5989, London, 1911). In certain trades, insurance against unemployment is, under the Insurance Act, compulsory. The total Unemployed Insurance Fund is provided partly from contributions by the workmen, partly from contributions by employers, and partly from moneys voted by Parliament. The effects of the new Act will not be observable earlier than the end of the year 1912.

6. Causes of unemployment.—The emergence of a class of free hired labourers, or of persons voluntarily seeking employment, usually makes itself manifest by the migration of numbers of such labourers to periodical or permanent centres of employment.

Instances of such periodical migrations are to be found in the movement of hop-pickers to Kent; in that of Irish harvesters from Ireland to the Lowlands of Scotland; in that of Italian *contadini* from Lombardy and Piedmont to the south of France; in the immense migration (annually about one million) of harvest labourers from various parts of northern and central Russia to the Black Soil Region; in the 'harvesters' excursions' from Ontario and Quebec to the Prairie provinces of Canada; and in the annual migration, which now assumes considerable proportions, of workmen from Scotland and from Italy to America in the spring, and to Scotland and Italy in the autumn. The colonization of America and of Australia, the partial colonization of Africa by Europeans, and the colonization of the Straits Settlements by Chinese, afford instances of permanent settlement of migrants.

Migration from the rural districts to the towns is a phenomenon common to all regions where no insurmountable obstacles exist against the mobility of labour. The relatively higher scale of nominal wages in the towns, as compared with the scale of wages in the country, and the relatively greater attraction of social centres, in general, conduce to this movement. This process customarily denudes the small towns, diminishing in them the demand for labour, and then denudes the villages. The stream of labourers seeking employment in the industrial centres under conditions of free mobility is uncontrolled, and is sometimes in excess of the demand for them. An excess of labourers seeking employment may of itself produce, through a series of reactions, the phenomenon of unemployment. This result is reached in two ways: the reduction of population in the country towns and villages diminishes the demand for commodities there; and the surplus of labourers in the industrial towns tends to reduce wages, and thus to reduce effective demand in them. Migration of labourers, in the absence of means of organizing their labour or the labour of others whom they displace, may, therefore, if conducted on a considerable scale, result in depression of trade, in so far as that is due to diminished capacity for consumption caused by diminished employment.

Diminution of employment may also result from the rise of the rate of interest upon capital devoted to industrial enterprises. Such a rise in the rate of interest may be caused by an increase in the demand for industrial capital over the supply of such capital in the market; or by increase of demand for funds in the market for commercial capital, or in the market for public funds; or the rise may be due to restriction of credit from any one or all of very numerous causes, such as over-speculation in land, in buildings, in industry, commerce, or otherwise, over-production of certain important commodities; or to disproportionate investment in enterprises which do not immediately yield a return adequate to meet the normal rate of interest upon the invested funds.

Examples of unemployment resulting from reactions of this kind are to be found in the depression in Great Britain in 1878 and subsequent years, which arose in part from the over-investment of capital in railways in the United States and in New Zealand.

Unemployment may also occur, upon an extended scale, through the cutting off of the supply of raw material which is necessary for the production of an important commodity.

Such a phenomenon may be caused by a war, as in the case of the Cotton Famine; or by a strike, as in industrial suspension due to a strike of coal miners.

Unemployment may also result from the falling off of demand for commodities, due to deficient harvests; resulting in advance in the price of necessaries of life, and in consequent diminishing general purchasing power as applied to commodities other than necessaries, so far as concerns the industrial centres; and, if the advance in price of agricultural produce does not offset the deficiency, in diminished purchasing power in the rural districts. Unemployment may also be caused by changes in tariffs, in technical processes (as in the displacement of hand labour by machinery, and the substitution of one machine for another), or in transportation routes, or by the opening up of new ports.

Instances of the latter are to be found in the creation of a new port of entry at Montreal in 1832, which immediately diminished by about one-half the port trade of Quebec; and the extension of the docks at Antwerp, Hamburg, and Havre, which more recently diminished the *entrepôt* trade of the port of London.

Periodical unemployment is also produced by seasonal trades, and by the interference of weather conditions with the normal course of outdoor labour.

The causes which have been enumerated are of a general character; and they affect, directly or indirectly, large numbers of men who, but for their operation, would be in constant employment. There are, however, two series of causes of unemployment in addition to these general causes: one series relates to the efficiency of the directive power of the employing class, and the other to the efficiency of the labouring power of the working class.

Competent management may, through the creation and intelligent use of reserves, distribute labour force in such a way as to secure continuity of employment under any but long-continued abnormal conditions; whereas incompetent management may result in the idleness of large groups of men, even in a period of brisk trade. Similarly, the efficient worker is, in general, likely to secure employment, while the inefficient, dissolute, or ill-tempered workman may find it difficult to procure employment at any time.

7. **Recent attempts to solve the problem of unemployment.**—The steps which have been taken during recent years to deal with the problem of unemployment have, in general, been characterized by the policy of separating those who are unemployed owing to causes over which they have no control from those whose unemployment is caused by personal deficiency. Temporary relief, accompanied by employment upon public or private work not otherwise demanded at the time, has been devised for the relief of workmen temporarily out of employment (as in Distress Committees and like organizations). A more difficult problem is presented by the casual labourer who has lost the faculty of continuous labour, and whose employment by private employers is for that reason discontinuous. Very frequently, physical and mental deficiencies combine to make the labour of such unemployed unproductive. The very measures which have been taken for the employment of the employable unemployed have probably rendered it more difficult for the unemployable unemployed to obtain the charity which is, after all, what they need, since work in any serious sense is not possible for them.

The Labour Colonies of Germany, Holland, and Belgium have been devised for such cases; and similar institutions have more recently been established in Scotland (in Ayrshire), and in England (at Hollesley Bay). The Labour Colony is an expensive, and not wholly satisfactory, form of poor relief; but it does, undoubtedly, present a means of preventing begging, and of avoiding the waste of indiscriminate charity (see, however, references in the Lit.).

Contemporaneously with the efforts which have been made by the public authorities (in England by the Local Government Board and by the municipalities) to grapple with the question of relief of the unemployed, certain steps of a positive character have also been taken.

In Germany, the enrolment of every workman in a society of his trade is practically compulsory. He is also under obligation to make periodical payments. Should he be sick or unemployed, he is entitled to certain benefits. In Great Britain, a scheme of insurance against unemployment is now before the country.

8. **The right to work.**—Such positive steps may or may not involve the recognition by the public authority of the right of the labourer to the opportunity for labour. Where such a right is recognized, and where machinery is provided for rendering it effective, it is difficult to see how the corollary of obligatory labour can be evaded.

An interesting experiment in this connexion is at present in progress. An Employment Committee has been appointed in Glasgow, under the auspices of the Board of Trade. The functions of this Committee involve the examination of every young person who is brought before it, and the provision of employment, after the manner of Plato's guardians. Should this plan be widely adopted, it is difficult to avoid the conclusion that there is a risk of fixing, by such means, hereditary occupations to an even greater extent than is now the case.

It is important to notice that, under existing police administration in Great Britain, it is usually possible in practice to compel young persons to work, whether they desire to do so or not. The extension of these powers to the obligatory employment of adults, excepting where they are sentenced by law to penal servitude, does not appear to have been carried out in practice.

The Unemployed Workmen Bill of 1907, promoted by the Independent Labour Party, contained an obligatory clause by which unemployed men might be sentenced to work under the control of the local authority for six months (cl. 7, sec. 3).

9. **Socialism and employment.**—It remains to be noticed that from the socialist point of view (promulgated especially by Saint Simon) all private employment is exploitative; and that from the anarchist point of view State and private employment are alike exploitative. The growth of the former idea has led to a propaganda of collectivism in which the principal point is that a democratic State should be sole employer; and the growth of the latter has led to the idea that the exploitative element in State and private employment alike should be checked by *l'action directe*, expressing itself in general strikes repeated as often as may be considered necessary.

It should be observed, however, that the general strike is a weapon with a double edge, and that the edge which is turned away from the striker is likely to be blunted before the other. The so-called third general strike in Russia proved this to the satisfaction of the leaders of it.

From the socialist point of view also it should be observed that the labourer has a right to the whole of the produce of his labour. A method of division which should be devised with a view to secure this condition, under modern circumstances of division of labour, and the eventual evaluation of the product—frequently at a long distant time and in widely distant places—presents cardinal difficulties. Such a plan appears to be applicable only to a limited and self-contained society. It might be held that the strenuous competition of modern commerce and industry tends to the elimination of unearned increments of value, although it is open to doubt whether any system would eliminate the possibility of adventitious gains due either to chance or to shrewd anticipation of economic reactions. A careful analysis of the phenomena of employment and of unemployment must show that mere alteration in the system or in the amount of the taxation of land, as is proposed in the Single Tax propaganda, or even the nationalization of the land, would not necessarily solve, or even seriously influence, so complex a problem as that of unemployment. Even in an agricultural country, not merely is access to land requisite, but a sufficient endowment of agricultural capital and skill are necessary to enable the landless unemployed to avail themselves of the land which might even be freely placed at their disposal. The phenomenon of near proximity of unemployed men and of land which may be cultivated rent-free is not unknown. It must be allowed, however, that, where scarcity of land really exists, peasants who might prefer to remain cultivators are driven into the towns because they have insufficient or no land. (This condition exists undoubtedly in some parts of Russia.) Whether even confiscatory taxation or immediate nationalization of the land would in any country necessarily result in increased cultivation, either extensively or intensively, is at least doubtful.

See also artt. ECONOMICS, SOCIALISM.

LITERATURE.—The subject of Employment is treated in all systematic treatises on Political Economy. The emergence of a class of free labourers seeking employment may be studied, for Western Europe, in the following: M. Kowalewsky, *Die ökonom. Entwickelung Europas bis zum Beginn der kapitalist. Wirtschaftsform* (tr. from the Russian), Berlin, 6 vols., 1901 ff., and, for Russia, V. O. Kluchevsky, *Hist. of Russia* (tr. C. J. Hogarth), London, 1911, vol. i., *Course of Russian History*, vols. i.[2]–iv. (Russian), Moscow, 1908–10.

For the economics of employment, see J. A. Hobson, *Evolution of Modern Capitalism: A Study of Machine Production*, London, 1894; L. Brentano, *The Relation of Labor to the Law of To-day* (Eng. tr.), New York and London, 1891; E. v. Böhm-Bawerk, *Capital and Interest: A Critical Hist. of Economical Theory* (Eng. tr.), London, 1890; E. v. Philippovich, *Grundriss der polit. Ökonomie*, 2 vols., Freiburg i. B., 1893 and 1899; J. Conrad, *Handwörterb. d. Staatswissenschaften*, Jena, 1901, art. 'Unternehmer und Unternehmergewinn,' etc., vol. vii.[2] pp. 338–361.

For wages, see A. Marshall, *Elements of Economics of Industry*, London, 1892, p. 267 ff., and *Principles of Economics*, do. 1907, vol. i.[5] p. 505 ff.; O. v. Zwiedineck-Südenhorst, *Lohnpolitik und Lohntheorie mit besonderer Berücksichtigung des Minimallohnes*, Leipzig, 1900.

For unemployment, see Board of Trade—Labour Department: Report on Agencies and Methods for Dealing with the Unemployed (Parl. Paper C.—7182), London, 1893 (contains Bibliography of Labour Colonies); continuation of above [cd. 2304], London, 1904; *La Disoccupazione, Relazioni e discussioni del 1o Congresso Internazionale per la lotta contro la disoccupazione 2–3 Ottobre 1906*, Milan, 1906; A. Agnelli, *Il Problema economico della disoccupazione operaia*, Milan, 1909; Unemployed Workmen Act, 1905 (5 Edw. VII. ch. 18); Circulars, etc., connected therewith, London, 1905, Orders, nos. 48,677–79; London Unemployed Fund, 1904–5; Report of Central Executive Committee, London, 1905; Report upon the Work of the Central (Unemployed) Body for London (Unemployed Workmen Act, 1905), do. 1906; Report of the Queen's Unemployed Fund, 1905–6, do. 1906; J. Burns, speech in House of Commons on vote for Local Gov. Board, 19th July 1906.

For arbitration and conciliation, see H. Crompton, *Industrial Conciliation*, London, 1876; L. L. F. R. Price, *Industrial Peace: its Advantages, Methods, and Difficulties*, London, 1887; Reports by Board of Trade of Proceedings under the Conciliation (Trade Disputes) Act, 1896 (59 & 60 Vict. c. 30), 7th Report, London, 1910; and Report on Collective Agreements between Employers and Workpeople (*ib.*), do. 1910.

For Labour Exchanges: Report on Agencies and Methods for Dealing with the Unemployed (*ib.*), London, 1904; Abstract of Labour Statistics (*ib.* annually); *The Labour Laws of New Zealand*[2], compiled by direction of the Hon. the Minister of Labour, Wellington, N.Z., 1896; New Zealand Official Year-Book; and Dominion of Canada, *The Labour Gazette* (issued monthly).

For the socialist point of view, see esp. W. Thompson, *An Inquiry into the Principles of the Distribution of Wealth*, London, 1824, and *Labour Rewarded: the Claims of Labour and Capital Conciliated; or, How to secure to Labour the whole Products of its Exertions*, do. 1827; K. Marx, *Das Kapital: Kritik der polit. Ökonomie*[6], Hamburg, 1909, vol. i. *passim*, vol. iii., 1st and 2nd pt., 1904[2], *passim*, also *Theorien über den Mehrwert*, vol. ii. 1st pt., Stuttgart, 1910[2], pp. 1–159, and vol. ii. 2nd pt., do., 1905, pp. 233–319; A. Menger, *The Right to the Whole Produce of Labour*, London, 1899; K. Vorländer, *Die Neukantische Bewegung im Sozialismus*, Berlin, 1902.

ENCRATITES

ENCRATITES (Ἐγκρατεῖς [Iren.], Ἐγκρατηταί [Clem. Alex.], Ἐγκρατί(ῖ)ται [Hippol., Epiph.]).—Christians of the early Church who made abstinence from flesh, wine, marriage, and possessions their rule of life. From the middle of the 2nd cent. they 'stood midway between the larger Christendom and the Marcionite Church as well as the Gnostic schools' (Harnack, *Hist. of Dogma*, Eng. tr., London, 1894–99, ii. 43). Without holding one form of creed, or being organized as a body, they practised everywhere the same kind of asceticism. Their spirit was widely diffused. Epiphanius, in his chapter, κατὰ Ἐγκρατιτῶν (*Hær.* 47), names seven countries, mostly of Asia Minor, in which they abounded (πληθύνουσι). Irenæus (i. 28) says that some of the earliest of them were followers of Saturninus and Marcion. Eusebius (*HE* iv. 28) appears to be mistaken in calling Tatian, the eminent Apologist, their founder (ἧς παρεκτροπῆς ἀρχηγόν), and Epiphanius (*loc. cit.*), in placing the Encratites after the Tatianites. What Tatian did was to join the sect, and to give it a more complete canon, including the Epistles of St. Paul, whose teaching other leaders, especially Severus, rejected. There must have been a considerable Encratite literature. Several writers, both for and against the principles of the sect, are now little more than names.

In the time of Marcus Aurelius, 'Musanus . . . is said to have written a very elegant work (ἐπιστρεπτικώτατος λόγος), addressed to certain brethren who had swerved from the truth to the heresy of the Encratites, which had even then made its appearance, and which introduced a singular and pernicious error into the world' (Euseb. *HE* iv. 28). Theodoret (*Hær. Fab.* i. 21) mentions Apollinaris, another writer of the same period, who wrote against the Severian Encratites. Macarius Magnes (iii. 43) states that an Encratite leader, Dositheus, a Cilician, wrote a defence in eight books, contending that 'by sexual intercourse the world had had its beginning, and by continence would receive its end.' Clement, in whose *Stromata* (bk. iii.) Encratism can best be studied, states that Julius Cassianus, whom he calls the founder of the Docetic heresy, wrote Περὶ ἐγκρατείας ἢ περὶ εὐνουχίας, and quotes three Encratite passages from this work (iii. 13, 91, 92).

The influence of the Encratites may be ascribed to three causes. (1) Their renunciation of the world was strikingly complete. They had the great merit of being logical. Having grasped a principle, they applied it with the utmost rigour and vigour. They rejected the prevalent distinction between a higher and a lower, though sufficient, morality. The Church, which applauded their counsel of perfection in the few, resolutely declared war against their principle when they sought to make it an inflexible law for all. Therefore they refused to follow the Church, scorning the weak compromise she offered. They insisted that, if ἐγκράτεια was right at all, it was right universally. To be a Christian was to be an Encratite.

(2) The Encratites pointed to the example of our Lord. They made the 'evangelic' life their standard, urging that the Christian system of morals must be founded on the actions of Christ, and take its laws from Him. The life of celibacy and the renunciation of all worldly goods, after His pattern, was the essential mark of Christian perfection. Tatian wrote a book, Περὶ τοῦ κατὰ τὸν Σωτῆρα καταρτισμοῦ (Clem. Alex. *Strom.* iii. 12), in which he showed that the Christian ideal can be attained only by the imitation of Christ, and rallied the Church to the duty of walking in His steps. The writer forgot, as Clement wisely observes, that Christ was 'not a common man' (οὐδὲ ἄνθρωπος ἦν κοινός).

'He was deficient in a right understanding of the life of Christ in its completeness, and in its relation to His mission as the redeemer of mankind, and the author of a new creation of Divine life, which, in the further course of its development from Him, was designed to embrace and pervade all human relations' (Neander, *Church Hist.*, ed. London, 1884, ii. 127).

Tatian wrongly regarded Paul as teaching (1 Co 7^5) that marriage and unchastity are one and the same thing—both equally the service of Satan. 'With Marcion and Saturninus he asserted that wedlock was only corruption and fornication' (φθορὰν καὶ πορνείαν [Eus. *HE* iv. 29]). In forming his opinions, it is probable that he made use not only of the canonical Gospels, but of apocryphal histories, in which the delineation of the Person of Christ had been modified under the influence of theosophical and ascetic principles. Epiphanius states that the Encratites used the *Acts* of Andrew, John, and Thomas; and the fragments of Cassianus found in Clement seem to reflect the *Gospel according to the Egyptians*.

(3) Encratism generally based itself on the same prevalent doctrine of God and the world as Gnosticism. Some Encratites, indeed, professed to be orthodox. Those whom Hippolytus describes (*Phil.* viii. 20) are admitted by him to have been sound in their teaching regarding God and Christ, differing from the Church only in their manner of life. But most Encratites were philosophical dualists. Taking the gloomy view that matter is essentially evil, and the body the cause as well as the occasion of sin, they denied the identity of the supreme God with the Creator of the world. Tatian learned a kind of dualism from his master, Justin Martyr, and afterwards developed it into the ordinary full-blown Gnostic doctrine of Æons (Euseb. *loc. cit.*). He then felt logically bound to connect himself with the Encratites, seeing no way of redemption except the subjugation of all the natural impulses and appetites. Tertullian would have become an Encratite, if this mode of life had not been associated with heresy (Harnack, *Hist.* ii. 103). A form of this morbid error is already combated in 1 Ti 4^{3-5}. When men were 'forbidding to marry, and commanding to abstain from meats,' the healthy-minded writer of the Epistle refuted them by denying the first principle of Gnosticism and Encratism. God is the Creator of the world, and none of His work is to be despised. 'Every creature of God is good, and nothing is to be rejected, if it be received with thanksgiving: for it is sanctified through the word of God and prayer' ($4^{4.5}$). Christianity is

not the eradication but the consecration of nature. In the right sense of the word, every Christian must, of course, be ἐγκρατής (used only once in NT, viz. Tit 1[8]). Paul reasoned of ἐγκράτεια till the Roman governor trembled (Ac 24[25]); he names it as part of the fruit of the Spirit (Gal 5[23]); and another writer mentions it as one of the graces which are to be added to faith (2 P 1[6]). But true self-control (ἐγκράτεια ἑαυτοῦ [Plato, *Rep.* 390 B], ἐγκράτεια ἡδονῶν καὶ ἐπιθυμιῶν [*ib.* 430 E]) is not to be attained by an otherworldliness which shirks life's duties, and shuns its pleasures as temptations of the devil. This 'fugitive and cloistered virtue' is far from according with the mind of Christ, who wished His followers to be the leaven of society, the salt of the earth, the light of the world (Mt 5[13ff.]).

Sozomen (v. 11) mentions the Encratites as a sect existing in Galatia in the time of Julian, when Busiris, one of their number, suffered. One of the laws of the Theodosian Code (A.D. 381) was directed against the Manichæans, who sheltered themselves under the name of Encratites. But 'the Encratite controversy was, on the one hand, swallowed up by the Gnostic, and, on the other hand, replaced by the Montanistic' (Harnack, *Hist.* i. 238).

LITERATURE.—In addition to books already named, see A. Hilgenfeld, *Ketzergesch. des Urchristentums*, Leipzig, 1884, esp. p. 543 ff.; cf. also art. 'Encratites,' in Smith–Wace, *DCB*; and Krüger, 'Enkratiten,' in *PRE*[3].

ENCYCLOPÆDIA OF THEOLOGY.—See THEOLOGY.

ENCYCLOPÆDISTS.—**1. Rise of the Encyclopædic movement.**—It may truthfully be said that the appearance of Hume's *Treatise of Human Nature* (1739–40) was the starting-point of a new school of thought. Locke had devoted himself to the explanation of the origin of our ideas; he told us that we owe our conception of substance to the long-continued habit of seeing certain modes in association one with the other; or—to put it in a word—Locke denied the existence of innate ideas, and declared that all our knowledge springs from experience. But Hume asked the question, How do we know that two things stand to one another in the relation of causality? Because we usually see one thing follow another thing, we simply come to the conclusion that it must so follow. Self is merely a complex of swiftly succeeding ideas, under which we imagine an illusory soul or self to exist. Soul, this complex of ideas, must hence cease when the ideas cease, and when bodily movement comes to an end. Thus it was that Hume's scepticism naturally followed Locke's empiricism in the order of thought, and all our knowledge was reduced to perception of sense, leaving us with sensation alone to take the place of the old determination of universality and necessity. The point of view arrived at had a close affinity with the philosophy of the 18th cent. in France. Of the school of thought known as the Illumination, or the Philosophy of the Enlightenment (see ENLIGHTENMENT), the Encyclopædists form a noteworthy part, inasmuch as they represent its spirit in its most characteristic form. In France this attitude of mind was unaccompanied by the pietistic tendency, wherein inward spiritual experiences were given a value as distinguished from the literal teaching of authority. This tendency was a feature in the movement towards intellectual liberation in the *Aufklärung* in Germany, even while it seemed to be in opposition to its conclusions. The Enlightenment of the Understanding there concluded its period of clear intellectual conceptions, by means of reason alone, by giving place to a period of sentimentality. In France, as we shall see, this concentration on the value of feeling, as advocated by Rousseau, ended in momentous results on the practical side of politics; while in Germany, where the call for action was not in the same way demanded, it found vent in intellectual and æsthetic interests, in the period of *Sturm und Drang*, and in Romanticism in literature.

It was in France, however, that the empirical or Lockian school of thought was carried to its ultimate and logical consequence of sensualism and materialism. Empiricism developed in France as it never did in England, despite its being derived so largely from the writings of Englishmen. The French relentlessly faced the practical consequences of the speculative position which they adopted with the clearness and logic characteristic of their race; and this resulted in a thoroughly materialistic conception of the system of the world, and in an egoistic morality.

But the growth of the speculative and sceptical attitude of mind that took the place of the idealism which had proceeded from Cartesianism gives us but one aspect from which the rise of the new school of the 'Illumination' can be explained. Along with the speculative side, there were two other influences at work which had as great an effect on contemporary thought as that which was purely intellectual, and which was complementary to it. The first was the rise of the scientific spirit, which, though it may have begun in France with Descartes, was developed in a remarkable way by Isaac Newton. Newton made men realize that the 'physical laws which hold good on the surface of the earth are valid throughout the Universe.' The mechanical conception of Nature formulated by Kepler, Galileo, and Descartes became, through Newton, intelligible to all. Men were shown how the machine works, while it was also demonstrated to them how it is held together by means of the law of gravitation. Newton's philosophy, on its speculative side, did not have much influence on contemporary thought, but practically his teaching and method had an effect which can hardly be overestimated. He popularized the so-called scientific view of Nature and made it intelligible, and this scientific outlook had the effect of making the world around of immense interest and importance in every one of its aspects, and presented infinite possibilities for those who were prepared to open their eyes, and have unveiled to them the things that had hitherto seemed hidden or mysterious. It also held up before them the hope of attaining the happiness sought by all, through knowledge of a kind that was free to every seeker after truth. It was Voltaire, in his *Lettres sur les Anglais*, who introduced his countrymen at large to this new way of looking at the world; it was he who contrasted the old learning and the old religion with the new; it was he who popularized the views which he had adopted, applying scientific methods to supernatural and superstitious beliefs. The light of day was to shine out unobscured by the accretions of the ages. Voltaire expounded Newton's theory of Physics, and wrote a *Dictionnaire philosophique portatif* (1764), which set forth his views on these and similar subjects from the standpoint (though officially contradicted on occasion) of a sceptic in religion and a materialist in philosophy. The visits of Voltaire and Montesquieu to England had great results, for they brought home with them new ideas in religion, philosophy, and the relations of man to man.

But there was still another cause in operation which made for the new empirical point of view. It is to be found in the general social and political condition of France at the time. A dissolute court and a despotic government, on the one hand, and a Church both hypocritical and tyrannical, on the other, had, each in its respective sphere, alienated

not only the poor and suffering, but all thinking men, such as were the *philosophes* of the 18th century. The impulse on their part was to resist the tyranny and corruption that everywhere abounded. When they applied their clear reasoning powers to the corrupt order of things that obtained at the time, there was little doubt of the result. The unjustifiable condition of matters then existing was to them the order of things established by authority, and, if they were to vindicate for rational mankind the possession of its reason, the first thing to be done was to show forth the irrationality of a state of affairs whose existence was a disgrace to a nation, and revolting to every intellectual principle and moral feeling. The *philosophes* did their part effectually, and possibly prepared the way for the nation to do the rest in a manner as yet undreamed of.

2. The Encyclopædic spirit.—Thus had the way been paved, and men had now reached a frame of mind in which they were ready to accept the scientific and sceptical doctrines as expounded by the new philosophers. It had at last come home to them what was the significance of the point of view from which it is recognized that law governs everything, and consequently that a knowledge of this law is what is most desirable for the welfare of mankind; and they apprehended the notion in the somewhat abstract fashion in which it was presented, for it was undoubtedly presented in a way which fell far short of being completely true. The 'law' which was well-nigh exalted to the place of the Deity of former days, arbitrary enough though that Deity might have seemed, was regarded too much as a power working outside of us, and independently of any ideal or developing force which might guide its operations and bring with it a unifying influence. The way was perhaps made too plain and clear to be accepted as the way of Truth, so evasive to those who search after it as an end. The mysteries remained mysteries even after the artificial wrappings were removed, and the very superstitions were found to conceal certain aspects of truth, in addition to the falsehood that could not be overlooked. Nevertheless, the wrappings had to be removed, and it was rightly thought that an organized systematization of all known knowledge in the arts and sciences would help in bringing about this end in the most effectual and practical way possible. Goethe says in his *Dichtung und Wahrheit*: 'If we heard the encyclopædists mentioned, or opened a volume of their monstrous work, we felt as if we were going between the innumerable moving spools or looms in a great factory.' But, though the knowledge of the process by which his coat was made at length disgusted Goethe with the coat itself, that knowledge had to be acquired along with the rest of the scientific and systematic knowledge of the day.

3. The Encyclopædia.—What, then, was this work which gave a name to a whole group of thinkers in the middle of the 18th century—that time of which d'Alembert remarked that 'the middle of the century was apparently destined to form an epoch in the history of the human mind by the revolution in ideas which appeared to prepare for this event'? The first volume of the Encyclopædia appeared in 1751, and at this time the *philosophes* who took part in it were considerable in number. They were also, as a matter of fact, not all of one mind: there were among them atheists and deists, and the personal jealousies and antipathies that existed among them were not small. But a splendid optimism carried them along in their great work—an optimism which meant belief in the best elements of humanity, in natural goodness instead of natural depravity, and in the possibility of human perfection under suitable conditions. Helvetius expressed their point of view when he said: 'The good law-giver makes the good citizen.'

The task of producing a complete exposition of all the scientific knowledge of the day was, indeed, a difficult one; it was one that occupied twenty years, and it comprehended, in the first edition of the work, seventeen volumes of text, eleven volumes of plates, four volumes of supplement, and two volumes of index, while a further supplement of five volumes appeared in 1776. There had, of course, been many encyclopædias of various sorts before this time; the most ancient extant is usually stated to be Pliny's *Natural History*, in thirty-seven books. In 1727, Ephraim Chambers, a Quaker born in Kendal, published his *Cyclopædia: or an Universal Dictionary of Arts and Sciences*, in two volumes; and this, which resembled a Dictionary more than what we understand by a Cyclopædia, ran through many editions. The famous French *Encyclopédie* really originated in a French translation of Chambers's *Cyclopædia*, begun in 1743 and completed in 1745 by John Mills, an Englishman settled in France, assisted by Gottfried Sellius, a native of Dantzig. This work was termed the *Encyclopédie ou dictionnaire universel des arts et des sciences*—a work in four volumes of text and one of plates. Owing to the unscrupulous action of his publisher, Mills was despoiled of the work he had carried out, and he returned to England. Jean Paul de Gua de Malves, an abbé, was then engaged as editor, and, in order to revise the work in a thorough fashion, he called in certain learned men as assistants, amongst whom were Condillac, Diderot, and d'Alembert. Disputes followed with the publishers, and de Gua resigned the editorship. Consequently, in 1745, the editorship was offered to Diderot, who had edited the *Dictionnaire universel de médecine*, and, curiously enough, had also issued a translation of an English work. Diderot (1713–1784) had much larger views of what the compass of the work should be than that first contemplated by the publishers, le Breton and his associates, for he aimed at making it a complete compendium of the whole of human knowledge, while at the same time it was to be the manifesto of a great philosophic party. D'Alembert (1717–1783) was associated with Diderot in this undertaking, and to him the portion relative to Mathematics was more especially assigned.

Of other writers there were twenty-one, each of whom received the original article on his subject in Mills' translation to serve as a guide for his work. But these articles were found to be useless for the purpose, and the work was done in most cases independently. D'Alembert wrote the *Discours préliminaire* to the book, explaining therein the origin and succession of the different branches of human knowledge, and classifying, after the Baconian method, the various arts and sciences according as they depended on memory, reason, or imagination—the three principal human faculties. This Preface was much admired at the time as a great effort after system, and it was delivered before the Academy on the author's reception, which was itself regarded as a triumph. Diderot undertook most of the articles on the Arts and Trades, to which he gave a large place in the Encyclopædia, revising what he did not absolutely write; indeed, this portion of the work was perhaps the most original of the whole. He was assisted by the Chevalier de Jaucourt, a modest writer, who rejoiced in the drudgery entailed in such an undertaking, and himself wrote nearly half the Encyclopædia; many specialists were also brought in, such as Daubenton for Natural History, Barthèz and Tronchin for Medicine, du Marsais and Beauzée for Grammar, Marmontel for Literature,

and Rousseau for Music. But all the contemporary *grands esprits* of the time were called upon to assist in some way or other—Voltaire, Euler, Morellet, Montesquieu, d'Anville, d'Holbach, Quesnai, and Turgot, the leader of the new school of economists whose teaching was first proclaimed in the Encyclopædia. In the supplementary volumes, Haller, the great physiologist, took part, and Condorcet, whose fate was to be so tragic in the days of the Terror. History and Biography were excluded except when they came in incidentally, and, the object of the book being frankly utilitarian, knowledge was held to be worthy of the name only if it led to some useful invention or discovery.

The prospectus describing the work as one which would form 8 volumes, with at least 600 plates, appeared in November 1750, but before that time Diderot had had much trouble with his pledged contributors, who were mostly in arrears with their articles. To make his difficulties greater, he himself was imprisoned at Vincennes on 29th July 1749 for 28 days, and then kept for three months and ten days a prisoner on parole at the castle, on account of his book entitled *Lettre sur les aveugles.* This, however, did not stop the printing, though, of course, it caused delay.

The clerical party was not long in realizing the dangers that threatened it through a work which preached the negation of the doctrine of innate ideas and gave a new outlook on the world. It saw that a powerful influence was coming into being with the view of attacking its preserves, and the Jesuits especially were jealous of the fact that they had not been consulted regarding the articles on Theology or Religion. They were not appeased by the fact that Diderot and d'Alembert themselves signed articles most orthodox in character. The more cautious amongst the Encyclopædists likewise became alarmed as time went on. Montesquieu declined the articles 'Democracy' and 'Despotism'; Buffon, though he wrote on 'Nature' in 1765, did not love the Encyclopædists; Voltaire, Duclos, Rousseau, and Turgot gradually separated themselves from the atheistical party, though they had been identified with the new movement at the beginning. The first volume of the Encyclopædia appeared in 1751, and the second in January 1752. Jansenists vied with Jesuits in attacking it. The Abbé de Prades, one of the collaborators, was the first to suffer. He had sustained a thesis in which he was supposed to criticize miracles, comparing certain of them with the cures of Æsculapius. Diderot was suspected of being its true author. It was found to be materialistic and atheistic by the authorities, and the Abbé was condemned by the Sorbonne, without a hearing, by 82 votes against 54. He was degraded, and fled to Germany to escape further punishment. Diderot wrote an 'Apology' in his favour—a moderate and well-argued document—but the two volumes of the Encyclopædia that had so far appeared were ordered to be destroyed, by a decree of the King's Council on 7th Feb. 1752.

As a matter of fact, the real effect was to advertise the work. Indeed, the freethinkers were evidently gaining ground. Jansenist and Jesuit were alike reproached for the intestine rivalries which made the Church and its ceremonies fall into contempt. The Government did not long maintain its rigorous attitude, and tried to support first one side, then the other. But the incompetence of the Church favoured the growth of the liberal spirit. Malesherbes, Director-General of the Librairie, almost openly favoured the philosophers, and it was reluctantly that he was forced to issue the decree of 1752. This decree, however, contained no prohibition of the continued publication of the Encyclopædia, or of carrying on an active propaganda by means of brochures warmly accepted by the public, who delighted in finding the Episcopal mandates denounced. The publication of the Encyclopædia itself was regularly continued from 1753 (when vol. iii. appeared) until vol. vii. was reached in 1757. In the meantime Diderot had a remarkable triumph. Just after the decree he was compelled to hand over his papers to the Jesuit cabal, who thought they could themselves have carried on the work. In this they soon found themselves mistaken, and the Government was forced to make application in May 1752 to Diderot to continue the work which his genius was alone able to accomplish.

With the publication of the seventh volume the ferment was renewed, and storms arose which brought the whole agitation to a crisis. The popularity of the book was extending. The subscribers had increased from barely two thousand for the first volume to double that number for the seventh, and the indignation of the clerical party grew in proportion. Diderot, d'Alembert, Voltaire, Rousseau, and Buffon were all supposed to be united in the desire to form a conspiracy to overthrow the existing society. D'Alembert, after being the guest of Voltaire at Ferney and visiting Geneva, wrote an article in which he praised the Genevan ministers for the purity of their lives and supposed heterodoxy of their opinions, in a way which was held to reflect on the Jesuits and Jansenists. Thus a flood of passion was let loose, which was, if possible, increased by the publication by Helvetius of his book *De l'Esprit* in 1758. Helvetius, a generous protector of the *philosophes*, set forth, in four dissertations, opinions often stated in his hearing, and his book was published under royal privilege. The Sorbonne condemned it; it was regarded as an abridgment of the Encyclopædia, and was said to be scandalous and licentious. Helvetius finally retracted his statements and left the country, and the *philosophes* themselves felt that harm had been done to their cause by the book. The Council of State suppressed the privilege conceded to the Encyclopædia in 1746, prohibited the sale of the seven volumes already printed, and on 8th March 1759 disallowed the publication of any further volumes. This was after a commission of theologians and lawyers had been appointed by the court to examine the work, but before they had reported. Yet, curiously enough, the Government did not wish actually to destroy the movement, but merely to adopt such a policy of encouragement or repression as was most convenient to the politics of the time, or possibly such as the caprices of a royal mistress might dictate. An enormous amount of money was involved in the concern, which was an additional complication. The 4000 subscribers had paid in advance their subscriptions of 114 livres apiece. Diderot had prepared 3000 plates, for which, by an absurd anomaly, a privilege was given, as though they could be of value without the text. The printing, however, went on as before, 50 compositors being constantly engaged upon the work.

It was in 1758 that Rousseau severed his connexion with the Encyclopædists by his celebrated letter to d'Alembert on 'Stage Plays,' in reply to the latter's article on 'Geneva,' wherein he had assailed the doctrine that the theatre is an invention of the devil. But this was, of course, only the reason assigned for what implied a real break between the emotional school and that of pure reason. The beginning had been reached of that reign of sentimentalism which, while maintaining the cult of the primitive man as against the product of civilization and reason, introduced the theory of government by means of the sovereign

'general will,' which was soon to be carried to its extreme consequences with such momentous results.

Rousseau's secession was, indeed, a severe blow to Diderot, who had struggled so bravely against continual difficulties and adversity. But a harder blow still was to follow. D'Alembert, his fellow-worker, exhausted by continuous persecution, at last declared his intention of resigning his task, and advised Diderot to do the same. 'I am worn out,' he says, 'with the affronts and vexations of every kind that this work draws down upon us.' Even Voltaire was persuaded that d'Alembert was right, but it was in vain that he pressed his views on Diderot. The latter felt that to abandon a work so begun would be to play into the hands of his opponents and to show a pusillanimous and feeble spirit. Weary as he was of insults from the enemies of reason, he resolved to 'go back to the Encyclopædia.'

It was seven years more before the enormous task was brought to a close, and this consummation was made possible only by the protection of Mme de Pompadour, de Choiseul, and Malesherbes. And it was to Diderot himself that the labour of carrying it to a conclusion fell. Not only had he to write articles on every sort of subject, to edit the articles, and to make explanations of the engravings as well as supervise their production, but he had to do all this in constant fear of interruption by the police. And in the end the production of this immense enterprise, which enriched three or four publishers, left him who had done so much for it a poor man. He himself asks if it is not strange that this is so, but characteristically adds that, after all, he is 'too happy to have lived.' And undoubtedly his reputation spread throughout civilized Europe, along with that of his stupendous work. It was towards the close of it that one of the hardest trials of the many that he had suffered had to be endured. After the delay of 1759, le Breton was entrusted with the printing of the ten remaining volumes in a single issue. Instead of carrying out his orders, he altered the articles in such a way as to delete every reference or statement that might be provocative to the Government, and consequently he mutilated the whole so that it was deprived of all that was most valuable in it. To make matters worse, the original manuscripts were put into the fire. Diderot's wrath and indignation knew no bounds, and for weeks he could neither eat nor sleep. Yet, though his first impulse was to give up his task, he resolutely persevered in it, and in 1765 the last ten volumes of letterpress were issued, though the eleven volumes of plates were not completed till 1772. The general assembly of the clergy on 20th June 1765 condemned the book. This sentence was quashed by the Parliament from hatred to the clergy, but all who owned the Encyclopædia were called on to deliver it to the police, by whom, however, it was eventually returned after some small alterations had been made.

4. **The contributors to the Encyclopædia.**—As regards those who took part in this great work, we must always place **Diderot** at the head. He was the man amongst the rest who thought out not only his plan of operation, but the scientific method of which the book was the exponent. He was, indeed, the great Encyclopædist, he of whom Goethe says that 'whoever holds him or his doings cheaply is a Philistine,' for it would be to show a truly limited understanding not to appreciate at its just value the great idea which Diderot tried to expound—that we must rise not only above the artificialities of the stately classic school of literature associated with the great French dramatists of the previous century, but also above the artificialities of an arbitrary standard of orthodoxy in religion and an untenable theory of government.

'Enlightenment of the understanding' meant, above all, the clear vision that penetrated through these mists and condemned all that could not be distinctly comprehended as unworthy of further notice. It was Diderot, with his very manifest faults of life and modes of expression, who brought unity into a plan in which many men of very different outlook took part. His articles fill 4132 pages, and number 1139; the greater number of them appear in the last ten volumes of the Encyclopædia. His special department in the work was supposed to be Philosophy and the Arts and Trades, but he undertook articles on a miscellaneous number of subjects besides. The minutest care was expended by him in the reproduction of the plates, and it is said that in the chief departments of industry these would serve for practical specifications and working drawings. Diderot himself visited the workshops, examined the machines, had them taken to pieces and put together again, and even learned to work them. In the Encyclopædia attention was, of course, specially concentrated on the physical sciences and the practical arts. Things which can be seen and handled, ideas which do not indicate mere verbal distinctions, as with the schoolmen, or whose essence is found in form rather than in matter, as in some of the great writers of the age just preceding, are the subjects which most attracted the famous Encyclopædist.

D'Alembert (Jean le Rond), 1717–1783, Diderot's fellow-editor, wrote mainly on scientific subjects; and his works on Mechanics and on Natural Science placed him in the front rank amongst the *savants* of his time. Moreover, though to us he may seem heavy and dry in his style, he was said to have the gift of making interesting all that he wrote or said. In any case he obtained great popularity in the salons of the day, more especially in that of Mlle de Lespinasse. But intolerance was his bane, and the anti-religious bent of his mind became a real passion within him. His loss, however, when he retired, disgusted with the difficulties of his work, was a very serious one.

Of the other writers besides Diderot and d'Alembert, **Voltaire** comes first to our mind; he was incessant in his industry and ready to accept any article submitted to him, of whatever kind, and he grumbled at no editorial modification, while he was honest and helpful in telling his friends where he thought they had erred either in taste or in fact. He had the good sense to maintain his objections to the unfortunate policy which the editors sometimes adopted, of allowing statements which they could not justify to appear because of the exigencies of the time. 'Time will enable people to distinguish what we have thought from what we have said,' d'Alembert had to confess. But, before condemning this attitude of trimming the sails to suit the wind, we must recollect the courage that had been already required to say what had been said in face even of physical danger, in days when, as in the time of Louis XV., the Government claimed the right to direct not only the conduct but also the opinions of the subject. The existence of this right, still maintained by him, was one of the causes of the breach which took place with another of the original contributors, **Jean Jacques Rousseau**. He upheld the right of suppressing, by means of the secular arm, opinions that were anti-social. But what really distinguished Rousseau from the Encyclopædists was the fact that his ideas were determined by feeling, while the philosophy of the Enlightenment declared that they ought to be determined by reason only. The artistic renaissance called Romanticism was to come as a reaction from, and at the same time as a comprehensible development of, the

rationalistic doctrines of the French philosophers. Rousseau had the power of sympathizing with the unenlightened, the outside people whom Voltaire designated as 'la canaille,' because he rested his philosophy on those elemental sentiments which were common to all; and the intellectualists consequently failed to comprehend him, as he certainly did not understand them.

Among the other notable Encyclopædists, Helvetius must be mentioned. Of his book *De l'Esprit* we have spoken; it roused keener resentment than perhaps any other book of the time, as tending, in the minds of the orthodox, to engender hatred against Christianity. Even the friends who, like Diderot, admired his work most declined to support the principles on which he rested his judgment. Helvetius' diatribes against the existing Government and the Roman Catholic religion made for revolution rather than for reform, and self-interest and pleasure were frankly advocated as the basis of justice and morality. His philosophy, if philosophy it may be called, was founded on sensationalism in its extremest form. But it is interesting to know that, if his arguments are not profound or convincing, without being the author of a thought-out doctrine of Utilitarianism he helped to inspire Bentham, its great advocate.

Holbach, the author of the *Système de la nature* (1770), which was often ascribed to his intimate friend Diderot, and part of which the latter probably composed, or at least inspired, was the prosperous and hospitable friend of the poorer Encyclopædists, while he also entertained friends from every part of Europe, including Hume, Priestley, and other Englishmen. He gave vent in no stinted terms to his indignation at the existing form of government. Indeed, institutions that had grown up through centuries were alike condemned by him without any effort on his part to determine their real meaning or value; and, unlike some of the other Encyclopædists, he did not restrict his attacks to superstitions or mere sentiments, but boldly advocated war between the governors and the governed. Intellectual deliverance was to him but the first step to converting thoughts into deeds. In reading Holbach now we come to understand how, when these doctrines were drunk in with avidity, the revolutionary maxims so soon became converted into facts.

But Helvetius and Holbach were but one type of Encyclopædists. We have, on the other hand, Turgot, who wrote anonymously some of the most valuable and weighty articles in the book, which he regarded, until he came to distrust its sectarian spirit, as a great instrument for the enlightenment of mankind. Then there was Montesquieu, who died in 1755 and left behind him an unprinted article on 'Taste'; and there were others who, until division arose, contributed to give dignity to the undertaking.

5. Value of the Encyclopædia.—The Encyclopædia itself was unequal, as might be expected from the difficulties under which it was composed and from the scarcity of money with which to pay contributors; some articles were inferior, and, as Voltaire pointed out, they constantly suffered from verbosity and dogmatic modes of expression. D'Alembert himself confessed that this was the case, and Diderot was dissatisfied with the work. The attitude adopted to religion is not by any means consistent any more than the rest. It would be untrue to say that dogmatic atheism was preached, though on the whole the attitude of the book is, of course, critical of orthodox beliefs. The main attack is, however, against Sacerdotalism, against a Church that was corrupt, and against priests who were enemies to society. The object was to teach the value of Science and the reign of Law, and, thereby, to take away interest from the miraculous. The Encyclopædists found such continual occupation in the world as it revealed itself to them that they were content to leave alone what was beyond. The goodness of human nature was taken for granted, and, as was developed in a way more thorough by Rousseau and his followers later on, bad education was held to be responsible for social failure, as bad laws and bad government were blamed for a corrupt State. The earth in which we live is of more interest than a heaven of which we can know nothing surely. Francis Bacon's idea of the systematic classification of knowledge made it seem possible that such classification should be made, and Bacon may be said to have inspired the idea of the Encyclopædia. Diderot himself said that he had 'taught his fellow-citizens to read Bacon.' Newton and Bacon were in the ascendant in the century which produced what Carlyle calls the 'Polemic of a Mechanical Era.'

It is interesting to reflect that from the Encyclopædists proceeds much of the social spirit of modern days. When Diderot teaches us to prevent misery rather than supply refuges for the miserable, he is preaching the latest doctrines in social economics. This, indeed, implies more than at first appears, because it means a break from the churchly doctrine of merely helping the weak and poor because it is a Christian duty, and setting to work instead to see where the 'machine' is working badly and producing these sad and suffering mortals. The one attitude is perhaps as abstract as the other, because, just as we think the machine is being brought into perfect working order, we are pulled up sharply by finding that the individual rebels at having himself regarded as only a part of a beautiful mechanical contrivance, and insists on asserting his individuality. Still, on the whole, the new science is the more hopeful and inspiring of the two, especially to those whose minds require some logical reason for their actions, and who do not want to be controlled simply by sentiment or by the ascetic spirit of religion.

All who played their part in this 'Encyclopædic workshop,' as Comte named it, were bound together in a common fellowship by their work on a common book, in a way probably never known before. But their failing was doubtless that of being abstract in their views of life and the world. The Liberalism of the Enlightenment had the faults as well as the virtues of certain forms of Liberalism in a later age. It freed itself from shackles that were impeding progress in the search for truth. It failed, however, to see that there were in the old rejected forms certain elements of truth that had been overlooked. The Encyclopædists did not consider that, even if knowledge of the useful arts and sciences were brought to perfection and the abuses that menaced society swept away, there would still be the eternal desire for some further explanation of the how and why, some fresh effort to comprehend the mind that understands and gives a unity to the conglomeration of facts presented to it.

END (Germ. *Zweck, Ziel, Ende* [primarily spatial]; Fr. *fin, but*).—The point towards which a process or act is directed; the object of a desire or purpose; the completion or culmination of a process or act. The concept of end is one which enters specially, though not exclusively, into the interpretation of human action. Thus, the scientific worker is said to be aiming at the accurate determination of some aspect of reality, the artist to be striving after a satisfactory form of expression, the moral agent to be attempting to adjust his conduct to certain standards of right living—in each case, that is to say, there is an end in view which is a determinant of action, just as the artificer's operations are determined by the kind of mechanical construction which it is in his mind to produce. The efforts made to express the content of these ends and to relate those in each move to one another in a systematic manner are referred to as constituting a normative or a regulative science. Thus, Logic, which deals with the ends or ideals of scientific activity, Æsthetics, which deals with those of artistic production, and Ethics, which deals with those relating to moral action or conduct, are spoken of as essentially normative sciences. Aristotle made the conception of end familiar to philosophy through his well-known doctrine of the four causes (ἀρχαί), in which he distinguishes the '*final cause*'—to give it its scholastic name[1]—'the purpose or goal,' from the formal cause, the material cause, and the efficient cause. 'The final cause,' he says, 'operates like a loved object' (*Metaph.* 1072*b*, 3). He applies this conception not merely to the interpretation of organic process and moral behaviour, but to the interpretation of the whole of reality, including the physical universe.

'Material causes are only intermediate—merely the means and indispensable conditions of phenomena. Above them stand final causes; above material necessity, the design of the universe; above the physical explanations of nature, the teleological' (Zeller's *Aristotle*, Eng. tr., 1897, i. 458 f.).

We thus have the arduous debate between Mechanism and Teleology explicitly opened—a debate which continues to our own time, and to which the most recent interesting contributions are those of the Neo-Vitalists and H. Bergson (see TELEOLOGY).

A distinction may be made between an end which can be consciously presented or envisaged as the object of voluntary process and an end which is not so presented, but is inferred from the facts of experience. The 'final purpose' of Nature, the 'goal' of progress, the *Summum Bonum*, would be instances of this type. Sidgwick has this distinction in view when he contrasts the Good attainable by human effort and the notion of an Ultimate Good (*Methods of Ethics*[6], p. 3). These two types of end are distinguished by Baldwin respectively as 'subjective end' and 'objective end'—a distinction which is not to be confused with Kant's distinction of subjective and objective finality in the *Critique of the Judgment*. This terminology is liable to misinterpretation under the ordinary acceptation of 'subjective' and 'objective.' 'Subjective' generally implies an element of contingency and arbitrariness, and these characteristics are not necessarily attached to ends of the first type; these ends may satisfy all the tests of objectivity. It would seem to be closer to the facts to distinguish them as 'explicit' and 'implicit' ends.

It is the explicit end of which we have direct experience. This is a cognizable element in the conscious process. In purposeful activity we are aware, on introspection, of an idea or image of some situation or object which is controlling the process. We are conscious of an orientation of the conscious stream in that direction, of a desire for it, of a striving towards it. This conative tendency, as it is called, is maintained and furthered by the presence, in consciousness, of the end; and the striving will continue, through hindrances and difficulties, until the idea is 'realized,' *i.e.* until it becomes literally (or, more precisely, temporally) the end-state or terminus. 'The end after which consciousness strives is, when attained, the termination of the striving' (Stout, *Manual of Psychology*, p. 66). It has to be borne in mind that, while we may say that the striving ceases when the end is reached, it would be injudicious to say that the end is reached *because* the striving ceases. The striving may cease because the end is reached; it may also cease before the end is reached. The end, the attractive idea, may lose its attractiveness and be abandoned, and *ipso facto* we cease to aim at it. On the other hand, there are ends so extensive and complex that we never completely attain them. The striving may not terminate while life continues, but we do not refuse the name of 'end' to the idea which keeps this tendency alive, though in current speech the term generally employed in this case is 'ideal.'

Ethical theory is always theory of ends. It has to do with ends of both the types referred to above. Motived actions, *i.e.* actions into which reference to an explicit end enters, are its data. Its conclusions have reference to implicit ends. A man need not be a moral philosopher in order to be moral. Even the moral philosopher in his daily details of conduct may safely be said to make no explicit reference to the *Summum Bonum*. The ends which regulate the specific acts, however, may appear as the constituents of that system of ends which we call the moral ideal. The acts are valued according to the nature of the explicit end, which is valued in turn by reference to the total system. The reality of this Moral Ideal is not affected by the fact that it is implicit and is not and cannot be an element of immediate experience. See, further, artt. on ETHICS AND MORALITY.

Sidgwick, *Methods of Ethics*[3], London, 1884 [[6] 1905], ch. 1. § 2. See also Literature appended to art. TELEOLOGY.

A. MAIR.

[1] Aristotle himself does not use the term. He speaks of 'the end' (τὸ τέλος), or 'that on account of which' (τὸ οὗ ἕνεκα).

ENEMY.—The significance of the term 'enemy' has altered with the course of centuries. From being ill-defined, it has become highly technical; from being wide of application, it has been confined to the designation of States at war.[1] A sentence in Cicero tells us what was the history of the word in the period within his knowledge: 'Hostis enim apud majores nostros is dicebatur quem nunc *peregrinum* dicimus' (*de Off.* i. 12). The word *hostis*, that is to say, originally meant a stranger, whence it may be inferred that strangers and enemies were at one time practically classed together.

In the earliest times, when there was no such thing as political society, strictly so-called, primitive man gave the name 'enemy' to every one who was not connected with him by ties of blood. Every such alien to the family or tribe he pursued with tireless hatred; he regarded him as lawful prey to be plundered or slain. The tribe was thus a union, on the basis of consanguinity, for purposes of defence and attack. The instinct of co-operation, of which it was partly the expression, gave place only very slowly to a spirit of union of a wider kind. Men became conscious of interests binding together those who worked on a common soil and made it their own by their labour. A

[1] For 'enemy' in the private sense, see HATRED, LOVE, etc.

state of society emerged in which they stood to one another not as kinsmen, but as fellow-citizens. The tribe became the nation, and the ties of kinship lost much of their compelling and restraining power. But the old feeling against aliens persisted under the new determining principle of the spirit of nationality. Among the ancient States, especially in the East, all foreign nations were regarded practically as enemies. In the case of some peoples, as, for instance, the Jews in post-exilic times, this animosity towards strangers was partly due to religious reasons, the monolatry of Judaism stamping all outsiders as heathen and idolaters, enemies of Jahweh, the one God. But the feeling was not very different both in the Greek city-States and at Rome, where a stranger, unless specially commended to protection, was regarded as having no rights at all. In Greece he was everywhere distrusted, and from Sparta excluded altogether. In Rome he could obtain justice only by the friendly offices of a citizen.

In considering the writings of Plato and Aristotle, so far as they bear upon this question, we have to keep in mind that the precept 'Love your enemies' has no place in Greek ethics. In the *Philebus* (49), we find Socrates remarking that it is not wrong to feel joy in the woes of enemies, while it would be very unjust to rejoice in the misfortunes of friends. He also describes barbarians, that is, foreigners, as natural enemies of the Greeks, and condemns war (and the common methods of warfare) only when waged between the Hellenic tribes, which were bound together by the ties of race and religion (*Republic*, v. 470). In the *Laws* (v. 729; ix. 879; xii. 949 f., 952 f.), Plato goes on to discuss the treatment of strangers in Greece, and makes several suggestions of reform. But the high-water mark of Greek thinking on this subject is perhaps attained by Aristotle in his criticism of the guardian class in Plato's ideal State (*Repub.* ii. 375 f.). He complains that the guardians are to be savage to strangers, although affectionate towards their friends, and he uses these words: 'It is not right to be fierce towards any one, nor are magnanimous natures ever savage, except towards persons who injure them' (*Pol.* iv. 7). Aristotle presumably is thinking of direct personal injury, or of the feeling of enmity which Socrates regards as justifiable between the inhabitants of the ideal Republic and the *individuals* in a foreign State who are responsible for initiating war against them (Plato, *Repub.* v. 471).

In these and earlier times the utmost cruelty was permissible towards enemies. Ferocity and lawless savagery characterized all phases of primitive society. Revolting customs were sanctioned by highly civilized States. Hence, even in Aristotle, whose views on war were far in advance of his time, inasmuch as he disapproved of it as an end in itself, we find no criticism of methods of warfare and conquest which we should describe as barbarous. He saw the land of the conquered pillaged and devastated, and non-combatants subjected to slaughter and outrage or sold with their children to slavery; but he seems to have found a sufficiently satisfactory explanation in the consideration that these atrocities were committed against 'barbarians,' people who were 'by nature' slaves. Plato, too, found such practices revolting only between Hellenic tribes, and he makes Socrates express the wish that in the ideal Republic the Hellenes should reserve for war with barbarians the treatment which Greeks now mete out to each other (*Repub.* v. 471).

The responsibility of beginning and conducting war has not long been the prerogative of States. Under the feudal system of the Middle Ages it was especially common for war to be declared by powerful lords, by cities, or provinces. Gentilis, the predecessor of Grotius, was the first publicist who defined war, much as we should define it now, as the just or unjust conflict between States. In Roman law the term 'enemy' was applied to States or individuals between whom had passed a formal declaration of war. But the Roman jurists, except for certain rules regarding the person of ambassadors, hostages, the keeping of treaties, and the like, laid down few regulations as to the treatment of a foe. Ideas of justice to an enemy and humanity to the conquered appear for the first time in Cicero (*de Off.* i. 11). But not until the 16th cent., when Grotius laid the foundation of the modern law of nations in his work *de Jure Belli ac Pacis*, did more humane principles influence the practice of States. At the present day, a traveller or resident in foreign territory is protected by, and answerable to, the law of the land. If, when he is abroad, war arises between his own nation and the country whose hospitality he is enjoying, he is generally allowed to remain where he is, so long as he conducts himself peaceably and loyally. An individual, indeed, is not usually accounted the *enemy* of the State with which the government to which he owes allegiance is at war. War is understood by the law of nations to be between States, not between individuals as such, although an individual may during war acquire what is termed enemy character, either as the owner of property or because of acts done by him as a private person. On the other hand, in so far as business relations are concerned, the subjects of belligerent States are enemies. All ordinary intercourse must cease until the war is at an end.

Hostilities are now carried on subject to a code of general rules which combatants cannot violate without exciting the reprobation and risking the interference of the civilized world. Prisoners and non-combatants alike are free from the severities of warfare, and in defeat their persons can be subjected neither to slaughter nor to outrage. Only such methods are legitimate as are absolutely necessary to weaken the forces of the enemy and compel him to seek peace; and all such as inflict useless suffering are rigidly excluded. Rules relating to the practices of assassination and devastation, and to the use of poison and of arms and projectiles which inflict needless torture, were laid down by the Brussels Conference of 1874. The Brussels code has not yet been made law, but nations which have since that date engaged in war have adhered to the principles embodied in it. See, further, art. WAR.

LITERATURE.—Text-books on International Law; Aristotle's *Politics*; Plato's *Republic* and *Laws*. A very interesting account of what in early times constituted a relation of hostility is found in Sir Henry Maine, *Early History of Institutions*, London, 1875; and reference may also be made to O. Schrader, *Reallex. der indogerm. Altertumskunde*, Strassburg, 1901, p. 256, and A. H. Post, *Grundriss der ethnolog. Jurisprudenz*, Oldenburg, 1894-95, i. 448 f.
M. CAMPBELL SMITH.

ENERGY.—A term borrowed from the Greek to express the mechanical idea of the 'power to do work.' Its etymological import is *something in action* or a name for *action itself*. It is thus the equivalent of 'matter in motion.' Sometimes it is a synonym for 'force' (*q.v.*), which has the same definition, and so means to denote the fact that effects do not take place without causal action, and this causal action for Mechanics is substance or matter in action or motion. But energy also, as denoting 'power,' implies capacity to do work without representing the 'force' or matter as actually in motion. Hence it was divided into 'potential' and 'kinetic' energy. Potential energy is force or matter in a static condition, one which

represents the mere capacity of producing work, but not the actual fact of producing it. Kinetic energy is 'force' in action or actually producing work. Thus snow lying on the mountain side may be conceived as potential energy. But when melted into water and flowing down the stream it is kinetic energy. A spring resting without strain is potential energy; the same spring bent or pressed down and exerting strain is kinetic energy. Hence any matter or force in a passive or static condition is potential energy; the same substance in motion or exerting pressure, strain or pulling power, is kinetic or dynamic energy.

In the practical problems of Mechanics it becomes important to measure energy, and some standard for the purpose had to be obtained. The first step in the direction of obtaining such a standard was to assume some constant form of energy and measure it in some way. It was known that it took a certain amount of energy, not measured, to raise 1 lb. a foot high, and twice this amount of energy to raise 2 lb. the same distance, or 1 lb. two feet high. This relation served as a means of determining some criterion to measure the amount of energy doing work, and this criterion could be found in the amount of work done. This unit of work done is called the 'foot-pound.' Gravity is the constant by which we may determine this; hence we may take the energy employed in moving an object a given distance vertically as the equivalent of gravity, and so obtain a standard for its measurement.

In fixing this standard 'we must choose our unit of work,' says Balfour Stewart, 'but in order to do so we must first of all choose our units of weight and of length, and for these we will take the *kilogramme* and the *metre*, these being the units of the metrical system. The kilogramme corresponds to about 15,432·35 English grains, being rather more than two pounds avoirdupois, and the metre to about 39·371 English inches. Now, if we raise a kilogramme weight one metre in vertical height, we are conscious of putting forth an effort to do so, and of being resisted in the act by the force of gravity. In other words, we spend energy and do work in the process of raising this weight. Let us agree to consider the energy spent, or the work done in this operation, as one unit of work, and let us call it the *kilogrammetre*. In the next place, it is obvious that if we raise the kilogramme two metres in height, we do two units of work, if three metres, three units, and so on. And again, it is equally obvious that if we raise a weight of two kilogrammes one metre high we likewise do two units of work, while if we raise it two metres high we do four units of work. From these examples we are entitled to derive the following rule:—*Multiply the weight raised (in kilogrammes) by the vertical height (in metres) through which it is raised, and the result will be the work done (in kilogrammetres).*'

By a process based upon the velocity which gravity gives falling bodies it is possible to calculate this energy, and so to determine a formula for practical use in mechanical operations. This calculation shows that *energy is proportional to the square of the velocity of objects*. Taking M to stand for the mass and V for the velocity, this formula is MV^2. Now gravity accelerates the velocity of falling bodies at a certain constant rate. One half of this divided into this formula gives the actual amount of energy expended in the operation. Hence $\frac{1}{2} MV^2$ represents the formula for measuring the amount of energy in any special case.

The total amount of energy in the world is supposed to remain the same at all times. This conception has given rise to the doctrine of the Conservation of Energy. The sense in which Mechanics or Physics asserts this doctrine is that the sum of potential and kinetic energies remains the same in all operations, and not that there may be no increase or decrease of either of them. If a ball is propelled upwards at a certain velocity its energy will be measured by the formula above given, and it will come to rest when gravity has overcome the energy of propulsion. Its initial velocity represents energy of the kinetic sort. When completely arrested its energy will be potential. At any point between the initial motion and its stoppage the sum of the potential and kinetic energies will be equal to the kinetic energy at the outset, the potential energy being nil at that point. This is what is meant by a conservative system of forces, and the expression Conservation of Energy expresses the fact.

Another import has been given to this doctrine in the idea that the kinetic energy of a system remains the same in all transformations, and it gives rise to some difficulties in accounting for the phenomena of change, especially of change from kinetic to potential, from dynamic to static conditions. The best conception of this situation is *Correlation* rather than Conservation of Force or Energy. The former suggests a conception of identity which seems not to be a fact in the transformations. Hence, in consequence of this equivocation in the doctrine of the Conservation of Energy, a controversy arises between philosophy and mechanical science. But, with the correction of the phrase suitable to the different problems involved, there is no occasion to do more than insist upon the equivocation, and so question the relevance of the physicist's inference from his mechanical use of conservation to the denial of the philosopher's doctrine of change, especially of facts that involve qualitative change.

Recently a doctrine of 'energy' has arisen which regards it as a 'substance.' The mechanic treated it as a property or quality of matter for doing work. But certain metaphysical propensities, on the one hand, and the implications lying at the basis of the distinction between kinetic and potential energy, on the other hand, created the need of a term for something which the scientific metaphysician—for that is what he was—wanted to distinguish from matter, on the one hand, and its properties, on the other. 'Energy' was thus made distinct from 'force' and 'matter.' It might lie at the basis of both, but it was distinct from them. Ostwald is perhaps the leading representative of this school. It does not express anything different, however, from that of those physicists who conceive the ultimate basis of material phenomena in terms of matter or ether, and only serves to eliminate the idea of inertia where 'matter' seems to imply it. We see, therefore, no reason for attaching any special importance to the doctrine.

LITERATURE.—Balfour Stewart, *The Conservation of Energy*[2], Lond. 1874; A. Daniell, *Principles of Physics*, do. 1884; Lord Kelvin, *Elements of Natural Philosophy*[2], Camb. 1879; *EBr*[11], art. 'Energy.'

JAMES H. HYSLOP.

ENHYPOSTASIS.—The term is one of a series—'hypostatical union' 'anhypostasis,' 'enhypostasis'—used to cast light on the constitution of the Person of Christ. The Christology of the Council of Chalcedon (A.D. 451) postulates in Christ the unity of two distinct natures—the Divine and the human—in a single person. This is called in theology the 'hypostatical union.' Since, however, the personality is assumed to belong exclusively to the side of the Divine—*i.e.* it is the eternal, pre-existent Son who has entered humanity—it would seem to follow that the humanity of Christ must be conceived of as impersonal. Church doctrine, therefore, has very generally affirmed the impersonality (*anhypostasia*) of the humanity of Christ. But the difficulty is obvious—How can an impersonal humanity be conceived of as a real or entire humanity? Does not the very peculiarity of man as rational lie in his possession of self-consciousness and will? And is a being possessing these attributes not already personal? To avoid this difficulty, the idea was hit upon of describing the humanity of Christ not as 'im-personal,' but as 'en-personal.'

The doctrine of *enhypostasis* is already met with in Leontius of Byzantium (A.D. 483–543), but is specially developed by John of Damascus (*c.* A.D. 750). It agrees with the other view in holding, in opposition to Nestorianism, that the human nature of Christ never subsisted in a personality of its own; that it was assumed by, and subsisted only in, the person of the Divine Logos or Son. But it avoids the unfortunate suggestion (which is not in the least intended) in the word *anhypostasia* of a possible independent impersonal existence of Christ's human nature, and lays emphasis on the idea that the humanity from the beginning subsisted 'in' the person of the Logos. Plainly, however, this does not remove the essential difficulty that it is a Divine, not a human, personality that we have in Christ. Many modern theologians would solve this by rejecting altogether the doctrine of the two natures, and boldly affirm that the personality lies wholly in the humanity; but it is very difficult to keep this view from passing into pure humanitarianism. If a solution is to be found, it is probably in the line of recognizing the essential kindredness of humanity to the Logos in which it is grounded, and which, in the Incarnation, appropriates humanity to itself as the organ of its own personal manifestation. The Logos is the personal centre, but under conditions truly and perfectly human—'The Word *became* flesh, and dwelt among us.'

JAMES ORR.

ENLIGHTENMENT, THE.—In its most general sense the term 'Enlightenment' (Germ. *Aufklärung*) indicates the first of the two periods through which modern thought has passed; or the development of philosophy from Bacon's *Novum Organum* (1620) to Kant's *Kritik der reinen Vernunft* (1781). But a more critical view of the period, with its characteristic ideals, reveals the fact that the beginning of the period must be dated from Hobbes (1588–1679) rather than from Bacon, whose freer and more cultural philosophy belongs to the Renaissance. As a further limitation, it must be observed that the Enlightenment hardly included the greater philosophic works which appeared contemporaneously with it. Though Locke (1632–1704) was connected with the movement, it was not by means of the *Essay concerning Human Understanding* (1690), but through his minor works on rights and religion, that the relation was sustained. Spinoza (1632–1677) in his *Ethica* (1677), with its Cartesian foundation, was innocent of the movement; but in his theologico-political writings, inspired as they were by Hobbes, he takes up some of its peculiar problems. In his *Treatise on Human Nature* (1738), Hume was as studious as Locke to avoid the rationalism of the Enlightenment, whose principles he criticized in his *Dialogues concerning Natural Religion* (1777). Kant's relation to the movement is discoverable, not in the *Kritik*, but in his lesser works on natural rights. Thus appearing in the minor writings of the great thinkers, the philosophy of the Enlightenment was elaborated by a host of semi-philosophical thinkers, who ignored the fundamental problems of logic and ethics, for the sake of settling practical questions of Church and State. Nevertheless, the Enlightenment possessed the spirit of the larger philosophy, even where it was unable or unwilling to pursue its method. This spirit was a regressive one, according to which the age endeavoured to return to fundamentals. With Descartes (1596–1650) the tendency manifested itself in the desire to premise a first principle of all thinking, the *cogito, ergo sum* (*Meditation II.*); Locke was equally anxious to elucidate the native principle of cognition when he styled the mind a *tabula rasa* (*Essay*, bk. i.). The same radical spirit was shown in practical philosophy, as when Herbert of Cherbury sought the true faith in the original *religio naturalis* (*de Veritate*, 1624), and Grotius attempted to find the true principle of law in the *jus naturale* (*de Jure Belli ac Pacis*, 1625). In a manner less definite and logical, the Enlightenment insisted upon 'nature' and 'reason,' without precisely stipulating what these ideas should denote. The method of the movement, guided as it was by the regressive spirit of the 17th cent., consisted in establishing contrasts between things established by authority and tradition and those erected through freedom and reason. This conflict between reason-rights and tradition-authority thus recalled the ancient Sophist contrast between φύσις and νόμος, the exact reiteration of which may be found in Cudworth's *Treatise concerning Eternal and Immutable Morality*, 1678 (bk. i. ch. i.). The practical result of this method of thought was to create an opposition to history, the source of tradition and authority, and to instil a belief in the eternity of 18th cent. ideals; coupled with this dogmatism was an attack upon positive religion and an antipathy to the idea of progress. Emancipating itself from the past, and feeling no need of a future, the Enlightenment was possessed of an optimism which believed that human reason was able to solve all problems and cure all ills. The leading questions of the Enlightenment had to do with (1) Natural Rights, (2) Free-thought and Toleration, (3) Rational Christianity, and (4) Natural Religion.

1. Natural rights.—It is with the name of Hugo Grotius (1583–1645) that the history of Natural Rights begins. Anticipated by Bodin's *Six Livres de la République* (1575), with its insistence upon the historical theory of rights, as also by Gentilis' *de Jure Belli* (1588), with its direct deduction of rights from Nature, Grotius' great work, *de Jure Belli ac Pacis*, was able to make use of the empirical in the one and of the rational in the other. The psychological basis upon which Grotius rears his juristic system was found in man's natural tendency towards the formation of society; this is attributed to the social instinct within him, as also to the particular gift of language, with its social possibilities (*op. cit.*, Prolegomena, §§ 7–8). From the logical standpoint Grotius argues, from both *a priori* and *a posteriori* principles, that natural rights are in harmony with human nature. *A priori* it was urged that *jus naturale* was so native to man that he could not be conceived of as existing without it, while the common consent of mankind argues, as from effect to cause, that, since the principle of rights is universal, it is also necessary to the human race (*ib.* I. cap. i. xii. § 1). In his enthusiasm over the rational principle of rights, Grotius was led to assume a radical position in theology, in accordance with which he asserted that the principle of rights would hold though we should assume that there is no God (*ib.* Proleg. § 1). Natural law is thus conceived of as following from the nature of things, while the law of God is dependent upon His will. The blunt way in which Grotius expressed this Thomism seems to produce the impression of atheism, and it was to the dual extremes of *ni dieu, ni maître* that this philosophy was destined to evolve. The Divine law was conceived as coming to man by means of tradition as something authoritative; having thus expressed himself, Grotius creates the dualism of *jus* and *lex*, *ratio* and *traditio*. It was in this way that the Enlightenment learned to despise the historical and to repose in the purely rationalistic.

In England, the philosophy of rights was con-

tinued by Hobbes, who developed a theory alien in character to that of Grotius. The failure of Bacon to participate in the discussion is one of the striking features of 17th century thought. Lerminier says:

'Chose remarquable! Bacon n'emploie pas une seule fois le mot *jus* comme représentant le droit même dans sa nature et dans sa substance. Le droit, *jus*, n'est pour lui que la collection des lois positives: il n'a donc pas traité de la justice universelle' (*Hist. du Droit*, 1829, p. 113).

In the hands of Hobbes the Grotian principle of rights underwent a double transformation; where Grotius was optimistic in measuring man, Hobbes was pessimistic; and where the one had been inclined to the social, the other turned abruptly to the egoistic. According to Hobbes, man is so constituted as to seek his own private benefit, being urged on by inexorable forces, and being further incapacitated to appreciate the condition of another's mind. The pessimistic conclusion drawn from these egoistic premisses appears when Hobbes, adding to Grotius' idea of *jus naturale* that of *status naturalis*, concludes that the native condition of man was one of 'war of all against all' (*Leviathan*, 1651, ch. xiii.). Such were the principles upon which Hobbes sought to erect a philosophy of the State, the essence of which consisted in the idea that the passage from the natural condition of *jus*, or *libertas*, to the civil condition of *lex*, or *obligatio*, is by means of contract, in accordance with which each individual surrenders his rights in consideration of a similar act on the part of others (*de Cive*, 1642, i. § 2). In connexion with this mechanical theory of the origin of the State, Hobbes introduced an ethical philosophy in which good and bad, instead of being conceived of as intrinsic, were looked upon as relative to the well-being of mankind—a view which was opposed by the absolutism of Cudworth and Clarke. For the development of the philosophy of rights the Enlightenment was indebted to Pufendorf (1632–1694), who sought to combine the social in Grotius with the selfish of Hobbes.

In the preparation for the schemes of free-thought and toleration, rational Christianity and natural religion, the juristic theories of Spinoza and Locke were of much moment, however secondary they may have been in the theory of natural rights as such. In his theory of rights, Spinoza stands closely related to Hobbes, although his own conception of Being as an all-inclusive substance in which all particular things participate (*Ethica*, pt. i.) was influential in the deduction of a principle of absolute rights as lodged in the Deity, to be derived from Him by the rational creatures which participate in His being (*Tractatus Politicus*, 1677, ii. § 18). Spinoza is quite frank in his assertion that right is equivalent to power, as this reposes in the Deity and is further found in man. In man appear the functions of desire and reason; in the former are found hope and also the instinct of self-preservation; in the latter, the wisdom that enables man to form the State and thus free himself (*ib.* ii. § 18). As Spinoza had carried out the harsh ideas of Hobbes, Locke advanced a theory of rights suggestive of Grotius' mildness. In particular, he put forward a more temperate view of the natural state of mankind, as well as a more rational conception of the origin of society. With Locke, the state of nature no longer signified the 'bellum omnium contra omnes,' but indicated a condition of things marked by the absence of external authority. Accordingly he says:

'Men living together according to reason and without authority to judge between them is properly the state of nature. But force, or the declared design of force upon the person of another . . . is the state of war' (*Two Treatises of Government*, 1690 [*Works*[11], 1812, v. 348–349]).

Like Grotius and unlike Hobbes, Locke believed that man has a natural appetite for society, so that his natural condition is not the impossible *status naturalis*. In this connexion, Locke attempted to show that the state of nature had existed in human history, and thus, in his work *On the Roman Commonwealth* (1660), he says:

'Romulus at the head of a numerous colony from Alba was the first founder of the Roman State; this colony was in the original state of nature, free and independent of any dominion whatsoever' (*Life of John Locke*, by Fox Bourne, N.Y. 1876, i. 148).

This conception of man's original condition made it possible for Locke to give a more plausible explanation of the origin of the State in a contrast between man and man rather than between man and the magistrate.

The juristic element in the thought of the Enlightenment, fated as it was to become an important factor in the development of Deism (*q.v.*), was not overlooked by the Deists themselves, however little they had to contribute to the philosophy of rights as such. Indeed, the common ground upon which the greater modern thinkers, like Locke and Spinoza, and the uncultured Deists, like Tindal and Chubb, were to meet was the juristic one. Free-thought was thus a great leveller; hence Warburton, quoting Swift, said:

'No subject but religion could have advanced Toland into the class of reputable authors . . . no subject but religion could have sunk his lordship [Bolingbroke] so far below it' (*Divine Legation of Moses*[5], 1746, v. 440).

Among the Deists, Tindal was the first to identify himself with the natural-rights movement, in connexion with which he shows himself to be a follower, first of Hobbes, then of Spinoza, and finally of Locke. In his *Essay concerning the Laws of Nations and the Rights of Sovereigns* (1694), he urges 'egoism' as the 'source of all man's actions and the foundation of his duty to God and man' (*op. cit.* 121). The *Essay on the Rights of Mankind* (1697) discusses the *status naturalis*, while the author's more complete philosophy of rights appears in *The Rights of the Christian Church* (1706), a work which connects the political philosophy of the Enlightenment with Deism. In this work, Tindal contends against established religion, on the ground that men are in a religious state of nature, 'subject only to God and their own consciences' (*op. cit.* 2). Without analyzing the inner nature of the principle of rights, Toland (1670–1722) advanced principles of practical rights and freedom. These appear in his *Life of Milton* (1699), as also in *Amyntor* (1699), the defence of it. A more definite relation to the philosophy of rights was sustained by Toland in his *Paradoxes of State* (1707), and *The Art of Governing by Parties* (1707); while more philosophical views are expressed in his *Anglia Libera* (1707), wherein he discusses questions of political contract and the ideals of a commonwealth (*op. cit.* 92). Chubb had a very meagre relation to the movement, as appears from his *Enquiry concerning Property* (1717), and *Some Short Reflections on the Ground and Extent of Authority and Liberty* (1728). Insignificant as were these Deistic attempts at elaborating a philosophy of rights, they are of great value in showing how closely connected were the principles of theology and politics—a connexion which will appear more convincing in relation to the question of free-thought and toleration. The purely political philosophy of the Enlightenment, dependent as it was upon Hobbes and Locke, underwent a development which in France was practical, in Germany speculative. Rousseau carried out Locke's idea of government by contract, the theory of which he projected in *Le Contrat social* (1762). In Germany, Kant attempted a theoretical deduction of *jus naturale* in his *Metaphysische Anfangsgründe der Rechtslehre* (1797), in which he reasons from the *status naturalis*, not as though it had been a real condition of mankind, but as a hypothetical condition upon the grounds

of which human rights might be deduced. The process is continued in Fichte's *Grundlage des Naturrechts nach den Prinzipien der Wissenschaftslehre* (1796), in which the relation of ego to non-ego is transformed into the relation of the individual to society. A similar application of the Enlightenment's philosophy of rights was made by Schopenhauer, who interpreted the Hobbist 'state of nature' in the light of the 'will to live' (*Welt als Wille und Vorstellung*, 1819, § 62).

2. **Free-thought and toleration.**—Free-thought was the minor premiss in an argument wherein natural rights was the major premiss and natural religion the conclusion. Inherent in Protestantism, the principle of freedom had further been employed by Grotius when he elaborated his principle of rights, especially at the point where he asserted the validity of 'jus naturale non esse Deum.' Hobbes had defined *jus* as *libertas*, and had contended against the 'captivity of the understanding' (*Leviathan*, ch. xxxii. p. 360). Spinoza, however, was the first to perfect an argument for freedom as something native to the human mind. According to the Spinozistic theory of natural rights, right is equivalent to power, so that one may do whatever he is able. Now thought, by its very nature an inner and individual process, is something over which no one but the individual himself can possibly exercise power (*Tractatus Theologico-politicus*, 1670, cap. xvii.). As with thought, so likewise with worship; its inner nature is such that it can be conceived of as undergoing no interference from an external power, although the magistrate may with power and right enjoin duties of justice and charity (*ib.* cap. xviii.). In making this distinction of the inner and outer, Spinoza sought to free science from religion, and to separate philosophy from faith, such a separation constituting the essential aim of his work (*ib.*). To arrive at this end, he defines one in terms of speculation, the other in those of practice: 'Ratio regnum veritatis et sapientiae; theologia autem pietatis et obedientiae' (*ib.* cap. xv.). Not only as a matter of natural rights in the individual, but likewise as the most rational law for the State, is the principle of toleration to be upheld. Such was the motto of Spinoza's work. His relation to Deism was an indirect one, for he made little appeal to the average free-thinker, hence the omission of his name from the list of free-thinkers from Socrates to Locke which Collins gave in his *Discourse of Free Thinking* (1713). Nevertheless, Deism was not unaware of Spinoza, while his logic of free-thought sometimes appears in its literature. Evidence of Spinoza's direct connexion with natural religion as a system is found in Kortholt's *de Tribus Impostoribus* (Herbert, Hobbes, Spinoza), 1680. Connected as was his name with these two greater thinkers, Spinoza was supposed to have influenced Toland and Tindal. Warburton called Toland the 'mimic of Spinoza' (*Divine Legation of Moses*[5], iv. 273), and both the pantheism and free-thought of this Deist may serve to indicate the nature of the imitation. With regard to Tindal, the controversy over natural religion brought forth the following rhyme:

> 'Spinoza smiles and cries, the work is done.
> Tindal shall finish (Satan's darling son)—
> Tindal shall finish what Spinoza first begun.'

Without any theoretical preliminary, Hobbes had anticipated Spinoza in proposing principles of toleration, the result of whose application was destined to become momentous in the history of Deism. The principles upon which Hobbes sought to base toleration consisted of two articles of Christian faith: the Deity of God and the Messiahship of Jesus. Belief in the existence of God as an existence, with attributes of a negative, superlative, or indefinite nature, involves the end of all true worship. That Jesus was the Christ was regarded by Hobbes as the other article of free faith, and this simple creed was in his mind the burden of the Gospels and the testimony of the Apostles as recorded in the Acts (*de Cive*, cap. xviii.). Rational Christianity and natural religion, with their maxims of the mere Deity of God and the mere Messiahship of Jesus, were thus practical political principles used in a controversy over Church and State, rather than speculative ones deduced in a disinterested fashion. This practical tendency reappears in Locke, whose sensationalism would have been as ineffective as Hobbes' materialism if their authors had been called upon to employ speculative instead of practical methods in the controversy. Like Spinoza, Locke insists upon the inwardness of religious belief, and thus argues that,

> 'although his (the magistrate's) opinion in religion be sound and the way that he appoints truly evangelical, if I be not thoroughly persuaded in my own mind, then there will be no safety for me in following it' (*A Letter for Toleration*, 1689 [*Works*[11], vi. 17-26]).

In insisting that speculative articles and opinions should not be imposed by law, Locke was not prepared to consent that the right of toleration should extend to the atheist, for the reason that with him the oaths and bonds of civil society could be of no avail. 'The taking away of God dissolves all,' declared Locke, who was still anxious to reduce the idea of Deity to a minimum (*ib.* 47). Having thus indicated the lower limit of religious belief, Locke furthered the formation of the Deistic code when he contended that the minimum of Christian belief which the State might enjoin consisted in the death and resurrection of Christ (*A Third Letter for Toleration*, 173–177). On the negative side, he insisted that it was not necessary for the subject to believe in the Athanasian Creed (*ib.* 410), so that his Deism was a mean between the extremes of atheism and orthodoxy. The magistrate cannot enforce a religion as true, 'unless the Law of Nature deliver into his hands the xxxix. articles of the one and only true religion' (*ib.* 428).

Among the Deists, who were beginning to make an impression as free-thinkers, the work of toleration was taken up when Tindal wrote his *Essay concerning Obedience to the Supreme Powers* (1694), in which he declares himself a follower of Locke, when he says:

> 'The author of the *Letters for Toleration* is the first who has ventured to assert the justice and necessity of toleration in its due and full extent' (*op. cit.* 130).

Tindal's more independent argument for freedom appeared in his tract, *A Discourse on the Liberty of the Press* (1698), wherein he pleads for freedom on the ground that, since reason is the only light that God has given man, he will be held responsible for the proper use of his faculties; whence the necessity of a free press, in order that men may perfect their faith by the free interchange of opinion (*op. cit.* 294). In his *Essay concerning the Power of the Magistrate* (1697), Tindal attempts a practical definition as the 'belief of a God, and the sense and practice of those duties which result from the knowledge we have of Him and ourselves' (*op. cit.* 130). But the most characteristic work on free-thinking that Deism was to produce appeared in 1713, when Anthony Collins (1676–1727) produced his *Discourse of Free-Thinking*, in which toleration, instead of being derived *a priori*, was based upon practical grounds. According to Collins, free-thinking in theology is as necessary as in other sciences, for the reason that theology involves these in its treatment of Nature and history (*op. cit.* 12). As with science, so with re-

ligion; since uniformity of opinion among men is impossible, it is best for each to judge independently, so that the 'surest and best means of arriving at truth lies in free-thinking' (*ib.* 33). Collins even goes so far as to assert that the manifest design of the gospel was to set all men free-thinking, as the Apostles urged them to abandon an established religion for a faith wholly new to them. With regard to his own day, Collins contends that, in view of various alleged revelations, as the Zend-avesta and the Bible, and owing to the different views of God and the Scriptures within the Church itself, it has become necessary to adopt free-thinking as the only possible means of setting one's self right in religion (*op. cit.* 48–90). In the hands of Collins the principles of free-thought were separated from the juristic philosophy of the Enlightenment and transformed into the special pleading peculiar to Deism.

3. Rational Christianity.—From its beginning in Hobbes, the theory of toleration had proceeded upon the assumption that the principles of Christianity may be stated in a manner so simple that it will satisfy the State in its demand for law and at the same time content the free-thinker in his claims for the rights of toleration. It was in this mediatorial spirit that Hobbes and Locke had sought to base rational Christianity upon the idea of God as mere existence, and Christ in His mere Messiahship. Now was to follow an independent treatment of the problem. Before Locke had written *The Reasonableness of Christianity* (1695), Arthur Bury published *The Naked Gospel* (1690), the aim of which was to advance the interests of natural religion, whose primary principle was faith (*op. cit.* 10). In the particular case of Christianity this general religious function operates as a belief in Christ as the Messiah (*ib.* 39). Such was also the view of Locke, who outlined his theology against the background of his philosophy of toleration. By appealing to primitive Christianity, Locke argued that the original article of belief and the sole test of discipleship among the Apostles consisted in the creed that Jesus was the Christ, so that to believe in Christ meant to credit His claims to Messiahship. The first principle of Christian ethics was that of repentance.

'These two,' says Locke, 'faith and repentance, *i.e.* believing Jesus to be the Messiah, and a good life, are the indispensable conditions of the new covenant, to be performed by all who would obtain eternal life' (*The Reasonableness of Christianity* [*Works*[11], vii. 105]).

This simple gospel was in Locke's mind the burden of St. Paul's preaching, and all that he advanced as necessary to salvation. With regard to the Pauline theology, as developed in the Epistles, Locke can only plead that these writings were intended for those who were already Christians; hence they 'could not be designed to teach the fundamental articles and points necessary to salvation' (*A Vindication of the Reasonableness*, etc., 1695, p. 167). As an empiricist, Locke would have had no right to use the term 'reasonableness,' but his employment of the term was political rather than philosophical, his contention practical rather than speculative. A century later, on the decline of Deism, Kant followed a similar course, except that, instead of passing from rights to religion, he reversed the process; and, having written a rationalistic treatise on Christianity, *Die Religion innerhalb der Grenzen der blossen Vernunft* (1793), he followed it up with a juristic defence of freedom, the principles of which are found in his *Rechtslehre* (1797). Thus, from Hobbes to Kant the principles of theology were closely connected with those of natural rights.

As the practical phase of Locke's philosophy had been of great moment in the formulation of the Deistic creed, so the speculative part of his system received Deistic recognition when Toland produced his *Christianity not Mysterious* (1696), a work suggestive of Bury's *Naked Gospel*. Toland's contention was that there was nothing in the gospel contrary to or above reason, so that no Christian doctrine could be called a mystery (*op. cit.* 6). [For a full account of Toland's views, see art. DEISM, in vol. iv. p. 534 f.] The next step in Deism was to attack the accounts of the miraculous as given in the Gospels. Accordingly, Collins, who had completed his theory of free-thought, inaugurated the attack upon mystery when he sought to invalidate the testimony of the prophets. Where William Whiston, in the Boyle Lectures of 1707, had contended for a single, Messianic sense in the interpretation of prophecy, Collins contended that the prophecies usually cited have in them a sense which is not Messianic at all, and that the application to the life of Christ, as in the case of the citations made in Mt 1 and 2, is to be understood in a purely allegorical or mystical manner (*The Grounds and Reasons of the Christian Religion*, 1724, p. 106). The reply to this Deistic work which was made by Edward Chandler, in *A Defence of Christianity from the Prophecies* (1725), so involved the question of miracles that it formed the starting-point for William Woolston's *Discourses on Miracles* (1727–1729), inaugurated as they were by his work, *The Moderator between an Infidel and an Apostate* (1725). With some of the miracles recorded in the New Testament, Woolston resorts to the allegorical method of interpretation (see *Discourses* i., ii., iii., iv.); others, which deal with the raising of the dead and the resurrection of Christ, are regarded as incredible. This negative attitude towards miracles formed the basis of Peter Annet's attack upon the credibility of the resurrection, the Gospel account of which he deemed a forgery (*The Resurrection of Jesus Considered*, 1744, p. 22).

This destructive treatment of Christianity was accompanied by an attempt to construct a rational Christianity, based upon the teaching rather than the person of Christ. The way for this had been prepared by Hobbes and Locke, in their plea for toleration upon the basis of the mere Messiahship of Jesus, while it was also an expression of the Socinian element in Deism. Locke's *Reasonableness of Christianity* had come in for some criticism as a Socinian work when John Edwards wrote his *Socinianism Unmasked* (1696), while in Warburton's mind Deism was a 'modern fashionable notion, not borrowed from, but the same with the Socinian' (*The Divine Legation of Moses*[5], i. 56). The most characteristic defender of this milder form of Deism was Thomas Chubb (1679–1747), who had made his entrance into the field of controversy by means of his Socinian work, *The Supremacy of the Father* (1715). Chubb's chief contribution to Deism was *The True Gospel of Jesus Christ* (1738), in which materials suggestive of Hobbes' hedonism are expressed in a form peculiar to Herbert's natural religion. The essence of Christianity and the person of Christ are treated in a purely utilitarian manner; accordingly, Chubb asserts that what fits a man for future felicity tends to make him happy here, so that, when the gospel is found to subserve man's present and future well-being, it may be called 'true' (*op. cit.* 4), just as the author of it may be called the 'greatest benefactor of our species' (*ib.* 16). Chubb's more precise formulation of his rationalistic Christianity involved three articles, as follows: (1) conformity of life to the rule of action founded upon the nature of things; (2) repentance and reform where one has violated this rule; (3) a future judgment where requital or

condemnation will be meted out according to conformity or non-conformity to the rule of right action (*ib.* 17). In adopting these principles of natural religion, Chubb abandoned the hedonism of Hobbes for the rationalism of Cudworth and Clarke. In the same spirit Thomas Morgan († 1743) attempted to connect the gospel with the religion of Nature, by regarding Christ as the Teacher who brought to light the 'true and genuine principles of nature and reason' (*The Moral Philosopher*[2], 1738, p. 144). Bolingbroke (1698–1751) attempted a distinction between the natural religion of Christ and the spurious religion of St. Paul and his followers; and, just as Lessing distinguished between the religion of Christ and the Christian religion, so Bolingbroke declared that 'the Gospel of Christ is one thing, the Gospel of St. Paul and all those who have grafted after him on the same stock, another' (*Philosophical Works*, 1754, p. 313). Christianity was to Bolingbroke 'a complete but plain system of natural religion' (*ib.* 316). Thus shorn of its mysteries of prophecy and miracle, the Christianity of Deism had become identified with the system of natural religion.

4. **Natural religion.**—As the doctrine of natural rights, with its corollaries of free-thought and toleration, had led to the formulation of rational Christianity, so natural religion employed a different logic to arrive at the same conclusion. The first movement, inaugurated by Grotius, was practical; the second, which sprang from Herbert, was speculative. Herbert's work *de Veritate*, appearing one year before that of Grotius, investigated natural instinct in its logical form as Grotius examined its ethical nature. Both thinkers attempted an *a priori* deduction of a natural principle, whose existence in human nature was then corroborated by an *a posteriori* investigation of human history; in both alike we find the appeal to the *instinctus naturalis* and the *consensus universalis*. [The contentions of the *de Veritate* will be found in art. Deism, vol. iv. p. 533.] Herbert's view of religion, naively conceived, and wanting in the inexorable rationalism and secularism of the Enlightenment, was destined to be prophetic rather than constructive in the career of natural religion, whose fundamental principle was that of the 'reason of things.' Hence, after the appearance of Herbert's work, the interest of the Enlightenment pursued the juristic of Grotius rather than the rationalistic of Herbert, the two tendencies uniting in the first quarter of the 18th century. This unity of natural religion and natural rights appeared in Charles Blount († 1693), who considered Herbert's five articles of universal belief to be the best ground for toleration (*Religio Laici*, 1683). In Blount's *The Oracles of Reason* (1693), the term 'Deist' is found, this being one of the earliest instances of its occurrence.

Without any dependence upon Herbert, Samuel Clarke exercised the same speculative freedom manifested in the former's *de Veritate*, while he enriched Deism with something like a theistic philosophy. Written in opposition to Spinoza, as also to Hobbes, Clarke's *Demonstration of the Being and Attributes of God* (1704–1705) was so devoted to the 'nature of things' as a first principle that it never freed itself from a kind of Spinozistic pantheism—a fact which did not escape the notice of William Carroll in his *Remarks upon Mr. Clarke's Sermons* (1705), while in recent years its importance has been re-considered by R. Zimmerman (*Samuel Clarke's Leben und Lehre*, Vienna, 1870). With Clarke the idea of God is thus closely connected with that of the reason of things, so that his theism or Deism tends to uphold a noetic system, Thomistic and Cudworthian in the extreme. With his implicit faith in the mathematical analogy, Clarke asserts that God must be thought of as eternal and necessary, just as twice two must be thought of as equal to four; as a necessary Being, God is thus the ground of His own existence (*Works*, 1732–1742, iii. 5). Identified with the nature of things, the Deity is called upon to will in accordance with the necessities which these things impose. In this connexion Clarke introduces the ethical as a determinant of the real; thus he says, 'To will things to be what they are not is as absurd as to believe that twice two is not equal to four' (*ib.* ii. 586). In thus arguing, Clarke was contending for a complete and self-sufficient natural religion, but the emphasis laid upon the ethical seems to involve as its consequence the abrupt change to revealed religion, for the reason that the will cannot perform what the intellect recognizes as fit and necessary. Accordingly, Clarke's metaphysical dogmatism is pursued by a moral scepticism, which declares that, perfect as the reason of things may be, the fallacy of acting contrary to such a standard is not sufficient to deter man from vice, because its pursuit is often accompanied by pleasure and profit, while pain and calamity may follow upon virtue.

'This alters the case, and destroys the practice of that which appears so reasonable in speculation, and introduces the necessity of rewards and punishments' (*ib.* 630).

This apparent lapse into hedonism was really an appeal to the idea of future rather than present happiness, as will become evident from the following plea:

'It is neither possible nor reasonable that by adhering to virtue men should part with their lives, if thereby they deprive themselves of all possibility of receiving advantage from that adherence' (*ib.* 679).

The doctrine of future rewards was thus the connecting link between natural and revealed religion, for, on the side of the Deity, this idea was fundamental, since

'God by express declaration of His will in Holy Scripture has established and confirmed the original difference of things' (*ib.* 697),

while from the human standpoint the principle of reward and punishment is necessary as a motive to impel the will towards that which the understanding recognizes as right in itself.

Early in the field of natural religion, Shaftesbury (1670–1713) elaborated an optimistic and æsthetical view of the world, which had something of that tendency towards pantheism which Deism ever betrayed. Shaftesbury uses the term 'Deist,' which he considers the 'highest of all names' (*The Moralists*, 1709, pt. 2, sect. 3). He has a word of praise also for the free-thinker, whom he characterizes as the 'noblest of characters' (*Characteristics*, 1711, iii. 311), but the more strenuous methods of rights and reason were foreign to his thought. The leading motive with Shaftesbury seems to be that of harmony within and without; to perceive this harmony constitutes religion, to promote it is the chief concern of morality. On the ethical side, he pursues the idea of harmony in connexion with his analysis of human nature, which is supposed to evince three tendencies: natural affections which tend to public good; self-affections which lead to private benefit; and unnatural ones which are harmful both to self and to society. To these, conscience or the moral-sense is added (*ib.* ii. 98, 119). The nature of virtue is such as to relate man to the world as a whole; hence, as Shaftesbury says, 'If any creature be wholly and really ill, it must be with respect to the universal system' (*ib.* 20). Furthermore, he speaks of virtue as 'proportionable affection' (*ib.* 40), while he asserts that the

'affection of a creature towards the good of the species or common nature, is as proper or natural to him as it is to any organ, part, or member of an animal body or mere vegetable to work in its known course and regular way of growth' (*ib.* 78).

At the same time, the mind is called upon to perceive the harmony in the world without, for

virtue is impossible in a 'distracted universe' (*ib.* 70). Here is the point where the systems of Shaftesbury and Clarke are in conflict; for, where Clarke sought to advance to the realm of revelation through the cracks in the natural order, Shaftesbury postulates a perfect world-order whose inner and outer harmony is in striking contrast to the distracted universe of the other system, and claims that without this the practice of virtue is in vain.

The influence of Clarke is to be observed in the most important of Deistic works, *Christianity as Old as the Creation; or the Gospel a Republication of the Law of Nature* (1730), written by Matthew Tindal (1656–1733). [See art. DEISM, vol. iv. p. 535 f.]

The famous reply to Tindal and to Deism in general which Butler (1692–1752) framed in *The Analogy of Religion, Natural and Revealed* (1736), was not so much opposed to or free from the elements of Deism as has usually been supposed; Butler, indeed, like Clarke, contributed to a system which he affected to attack. In his ethical philosophy, Butler defends egoism when he declares that self-love stands in need of furtherance, while its dignity is such as to place it upon a level with conscience (*Sermon* ii.); both principles are based upon the Stoical principle of harmony with Nature (*ib.*). After assuming that no revelation would have been given had the light of Nature been sufficient, Butler reiterates Tindal's favourite motto: 'Christianity is a republication of natural religion' (*Analogy*, ii. ch. i. § 1). Here, natural religion is the standard; for, if in revealed religion there are ideas whose meaning is contrary to natural religion, such meaning cannot be the real one (*ib.* § 2). In the same manner reason stands supreme, and Butler in his determined rationalism declares:

'I express myself with caution, lest I should be mistaken to vilify reason; which is indeed the only faculty we have wherewith to judge concerning anything, even revelation itself' (*ib.* ch. iii. § 1).

Butler's position, however, differs from that of the Deist, in that he is pessimistic where the exponent of perfect natural religion is ever optimistic; he thus contends that the imperfection attending revealed religion is one which natural religion is called upon to share, so that all that may be said against the one is valid as a criticism of the other. Indeed, Butler's ethical pessimism and his armed resistance to it are the permanent results of his traditional system. In his ethical sermons, he utters an ever-memorable lament over conscience, when he says:

'Had it strength, as it has right; had it power, as it has manifest authority, it would absolutely govern the world' (*Serm.* ii.);

and, when in the world he discovers 'infinite disorders,' he is still able to postulate a theory of the moral government of God, the actual operation of which in the present militant condition of things is manifest as a 'tendency' (*Analogy*, I. ch. iii. §§ 4–5). [Cf. art. BUTLER.]

The decline of Deism is to be noted in Thomas Morgan and Bolingbroke. Morgan is of historical value in connecting Clarke with the controversy, for it was from Clarke that he derived his Deism. In speaking of the famous expression, 'the reason of things,' Morgan says:

'I mean the same thing by it that Dr. Clarke does, while he grounds the whole of natural religion upon this principle' (*The Moral Philosopher*[2], 1738, iii. 314).

Morgan further reveals the influence of natural rights, for he criticized the Mosaic law in the light of the Grotian *jus naturale*, and expressed Jezebel's attitude towards Elijah after he had slain the prophets of Baal by saying: 'She thought this method contrary to the law of nature and nations' (*ib.* ii. 314). Bolingbroke began to cast suspicion upon the authenticity of natural religion by searching for evidences of it in history. The Hobbist *status naturalis* he regarded as a condition of the world in which man was, not irrational, but 'artless'; when he searches this native condition of mankind for traces of the religion of Nature, he can only say:

'It cannot be proved without the help of the Old Testament, nor very well with it, that the unity of God was the primitive Belief of Mankind; but I think it sufficiently evident . . . that the first and great principle of natural theology could not fail to be discovered as soon as men began to contemplate themselves and all objects that surrounded them' (*Works*, 1754, iv. 203). A glance at the ancient Egyptian religion, the worship of the Chinese, and the faith of King Melchizedek seems to suggest the possibility of this.

With the application of history to the scheme of natural religion the end of Deism begins; at the same time, the rationalistic force of the Deistic argument began to lessen, as was shown by the appearance of Dodwell's *Christianity not Founded upon Argument* (1742). With no theory of knowledge to guide him, Dodwell assumed the standpoint of intuition, or religious consciousness, whence he was able to offset all rationalism in religion by saying, 'There is no medium between believing and not believing' (*op. cit.* 6). With the actual content of religion as the basis of his argument, Dodwell turns away from a 'boasted rational faith,' and asserts that this is 'without the least foundation to support it in either nature or revelation' (*ib.* 7). Fitted for actual life in the world, the human soul is not adapted to the unfruitful work of speculation, while a rational faith could never produce the effects attendant upon real religion (*ib.* 24). As with the content of religion, so with revelation; here the command is, 'Believe'; the appeal is direct and compromising (*ib.* 37). Dodwell's work, which constantly touches the fringe of a genuine philosophy of religion, was of great importance as a human document, while it amounted to little as a controversial production, for the reason that it took a stand against both Deism and orthodoxy; Dodwell himself seems to have possessed something of the humanism of both Lessing and Rousseau, while his particular mood was one of mysticism.

The complete downfall of Deism was due to the scepticism of Hume (1711–1776), who applied to the rationalism of his fellow-countrymen the results of national empiricism. He thus undid the work of Herbert of Cherbury. [See art. DEISM, vol. iv. p. 537 f.] Another attack upon reason in religion was made by Rousseau, while the historical content of human worship was emphasized by Voltaire in his *Essai sur les mœurs des nations* (1756). [See, further, art. ENCYCLOPÆDISTS.] Deism in Germany was organized by H. S. Reimarus (1694–1768) in his *Wahrheiten der natürlichen Religion* (1754). Lessing (1729–1781) was involved in the religious controversy, and in so far assumed the rôle of a Deist; but his humanism and sense of historical values saved him from being submerged in the troubled waters of natural religion. His attempt at a philosophy of revelation was made in his booklet, *Die Erziehung des Menschengeschlechts* (1780). In addition to the opposition to the static philosophy of the Enlightenment, the late 18th cent. began to emphasize the thought of 'progress'—an idea wholly alien to the speculations and political ideals of the period. Bodin (1530–1597) had attempted this problem in his philosophy of rights; Vico (1668–1744) introduced it into his *Scienza nuova* (1725); Turgot expressed it more definitely in his *Les Progrès successifs de l'esprit humain* (1750). The rationalistic method of the Enlightenment, which had accompanied this static conception of things, was set at naught by Kant's *Kritik der reinen Vernunft.* In spite of its blind

faith in what is called 'Naturo,' the Enlightenment had the advantage and performed the service of emancipating the human spirit from authority and tradition; moreover, it laid the foundation for philosophy in things necessary in themselves and universal in their application, as appears most convincingly in its systems of rights and religion. The thought of the present age is at the very antipode of the Enlightenment, which glorified the static and rationalistic where the present upholds the dynamic and realistic.

LITERATURE.—In addition to the sources and authorities cited in the article, the following general works may be consulted: J. E. Erdmann, *A History of Philosophy*, tr. W. S. Hough, London, 1897, §§ 285, 293; R. Eucken, *Die Lebensanschauungen der grossen Denker*[2], Leipzig, 1897, pp. 342–403; A. S. Farrar, *Critical History of Free Thought* (*BL*), London, 1862; J. G. Hibben, *The Philosophy of the Enlightenment*, London, 1910; J. Hunt, *Religious Thought in England*, London, 1870–73; G. V. Lechler, *Geschichte des englischen Deismus*, Leipzig, 1841; F. C. Schlosser, *Geschichte des achtzehnten Jahrhunderts*[4], Heidelberg, 1861; L. Stephen, *English Thought in the Eighteenth Century*[2], London, 1881; W. Windelband, *Geschichte der neueren Philosophie*, Leipzig, 1876, §§ 28–56.

CHARLES GRAY SHAW.

ENTHUSIASM.—The word *ἐνθουσιασμός*[1] is of relatively late origin. The only term in the earlier Greek vocabulary that could be used to denote a condition of vehement psychical excitement or inordinate exaltation was *μανία*, a word of very general connotation. It is characteristic of the Greeks that they spoke even of the 'madness' of poets, corresponding to the *furor poeticus* of the Romans. Subsequently the word *μέθη* was sometimes used in the same sense, and the term 'intoxication,' therefore, is not to be too literally interpreted. Intoxication emanates from Dionysus, the god who re-incorporates himself in wine; and, accordingly, the *μέθη αἰώνιος*, the guerdon of Orphic mystics in the other world (cf. A. Dieterich, *Nekyia*, Leipzig, 1893, p. 80, note), really signifies their final union with the deity, and is thus, as we shall see, identical with an eternal enthusiasm. We find mention likewise of an intoxication in which the poet creates his work—an idea which is connected in a special way with Æschylus, the most impassioned of the Greek tragedians; legend even tells us that, while he was still young, Dionysus appeared to him and kindled in him the fire of poetic creation (Athenæus, 22*a*). Æschylus is the first writer known to us who uses the verb *ἐνθουσιᾶν* in intimate connexion with *βακχεύειν* (frag. *Edonoi*, 58 [Nauck]); then comes Euripides (*Troades*, 1284), with whom *ἐνθουσιᾶν* virtually means 'to rave.' The earliest use of the substantive *ἐνθουσιασμός*, with its doublet *ἐνθουσίασις*, occurs in Plato; and the correlative idea operates largely in his writings. But even the root from which these various forms are derived, viz. *ἔνθεος*, with its corresponding verb *ἐνθεάζειν*, 'to be enraptured,' is not found, so far as we know, before the 5th cent. B.C., the earliest instances of their usage being respectively Æschylus, *Septem con. Theb.* 497 (*ἔνθεος Ἄρει*), and Herodotus, i. 63.

It can hardly be doubted that these terms came into use with the rise of the Mysteries and the spread of prophecy, for here the idea of a union with deity that exalts the favoured ones above all earthly concerns plays a prominent part: when the deity enters into a man, the resultant state is enthusiasm. The word *ἔνθους*, which occurs in Proclus, *in Timæum*, i. 64, 14. 23, and other writers, is equivalent to *ἔνθεος*, 'having God in oneself' (Boisacq, *Dict. étymol. de la langue grecque*, Heidelberg, 1907 ff., p. 254). The term may have reached Plato by way of the Orphics, and the reason why Proclus (*in Tim.* i. 7, 27 [Diehl]) applies the adjective *ἔνθεος* to the Pythagoreans as well is simply that the line of demarcation between Orphic and Pythagorean views was for him indistinguishable (Rohde, *Psyche*[3], Tübingen, 1903, ii. 108, 2). At all events *ἐνθουσιασμός* was from the first mainly a theological conception, while *ἔκστασις*, on the other hand, comes from the domain of medical terminology, and, so far as known, was not applied till long after Plato's day to the rapturous state of a soul delivered from earthly conditions. Ecstasy (*q.v.*) involves the separation of the soul from the body, since in it the soul presses towards God, and strives to become one with Him; it is something fundamentally different from enthusiasm, though the two ideas go hand in hand, and are often confused with each other (A. Dieterich, *Eine Mithrasliturgie*, Leipzig, 1903, p. 98). Enthusiasm, as we saw above, denotes the state of a man in whom a god dwells; but here we must, of course, make the further reservation that, when the indwelling power is a noxious or evil spirit, the result is 'possession' (*θειασμός, δαιμονισμός*), which may likewise be spoken of as *μανία*, 'madness,' but never as *ἐνθουσιασμός*. The connotation of the latter term is thus clear and distinct. The mystic is *ἐνθουσιαστικός*; so is the seer, in the frenzy of prophecy (cf. *e.g.* Plutarch, *de Defect. Orac.* 432 D, *Solon*, 12, Firmicus, *Math.* viii. 21), and also the poet, in whom dwell Apollo and the Muses (cf. Democritus; see Zeller, *Phil. d. Griechen*, i. [Leipzig, 1869], 645; Plato, *Phædr.* 245 A; Tambornino, *de Antiquorum Daemonismo*, Giessen, 1909, p. 6); seer and poet are also styled *νυμφόληπτοι* (cf. Bloch, in Roscher, iii. 513 ff.).

The mode of generating that union with the deity which produces the enthusiastic state was represented at first in a very crude way—as eating the god or having sexual intercourse with him (A. Dieterich, *Eine Mithraslit.* 97 ff.). Enthusiasm was brought about also by drinking wine, since Dionysus materializes himself therein (*ib.* 173). Seer and poet drink inspiration with the water of the Castalian fountain, for here the nymph dwells in bodily form. The erotic union of the Delphic priestess with Apollo has been vividly portrayed by ancient witnesses (Bethe, *Rhein. Mus.* lxii. [1907] 467; cf. schol. on Aristoph. *Plut.* 39, and the passages in A. Dieterich, *Eine Mithrasliturgie*, 2nd ed. enlarged, Leipzig, 1910, p. 14). Another act of amatory union was the dance of the Bacchantes with Dionysus (cf. *e.g.* Aristoph. *Frogs*, 324 ff.), which likewise assumed enthusiastic forms; in explanation of this, reference may be made to an Esthonian custom recorded by Weinhold ('Zur Geschichte des heidnischen Ritus,' in *ABAW*, Berlin, 1896, p. 30; cf. Fehrle, *Kultische Keuschheit*, Naumburg, 1908, p. 11, 1). Further, the phenomena of the dream were also brought into connexion with enthusiasm, as the soul of the dreamer develops higher powers of vision and anticipates the future. According to Aristotle (frag. 10), the first impression of the idea of God is imparted by the *ἐνθουσιασμοί* and *μαντεῖα* of the soul in sleep, and we know that the Stoics found warrant for oracles and dream-reading in the Divine origin of the soul as manifested in *ἐνθουσιασμός* (Zeller, *op. cit.* iv. 320).

A peculiar function is assigned to enthusiasm in the philosophy of Plato, who distinguishes several phases of a frenzy (*μανία*) that imparts gifts of the highest order. There is the frenzy of the seer, who unveils the future; that of the consecrated mystic, who absolves men from sin; and that of the poet, who is possessed by the Muses—these three forms have already been noted, while a fourth is found in the frenzy of the philosopher (*Phædr.* 244 ff.). Every human soul has in a former life beheld the

[1] The present article is intended merely to trace the origin and ethical usage of the (Greek) term; cf., further, ECSTASY and ENTHUSIASTS (Religious) for the part that 'enthusiasm' has played in religion.

true reality, but only a few are able to summon up the remembrance thereof. Those to whom this privilege is vouchsafed, however, hold themselves aloof from the ordinary pursuits of life, and, uniting themselves with God, are reviled by the multitude as mad, while, as a matter of fact, they dwell apart in the enthusiastic state. In Plato's judgment, accordingly, enthusiasm is the medium of a direct intuition of the Divine—a vision which is granted to the philosopher alone (*Phædr.* 249 C).

Platonic and Stoic views, combined with popular ideas, reappear in Plutarch (Zeller, *op. cit.* v. 173 ff., with relevant quotations). According to Plutarch's exposition, when the soul is in a state of enthusiasm, it receives immediate intimations from God; upon enthusiasm, indeed, rests all higher revelation. The more effectively the soul represses its own activities, preserves its tranquillity, and frees itself from the sensuous, the more delicate becomes its receptive faculty; and consequently the best medium of Divine revelation is sleep or an abstemious life. The intimations of the gods are conveyed to the soul by dæmons, while material agencies, such as the vapours of the Pythian grotto, may also avail, with the consent of the gods and the aid of dæmons, to induce the enthusiastic state. Enthusiasm always comes spontaneously, and the suddenness of the illumination it brings is the guarantee of the truth thereof.

Plutarch defines enthusiasm as an affective state (πάθος) of the soul, but Aristotle had characterized it more precisely as a *pathos* peculiar to the psychical *ethos* (*Pol.* viii. 55). The special power of inducing the enthusiastic condition is ascribed by Aristotle to the music of Olympus (*loc. cit.*)—a view that suggests other related phenomena. In ancient Hellas an important factor in orgiastic celebrations was boisterous music (cf. *e.g.* Eurip. *Bacch.* 126 ff.), which was regarded, no doubt, as a means of exciting emotion, just as it forms an accompaniment to ecstatic actions among the less civilized races of to-day. The Greeks could not but feel, however, that the music of the orgies was of a barbaric kind. Their own music was always marked by the quality of dignified repose, and did not naturally lend itself to the expression of joy, or pain, or enthusiasm (Gevaërt, *Hist. et théorie de la musique de l'antiquité*, Ghent, 1875–81, i. 37 ff.). The power of producing enthusiasm was associated with the Phrygian and Lydian modes and with the music of flutes (Arist. *Pol.* viii. 6. 5), and here we have the explanation of the above reference to the music of Olympus. It would seem, moreover, that the Aristotelian school were specially interested in investigating the influence of music upon the emotions; for, apart from Aristotle's own disquisitions in *Pol.* viii., we hear of a work by Theophrastus, 'On Enthusiasm,' in which, according to frag. 87 (Wimmer), the effects of music were discussed. The subject was, of course, one of special importance, as music was a leading element in ancient education (Arist. *loc. cit.*).

At the close of the classical period of philosophy stands the imposing figure of Plotinus, in whose writings, as in those of his pupils, the terms ἔνθεος and ἐνθουσιασμός play a great part (cf. Diehl in the Index to Proclus, *in Timæum*, iii. 425; Proclus, *in Rem Publicam*, ed. Kroll, Leipzig, 1901, ii. 440). But it is quite evident that for Plotinus the union of the human soul with the deity properly means its separation from the body, and thus implies the condition of ecstasy, not of enthusiasm at all.

LITERATURE.—This is indicated in the article.

L. RADERMACHER.

ENTHUSIASTS (Religious).—This article deals with certain teachers of religion, who have believed themselves to be directly inspired by God to impart new truth. They may be classified according to their attitude to previous revelation. Some have attached themselves closely to previous literature, frequently concentrating on apocalyptic, or interpreting on special lines—as the Catholic Apostolic Church. Others, in supplementing existing revelations, tend to supersede them—as Muslims and Mormons. Others believe themselves in such close touch with God that they do not value previous prophecy; of such are the Bābīs. Thus not all the new theologies are immutable; Muggleton, Swedenborg, and Ann Lee have had no successors, but the Doukhobors believe inspiration to be generally diffused. All these classes of theological Enthusiasts are treated separately; and the Hebrew Prophets, noblest of the type, will be dealt with in art. PROPHECY (Hebrew).

1. Our study may begin with Christian prophecy, a phenomenon of great importance for some two centuries. From the first it was avowed that the prophet would not be a permanent feature in Christian life (1 Co 13[8]), but meantime prophecy was a gift of Christ (Eph 4[11]) to men and women (Ac 21[9]), for the benefit of the Church and occasionally of outsiders (1 Co 14[22-25]). Like their Jewish prototypes, the Christian prophets could use symbols (Ac 21[11]); but, unlike the Greeks possessed with spirits of divination (Ac 16[16]), they had their spirits under control (1 Co 14[32]). In Greek circles there was clearly a risk of confusion, causing hesitation in some quarters (1 Th 5[20]), and authoritative repudiation of some false prophets (1 Jn 4[1]). A typical product of such Enthusiastic ministry is seen in the Apocalypse, with visions and predictions which yet, in their literary form, show manifest signs of elaborate study (cf. 1 P 1[10. 11]). This book is the only one in the NT which puts forth explicit claims to inspiration (Rev 1[11] 22[18]); but these were pitched very high, and, being accompanied with orders for public reading (1[3]), they at once ensured acceptance, even outside Asia and its seven Churches.

Another specimen of an Enthusiast's work is the *Shepherd*, with its visions to Hermas, leading up to the coming of an angel, who imparted much information which the seer was told to commit to writing and circulate. Some of the more striking doctrines are the importance attached to guardian angels (*Mand.* 6[2]) and the elaboration of the terms of salvation; baptism is the means of forgiveness (*Sim.* 9[16]), and sins after baptism can be forgiven only once more (*Mand.* 4[3]); those who died before Christ have their opportunity by the preaching of the apostles and teachers when they themselves died; but, even then, baptism in Hades is necessary (*Sim.* 9[16]). Sins are carefully classified (9[19-28]), and works of supererogation are admitted (5[2]). Great stress is laid on the doctrine of the Church, and the risk arising from false prophets is frankly recognized (*Mand.* 11). This tendency became more pronounced with Ignatius, who hoped that God might reveal something to him (*Eph.* 20); but he pointed emphatically to a new path when he claimed that the preaching of the Spirit prompted the message (*Phil.* 7): 'Do nothing without the bishop.'

2. The conflict foreshadowed in 3 John came to a head on the uplands of Asia Minor, when the Montanists objected to the new officialism. They claimed that for generations they had not lacked inspired prophets; and the revelations that came from their leaders were akin to Biblical prophecy and apocalyptic, in that they demanded a most strict morality, and foretold the speedy ushering in of a new age. But it would appear that their prophets wrought themselves up to receive these revelations, and combined the old methods of asceticism and physical exertion with the Indian method of intense introspection. In a discussion

about A.D. 178, some bishops hardly appeared to advantage; the Montanists thereupon rallied all the conservatives throughout the Empire, with the combined appeal for separation from the world to high morality, and reliance on the sure word of prophecy. For a generation they held their place within the general federation of churches, but at Rome and at Carthage the prophets were obliged to step out, leaving the officials to perfect the machinery of the Great Church. After the days of Zephyrinus and Tertullian, Montanism shrank to the dimensions of a mere local sect, almost negligible; even in Phrygia the succession of the prophets ceased. [Cf. art. MONTANISM.] Henceforward, in the West, all claims to direct inspiration were steadily discountenanced by the orderly instinct of Rome, and until the disruption of the 16th cent. all effervescence was speedily checked.

3. A few cases may be noted. Towards the end of the 12th cent. arose **Joachim of Fiore**, in Calabria, who won the ear of four successive Popes, until a new religious order was sanctioned, and his writings were widely read. He taught that the age of the Spirit would begin with A.D. 1260, and he sketched in detail the events of the sixty years preceding. Starting from the Apocalypse, he and his many disciples added new revelations. The Franciscan order was permeated with his views, and, when it divided, the Spirituals clung to them; with their suppression, and the obvious failure of Joachim's predictions, the school died a natural death. A Lombard enthusiast, **Wilhelmina 'of Bohemia,'** claimed to be an incarnation of the Spirit to save the Jews, Saracens, and false Christians; her sect was exterminated soon after her death in A.D. 1281. In Thuringia, *c.* A.D. 1360, from the midst of the Flagellants (*q.v.*) came **Conrad Schmid**, an incarnation of Enoch, who founded the Brethren of the Cross; the Inquisition prevented the unfolding of a constructive programme. Among the **Taborites**, prophets appeared who foretold the speedy end of the age, and incited to war in order to clear the way for the reign of Christ. This intensified the resolve of the authorities to nip all such movements in the bud, and they burned Hans Böhm, who in A.D. 1476 claimed a commission from the Virgin Mary. **Savonarola's** claims to angelic visions won him great popularity, till he flinched from the demand to submit his claims to the ordeal of fire. The **Alumbrados** of Spain, professedly holding intercourse with the Lord and with the Virgin, were equally put down; even **Teresa of Castile** was viewed askance, and her writings were severely censured, though they deal with practical religion more than with theology, and side with the Counter-Reformation.

4. The Hussite leaven showed striking results in A.D. 1521. At Zwickau, midway between Prague and Eisleben, dwelt a Silesian weaver **Nicholas Storch**, who had apparently lived among the Taborites. When he was backed by **Thomas Münzer**, an educated Saxon sent by Luther, he soon blossomed into a prophet. Luther having disappeared after the Diet of Worms, Storch went to Wittenberg, and convinced the leaders of the reality of his mission. Luther hastily returned, and adopted the old device, demanding a miracle to substantiate Storch's claims. The latter withdrew to Silesia and Southern Germany, dying at Munich in 1525, accepted on all hands as inspired, though his enemies adopted Luther's addendum that it was Satan who inspired him. Meanwhile Münzer went to Prague, and announced the dawn of the new dispensation, with the redress of all social grievances. Returning to Saxony, he initiated a communistic system, which he declared to be Divinely ordered. Banished by Luther's influence, he spread his views in Nüremberg and Switzerland, and then returned to Mühlhausen, through districts where the Peasants' War was raging. Here he convinced them of his mission, so that their social programme was backed by the conviction that God was directing them through this prophet. With the massacre of Frankenhausen in 1525, Münzer died, and the first phase of this prophetic movement ended, Hans Hut confining himself to mere exposition of the Apocalypse in his book on the *Seven Seals*.

5. A leather-dresser from Swabia, **Melchior Hoffmann**, was teaching east of the Baltic; then in 1526, at Stockholm, he published a short *Exhortation to his Livonian Converts*, containing an application of Dn 12; and he proceeded to calculate the end of the age, which he fixed for 1533. From Sweden he worked through Denmark and Friesland to Strassburg, where he arrived in 1529. Here he devoted himself further to exposition of the Apocalypse, expanding the idea that the few years left were the period of the Two Witnesses. Presently he recognized inspired prophets in Leonard and Ursula Jost, he himself becoming Elijah, the inspired interpreter. Driven out from the city, he toured through the Netherlands and Westphalia, quite transforming the northern Anabaptist movement till it was thoroughly impregnated with Millennial views. He announced that Strassburg was the New Jerusalem, whence the armies of the Lord would destroy His enemies; and he returned thither to get ready. In a few weeks he was imprisoned, and lingered for ten years, revising his calculations; and, though he heard of the outbreak of civil war resulting from his teachings, he never recognized any fundamental error.

6. Hoffmann being silenced, the second witness appeared promptly in a Haarlem baker, **Jan Matthys**; Hoffmann was Elijah, Matthys was Enoch. Strassburg being clearly impossible, missionaries to Münster, in Westphalia, announced that the Millennial Kingdom was at hand; in eight days 1400 people pledged themselves to the new state of things. Matthys sent two more missionaries to take the lead, and the quieter citizens speedily left the place. Matthys announced the revelation that Münster, and not Strassburg, was the New Jerusalem, and he sent out messengers to direct a general concentration of his followers thither. Amsterdam, Lübeck, Bremen, and other cities responded promptly; and then, although it does not appear that Matthys contemplated any military propaganda, any more than do Second Advent bodies of to-day, the authorities took alarm, inaugurated a reign of terror, intercepted immigrants, and murdered many. The Münster citizens who remained were mostly won to the prophetic side, and the February elections threw all authority in the city into the hands of the Chiliastic Anabaptists. Matthys soon came to take personal charge, and then arose other prophets and prophetesses. When an episcopal army appeared to besiege the city, communism was adopted, as in many other cities under similar conditions; it does not appear that this was ordered by revelation. Visions came to many; and, when Matthys went forth as Samson against the Philistines, and fell in the sortie, his chief apostle, **Jan of Leyden**, was soon recognized as prophet. He gave forth a revelation, whereby the Council was superseded by the Twelve Elders. A few months later, another prophet, **Johann Dusentschuer**, proposed that Jan be made king; and this was done. In October, Dusentschuer gave forth a revelation that 27 apostles were to be sent out, preaching the doctrine of the Kingdom; and all started, mostly to martyrdom. They were preachers making no pretensions to prophecy; but they breathed the same atmosphere, and nearly

the last propaganda work from Münster was Rothmann's book, *A wholly consolatory Witness of the Vengeance and Judgment of the Babylonian Abominations*, etc. Early in the New Year, King Jan issued a code of law, closing with the claim, 'The voice of the living God has instructed me that this is a command of the All Highest.' To the end, he was believed in and obeyed; but the city was captured, and all the inhabitants were massacred. So closed the most remarkable of all the mediæval Enthusiastic movements.

7. The doctrines did not die out at once, for ten years later Calvin published a tract *Against the fanatical and furious Sect of the Libertines who call themselves Spiritual.* His version was that they deemed themselves appointed to usher in the last dispensation, that of Elijah or the Spirit, when every Christian should have direct revelation, and the dead letter of Scripture would be discerned to have a double meaning. Calvin also accused them of teaching that there was no outward law and no principle of evil, for every believer was identified with God.

8. More lasting was the movement inaugurated by Heinrich Niclaes of Münster, in 1540. He had hitherto been a Roman Catholic; at Amsterdam he had met Anabaptists and declined to associate with them; but he now received a revelation to establish himself at Emden as a prophet, and publish three Divine communications: 'For this purpose have I borne thee on My heart from thy youth, for a house for Me to dwell in.' For twenty years he carried on a quiet propaganda with three companions supernaturally pointed out to him, Daniel, Elidad, and Tobias; then he was driven out, and worked in England and up to Cologne. A fourth revelation came in 1565, largely concerned with the organization of his followers; but it led to their doubting his inspiration. Apart from a most elaborate framework for the Family of Love, and a decided opposition to Lutheranism, the chief peculiar theological tenet was that 'there are some now living which do fulfil the law in all points.' Niclaes died in 1570, leaving no prophetic successor, but in 1606 the English adherents appealed to King James for toleration, repudiating all sympathies with the Puritans, insisting that they valued the Scriptures and believed in salvation through Christ Jesus the only Saviour, on repentance and newness of life. Two years later, Henry Ainsworth at Amsterdam felt it wise to refute the *Epistle to Two Daughters* of Warwick. Yet they held on, only disappearing after 1645, when an outburst of new revelations attracted Englishmen susceptible to such influences, and left the Family of Love to wither away. There seems to be no more recent study than F. Lippold's, in *Zeitschr. f. d. hist. Theol.*, Gotha, 1862.

9. Britain was slower than the Continent to evolve prophets, but about 1633 Arise Evans began his career with warnings to King Charles that he and the kingdom were doomed. For a second message, two years later, he was imprisoned. When the Civil War broke out, he received a revelation to uphold the Established Church, and therefore attacked the General Baptists; they challenged his inspiration, and he offered a prediction to be fulfilled in a week. Its success confirmed him, and he continued to admonish the ruling powers, but met no acceptance.

10. Another isolated prophetess was Anna Trapnel, who entered on her career about 1643, and joined the Allhallows Fifth-Monarchy church in 1650. After the dissolution of the Nominated Parliament, three books of her prophecies were speedily published, and for a year before the death of Cromwell she was again active. She went into trances, and spoke in rude rhyme so fast that she could hardly be reported, calling herself the poor Instrument, or the Voice. The burden of the new teaching was the imminent return of Christ, as soon as the $3\frac{1}{2}$ times were fulfilled. No organization resulted from her work. The most recent study of her is in the *English Historical Review* for July 1911. More successful were the Ranters, the Muggletonians, and, a century later, the Southcottians; for these see the separate articles.

11. Meantime fresh prophets arose on the Continent. J. W. Petersen, a Lutheran dignitary, devoted himself to apocalyptic interpretation, and then, with his wife and another lady, announced new revelations, which seem to have contained nothing fresh except the modification of a dogma of Hoffmann, that Christ had a double human nature—one eternal, the other originating with the Virgin. Though Petersen spent half a long life publishing, his death in 1727 showed that no effect had been produced; and equally unimportant were other prophets, from the German artisan class. Two Bernese who professed to be the Two Witnesses, and in their teachings revived the Gnostic idea that, while the soul was regenerate, the doings of the body did not matter, were cut short by the law in 1754. For all these, consult Hagenbach, *Hist. of the Church in the 18th Century* (Eng. tr., N.Y. 1869).

12. In Russia an old inheritance from the Paulicians of Armenia was touched with new life. One sect is the Khlysti ('Flagellants'), followers of a man who in 1645 proclaimed: 'I am the God announced by the prophets, come down on earth the second time for the salvation of the human race, and there is no God but Me.' They hold, however, that a succession of Christs has been maintained ever since, elevation to this rank being by perfect surrender to the influence of the Spirit, who subdues the flesh. Their ecstatic methods of worship produce much prophesying, and, as they are expressly forbidden to write, lest inspiration be trammelled, they have made no permanent addition to dogma. As a reaction from them, about 1770, arose the Skoptsi ('Castrators'), founded by one who declared himself God incarnate: they are strongly chiliastic, and look for the return of Christ when their number reaches 144,000; the sealing into this number consists of castration. For these and similar sects, see Leroy-Beaulieu, *Empire of the Tsars* (Eng. tr., N.Y. 1893–6, vol. iii.). The most important of the movements in east and north Europe are the Doukhobors and Swedenborgians, both of whom have spread beyond the country of origin (see separate articles).

13. The Convulsionist outgrowth of the Jansenists at Paris left no mark in theology; nor is it otherwise with the Cevennes Prophets (see CAMISARDS). But the latter are responsible for the Manchester movement of the Wardleys, and Ann Lee, 'Bride of the Lamb,' who migrated to America and founded the Shakers (*q.v.*). These are not to be confounded with an English body founded in 1864 by Mary Anne Girling, who gave herself out as the final revelation of God. Her teachings dealt chiefly with conduct, inculcating celibacy and communism. The most singular dogma was her own immortality, and her death in 1886 ruined these second Shakers, who had styled themselves 'Children of God.' About the same time the 'New and Latter House of Israel' was organized in Kent by James White, whose revelations are published in the *Flying Roll*. The most remarkable point is that Christ redeemed souls only to a limited extent; bodies must be redeemed by acceptance of the Mosaic Law, and at Christ's appearing, 144,000 of these will greet Him and reign with Him. An enormous unfinished building near Gillingham is the chief relic of these Jezreelites. More lasting has been the Catholic Apostolic Church (see

IRVINGISM), springing out of a movement at Port Glasgow in 1829; while the proceedings of Prince and Smyth-Pigott have not yet destroyed the Somerset Agapemone (*q.v.*). Far more influential results have followed the enthusiasm of two remarkable Americans, Joseph Smith and Mary Baker Glover Eddy, for which see articles MORMONISM and CHRISTIAN SCIENCE, though the latter does not emphasize the point that the system came by revelation; as to which see *Science and Health*, p. 34, line 7; p. 109, line 20; p. 123, line 19.

[America has also been the home of other enthusiasts besides those just mentioned. The Amana Society (*q.v.*) is of German provenance, but the very small sect of Angel Dancers (*q.v.*) is purely American in origin, and, despite its evanescent character, it is not without interest psychologically as illustrating the rise of a sect based entirely upon enthusiasm. Ballou's curious 'American Bible' *Oahspe* (*q.v.*) will be considered in a separate article. Like the work of Ballou, the activity of **Andrew Jackson Davis**, the 'Poughkeepsie Sage,' whose *Principles of Nature, Her Divine Revelation, and a Voice to Mankind*, published in 1845, marks the foundation of Spiritualism (*q.v.*) as a separate cult, must be considered as outside the realm of Christianity, though Jackson was not, like Ballou, directly hostile to it. He claimed to have received his inspiration, during a trance of sixteen hours, from inhabitants of the other world, and alleged communications from the departed spirits form a leading feature in all spiritualistic *séances*. Within the sphere of Christianity mention should first be made of **Mrs. Ellen G. White**, the wife of James White already mentioned. She was born in Portland, Maine, in 1827. Before her marriage, in 1846, she began to have 'visions,' at least some of the phenomena manifested by her clearly being attributable to hysteria. To her was due in great part the rise of the sect of Seventh-Day Adventists, who in the earlier days believed her to possess the gift of prophecy, and who have always maintained that she received 'messages of instruction for the Church from time to time by the direct inspiration of the Holy Spirit.' The extent to which this sect holds this belief is shown by the fact that in 1865 a sub-sect, the Church of God (Adventist), was formed on the single new tenet of rejection of acknowledgment of Mrs. White's alleged inspiration. A still more remarkable phenomenon is afforded by the creation of the Christian Catholic Church in Zion by **John Alexander Dowie** (1847–1907), a Scotsman by birth. He was for some years a Congregational minister in Australia; but at Melbourne, where he had established an 'independent' church, he became a believer in Divine healing through prayer. For several years he inculcated these tenets in the United States and Canada, and finally, in 1896, he organized his new sect, assuming the title of 'general overseer.' In the latter part of 1899 he claimed to be the 'Messenger of the Covenant,' in 1901 he was 'Elijah the Restorer,' and from 1904 until a revolt against him in 1906 he was 'First Apostle' of his sect.

To the number of American enthusiasts must be reckoned **Frank W. Sanford** (b. at Bowdoin, Maine, 1862), who was for several years a Free Baptist minister in New England. At a convention of his denomination in 1893 he announced that he had received Divine revelations commanding him to preach to the whole world before the 'coming of the end.' He accordingly founded at Shiloh, Maine, the Holy Ghost and Us Society, which holds most pronounced chiliastic views, while Sanford himself claims to be Elijah. After having conducted a disastrous voyage to Africa, during which a number of his followers died from insufficient food and care, Sanford was convicted, 9 Dec. 1911, of causing the death of six of these persons, and was confined in a Government prison. A single sentence from his statement before the court is of psychological interest in this connexion:

'I said: "Father, what next? What next, now that we have this company on board?" I received this answer—and I make this statement advisedly, knowing what I am doing—I received this answer: "Continue."'

In the latter part of 1896 yet another enthusiastic sect sprang into existence, the Church of God and Saints of Christ (popularly known as 'Black Jews'). The founder was **William S. Crowdy**, a negro who had been a railway cook until he received a revelation as 'a prophet of God sent to the whole world.' The new sect for a time made a profound impression on the negroes who attended its services, where even the local preachers were termed 'prophets.' The 'bishop,' or 'prophet' (at present Crowdy himself),

'is not elected, but holds his position by virtue of a Divine call. He is believed by his followers to be in direct communication with the Deity, to utter prophecies by the will of God, and to perform miracles. On his death the prophetic office lapses until a new vision appears' (Special Census Report [1906] on *Religious Bodies*, ii. 202, Washington, 1910).—LOUIS H. GRAY.]

14. All the Enthusiasts yet mentioned arose in a Christian atmosphere; it remains to glance at some in the near East. The Jews have been peculiarly liable to ebullitions of this kind, owing to their Messianic expectations; Bar Cochba and David Alroy have attracted some Christian attention, but the career of Shabbethai Ṣebi in the 17th cent. is the most recent. He was a Spanish Jew, born at Smyrna of a family in close commercial touch with England. Since Qabbalists had calculated A.D. 1648 as the year of salvation, he then privately announced himself as the Messiah, but met no local acceptance. At Gaza he was acknowledged by a famous rabbi, who took up the part of Elijah, herald of the Messiah; and for thirteen years he quietly strengthened his position at Jerusalem. A visit to Cairo brought him into contact with a rich young Jewess of good family, who expected to be the bride of the Messiah, and they married. Elijah now announced the speedy restoration of Israel after a bloodless victory, and the Messiahship was openly proclaimed. This necessitated his fleeing the land, and he returned to Smyrna. Here the English Fifth-Monarchy movement had induced the belief that A.D. 1666 was to usher in the Millennium. The whole Jewish world was disturbed, and embassies came from all quarters, hailing him as King of the Jews. Though miracles were reported on all hands, he remained entirely passive. The Sultan naturally desired to test his claims, and he preferred to become a Muslim, afterwards stating to his followers that thus Messiah 'was numbered among the transgressors'! His apostasy wrecked their faith in him, and a vigorous persecution by Shah Abbas in the same eventful year ended the movement in Persia, though for a century the European Jews remained on the alert for a national restoration to their Holy Land.

15. Far more important to the whole world has been the appearance of Muhammad as the Prophet of God. He began only as a teacher, but, when his authority was challenged, he was reassured by the angel Gabriel, who bade him 'recite in the name of the Lord who created.' From that time till his death he had frequent revelations, received usually in artificial darkness; these were generally written down by hearers. More than once these communications referred with respect to the Law and the Gospel, to Noah, Abraham, Moses, and Jesus as true prophets; but the implication was increasingly that former books were superseded. His revelations were put into an

authorized edition within three years of his death, and a revised Qur'ān sixteen years later has proved final for the Sunnite sect, now the most influential. The transplantation of Islām to Persia, where high views of hereditary right were common, produced a schism soon after the Prophet's death, and the Shī'ites are legitimists not only in politics but in theology, holding that the hereditary successors of Muhammad are inspired. Three times this has had important results, with the Ṣūfīs, the Assassins, and the Bābīs (*qq.v.*).

LITERATURE.—Besides books mentioned in the text, see E. C. Selwyn, *The Christian Prophets and the Prophetic Apocalypse*, London, 1900; G. N. Bonwetsch, *Gesch. des Montanismus*, Erlangen, 1881; H. Weinel, *Die Wirkungen des Geistes und der Geister im nachapost. Zeitalter*, Freiburg, 1899; J. F. K. Hecker, *Epidemics of the Middle Ages*, tr. Babington, London, 1844; C. A. Cornelius, *Gesch. des münster. Aufruhrs*, Leipzig, 1855–60; R. Heath, *Anabaptism*, London, 1895; R. Barclay, *Inner Life of the Religious Societies of the Commonwealth*, London, 1877; Rufus M. Jones, *Studies in Mystical Religion*, London, 1909. W. T. WHITLEY.

ENVIRONMENT (Biological).[1]—For the biologist the problems raised by the term 'environment' are largely concerned with the part this factor or collection of factors may play in the process of evolutionary change. To what extent can the characters of living things be changed by changes in the conditions under which they live; and, if such changes occur, how far can they become permanent? That a definite change in the nature of the environment—temperature, moisture, food supply, or some other factor—will frequently bring about a change in the organism is beyond dispute. But whether the impress left on the organism can be transmitted to the next generation—whether so-called 'acquired' characters can be inherited—has been, and still is, a subject of keen controversy.

In his theory of evolution, put forward in 1809, Lamarck laid it down as one of his laws that the functional changes produced by a change in the environment during the life of the organisms are transmitted to the offspring; and during the next half century, in so far as the doctrine of evolution was accepted, it was accepted on this basis. By the publication of his *Origin of Species* in 1859, Darwin introduced another factor to account for evolutionary change, and the acceptance of 'natural selection' released the evolutionist from the burden of ascribing all specific difference to the direct action of the environment on the living thing. Darwin, however, remained to some extent a follower of Lamarck. Without variations upon which to work, natural selection cannot be effective in producing evolutionary change. As to the origin of such variations he did not venture upon any general statement, holding that in some cases they might be brought about by the direct action of a changed environment, while in others they must be attributed to some innate tendency on the part of the organism to vary, due to causes of which we are quite ignorant. Nevertheless, he did not hesitate in many instances to state his opinion, that a change in the conditions of life led to modification through the increased use or disuse of certain parts or organs, and that these modifications were accentuated and gradually rendered permanent through a continuous process of selection.

As an example may be taken the relatively smaller size of the wing structures, with their lessened powers of flight, in domesticated fowls, ducks, and pigeons—a peculiarity which Darwin considered to have been directly initiated through the effects of disuse consequent upon a change of environment, and ultimately exaggerated and fixed by long-continued selection.

As compared with Lamarck on the one hand, and most modern biologists on the other, Darwin may be said to have held an intermediate position. For Lamarck the increased use or disuse of organs consequent upon a changed environment was the only source of variation, and therefore the sole factor in the transformation of species. For Darwin there were two classes of heritable variation—variations arising through increased use or disuse, and variations arising spontaneously in the organism through causes not understood, though in either case the co-operation of natural selection was necessary to bring about a permanent change in form. Cf. art. EVOLUTION (Biological).

More recently the tendency among biologists has been to deny the transmissibility of modification acquired by the individual through a change of environment during its lifetime. This was largely brought about through the teaching of Weismann, who introduced a new conception of the relation of the reproductive tissues to the rest of the body. Hitherto this relation had been regarded as an alternating one. The germ-cells gave rise to the individual, and the individual in turn produced the germ-cells. Weismann introduced the idea of the continuity of the germ plasm through successive generations, and regarded the body, or *soma*, as an offshoot specialized for carrying and protecting the all-important germ plasm. By its formation the body is, as it were, side-tracked off the main course of evolution. Its chief function is that of a trustee for the germ plasm which it contains. Moreover, the germ plasm carried by a given body belongs to the same generation as the body itself, and is of equal age, both being the direct offspring of the germ plasms carried in the bodies of the common parents. It is obvious that this conception of the relation between an individual and its contained reproductive tissue renders it difficult to conceive how a modification brought about by an environmental change in the former can induce such a change in the latter that, when it comes to throw off a somatic offshoot, it will convey to it the impress of a modification just produced in a group of cells in which it lived but from which it was not derived. Weismann, therefore, challenged the evidence for the supposed transmission of 'acquired' characters, and showed that when critically examined it broke down. He also brought forward direct experimental evidence against the transmissibility of a definite group of acquired characters, and showed, from a long series of experiments on mice, that mutilations are not in the least degree inherited.

Nevertheless, heritable variations are continually arising in animals and plants, and it is in the seat of such variations that Weismann's views differed from those earlier current. For Weismann, the seat of heritable variation was in the germ plasm, and not in the *soma* by which the germ plasm was carried. Any new variation first arises through some abnormal occurrence in the germ plasm. Having once arisen, its tendency is to become permanent, and it is expressed in each of the sequence of somatic offshoots to which that germ plasm gives rise. Fresh variations can, on Weismann's view, be directly due to an environmental

[1] For the ethical aspects, see EDUCATION (Moral), p. 216, and ETHICS (Rudimentary), p. 426.

change, but they owe their origin to the effect of the changed conditions on the germ plasm and not on the body which carries the germ plasm (cf. art. HEREDITY). The action of a changed environment on a living thing may induce a change either in the *soma*, or in the germ plasm, or in both; but, even if both are affected, it does not necessarily follow that the changes are corresponding ones. The change in the germ plasm can, of course, be appreciated only on its forming a somatic offshoot, and this may present modifications differing from those shown by the antecedent *soma*, though the modifications in each case may have been brought about by the same environmental change. In the one case the change acts directly upon the somatoplasm, in the other it acts upon the germ plasm which transmits the effects of the stimulus to the *soma* that subsequently arises from it.

Discussions on the transmission of environmental changes frequently arise out of cases in which the developing young, as in mammals and plants, are parasitic for a time upon the maternal parent. Decreased vigour in the parent, resulting from unfavourable conditions of nutrition, often leads to an abnormal lack of vigour in the offspring, and this has sometimes been held to show that the direct effect of altered conditions on the parent is transmitted to the next generation. For example, two similar plants may be taken, of which one is grown under favourable, and the other under unfavourable, conditions. The seeds of both are collected and grown under similar conditions, and it is found that those derived from the latter plant give rise to less vigorous offspring than those derived from the former. In such cases it is apt to be overlooked that the relation of the parent to the offspring is twofold. Not only does the parent carry the germ plasm from which the offspring arise, but at the same time it acts as the environment of the developing young. It is in the latter capacity that a modification in the parent following upon changed conditions brings about a modification in the offspring. The question is not one of the transmissibility of increased or decreased vigour from parent to offspring; it is simply a question of the direct effect of altered environment on the developing young.

Weismann's views may be said to have met with general acceptance among biologists, though here and there were to be found a few supporters of a somewhat modified form of Lamarckianism. Little further advance was made until the 20th cent. brought with it a fresh stimulus to experimental work on living things, and within the last few years the question of the inheritance of 'acquired' characters has been re-opened, largely through the researches of Przibram, Kammerer, and others. The experiments of the last-named were for the most part made with amphibia and reptiles, and are concerned principally with colour modifications or with modifications of the normal instincts resulting from a changed environment. In several such cases it is claimed that the modifications produced re-appear in the offspring even when they are reared under normal conditions. The possibility is not precluded that the germ plasm was altered simultaneously with, but independently of, the somatoplasm in the individuals used for experiment; and the results cannot be regarded as conclusive evidence for the transmission of acquired characters, until it can be shown that they are reversible at will through the alteration of the environmental conditions. Though this has not yet been done, the experiments are full of suggestion, and there is reasonable hope that the work of the next decade will go far towards providing the answer to the old and much debated question of the inheritance of modification brought about by an alteration in the environment.

LITERATURE.—In addition to the writings of Lamarck and Charles Darwin, the following will be found of interest to English students: S. Butler, *Life and Habit*, London, 1877, also *Evolution, Old and New*, do. 1879; E. D. Cope, *The Primary Factors of Organic Evolution*, Chicago, 1896; T. H. Morgan, *Experimental Zoology*, London, 1907; A. Weismann, *The Germ Plasm* (Eng. tr., do. 1902), also *The Evolution Theory*, do. 1904. A succinct and illustrated account of the most recent experimental work is given in H. Przibram's *Experimental-Zoologie*, iii. 'Phylogenese,' Vienna, 1910. The most recent discussion from the Lamarckian standpoint will be found in R. Semon's *Die Mneme*, Leipzig, 1908, and in his art. in the *Fortschritte der naturwissenschaftl. Forschung*, vol. ii., Vienna, 1911.

R. C. PUNNETT.

ENVY AND EMULATION.—I. Envy.—Envy is an emotion that is essentially both selfish and malevolent. It is aimed at persons, and implies dislike of one who possesses what the envious man himself covets or desires, and a wish to harm him. Graspingness for self and ill-will lie at the basis of it. There is in it also a consciousness of inferiority to the person envied, and a chafing under this consciousness. He who has got what I envy is felt by me to have the advantage of me, and I resent it. Consequently, I rejoice if he finds that his envied possession does not give him entire satisfaction—much more, if it actually entails on him dissatisfaction and pain: that simply reduces his superiority in my eyes, and ministers to my feeling of self-importance. As signifying in the envious man a want that is ungratified, and as pointing to a sense of impotence inasmuch as he lacks the sense of power which possession of the desired object would give him, envy is in itself a painful emotion, although it is associated with pleasure when misfortune is seen to befall the object of it. As Dryden puts it,

> 'Envy, that does with misery reside,
> The joy and the revenge of ruin'd pride.'

It is obvious that envy and *jealousy* are closely allied. They have much in common, though they are perfectly distinct emotions. They are both selfish and malevolent, they are both concerned with persons, and both imply hatred of their object and a desire to harm him. But there is a deeper malevolence in jealousy than in envy, and the former is the stronger and more imperious passion. For this there are various reasons. In the first place, it is owing to the fact that jealousy is grounded on some estimate of what is due to self: it is not a mere consciousness of inferiority, as in envy. In the next place, there is a *twofold* source of irritation and displeasure to the jealous man, arising from the circumstance that *three* persons are involved in the situation, so that he is dealing, not with one rival, but with two (individuals or groups of individuals). When I am jealous of a person, it is because he has gained possession of the regard of another whose attachment I claim. This means that I hate the usurping person, but also that I am annoyed with the other who has allowed him thus to intrude. And so, also, when I say that I am jealous of a man's popularity with a party or a section of the community, my meaning is that I hate him for taking away a popularity that I myself claim or aspire to, and that I resent the pliability of the section or party who have allowed themselves to come under his influence.

It is characteristic of jealousy that it distorts the nature of him who harbours it, depriving him of the power to see things as they really are, rendering him unjust in his judgments and over-suspicious, leading him to catch at straws and make much of trifles, and driving him on to acts of cruelty.

> 'Jealousy is cruel as the grave:
> The flashes thereof are flashes of fire,
> A very flame of the Lord' (Ca 8[6]).

Great poets, like Shakespeare, know well how to represent this emotion in its nature, play, and offensiveness (see, *e.g.*, *Othello* and *Winter Night's Tale*), and they mark its outward expression also, and elucidate it by similes. Says Chaucer, in 'The Knight's Tale':

> 'Therewith the fyr of jealousie up-sterte
> Withinne his brest, and hente him by the herte
> So woodly, that he lyk was to biholde
> The boxtree, or the asshen, dede and colde'
> (lines 1299–1302 in vol. i. of A. W. Pollard's ed. of the *Canterbury Tales*).

Jealousy seems to be present to some degree in the lower animals, as well as in men.

'A favourite dog will be emotionally moved by the sight of his master fondling a kitten or another dog; he will sometimes slink away and hide himself and sulk, or he will keep pushing himself forward to be caressed, with sidelong glances at the kitten. Some very young children behave in a similar way, when their mother nurses another child. And in both cases the jealous creature is apt to exhibit anger towards the intruder' (W. McDougall, *Introd. to Social Psychology*, p. 138).

2. Emulation.—Very different from envy, though often taken as synonymous with it, is emulation. The latter is not, properly speaking, either selfish or malevolent, and it is not of the essence of it to be associated with hatred. It is characterized more by contrasts with envy than by similarities. It is an exhilarating emotion, drawing forth and strengthening our activity, and is the condition of progress and healthy development in the individual, as it is the result of aspiration or the pursuit of an ideal. It is a species of rivalry or competition, and, therefore, presupposes antagonists or opponents. But an opponent need not be viewed as an enemy to be hated: rather, he is our friend, if he braces our nerves and calls forth our energies and helps us to develop ourselves. Egoistic, indeed, emulation is, and has to be classed under the natural desire of superiority or power, but it is not selfish: it is compatible with generosity of character and good-will, which neither envy nor jealousy is. It stimulates us like play or the chase, and invigorates our nature; and, by the fact that there is in it an element of uncertainty (if not of hazard), it adds to the zest of life, as pursuit and enterprise in general do.

The emotion seems not to be confined to man, but is shared in by the lower animals, as we see in the competition in racing between horses and the like; and it is intense in children, entering into many of their games.

Emulation must not be confused with *ambition* (*q.v.*). Ambition, too, reposes on the love of power, and, when nobly directed, is a valuable and laudable impulse, achieving great things: it is simply an eager desire (with effort to actualize it) to rise in place or to increase in influence; and so far it is good. 'To take a Soldier without *Ambition*,' says Bacon, 'is to pull off his spurres' (*Essays*, 'Of Ambition'). But if, as Plato represents it in the *Republic*, it be the dominance of the will over the reason, then it is *inordinate* desire, and is ready to make a wrong use of rivals or those that stand in the way, ignoring the fact that every man is an end in himself, and must not be treated simply as a tool. The ambitious man, we often say, has no conscience: at any rate, his conscience is subservient to his own purposes, and not necessarily to rectitude. It is not well with us when our principle becomes, '*I* must rise, whoever falls, and whatever be the means.' The evil consequences of ambition on character have been the theme of preachers and poets alike all down the ages: 'by that sinne fell the Angels' (*King Henry VIII.*, III. ii. 440).

3. Emulation degenerating.—Distinct though emulation and envy are, the one may readily lapse into the other. It is manly and proper to wish to excel in a race, and to strain every nerve to accomplish that end; but, when the runner, finding himself likely to be outstripped by his opponent, tries to jostle him or to trip him up, that is emulation degraded to envy: honourable rivalry has been replaced by conduct that is dishonourable and mean.

'Emulation,' says Butler (Serm. i. note 20), 'is merely the desire and hope of equality with, or superiority over others, with whom we compare ourselves. . . . To desire the attainment of this equality or superiority by the particular means of others being brought down to our own level, or below it, is, I think, the distinct notion of envy. From whence it is easy to see, that the real end, which the natural passion emulation, and which the unlawful one envy, aim at is exactly the same; namely, that equality or superiority: and consequently, that to do mischief is not the end of envy, but merely the means it makes use of to attain its end.'

The lapse into envy brings its own nemesis. The envy of the envious man reacts upon himself: it is apt to bring him more pain than pleasure—as the common phrase has it, it 'gnaws' his soul.

4. Implication of society.—It only remains to add that the emotions here considered—envy and jealousy, emulation and ambition—presuppose society; *i.e.* they could not exist except in a social environment or setting. They are essentially egoistic, inasmuch as they centre in the self or Ego, being concerned primarily with the individual's interest; but they are conditioned for their existence by the fact that there is an 'other' over against the individual, competing with him and possessing different and, it may be, antagonistic interests. They all imply relations to other human beings, and the conception of a pure 'individual'—of an isolated conscious unit, absolutely divorced from every other conscious unit—is an absurdity: egoism (*q.v.*), in that sense, there can be none.

WILLIAM L. DAVIDSON.

EPICTETUS.—Epictetus of Hierapolis (*c.* A.D. 50–130) was a distinguished pupil of the Roman philosopher Musonius. Though not possessed of the originality or daring of his teacher, he has attained much greater fame through the fact that the substance of a great number of his discourses was preserved and published by his pupil Arrian. From the date of their first publication down to the present day these 'discourses of Epictetus' have enjoyed an extraordinary popularity; they have been many times translated into various European languages; and they constitute an authority of the first importance, both as to the teaching of the Stoic philosophy which Epictetus professed, and as to the social atmosphere of Rome in the 1st cent. A.D.

Epictetus was brought up as a slave in the house of Epaphroditus, a freedman of Nero, and presumably the same who became his secretary, remained faithful to him upon his fall, assisted him in his last hours, and was afterwards put to death by Domitian. Epaphroditus recognized the talent of the young slave, gave him the liberal education which was at that time the privilege of the humblest members of the great Roman households, and sent him as a young man to study under Musonius. He then

gave him his freedom, and Epictetus took up with success the profession of popular philosopher. Young men from all parts of the Empire listened to his teaching, and men of rank and position sought his advice. In the year A.D. 89 he fell a victim to the edict of Domitian against the philosophers, and was exiled from Rome and Italy; he withdrew to Nicopolis, and lectured there till his death in a ripe old age. The Emperor Trajan held him in special honour, and the records of his teaching exercised a great influence on the youth of Marcus Aurelius.

Epictetus was well schooled in the orthodox teaching of the Stoic philosophy, and it has been shown that both in his principles and in his use of technical language he is loyal to it. It is, however, only with difficulty and by a careful rearrangement of the material that a philosophical system can be deduced from his recorded utterances. Each of these is complete in itself, and has as its direct aim the enforcement of some moral principle by an appeal to the conscience of his hearers. Thus the practical application of ethics outweighs all other parts of the philosophy; and, whilst there is constant repetition within this field, the rest of the system is only hinted at by casual allusions. The ethical principles of Epictetus are strongly coloured by the circumstances of the time. He urges that, although political and personal freedom may be wanting, no man can be deprived of true freedom, which consists in pursuing virtue, the only good. Fortune has no power over the philosopher, because the things that she can give and take away are indifferent. The exercise of virtue consists in attention to the homely duties which result from human relationships, such as those of master and slave, parent and child, magistrate and citizen. In all his troubles the good man is comforted by the nearness of God, whose will he gladly obeys, and to whose decrees he is resigned. Epictetus holds up to our admiration the picture of the ideal Cynic, who, disdaining home or comfort for himself, becomes the servant of all, and enters every family to reconcile or to console; but he avoids the paradoxes in which the early Stoics and Cynics alike delighted, is gentle and reasonable in his teaching, and seldom engages in sharp controversy. He asserts his personal convictions most definitely in an uncompromising denial of the doctrine (towards which his hearers were strongly inclined) of the continuance of personality after death.

The discourses of Epictetus are so often considered typical of Stoicism that it is necessary to observe that he was Stoic with a difference. In temperament he had little in common with Zeno and Cleanthes, who were enthusiasts and revolutionaries; and hardly more with Panætius and the 'middle Stoics,' who were gentlemen and statesmen. Epictetus, even when his position was highest, was at heart a slave; his talents lay at the disposition of others. He accepted Stoicism at command; and in the same spirit he accepted the religion, the politics, and the social circumstances of his time. No man could be more precise in insisting upon the regular and contented performance of all actions approved by the general opinion; around these he threw the glow of a religious submissiveness which certainly forbade him to do wrong at the bidding of any earthly master, but at the same time predisposed him to consider as right any burden that others might lay upon him. Domitian was unduly anxious if ever he imagined that political danger could arise from such a philosopher.

The study of the discourses of Epictetus is an indispensable starting-point for a true understanding of the teaching of St. Paul. Better than any work of antiquity they reveal to us the inner thoughts of the social circles to which the Apostle chiefly addressed himself. See, further, art. STOICISM.

LITERATURE.—*Epict. dissertationes*, ed. H. Schenkl, Leipzig, 1898 (here the ancient references to the life of Epictetus are also collected); tr. of the *Dissertationes*, with notes, a Life of Epictetus, and a view of his philosophy, by G. Long, London, 1848; H. von Arnim, art. in Pauly-Wissowa, 11th half-volume, 1907; R. Asmus, *Quæstiones Epicteteæ*, Freiburg, 1888; A. Bonhöffer, *Epictet und die Stoa*, Stuttgart, 1890, also *Die Ethik des Stoikers Epictet*, do. 1894; Ivo Bruns, *de Schola Epicteti*, Kiel, 1897; H. Schenkl, *Die epiktet. Fragmente*, Vienna, 1888; J. Stahrmann, *de vocabulis notionum philosophicarum ab Epicteto adhibitis*, Jena, 1885: T. Zahn, *Der Stoiker Epiktet und sein Verhältnis zum Christentum*², Leipzig, 1895; W. L. Davidson, *The Stoic Creed*, Edinburgh, 1907, *passim*.

E. V. ARNOLD.

EPICUREANS.—The Epicureans are properly the adherents of the Greek philosopher Epicurus. But the term is popularly and less correctly used with reference to thinkers of later times who did not belong to his school, and were not directly influenced by his teaching.[1] Thus hedonistic ethics, the rejection of purpose in Nature, and the denial of a moral government of the world, were vaguely called 'Epicurean,' from whatever quarter such views were put forward. The school is interesting as the heir to the doctrines of the Ionian philosophers, and as the exponent of ancient materialism in its final form.

1. Life and writings of Epicurus.—Epicurus (341–270 B.C.) belongs to an age when the first speculative impulse of the Greek intellect had already subsided. The chief facts of his life are collected by Diog. Laert. (x. 1–28).

He was born at Samos (where his father Neocles had received a grant of land when the Athenians occupied the island) on the 7th day of Gamelion, 341. Though he traced his descent to the famous clan of the Philaidæ, his family was poor, and he is said to have assisted his father, who was a schoolmaster as well as a farmer, and his mother, who performed certain religious rites of purification. When he was twelve years old he began to study philosophy, probably at Teos, under Nausiphanes, a Democritean. He also heard Pamphilus, a Platonist, at Samos. After the death of Alexander the Great, at the time when Epicurus was completing the military service required of every Athenian citizen as an ἔφηβος in Attica, his father, with the other Athenian settlers, was expelled from Samos by Perdiccas, and went to Colophon. The following years seem to have been spent in private study, until, at the age of 32, he began to teach, first at Mytilene, then at Lampsacus; next, from 306 onwards, at Athens. From Mytilene he drew Hermarchus, afterwards his successor. The adherents won at Lampsacus formed the kernel of his school. Such were Idomeneus, and Leonteus with his wife Themista, among the richest and most influential of the citizens; such, too, were Metrodorus, Polyænus, and Colotes, who became his ablest pupils. At Athens he gathered a community about him in the famous garden, where the members met as friends and pupils of a common master. Shut off from the world around, and closely united to each other by their fervent belief in his teaching, they resembled a religious sect rather than a philosophic school; and their affection for Epicurus bordered on adoration. He accepted such respect and veneration as a matter of course, assumed the responsibility of a spiritual director, and by his whole behaviour consciously imposed on them an absolute devotion to his person. He drew up for them catechisms of his doctrines, which they were bidden to learn by heart. By example and precept he condemned excess and recommended a simple mode of life, discouraged ambition, and counselled retirement from the world. His whole day was taken up with study, authorship, and correspondence. His health had always been delicate; only an invalid racked with pain could have rated painlessness so high. Having outlived Metrodorus and Polyænus, his favourite disciples, he succumbed to a painful malady in his 72nd year (270 B.C.). A scrap of his letters shows that he bore the agony of the last fortnight with cheerful confidence.

Of the 300 rolls which this industrious recluse lived to complete, no fewer than 37 belonged to his *magnum opus*, περὶ φύσεως, of which fragments of books ii., xi., xiv., xv., and xxviii. have been recovered, though in a very imperfect state, from Herculaneum. The work proceeded slowly; in 300–299 it had reached book xv., and, four years later, book xxviii. Of his other works only scanty fragments are preserved, sufficient, however, to

[1] It is interesting to note that, in Rabbinical Judaism, 'Epicurean' (אפיקורוס) is a stock synonym for 'infidel,' 'materialist' (Deutsch, in *JE* i. 665 f.).

show their great variety. Many were scientific treatises, some physical (περὶ ἀτόμων καὶ κενοῦ, περὶ τῆς ἐν τῇ ἀτόμῳ γωνίας, περὶ ἀφῆς, περὶ τοῦ ὁρᾶν), others ethical (περὶ αἱρέσεων καὶ φυγῶν, περὶ βίων, περὶ δικαιοσύνης καὶ τῶν ἄλλων ἀρετῶν, περὶ ἡδονῆς, περὶ ὁσιότητος, περὶ τέλους), and one, the famous Κανών, dealt with the standards of truth in scientific inquiry. Others treated of lighter topics, *e.g.* the dialogue Συμπόσιον, in which both Epicurus and Metrodorus were interlocutors. Of those which took their titles from the names of men and women, some were most likely eulogies of friends or, it may be, tributes to their memory, *e.g.* Ἀριστόβουλος, Νεοκλῆς, Χαιρέδημος (named after the three brothers of Epicurus), Εὐρύλοχος, Ἡγησιάναξ, Θεμίστα, Μητρόδωρος. Others were certainly controversial: Ἀντίδωρος, Τιμοκράτης, Ἐπιτομὴ τῶν πρὸς τοὺς φυσικούς, περὶ παθῶν δόξαι, πρὸς Τιμοκράτην, πρὸς Δημόκριτον, πρὸς Θεόφραστον, πρὸς τοὺς Μεγαρικούς. His correspondence was from an early time passed round from hand to hand, and highly valued for its didactic tone; but there are personal traits in the letter to his mother discovered at Œnoanda, and in another to a little girl, possibly the daughter of Metrodorus. This mass of writing is represented now by the three epistles: (i.) to Herodotus, an epitome of physics (Diog. Laert. x. 35–83); (ii.) to Pythocles, περὶ μετεώρων, a similar epitome treating of atmospheric and celestial occurrences, including earthquakes (*ib.* 84–121); (iii.) to Menœceus, on religion and ethics (*ib.* 122–135); to which may be added (iv.) Κύριαι δόξαι, an arbitrary selection or anthology of striking sentences from the larger works, put together on no obvious principle, and as remarkable for repetitions as for omissions (*ib.* 139–154). This, though the most famous, was not the only anthology of the kind: another, Γνωμολόγειον, containing eighty-one sentences or maxims by Epicurus, many of them new, was recently found, and published by C. Wotke in *Wiener Studien*, x. 175 ff.

The epistles to Herodotus and Menœceus are unquestionably genuine. Usener doubted whether Epicurus himself compiled the epistle to Pythocles, though he admitted that it was drawn from his works, citing in support of his contention Philodemus in *Volt. Herc. coll. alt.* i. 152. H. von Arnim (Pauly-Wissowa, vi. 137 ff.) defends the authenticity of this compendium also.

Modern readers find the style of Epicurus difficult; but this was not the judgment of antiquity. He was so lucid a writer, says Diogenes Laertius, that in his work on Rhetoric he makes clearness the sole requisite. This one merit is granted him by Cicero, who criticizes severely his neglect of those graces of style which give to the works of Plato, Aristotle, and Theophrastus a perennial charm. But the truth is that, like other philosophers, notably Aristotle, Epicurus had two styles. So voluminous an author was almost bound to vary his mode of expression, according as he addressed an esoteric circle of disciples or a wider public. For the former, clearness and precision sufficed; but the epistle to Menœceus, in its avoidance of hiatus and its fervid, if restrained, eloquence, remains to show that upon occasion Epicurus could write for effect.

2. The School.—Our authorities are unanimous that there never was a more united school. The doctrine of the founder was passed on unaltered, and it is difficult to detect any material divergence from orthodoxy in the expositions of succeeding ages. Of the immediate disciples, three, Metrodorus (330–277 B.C.), Polyænus, and Hermarchus, were in later times joined with the master as the four pillars or standards of orthodoxy.

Polyænus had been an eminent mathematician; and Metrodorus, who after his first introduction never left Epicurus except once to spend six months at his old home, was the favourite and the most gifted. We have a list of fourteen works by him, and they were cited in later times as of all but equal authority with the master's own. Several of them appear from the titles to have been controversial works; for even Metrodorus found his scientific activity limited by the very completeness and finality of the system which he embraced. Loyalty to the master was incompatible with free inquiry, and in all succeeding generations Epicureans who wrote on philosophy at all were bound either to expound and expand his original statements, or to expose and refute those who did not accept them. Metrodorus had a brother Timocrates, who first embraced and then abandoned the faith—almost the only instance of a renegade in the annals of the school. It was in a polemic against this heretic that he somewhat coarsely avowed that a sound digestion is the standard of all that pertains to man's wellbeing—an avowal of which the enemies of the school were not slow to take advantage.

From Hermarchus, who succeeded Epicurus, the headship of the school passed to Polystratus, of whose work περὶ ἀλόγου καταφρονήσεως we have fragments, deciphered by Gomperz (*Herm.* ii. 398 f.); from him it passed to Dionysius (200 B.C.), and next to Basilides; and then in unbroken succession for several centuries, though our information is so scanty that many of the scholarchs are not known to us even by name. About 100 B.C. Zeno of Sidon, who is mentioned by Cicero, succeeded Apollodorus (ὁ κηποτύραννος), who was the author of some 400 treatises. Zeno was followed by Phædrus, whose successor, Patron, was head from 78 until after 51 B.C. But the most conspicuous Epicurean in the Roman society of that day was Philodemus of Gadara, tutor and guest of Piso, the consul of 57 B.C. His poetical skill is admitted by Cicero (*in Pis.* 28 f.), and over thirty of his epigrams are included in the *Anthologia Palatina*. He was also a prolific prose writer; the library of an Epicurean at Herculaneum contained works by him—περὶ εὐσεβείας, περὶ μουσικῆς, περὶ ῥητορικῆς, περὶ ποιημάτων, περὶ σημείων καὶ σημειώσεων, περὶ κακιῶν, περὶ ὀργῆς, περὶ θανάτου—fragments of which have been in part, but very imperfectly, deciphered. He also wrote on the Philosophic Schools, in at least ten books (Diog. Laert. x. 3). In the 1st cent. B.C. also lived at Rome Asclepiades of Bithynia, a celebrated medical practitioner, who put forward a new theory of the origin and classification of diseases, which he based upon an adaptation of the Epicurean doctrine of atoms and void. The Roman poet Lucretius (*q.v.*) hailed Epicurus as the deliverer of mankind from superstition and the fear of death. The same passionate enthusiasm marks the outpourings of a certain Diogenes, who had spent his life in propagating Epicurean doctrine in Œnoanda, an obscure Pisidian town, where, in 1884, two French scholars, Holleaux and Paris, discovered inscriptions on the walls of the market-place. From them we learn that the aged teacher, knowing his end to be near, left a sermon in stone where it was bound to catch the eye of every resident and every casual visitor. The inscription includes tracts by Diogenes himself (i.) *On the Nature of Things* (34 columns); (ii.) *On the Infinity of Worlds*, addressed to Antipater (12 columns); (iii.) an ethical discourse (36 columns); and (iv.) a fragment *On Old Age*, addressed to the young. To these are appended maxims of Epicurus, and what is apparently a citation from a letter to his mother.

3. Philosophy and its divisions.—As a child of his age, Epicurus emphasized the importance of conduct, defining philosophy as 'a daily business of speech and thought to ensure a happy life.' The loss of national independence and the decay of civic life are often alleged as causes why the later Greek philosophy became more and more practical, and the needs of the individual its chief preoccupation; but this change of direction had set in long before, with the Sophists and the Socratics. The older physicists sought knowledge for its own sake; Epicurus and his school sought it as a means to happiness.

'If we had never been molested by alarms at celestial and atmospheric phenomena,' he says, 'or by the misgiving that death somehow affects us, or by neglect of the proper limits of pains and desires, we should have had no need to study natural science' (Diog. Laert. x. 142). And again, 'Vain is the discourse of that philosopher by whom no human suffering is healed' (Porphyrius, *ad Marcellam*, xxxi. p. 209, 23 [Nauck], fr. 221 [Usener]).

By these and similar utterances he attests the predominance of the practical aim, and by implication prescribes limitations to the necessary task of physical inquiry. We must study Nature because we ourselves are part of it, and, until we have gained some acquaintance with the whole, we shall not understand our relations to it, or learn on what conditions our happiness depends. So far from encouraging the extension of research, Epicurus was impatient of such studies as poetry, rhetoric, and mathematics, which had their place in the ordinary education of the day, because they did not contribute to happiness. 'Hoist all sail,' he writes to a young friend, 'and give a wide berth to culture (παιδεία).' In his system there is no great originality; he borrowed his physics from

Democritus (*q.v.*), to whom he stands in much the same relation as do the Stoics to Heraclitus. To him the value of the discoveries of the Atomists lies in their utility; they free us from the errors of popular belief and false philosophy. Thus they are directly subservient to a happy life. Philosophy had been divided into Logic, Physics, and Ethics; but the great mass of logical doctrine was rejected by Epicurus as superfluous. Like men of science in more recent times, he wished to concern himself not with words but with things. However, besides Physics and Ethics, he recognized what he called Canonic, a study of the standard, or canon, of truth. The aim of this study was to convince us that our knowledge of Nature is trustworthy. It was not so much an independent division of the system as—what it is sometimes called—an appendix or special part of Physics (*accessio naturalis partis* [Sen. *Ep.* 89. 11]).

4. Physics.—(*a*) *General principles.*—The two epitomes mentioned above, the epistle to Herodotus and that to Pythocles, are the most trustworthy sources for Epicurean physics. Like all his Ionian predecessors, Epicurus starts with the axiom that matter is indestructible. Nothing can arise out of that which is not; nothing which actually exists can be altogether annihilated. Moreover, the sum-total of things was always such as it is now, and such it will ever remain. For there is nothing into which it can change, since outside the sum of things there is nothing that could enter into it and bring about the change. The whole of being, then, consists of bodies and space. Experience through sense attests the existence of bodies, and without space (τόπος)—which we also call an intangible existence (ἀναφὴς φύσις), vacuum (κενόν), or room (χώρα)—the motion of bodies, which is also a datum of experience, is inconceivable. Beyond bodies and space there is nothing—no *tertium quid*—which can be conceived to exist, so long, that is, as we fix our attention upon wholes or separate things, in contradistinction to the qualities, whether essential or accidental, which belong to things. But a distinction must be drawn between those bodies which are composite and those which are simple. The former are unions of particles—unions which can be again dissolved; the latter, the particles of matter themselves, must be unchangeable and indivisible (hence their name, ἄτομοι, ἄτομα). All apparent becoming and perishing of things depends upon the alternate uniting and separating of such ultimate indestructible particles. The All, or sum of things, is by its very notion infinite. For, if finite, it must be bounded by a something outside it, which is inconsistent with the notion of the All. It is infinite, not only spatially, but in respect of the number of indivisible particles or atoms contained in it; for, if space were infinite and bodies finite, they would not have stayed anywhere, but have been dispersed and lost in the void; whereas, if space were finite, it could not find room for infinite matter. The atoms resist disintegration because they are all matter; they contain no void within them. In Lucretian language, they are strong in solid singleness. They vary in shape; the atoms of each shape are absolutely infinite, but the variety of shapes, though indefinitely great, is not absolutely infinite. The atoms are eternally in motion, rebounding after collision, or again oscillating when imprisoned in a mass with other atoms which temporarily form a composite thing. This is because every atom is in void space, which offers no resistance; and there was no beginning to all these motions, because both matter and space are infinite. Hence, too, there must be an infinity of worlds—some like this of ours, others unlike it. A world is defined (§ 88), after Leucippus, as a sort of envelope of sky enclosing an earth and stars and all visible things, which is cut off from the infinite, and terminates in a boundary which may revolve or be at rest, which may be round or triangular, or of any shape whatsoever.

After thus laying down the principles of matter and motion, Epicurus proceeds to deal with the films (εἴδωλα) which emanate from bodies, by which he, like Democritus, explained perceptions of external objects, and mental activity in general. Such husks of films are incessantly streaming from the surface of all perceptible bodies, the waste being as constantly repaired by the accession of fresh atoms from the infinite store of matter. Their velocity through space is enormous, if they encounter no resistance; and, so long as this is the case, they preserve the relative shape, with projections and depressions, of that object from which they were parted. This degree of resemblance entitles them to be called images, in spite of their lack of depth. Our sensations of seeing, hearing, and smelling depend upon the entrance of these films into the appropriate organs of sense. Our belief in the permanence of visible external objects is due to the constant succession of images of the same shape and colour which reach us from them. And, as with the eyes, so with the mind. The mental perception of shape, whether in dreams or in intuitive thought, is due to the impact of the εἴδωλα upon the finer substance of the mind. But not all the films which strike upon the senses or the mind reach us unimpaired. In the course of their passage the outlines may have been blurred, distorted, or mutilated. Further, in the air atomic structures may arise which never formed the superficial layer of any actual body, *e.g.* a Centaur, and these, coming in contact with the senses or the mind, give rise to erroneous judgments.

(*b*) *Canonic.*—At this point the purely physical exposition naturally passes over into Canonic. In his treatment of the problem of truth and error, Epicurus inflexibly adheres to one main position: that perceptions of sense and mental intuitions are always true, and that error creeps in with judgment or opinion (δόξα). Judgment undertakes to interpret sensation. If we want to test the truth of a judgment about an external object, we compare the sensations which we receive in succession from it. If, then, the earlier interpretation is confirmed (ἐὰν ἐπιμαρτυρηθῇ) by a subsequent observation, the judgment was true; if, however, it be not so confirmed (ἐὰν μὴ ἐπιμαρτυρηθῇ), the judgment was false, as when the tower which seemed round at a distance is discovered on a nearer approach to be square. This is a case where subsequent examination is possible (τὸ προσμένον); but many judgments deal with the unknown (ἄδηλον), about which we draw inferences from the known. Here the ἄδηλον, which cannot be directly perceived, must be made the subject of an inference by connecting it with another object which can be perceived. There are also cases, within the region of known and knowable fact, where, owing to circumstances, the test of sensation cannot be directly applied a second time. Where for any of these reasons further confirmation (ἐπιμαρτύρησις) is inapplicable, Epicurus falls back upon a feebler test—the absence of contradictory experience: cf. οὐκ ἀντιμαρτύρησις δέ ἐστιν ἀκολουθία τοῦ ὑποσταθέντος καὶ δοξασθέντος ἀδήλου τῷ φαινομένῳ (Sext. *adv. Math.* vii. 213, fr. 247 [Usener]). The judgment upon its trial is acquitted of error because no fact (ἐναργές) can be adduced to witness against it. Thus applied, the Canon allows the strangest hypotheses concerning atoms, images (εἴδωλα), and gods to pass unchallenged. It should be noted also that the procedure by way of induction and analogy

presupposes something answering to a law of uniformity—'as are the instances under our observation, so too are the instances inaccessible to observation.' Sometimes, it is true, Epicurus does reason in this way: the imperceptible atoms and their movements are construed as if, under the microscope or some more potent aid, they could be directly observed. At other times the Canon is differently applied. Somewhere in infinity all possibilities are realized, for nothing in our experience contradicts either this general proposition, or particular cases affected, such as the shapes of the worlds, or the alternative explanations of celestial phenomena. A mutilated tract by Philodemus of Gadara on signs and inferences (περὶ σημείων καὶ σημειώσεων) is a proof that, two centuries after the death of its founder, the school was still interested in analogical and inductive reasoning. Again, Epicurus laid down a criterion for the practical as well as for the theoretical sphere. This consisted in the peculiar sensations of pleasure and pain, in which he recognized the same clear evidence (ἐνάργεια) which belongs to perceptions of external objects (Diog. Laert. x. 34; Aristocles *ap.* Euseb. *Præp. evang.* xiv. 21, p. 768*d* ff.; Cic. *de Fin.* i. 23, fr. 243 [Usener]). This is of the highest importance when he comes to Ethics.

Besides immediate perception, and the feelings of pleasure and pain, a further standard of true judgments is to be found in preconception (πρόληψις). This term denotes primarily a notion based upon and derived from perception, and therefore, like it, valid, which has found expression in some common term in daily use (*e.g.* 'man'). The utterance of the term calls up in those who understand the language a clear and distinct mental image (πρόληψις) already formed from previous clear and distinct perceptions. Sometimes, however, true judgments so universally recognized as not to require further testing by experience are also called preconceptions (προλήψεις). In any case, both their validity as tests of truth, and the mark of clearness and distinctness which they present, must be of a secondary and derivative kind, as compared with sensation.

(*c*) *The atoms.*—Returning now (§ 54) to the unchangeableness of the atoms, Epicurus thence deduces the distinction between primary and secondary qualities long before announced by Democritus (*q.v.*). All qualities (ποιότητες) are changeable; but the atoms must be thought of as unchangeable, for all changes must have something permanent underlying them. Hence the atoms possess only weight, shape, and magnitude, to which may be added impenetrability (ἀντιτυπία: Sext. *adv. Math.* x. 240, fr. 275 [Usener]). They have not colour, smell, taste, heat, cold, dampness, or dryness. These changeable qualities arise, not in the atoms but in the composite wholes (συγκρίσεις), through the varying union and arrangement of atoms (ἐν τῇ ποιᾷ συνθέσει τῶν ἀτόμων ταῦτα: Simp. *Categ.* 14, fr. 288 [Usener]). But, while Democritus made the secondary qualities relative (νόμῳ χροιή, νόμῳ γλυκύ), Epicurus by his unshakable belief in the reality of present sensation is bound to attribute them to the composite objects or perceptible things. The leaf is yellow, though its atoms have no colour, for my sensation of yellowness upon seeing it is real and objective, due to an image, of the same colour as the leaf (ὁμοχρόων: Diog. Laert. x. 49, p. 11 [Usener]), which enters my eye. The whole variety of changing qualities present in experience can, Epicurus maintains, be derived from shape and magnitude, the qualities which are left to the atoms, if due account be taken of variety in atomic arrangement and motion. Another point of difference from Democritus is that, whereas he made his atoms of all sizes, Epicurus objects to the assumption as unnecessary for the explanation of differences of quality, and as involving the absurdity of visible atoms. Nor, again, can any atom be infinitely small, for no body of finite size can contain an infinity of constituents, nor can subdivision go on indefinitely, for then some part of matter would be annihilated. Though the atom is the least body separately existing, it has itself minimal parts, which must be conceived on the analogy of the corresponding minimal parts of bodies of finite size. Space and time, as well as matter, are conceived as made up of minimal parts not further subdivisible. In infinite space all bodies move with uniform velocity (ἰσοταχεῖς [Diog. Laert. x. 61]), so long as they encounter no resistance, which is made to account for all variation in velocity (βράδους γὰρ καὶ τάχους ἀντικοπὴ καὶ οὐκ ἀντικοπὴ ὁμοίωμα λαμβάνει: *ib.* x. 46, p. 10 [Usener]). The free atoms move with the swiftness of thought over the very greatest distances, and this uniform velocity is maintained, whether the atom falls from above downwards under the influence of weight, or recoils from collision with another atom, or oscillates in the entangled mass of atoms which make up a sensible thing. The downward motion due to weight presumes that up and down are somehow empirically determined. Now, in infinite space there can be no up or down in the sense of a highest or lowest point or surface beyond which a body cannot move. At the same time, the opposite directions up and down, which we distinguish in any line of finite length, remain equally opposed when the line is prolonged to infinity.

5. The soul.—The materialism of Epicurus is prominent in his treatment of the soul. It is a corporeal substance, a compound of atoms of four different species, distributed throughout the frame, but more densely massed in the breast. It most resembles warm breath, *i.e.* wind mixed with heat. Elsewhere it is said to contain air as distinct from wind, and a fourth nameless substance which is the seat of sensation, memory, love, hate, and intellect in general (τὸ γὰρ ᾧ κρίνει καὶ μνημονεύει, καὶ φιλεῖ καὶ μισεῖ, καὶ ὅλως τὸ φρόνιμον καὶ λογιστικὸν ἔκ τινός φησιν ἀκατονομάστου ποιότητος ἐπιγίνεσθαι: Plut. *adv. Col.* 20, p. 1118*d*, fr. 314 [Usener]). Portions of this subtle substance may leave the body, as in sleep, or through the effect of a deadly blow, and yet the patient may recover, and receive new accessions of soul-substance from outside. Its mobility is shown in thought, feeling, and the bodily motions which it originates. The connexion and mutual dependence of the two corporeal substances, soul and body, are conceived as follows. We derive sensation, sentience, feeling, mainly from soul, partly from body; for our soul would not be sentient unless it were confined in our body. Being so confined, it confers this quality on the body, which it renders sentient; but the body does not share in the other functions of the soul, such as memory and thought. The peculiar motions of the soul's substance, on which these higher functions depend, are also conditioned by the body which encloses and holds it together. At death the lifeless corpse ceases to feel; but the soul, too, can no longer retain sensation when separate from the body, but is dispersed in air.

Essential attributes and accidents.—That the soul is not an incorporeal substance is proved by the fact that it acts and is acted upon. There is nothing incorporeal to Epicurus except empty space. Whatever else we call incorporeal is found, upon examination, to be, not an independent thing, but an attribute or quality. And here a distinction must be drawn between essential attributes (συμβεβηκότα), which are inseparable from (ἀεὶ

παρακολουθοῦντα) the conception either of a body in general or of a visible body, and the fortuitous transitory states, or accidents (συμπτώματα), with which this is not the case. The former, Epicurus holds, are not independent substances, or incorporeal entities, or simply non-existent; in their entirety they constitute the permanent nature of the whole body, though not in the sense that they are parts of it spatially divisible (ὡς τὸ ὅλον σῶμα—ἐκ τούτων ἁπάντων τὴν ἑαυτοῦ φύσιν ἔχον ἀΐδιον: Diog. Laert. x. 69, p. 23 [Usener]), and are never perceived apart from it. As shape and size are qualities of body as such, which we cannot think away, so it is with single bodies: each has its inseparable essential attributes, which we cannot think away from it without annihilating its nature. Of accidents (συμπτώματα) the most important are motion and rest; and, as motion and rest are related to corporeal things, so time in its turn is related to them. Hence time is properly defined as an accident of accidents (σύμπτωμα συμπτωμάτων).

6. Human progress.—The infinity of worlds already mentioned implies that incessantly some come into being, and others perish. The Epicurean cosmogony, which in the main follows the lines laid down by Democritus, is most exactly given by Lucretius (*q.v.*). Neither the creation nor the destruction of worlds is the work of Divine agency, but both are merely a product of the eternal motion of atoms, of natural laws working independently of any plan or purpose. As with our world at large, so with human civilization. That, too, is a product of undesigned natural development. Activities originally exercised instinctively came, in course of time, to be matured and perfected by intellect, and thus all the arts of life were successively evolved. Intellect itself is a product of Nature, and, in long ages, has acquired, under the pressure of need, its whole store of knowledge and aptitudes. The origin of language had given rise to fierce discussion. Some sought it in Nature, others in convention. Epicurus does not wholly accept either view. He traced language back to those instinctive cries, expressive of emotion, which are as purely reflex as a sneeze or the bark of a dog; but he recognized that these cries would not be everywhere the same, but would vary in different tribes according to varying conditions. Out of these primitive words language gradually developed—and mainly by conscious effort, in order that the meaning of each term used in a local dialect should be quite unmistakable, and intelligible throughout the whole tribe. The last terms to be invented would, of course, be the names of things which are not visible and corporeal. In other words, language is another case where the natural instinctive product was shaped under stress of necessity, and adapted to its purpose by human intellect.

7. μετέωρα.—The epistle to Herodotus ends with a brief summary of the principles regulating the attitude of Epicurus in regard to those natural phenomena which in all ages have excited curiosity and terror, such as eclipses, comets, tempests, and the like. The general name for such phenomena is *μετέωρα*, because, with the exception of earthquakes, they occur overhead in the sky. We are bound to believe, he says, that such events do not occur by the command of any being who enjoys bliss and immortality, *i.e.*, they are not the work of the gods. Whether such Divine interference be conceived as perpetual, and the cause of regularity, or as spasmodic, and producing abnormal and irregular events, the care and anxiety implied by it is incompatible with our notion of perfect bliss, and the mere belief in such an inconsistency is enough to poison our peace of mind. Our happiness does, indeed, depend upon accurate knowledge of the most important principles, and from that sphere of physics plurality of causes or contingency must be absolutely excluded. But exact knowledge of details does not contribute to happiness. Thus in astronomy we must learn what the heavenly bodies really are. On this point no uncertainty is permissible; we must be quite clear, *e.g.*, that the Stoics are wrong in holding them to be orbs of fire, endowed with life, reason, and purpose; but, when we come to their risings and settings, their solstices and eclipses and the like, exact knowledge on these points is unnecessary to happiness, and, as a fact, does not relieve from terror and misgivings the experts who claim to possess it. Their curiosity can never be quite satisfied. Some things still remain unknown, and therefore excite no less alarm in the experts than in the ignorant multitude. If our researches into celestial phenomena lead us to assume, not a single definite cause, but a plurality of possible causes, each sufficient to account for the phenomenon in question, such a result is accurate enough for our purpose, which is to ensure our own peace of mind. In such investigation we must take account of the various ways in which analogous phenomena occur within our terrestrial experience. When we know that a given effect can be produced in several ways by several distinct causes, while we are uncertain to which of these causes it is to be referred in any particular case, then, if we are sure that the question whether it should be referred to cause A or to cause B does not affect our tranquillity, we need not carry the investigation any further. How this method worked is shown in detail in the epistle to Pythocles. For each phenomenon several alternative explanations are set down side by side, and no preference is given to any of these over the others. Many of them are known to have been put forward in all seriousness by one or other of the early Ionians—Anaximander, Anaximenes, Xenophanes, Anaxagoras, Metrodorus of Chios, and, of course, Democritus. Thus the document, properly used, has its value as a contribution to the history of Greek science. The industry with which all previous explanations are collected is creditable, and may be set off against the writer's indifference as to which of them is true, so long as they dispense with the subsidiary assumption of Divine interference. Once, indeed, the record drops its habitual tone of impartial neutrality and takes sides with all the ardour of personal conviction. Heraclitus had declared the size of the sun to be the breadth of a man's foot (Diels, 12 B 3 [i². 62]). Epicurus, ignoring the wide divergence of opinion upon this interesting problem, lays down a similar view (Diog. Laert. x. 91) respecting sun, moon, and stars, which are all alike stated to be, in relation to us, just as large as they appear, though we are still left with three alternatives as to the actual size, which may be a little larger, a little smaller, or precisely as large as it appears. The grounds of this dogmatic statement, as given in περὶ φύσεως xi. (fr. 81 [Usener]), are that, if the apparent size, the size in relation to us, had diminished owing to the distance, the colour or brightness would have diminished still more: and this from the supposed analogy of fires seen at a great distance upon earth. In this summary (for the two epistles to Herodotus and Pythocles may be treated as a single whole) Epicurus did not think it worth while to include his famous hypothesis of atomic declination, or his account of the origin of life, while there is only a passing reference to such important topics as the history of our world, and of mankind upon it.

8. Theology.—From the foregoing it is abundantly clear that to Epicurus the gods are not supernatural beings controlling Nature from outside. His denial of Divine providence and Divine interference with the world is unqualified. That

he should have believed in gods at all is probably due in part to the influence of Democritus (*q.v.*), who postulated gigantic long-lived phantoms (δαίμονες), powerful for good or ill. The Epicurean gods differ from such δαίμονες in three particulars. (i.) They do not dwell in this or any world, but in the *intermundia* (μετακόσμια), or interspaces between world and world, where multitudes of gods and goddesses in human form hold converse. (ii.) They are not divided into beneficent and maleficent beings, but are all alike utterly indifferent to human interests. No benefits are to be expected from their favour, no punishments to be dreaded from their anger. Free from all tasks and occupations, they live solely for their own enjoyment. (iii.) They are not merely long-lived, but indestructible and eternal. The proof of their existence is the universal belief in them, which is declared to be no false opinion, but a genuine preconception (πρόληψις), which cannot have arisen except through many previous impressions of gods, all of them corresponding to an outward reality. Thus we are bound to think of them as blessed and eternal. To such superhuman excellence our reverence is due; but neither prayers, nor vows, nor prophecies have any part in true piety. These theological dogmas are declared to be just as certain, just as important in their bearing upon human happiness, as the fundamental principles of physics. But they involve a difficulty which baffles explanation. The bodies of the gods, like all συγκρίσεις, ought to be dissoluble by the separation of those atoms which united to form them. This difficulty is treated by the Epicurean speaker in Cic. *de Nat. Deor.* (I. xviii. 49, fr. 352 [Usener]), but the passage is the despair of commentators. According to Lachelier, Scott, and Giussani, the Divine bodies are eternal because continually renovated by fresh matter, waste and repair being equal and co-instantaneous (cf. ὁμοιότητες, Aet. I. vii. 34 [*Doxogr. Gr.* p. 306]).

9. **Ethics.**—(*a*) *Psychological prolegomena.*—Before proceeding to Ethics, it is convenient to sum up the conclusions already reached which most affect our happiness. Correct theology rids us of fear of the gods, by teaching that they do not interfere with the order of Nature; correct psychology rids us of the fear of death, by teaching us the true nature of the soul, which is seen to be incompatible with immortality. Further, the study of Nature can alone teach us what are the true limits of pleasure and pain. As we saw, for action and conduct, feelings (πάθη) are the test and touchstone, as sense-perception is for knowledge and opinion. There are definite limits to the increase of pleasure and pain alike. For pleasure they consist in the removal of every painful want. When this has been attained, pleasure cannot be heightened, it can only be varied (ποικίλλειν). Pain also has its limits fixed by Nature; the intensity of pain is in inverse ratio to its duration. The worst pains bring themselves to a violent end by killing the sufferer outright. Further, in pleasure it is necessary to distinguish the goal from the path which leads to it. The former is a permanent state of tranquillity or rest (καταστηματικὴ ἡδονή); the latter consists in movement (ἐν κινήσει), or progress, or excitement. Such movements are fugitive states, as contrasted with the permanent peace and serenity at which they aim, their object being either to get rid of painful want or to vary the pleasure which ensues upon its removal. Similarly, there are two sorts of desires, the first natural and necessary (φυσικαὶ καὶ ἀναγκαῖαι), aiming at the removal of all pain, the second natural but not necessary (φυσικαὶ καὶ οὐκ ἀναγκαῖαι); and these latter may be prompted by the false opinion that pleasure can be heightened, not merely varied, when all pain has been removed. This would explain preference for luxurious over simple fare, which Epicurus holds to be a mistake. Lastly, the pursuit of that which affords no pleasure at all—the miser's love of gold, the conqueror's love of glory—is a third class of desires, neither natural nor necessary, and entirely based upon false opinion. This psychological view, that there are two species of pleasure, is in sharp contrast with the doctrine of the Cyrenaics (*q.v.*), who held that pleasure is always a state of motion, and hence denied that the painless state of rest is pleasure at all. Another point on which Epicurus is at issue with the Cyrenaics is the comparison of mental with bodily pleasures. As to origin, the Cyrenaics pointed to certain mental pleasures and pains as not derived from the body (Diog. Laert. ii. 89, fr. 451 [Usener]). Epicurus held that all mental pleasure is derived from and related to the bodily pleasures of sense, affirming, in a much cited passage, that apart from these latter he had no idea whatsoever of the meaning of good (*ib.* x. 6, fr. 67 [Usener]). As to relative intensity, the Cyrenaics pronounced unhesitatingly for the pleasures and pains of the body. Epicurus contended that mental pleasure extends to past and future objects, while bodily pleasure is confined to the present. Past pleasures stored in the memory continue to be enjoyed; and, reinforced by them, even feeble present pleasure can outweigh greater present pain. Again, an assured hope and confident anticipation of the future is a similar make-weight on the side of pleasure. On these grounds he reverses the decision of the Cyrenaics, and pronounces that mental pleasures, although they merely mirror in the faculty of thought the bodily pleasures of sense, nevertheless exceed them in intensity as well as in range.

(*b*) *The end of action.*—In his theory of life and conduct (περὶ βίων) Epicurus starts (as did Bentham long after him) from the principle that pleasure and pain are the sole, the only possible, motives for our actions. This follows from our physical constitution. That pain must be avoided and pleasure pursued is a dictum as plainly evident as that fire is hot and ice cold. Internal sense guarantees the one, external perception the other, and each in its own sphere is a valid criterion. All experience confirms this: every animal as yet uncorrupted by false opinion naturally and instinctively pursues pleasure, and seeks to ward off pain. If all our striving, willing, and acting thus relate to pleasure and pain, we may call pleasure the highest good, and pain the worst evil, where by good we mean simply the end sought for its own sake, which is never a means to something else. Or, as J. S. Mill puts it, what better proof can be adduced that a thing is desirable than the fact that it is desired? Epicurean ethics is thus seen to be a system of egoistic hedonism, in which the maximum pleasure of the agent, after due subtraction of pains, is the supreme standard. Thus peace of mind and body, or the health of the entire man, is the only true and permanent satisfaction in which all minor and subordinate aims are embraced. Reason enables us to foresee and take into account the consequences, pleasurable or painful, which follow from our actions, so that we sometimes choose present pain in preference to pleasure, because by so doing we ensure a greater pleasure later on. For, though, considered in itself, every pleasure is a good, and agreeable (οἰκεῖον) to human nature, yet not all are to be chosen indiscriminately. Nor are all pains to be avoided, although pain is always an evil, and alien (ἀλλότριον) to our constitution, for their after-effects may be salutary. It is necessary, before acting, to measure or weigh the consequences, pleasurable

and painful, one against the other. Reason will choose and avoid, upon a sober calculation of the maximum pleasure attainable, after subtracting whatever pain is involved in and consequent upon its attainment.

(c) *The virtues.*—To the end thus defined, the virtues are related as indispensable means. No one can live pleasantly who does not live prudently, honourably, and justly; and, conversely, no one who lives prudently, honourably, and justly can fail to live pleasantly. At the same time, apart from this relation to the end, the virtues are worthless; and Epicurus was not slow to ridicule the absolute and unconditional value which the Stoics claimed for morality (*καλόν*, *honestum*) as an end in itself. If this morality has nothing to do with pleasure, what, he asks, can it stand for, unless it be the object of popular applause (*populari fama gloriosum*: Cic. *de Fin.* ii. 15, 48, fr. 69 [Usener])? It was easy for him to show the utility of three of the cardinal virtues. Prudence (*φρόνησις*), the root of all the other virtues, teaches what is to be sought and what to be avoided; Temperance (*ἐγκράτεια*), that we must not be seduced from a prudent choice by the bait of a pleasure known to entail painful consequences. The function of Courage is to keep us firm against those fears of the gods, of death, and of pain which *φρόνησις* has proved to be groundless. But the case is different with the social virtue of Justice, and the duties which by it a man owes to his neighbours. How are we to prove that honesty is the best policy? How can disinterested conduct be justified in a system which makes self-love the mother of all virtues? For, if it is a psychological truth that all men by instinct and reason pursue their own pleasure and avoid their own pain, all duties must be self-regarding. The egoistic effort of every individual competes with that of every other. Again, what makes actions just, and why does Epicurus enjoin obedience to the rules of justice? He holds that injustice is not in itself an evil, and that, in the state of nature, man was predatory. But he is no longer in the state of nature; Epicurus, like Hobbes and Hume, assumed a social compact, which, once made, is ever afterwards binding. But why should the wise man observe this compact if he find secret injustice pleasant and profitable? Because he can never be sure that he will not be found out. If he escapes detection by his fellow-men, there remains the fear of Divine vengeance, which, even if groundless, does more to disturb man's peace of mind than the fruits of injustice to promote it. That such motives do not weigh with criminals is irrelevant; we are dealing now with the wise and prudent man. In his judgment, compliance with the demands of justice, honour, and equity is a small price to pay for a pleasant life, or rather a moderate premium to ensure it. As things are, through justice and equity we gain the goodwill, love, and support of our fellow-men, which contribute so much to make us happy. Thus Epicurus first stated the utilitarian defence of justice. Its rules are wisely framed to procure for each the maximum of pleasure, to adjust conflicting interests with the minimum of friction; but, if all men were shrewd enough to see this and profit by it, laws would no longer be needed. Their present function is rather to protect the wise from suffering injustice than to deter them from committing it.

(d) *Friendship.*—Whereas the Stoics saw in justice and philanthropy the bonds which hold society together, Epicurus augured the happiest results from the voluntary association of friends. We must make friends, as we must obey the laws, because without them we cannot live safely and fearlessly, and therefore cannot live pleasantly. We promote our own happiness by conferring benefits on our friends; it is sweeter to give than to receive (*τὸ εὖ ποιεῖν ἥδιόν ἐστι τοῦ εὖ πάσχειν*; Plut. 'non posse suaviter vivi secundum E.': 15, p. 1097*a*, fr. 544 [Usener]). When an admission apparently so compromising to egoism is once made, it is easily pushed further; it is, therefore, not surprising to be told that we should make sacrifices for friends, and even undergo the greatest hardships on their behalf. In all ages the school was famous for the devoted friendships of which it could boast.

10. Fate and free will.—The epistle to Menœceus closes with the lofty claim that the man who follows its precepts will live the life of a god upon earth. At every moment the pleasures he enjoys far outweigh his pains; his future is secure; even on the rack he will be happy; give him bread and water, and he will not fall short of Zeus in enjoyment. The Stoics made promises no less extravagant, and Epicurus could not afford to be outdone by his rivals. But he differed from them fundamentally in his view of the future. The Stoics retained the doctrine of natural necessity as laid down by Democritus, that all events are equally determined, and linked together in one unending series of causes and effects; that the future is thus inevitably fixed, and could conceivably be foretold with complete accuracy at any point in the series. Epicurus rebelled against this doctrine. The past, he admitted, was determined, but not the future. So tenacious was he of this distinction, that he would not allow the validity of a disjunctive proposition relating to the future, such as: 'Hermarchus will either be alive or not alive to-morrow.' He was afraid (Cic. *de Fato*, x. 21, fr. 376 [Usener]) that in granting this he would be granting by implication that all events are necessarily determined. His own view is that some things happen by chance, and some are due to human agency (*ἃ δὲ ἀπὸ τύχης, ἃ δὲ παρ' ἡμᾶς*: Diog. Laert. x. 133, p. 65 [Usener]), where the context shows that *ἀπὸ τύχης* and *παρ' ἡμᾶς* must imply some sort of spontaneity and free will. This is a direct denial of Leucippus' maxim, *οὐδὲν χρῆμα μάτην γίνεται*. With pointed allusion to Leucippus and Democritus, Epicurus exclaims that it would be better to believe the tales about the gods than to become the slaves of the inexorable Fate of the physicists (*ἐπεὶ κρεῖττον ἦν τῷ περὶ θεῶν μύθῳ κατακολουθεῖν ἢ τῇ τῶν φυσικῶν εἱμαρμένῃ δουλεύειν*: *ib.* 134, p. 65 [Usener]). To what limitations this doctrine of contingency was subject is not known; but it is very improbable that it was carried as far as Guyau (*La Morale d'Épic.* ch. ii.) supposed. See also LUCRETIUS.

R. D. HICKS.

EPIPHANY.—This is the name usually given to the Christian feast held on January 6th. The early history of the feast is obscure, but it certainly

was generally observed by A.D. 325, and was probably not yet universal in 311. This is shown by the evidence of the Arians and the Donatists. The Arians appear to have celebrated the feast, for Greg. Naz. says that in 372 the Arian Emperor Valens visited the church at Cæsarea in Cappadocia, and shared in the Epiphany feast.[1] Considering the intensity of feeling between Arians and Orthodox, it is extremely improbable that either party would have accepted a feast which had been introduced by the other (cf. also Usener, 'Weihnachtsfest,' p. 192 f.). Thus it is probable that the Epiphany feast belonged to the services of the undivided Church, and, therefore, must have been introduced before 325. On the other hand, it can scarcely have been universal before 311, when the Donatists broke away from the Church; for Augustine in preaching about the Epiphany complained that the Donatists did not celebrate it.[2] It is not probable that the Donatists abandoned any established Christian custom, and it seems, therefore, to be almost certain that the Epiphany was introduced after their schism; but, of course, the proof is stringent for Africa only; and, although it justifies the view that the feast was not generally observed before 311, it does not exclude the possibility that it was celebrated in some churches at an earlier period. This possibility is, indeed, turned to certainty by a reference to the Epiphany in the *Martyrium* of Philip of Heraclea († 304), and by the statement in Ammianus that, when Julian was in Vienne in Gaul, he visited the church at the Epiphany.[3]

Some writers have quoted the homily of Hippolytus, *εἰς τὰ ἅγια θεοφάνια*, as a proof that the Epiphany existed in Rome in the middle of the 3rd cent.; but this evidence must probably be abandoned. It is very doubtful whether this tract belongs either to Hippolytus, to the West, or to the 3rd century. Internal evidence shows that it was more probably a sermon delivered at the baptism of some distinguished person in the Eastern Church, and probably in the 4th century. It may have been at the feast of the Epiphany; this is probable not only on internal evidence but also because the Epiphany was a favourite day for baptism.[4]

Still earlier is the evidence of Clem. Alex., who states that the Basilidians observed the feast of the Baptism on Jan. 6,[5] but his words seem distinctly to imply that the feast was not observed in Catholic circles. The evidence for the celebration of the feast among Gnostics is, therefore, about a century earlier than that for its existence among Catholics.

As was shown in art. CHRISTMAS, it is certain that in the East Jan. 6 was the feast of the Nativity as well as that of the Baptism, and it is probable, though not quite so certain, that the same is true of the West. But in the 4th and 5th centuries Dec. 25 was gradually adopted as the feast of the Nativity, and ultimately became universal, except in Armenia.

The history of the feast on Jan. 6 after the acceptance of Dec. 25 for the Nativity is not quite the same in the East as in the West. In the East it remained the feast of the Baptism, as may be seen, apart from the liturgical arrangements for the day, from the sermons of the Eastern Church Fathers, and from the hymns. But in the West it came to be chiefly associated with the visit of the Magi to Bethlehem, though the connexion with the Baptism was never entirely forgotten; in addition to this, the miracle of Cana was associated with the feast, and later there was a tendency to regard it as a celebration of all manifestations of the Divine nature of Christ.

So far there is no doubt. The problems which arise are: (1) Was Jan. 6 originally a feast of two distinct events, the Nativity and the Baptism, or of one only; and if the latter, what was the course of its development? (2) Why was Jan. 6 chosen as a special feast, apart from the question as to which event was celebrated on it?

1. The original character of the feast of Jan. 6 and its modification.—There is no sufficient evidence to justify a confident answer to this question. What is clear is that in the 4th cent., in Constantinople, Antioch, Alexandria, and probably elsewhere, before Dec. 25 was accepted as the date of the Nativity, Jan. 6 was observed as the feast both of the Nativity and of the Baptism. Jerusalem offers a possible exception. Here it is quite plain, from the evidence of Silvia, that Jan. 6 was a feast of the Nativity; it is less certain whether it was also a feast of the Baptism. The researches of F. C. Conybeare (at present unpublished) tend to show that the Armenian rites, which combine the Baptism and the Nativity, represent a combination of a Jerusalem rite celebrating the Nativity, and a Greek (Alexandrian, or Antiochene?) rite celebrating the Baptism.

Now, it is tolerably plain that in connexion with the doctrinal controversies of the 4th and 5th centuries there was a tendency to emphasize the Nativity and distinguish it from the Baptism, and that this was one of the reasons which led to the establishment and exaltation of a separate feast on Dec. 25. To go farther is difficult. The points which stand out are that in the West the feast came to be connected with the Magi, and that Jerusalem, which, if we are to trust Macarius, had originally celebrated the Baptism on Jan. 6, partially or completely changed the character of the feast and connected it with the Nativity. So far did this go that Epiphanius not only maintains that Jan. 6 is the date of the Nativity, but says that a different date, Nov. 8, was that of the Baptism.[1] Obviously these changes were made because the Church was contending with some disputed doctrine concerning the Baptism of Christ, and desired to exclude it, or the danger of it, from the celebration of the Epiphany. The exact proof is difficult to obtain, in the absence of any direct statement; but there are enough indirect allusions to show that the danger was the doctrine that Jesus became Divine at the Baptism rather than at the Nativity, or that He obtained regeneration through baptism in the same manner as Christians. The evidence for this view is too scattered to be given in full. The following must serve as an indication of its character.

Among the correspondence of Leo (440–461) there is a letter to the Sicilian bishops (no. 18), and it is clear from his protests that there was in Sicily a tendency to regard the baptism of Jesus as having conveyed the same grace to Him, and having borne the same import for Him, as the baptism of believers

[1] *εἰς γὰρ τὸ ἱερὸν εἰσελθὼν μετὰ πάσης τῆς περὶ αὐτὸν δορυφορίας, ἦν γὰρ ἡμέρα τῶν Ἐπιφανίων καὶ ἀθροίσιμος, καὶ τοῦ λαοῦ μέρος γενόμενος οὕτως ἀφοσιοῦται τὴν ἕνωσιν κ.τ.λ.* (Greg. Naz. *Or.* xliii. 52 [i. 808d, ed. Bened.]).

[2] 'Merito istum diem nunquam nobiscum haeretici Donatistae celebrare voluerunt, quia nec unitatem amant, nec orientali ecclesiae, qua apparuit illa stella, communicant; nos autem manifestationem domini et salvatoris nostri Iesu Christi, qua primitias gentium delibavit, in unitate gentium celebremus' (Aug. *Serm.* 202, 2 [v. 915c]).

[3] 'Feriarum die quam celebrantes mense ianuario Christiani Epiphania dictitant' (Ammianus, xxi. 2. 5).

[5] *αἱ δὲ ἀπὸ Βασιλείδου καὶ τοῦ βαπτίσματος αὐτοῦ τὴν ἡμέραν ἑορτάζουσι, προδιανυκτερεύοντες ἀναγνώσει . . . τὴν πεντεκαιδεκάτην τοῦ Τυβὶ μηνός, τινὲς δ' αὖ τὴν ἑνδεκάτην τοῦ αὐτοῦ μηνός* [*i.e.* Jan. 6 or Jan. 10] (*Strom.* i. 21).

[1] *καὶ ἐβαπτίσθη ἐν τῷ Ἰορδάνῃ ποταμῷ, τῷ τριακοστῷ ἔτει τῆς αὐτοῦ ἐνσάρκου γεννήσεως, τουτέστι κατὰ Αἰγυπτίους Ἀθὺρ δωδεκάτῃ, πρὸ ἓξ εἰδῶν Νοεμβρίων* (*Panarion* 51, ed. Dindorf, ii. 482 ff.).

conveys to and bears for them. The vigour with which Leo protests shows that this doctrine existed in Sicily. It is also not improbable that a similar feeling underlies Pope Siricius's letter to Himerius of Tarracon in 385, in which he protests against the custom of baptism at the Epiphany. More definite traces of this type of heresy may be found in various homilies on the Epiphany, among the *Spuria* of Augustine, Ambrose, and Maximus. In pseudo-Augustine 136, for instance, the writer says: 'Let us celebrate Christ's baptism, keeping watch over our purity; because this is the regeneration of Christ and a strengthening of our faith.' It is difficult to define its exact limits, but there is no doubt that the view, ultimately derived from early Adoptianist sources, lingered on for a long time, that Jesus was in some sense regenerate, or even that He became Christ, in the Baptism, and that this heresy necessitated the efforts of the Church so to handle the feast that its heretical explanation should be excluded. Hence, especially in the genuine homilies of Augustine, the Epiphany is treated as primarily the celebration of the coming of the Magi, and not of the Baptism.

2. The original choice of Jan. 6.—The solution of this problem is unattainable at present. The fact which stands out is that the earliest evidence for the feast is that of the Basilidians. We have every reason for believing that these Gnostics were syncretistic in their methods, and this draws attention to a story in Epiphanius (*Panarion* 51) as to the feast which used to be held in Alexandria in the Koreion, or Temple of Kore, on Jan. 6. He says that on the eve of that day it was the custom to spend the night in singing and attending to the images of the gods. At dawn a descent was made to a crypt, and a wooden image was brought up, which had the sign of a cross, and a star of gold, marked on hands, knees, and head. This was carried round in procession, and then taken back to the crypt; and it was said that this was done because 'the Maiden' had given birth to 'the Aeon.' With this may be compared the statement of Macrobius (i. 18. 9.):

'Sol ut parvulus videtur hiemali solstitio, qualem Aegyptii proferunt ex adyto die certa quod tunc brevissimo die veluti parvus et infans videatur,'

and the statement in Cosmas Indicopleustes (*PG* xxxviii. 464):

ταύτην ἦγον ἔκπαλαι δὲ τὴν ἡμέραν ἑορτὴν Ἕλληνες καθ' ἣν ἐτελοῦντο κατὰ τὸ μεσονύκτιον ἐν ἀδύτοις τισὶν ὑπεισερχόμενοι ὅθεν ἐξιόντες ἔκραζαν· ἡ παρθένος ἔτεκεν, αὔξει φῶς.

It is possible that Cosmas himself believes this to be Dec. 25, but, as he refers to Epiphanius, it is not improbable that it was really Jan. 6. In this connexion the usual name for the Epiphany in Greek, *ἡ ἡμέρα τῶν φώτων*, obtains a new importance (see further F. Cumont, 'Le Natalis Invicti,' in *CAIBL*, 1911). The existence of a heathen feast of this kind would afford ample explanation of the growth of a similar Christian feast, either by way of syncretism or of rivalry; and a more or less Docetic or Adoptianist form of Christianity would naturally regard the Baptism as the spiritual birth of Christ.

Another line of possibility is contained in the constant connexion of Epiphany with the rite of 'Blessing the Waters.' In the earliest Syriac, Coptic, Armenian, and Greek Epiphany rites there is a ceremony of consecrating water, usually that of the local river, for baptism. There is reason to think that this represents an originally pagan custom. According to Epiphanius (*Panarion* 51), there was in Alexandria a festival called *ὑδρεῦσις* (see F. Chabas, *Le Calendrier des jours fastes et néfastes de l'année égyptienne*, Paris, 1870, p. 69). This festival was on Tybi 11 (Jan. 6), and it was the custom to draw water and store it because of the especial merit which it then acquired. Aristides Rhetor in the 2nd cent. also mentions this custom, though he does not specify the date. He also states that the water used to be exported for use abroad, and that—unlike all other water—it was supposed to improve with age, like wine (*Orat.* ed. Oxford, 1730, ii. 573 [p. 341] and 612 [p. 361]). Epiphanius goes still further, and says (*loc. cit.*) that the water actually became wine; and he connects this fact with the celebration of the miracle of Cana at the Epiphany. It is also probable that this custom was not confined to Egypt or the Nile; Epiphanius goes on to state that at that season many fountains turned to wine. There was at Cibyra in Caria a fountain of this sort, and another at Gerasa in Arabia. Epiphanius had actually drunk of the fountain at Cibyra. In Rome libations were made by the priest of Isis with Nile water; and Plutarch tells us that the water which used to be carried before the priests in procession was in some sense an effluence of the god himself (*de Is. et Osir.* 36; cf. also Clem. Alex. *Strom.* ed. Sylburg, p. 634).

Behind all these customs there is probably (though it is scarcely susceptible of proof) an ancient belief to the effect that at the turn of the year water was especially dangerous, owing to evil spirits; and that it became propitious once more when the sun had begun clearly to lengthen his day. Even to the present day the Coptic calendar (published in 1878 at the Feluch Printing Office in Alexandria by A. Mourès) issues a warning not to drink water from the river on Tybi 5 (and it is better not to do so a whole month previously), but on Tybi 9 the blessing of Heaven descends on the river.[1]

Probably nothing will in the end throw so much light on the origin of the Epiphany feast, and also on that of Baptism, as a general study of the primitive belief of the connexion between water, the spirit world, and the cycle of the sun.

LITERATURE.—H. Usener, *Religionsgeschichtl. Untersuchungen*, i. 'Das Weihnachtsfest,' Bonn, 1889, ²1910; P. de Lagarde, *Mittheilungen*, Göttingen, 1884–91, iv. 241 ff. There is a valuable article in *PRE*³ v. 414–417 by Caspari; but much more may be expected if, or when, Conybeare's collection of material is published.

KIRSOPP LAKE.

EPISCOPACY.—The term 'episcopacy' is used in the present article to denote that system of the Church in which bishops (in the ordinary modern sense of the word 'bishop') fill the offices on which the continued life of the Church depends.

1. New Testament.—In the NT the word 'bishop' (*ἐπίσκοπος*) is used to denote the same officer as the word 'presbyter' (*πρεσβύτερος*). See Tit 1^{5-7}, where Paul, in directing Titus to appoint presbyters in every city, and describing those who are fit to be presbyters, says: 'For one who is a bishop must be blameless, as God's steward,' thus using the word 'bishop' to apply to the person who has been called 'presbyter' immediately before; Ph 1^{1}, 1 Ti 3^{1-13}, where bishops aud deacons are mentioned side by side without any reference to presbyters, and where the passages would plainly demand some mention of the presbyters if they were different from the bishops; Ac $20^{17. 28}$, where those described in the narrative as the presbyters of the church are addressed by Paul as bishops (cf. also 1 P $5^{1. 2}$ in TR and RV text, where 'exercising the office of bishop'—*ἐπισκοποῦντες*—is used for those who are addressed as presbyters; but RVm and WH omit). A comparison of these passages affords adequate evidence that in the NT the terms 'bishop' and 'presbyter' are used interchangeably.[2] The use of the word 'bishop' in

[1] Owing to the change of calendar, the equivalence of the months is now different; and Tybi 9 = Jan. 16, but this is, as it were, only a modern accident.

[2] Against this, see von Weizsäcker (ii. 326–331, Eng. tr.), who distinguishes the terms; and Hort (pp. 190–194), who regards

the NT then does not itself denote the existence of episcopacy in NT times.

It remains to inquire whether there are other indications to show that episcopacy existed. Of such indications there are the following: (1) the position and work of the Apostles; (2) the suggestions about the position of James, the Lord's 'brother,' at Jerusalem: see Ac 12^{17}, where Peter directs that his release from prison be announced to 'James and to the brethren'; $15^{13.19}$, where James appears to be represented as having presided at the Council of Jerusalem;[1] 21^{18}, where the statement about Paul, that he 'went in' 'unto James; and all the presbyters were then present,' shows that James was then presiding in the church at Jerusalem; Gal 2^{9}, where Paul, referring to Jerusalem, mentions James before Peter as well as before John, contrary to the usual order in the NT; (3) the rule of the Apostolic delegates Timothy and Titus at Ephesus and Crete: see the Pastoral Epistles, *passim*; (4) the use of the laying on of hands as a link in the ministry by the original Apostles and Paul and the Apostolic delegate Timothy: see Ac 6^{6}, where the seven men of good report were ordained by the Apostles laying their hands on them with prayer; 1 Ti 4^{14}, 2 Ti $1^{6.7}$, where Paul refers to Timothy having been ordained *with the accompaniment of* the laying on of the hands of the presbytery (*μετὰ ἐπιθέσεως τῶν χειρῶν τοῦ πρεσβυτερίου*), but *by means of* the laying on of his hands (*διὰ τῆς ἐπιθέσεως τῶν χειρῶν μου*);[2] 1 Ti 5^{22}, where Paul urges Timothy not to lay hands hastily on any one;[3] (5) the appointment of presbyters by Paul and Barnabas in the churches of Asia Minor, whether, as analogy makes more probable, by the laying on of hands or by some other method: see Ac 14^{23}. These indications point to the rule and the exercise of ordaining power on the part of officers of a higher order than the presbyters and corresponding to the bishops of later times.[4]

2. Early Church.—There is very clear evidence that in Asia Minor the government of the Church was episcopal, and episcopacy was regarded as necessary from, at any rate, the beginning of the 2nd century. Ignatius of Antioch, writing about the year 110, expresses himself in terms which imply that he did not know of recognized Christian bodies anywhere without bishops, and that he regarded the latter as necessary to the existence of the Church. He says that, apart from bishops, presbyters, and deacons, 'there is not even the name of a Church' (*χωρὶς τούτων ἐκκλησία οὐ καλεῖται*). He refers to the necessity of bishops, (1) that there may be a centre of unity for discipline and prayer, (2) that the bishop may be the representative of Christ and of God, and (3) that the Eucharist may be securely, and Baptism and other rites lawfully, administered.

'Be careful, therefore, to observe one Eucharist . . . there is one altar, as there is one bishop together with the presbytery and the deacons my fellow-servants'; 'Let that be held to be a valid (*βεβαία*) Eucharist which is under the bishop or one to whom he shall have committed it'; 'It is not lawful apart from the bishop (*οὐκ ἐξόν ἐστιν χωρὶς τοῦ ἐπισκόπου*) either to baptize or to hold a love-feast': see *Eph.* 2, 3, 4, 5, 6, 20; *Magn.* 2, 3, 6, 7, 13; *Trall.* 2, 3; *Philad.* 3, 4; *Smyrn.* 8.[1]

Towards the end of the 2nd cent., about the year 185, the need of episcopal succession from the Apostles is emphasized by Irenæus in Gaul as a guarantee for the preservation of the truth: see *adv. Hær.* III. iii. 1. There is like evidence from Africa in a passage from Tertullian, writing about the year 199 and referring to episcopal descent from the Apostles as affording the proof of the life of the Church: see *de Præscr. Hæret.* 32. The ordinary belief of the 3rd cent. is expressed by St. Cyprian when he says: 'Any one who is not with the bishop is not in the Church' (*Ep.* lxvi. 8). The rites which lie behind the *Canons of Hippolytus* (Roman or African, 2nd or 3rd cent.), the *Liturgical Prayers* of Serapion (African, 4th cent.), and the *Apostolic Constitutions* (Syrian, 4th cent.) contained a clear distinction between the offices of bishop, presbyter, and deacon. (For what may be a different element in the *Canons of Hippolytus*, see below.) As to Rome, the lists of the bishops of Rome afford weighty testimony to episcopal government, and to the episcopal government being that of a single bishop. The value of these lists has often been questioned; but Bishop Lightfoot in his essay on the early Roman succession showed with great conclusiveness that there was really one (and not, as many had thought, more than one) tradition as to the early bishops of Rome, and that this tradition went back to the middle of the 2nd century (see his *Apostolic Fathers*, I. i. [1890] 201–345). A reference to 'Clement,' to whom is entrusted the charge of sending to the foreign cities (*πέμψεις ἐν Κλήμεντι καὶ ἐν Γραπτῇ· πέμψει οὖν Κλήμης εἰς τὰς ἔξω πόλεις, ἐκείνῳ γὰρ ἐπιτέτραπται*), in the *Shepherd* of Hermas, a Roman document of the end of the 1st cent. or of the middle of the 2nd, may allude to a bishop as chief ruler at Rome (*Vis.* ii. 4 (3)). The lists of bishops of Jerusalem, Antioch, and Alexandria given by Eusebius may also be mentioned. They have much less authority than the list of the bishops of Rome, but have some importance; and the evidence of the Antiochene list is corroborated by the testimony in the *Epistles* of St. Ignatius (see the lists collected from the *Ecclesiastical History* and *Chronicle* of Eusebius by McGiffert in his tr. of Eusebius in *Nicene and Post-Nicene Fathers*, p. 402).

If the evidence which has so far been mentioned stood alone, it would hardly be possible for any scholars to hold an opinion other than that episcopacy was the form of Church government in Rome and throughout the West as well as in Asia Minor from the earliest times. A different opinion, however, has been based on other evidence and linked with the references to the 'prophets' in the NT already alluded to. In the *Teaching of the Twelve Apostles*, a Syrian or Alexandrian document of the 1st or 2nd cent., probably composed for Christian use on the basis of a Jewish manual, the prophets fill an important place. A true prophet is said to 'speak in the Spirit,' and to 'have the ways of the Lord.' The prophets are called 'your chief priests' in connexion with the reception of first-fruits—a phrase which suggests a comparison between the position occupied by the prophets among Christians and that occupied by the priests among the Jews. The local ministers are described as 'bishops' (*i.e.* presbyters, as in the NT) and deacons; an indication of their dignity is that 'they perform the service (*λειτουργοῦσι . . . τὴν λειτουργίαν*) of the prophets and teachers,' and that they are 'your honourable men along with the

the word 'bishop' not as denoting an office, but as simply meaning generally one who is in a position of oversight.

[1] Against this, see Hort, pp. 79–81.

[2] F. H. Chase, *Confirmation in the Apostolic Age*, London, 1909, pp. 35–41, with less probability interprets 2 Ti $1^{6.7}$ as referring to Confirmation, not Ordination.

[3] With less probability this is interpreted as alluding to Absolution, not Ordination, by C. J. Ellicott, *in loco*; Hort, pp. 214, 215; Chase, *op. cit.* p. 65.

[4] Against this it has been maintained that the existence and work of the prophets, or prophets and teachers, and especially the statements about them in 1 Cor. and the notice in Acts of their laying hands on Paul and Barnabas at Antioch and sending them away on their missionary journey, show a ministry independent of anything corresponding to episcopal rule and ordination both in its origin and in its work: for the prophets, see Ac 11^{27} 13^{1} 15^{32} 19^{6} $21^{9.10}$, Ro 12^{6}, 1 Co $11^{4.5}$ $12^{4-11.28.29}$ $13^{2.8.9}$ $14^{1-6.22-39}$, Eph 2^{20} 3^{5} 4^{11}, 1 Th 5^{20}, 1 Ti 1^{18} 4^{14}.

[1] Ignatius does not, it may be well to notice, specify the method by means of which the bishop receives his office. He says nothing about succession, and he does not mention the laying on of hands.

prophets and teachers.' Instruction is given that the prophets are to be allowed to 'offer thanksgiving as much as they desire' (εὐχαριστεῖν ὅσα θέλουσιν)—a phrase which probably means to celebrate the Eucharist at such length and with such forms as they wish (cf. Justin Martyr, *Apol.* i. 67; *Const. Ap.* viii. 12). There is no indication that the local ministry of 'bishops' and deacons was ordained by a higher order as well as chosen by the people; and there is nothing to show whether the prophets were or were not ordained. Some writers hold that this silence is a proof that there was no ordination in either case, but in connexion with such matters the incomplete and fragmentary character of the book must be borne in mind (*Teaching of the Twelve Apostles*, x. 7, xi. 3–12, xiii., xv. 1, 2, xvi. 3). The *Shepherd* of Hermas contains instruction how to distinguish a true from a false prophet by the observation of character; but does not show whether the prophet was in any way appointed to his office (*Mand.* xi.). Prophets held a prominent place in the Montanist movement which began from Phrygia in the second half of the 2nd cent.; and the Montanists maintained that the prophets and spiritual persons possessed the powers which were wrongly claimed by the officials of the Church. For instance, Tertullian in his Montanist days writes: 'The Church will indeed forgive sins; but it will be the Church the Spirit by means of a spiritual man, not the Church the number of the bishops' (*de Pud.* 21). It is a theory of some writers that in this respect the Montanists preserved the original tradition of the Church.

With the references to the prophets in the NT and the later evidence from the *Teaching of the Twelve Apostles*, Hermas, and the Montanists, the privileges ascribed to the 'confessors' in some quarters have been associated by writers who hold that the original constitution of the Church was not episcopal. A study of the Church Orders brings out the existence and alteration of a provision that a confessor might be accounted a presbyter without receiving ordination. The *Canons of Hippolytus* enact that one who has been tortured for the faith is to be regarded as a presbyter without ordination by the bishop if he is a freeman, and that if he is a slave he must be ordained, but the bishop is to omit the part of the prayer which relates to the Holy Ghost. A confessor who has not suffered torture must be ordained if he is to become a presbyter; and no one can become a bishop without ordination even if he had been tortured for the faith (canons 43–45 in Achelis, *Canones Hippolyti*, 1891). The later *Egyptian Church Order* contains confused and inconsistent statements, which show traces of a similar provision to that in the *Canons of Hippolytus* as well as of its reversal (canons 24, 25, 54, 55 of the Ethiopic text; and canons 34, 67 of the Saidic text in Horner, *The Statutes of the Apostles*, 1904). The *Apostolic Constitutions* prohibit a confessor from acting as a bishop or presbyter or deacon unless he has been ordained (viii. 23). A similar line of thought to that indicated by the allowance of this privilege to the confessors may have underlain the claim made at Carthage in the 3rd cent. that those who had suffered persecution and torture and danger of death for the sake of the faith might re-admit to communion Christians who had apostatized (see, *e.g.*, Cyprian, *Ep.* xv. xvi.).

With this group of evidence may be taken an obscure sentence in the *Canons of Hippolytus* which occurs in the description of the rite of consecrating a bishop, a canon of the Council of Ancyra of 314, some alleged instances of ordination by presbyters, and statements about the Church of Alexandria. The sentence in the *Canons of Hippolytus*, 'Then, from among the bishops and presbyters let one be chosen who is to lay his hand on his head and pray, saying,' has been thought to form part of the older strata incorporated in the present text of the *Canons*, and to embody a primitive custom, according to which ordination was not restricted to bishops prior to the clear distinction between bishops and presbyters already mentioned, and to the regulation by which the power of ordaining is explicitly said not to be committed to presbyters (*Canons of Hippolytus*, 30–32). The thirteenth canon of Ancyra, according to the text adopted by J. B. Lightfoot and as translated by him (*Philippians*, pp. 232, 233), enacts that 'it be not allowed to country-bishops (χωρεπισκόποις) to ordain presbyters or deacons, or even to city-presbyters (μηδὲ πρεσβυτέροις πόλεως), except permission be given in each parish (ἐν ἑκάστῃ παροικίᾳ) by the bishop in writing'—an enactment which has been understood to mean that episcopal ordination can in some cases be dispensed with, if there is episcopal sanction, which on such an interpretation would testify to episcopal government as a fact, but would imply that no necessity for episcopal ordination exists as a matter of principle. To the present writer the true text and translation of the canon appear to be: 'Country bishops may not ordain presbyters or deacons, no, nor town presbyters either (μηδὲ πρεσβυτέρους πόλεως), without the written consent of the bishop, in another diocese (ἐν ἑτέρᾳ παροικίᾳ).'[1] The alleged instances of ordination by presbyters of Felicissimus in the West in the middle of the 3rd cent. by the presbyter Novatus (Cyprian, *Ep.* lii. 2), of Daniel in the East in the 4th cent. by the abbot Paphnutius (Cassian, *Conl.* iv. 1), and of St. Aidan in the 7th cent. by the abbot and monks of Iona (Bede, *HE* iii. 5) are probably all cases in which the phrases 'appointed' (*constituit*), 'made' (*fecerat*) a deacon, 'was preferred (*est prælectus*) to the office of deacon,' 'he promoted (*provexit*) him to the honour of the presbyterate,' 'ordaining (*ordinantes*) him,' refer not to the act of ordination but to the making of arrangements for that act. As regards Alexandria there is a series of statements which need careful consideration. Jerome, after speaking of the identity, according to his theory, of bishops and presbyters, proceeds:

> 'When afterwards one was chosen to preside over the rest, this was done as a remedy for schism, and to prevent one individual from rending the Church of Christ by drawing it to himself. For even at Alexandria, from the time of Mark the Evangelist to the episcopates of Heraclas and Dionysius, the presbyters used always to appoint as bishop one chosen out of their number, and placed on a higher grade, as if an army should make a commander, or as if deacons should choose one of themselves whom they know to be diligent, and call him archdeacon. For, with the exception of ordaining, what does a bishop do which a presbyter does not?' (*Ep.* cxlvi. 1).

In a letter written by Severus, the Monophysite Patriarch of Alexandria between 518 and 538, it is said that formerly at Alexandria the bishop was appointed by the presbyters, and that it is by a later custom that his 'solemn institution has come to be performed by the hand of bishops' (see E. W. Brooks, in *JThSt* ii. [1901] 612, 613). In the collection *Apophthegms of the Fathers*, parts of which are probably as old as the second half of the 4th cent., 'certain heretics' are said to have abused the Archbishop of Alexandria 'as having received his ordination from presbyters' (*Apophthegm. Patrum*, 78, in *PG* lxv. 341). The 10th cent. writer Sa'īd Ibn al-Baṭrīq, the Melkite or Uniate Patriarch of Alexandria, who took the name of Eutychius, gives a circumstantial account that

> 'the Evangelist Mark appointed, together with Ananias the Patriarch, twelve presbyters to be with the patriarch, so that, when the patriarchate was vacant, they should choose one of the twelve presbyters, and that the other eleven should lay

[1] See R. B. Rackham, in *Studia Biblica et Eccles.* iii. (1891) 149, 187–193; cf. Routh, *Rel. Sac.*², 1846–8, iv. 121, 144–157.

their hands on his head and bless him and make him patriarch, and afterwards should choose some eminent man and make him presbyter with themselves in the place of him who had been made patriarch, so that they might always thus be twelve,' and adds that this custom was changed for the later custom in the time of the Patriarch Alexander in the first half of the 4th cent. (*Annals* in *PG* cxi. 982 [Lat. tr.]; Arab. text of the treatise in Pocock's ed., Oxf. 1658; and of this passage in Selden, *Eutychii Ægyptii Orig.*, Lond. 1642).

None of this evidence appears to the present writer to counterbalance the testimony which indicates that episcopacy was part of the ordinary system in the Church from the first. It is easy to exaggerate the importance of the *Teaching of the Twelve Apostles*; and it is very questionable what inferences can rightly be drawn from its silence. Apart from a comparison with the *Teaching*, no conclusions contrary to episcopacy could be derived from the references to the prophets in the *Shepherd* of Hermas. The general history of the Church in the 2nd and 3rd centuries does not support the opinion that the Montanists retained a survival of the original tradition. The privileges allowed to the confessors seem to have been merely an outcome of the exaggerated value which was sometimes attached to sufferings on behalf of the faith. If the text and translation of the canon of Ancyra are as already suggested, the canon does not allow of ordination by any except bishops, but is simply a disciplinary measure designed to prevent the bishops appointed to supervise the Christians in country districts from encroaching on the rights of the diocesan bishops. The alleged instances of ordination by others than bishops do not, in the light of the consideration which has been already urged, bear examination. The case of the Church at Alexandria is much more important than the others. But here there is great doubt about the facts. In the midst of his statement on the equality of bishops and presbyters, Jerome, by introducing the sentence, 'With the exception of ordaining, what does a bishop do which a presbyter does not?' appears to restrict ordination to bishops; for it is hardly an adequate interpretation of his words to suppose that they merely indicate the practice which had come to be in his time, and are not in any way an assertion of a principle. Eutychius, apart from corroboration of his statements, is not regarded by any one as a trustworthy authority. It is not unlikely that the whole story arose out of Arian slanders against Athanasius, who is known to have been episcopally ordained; and it may be observed that Origen, who had plenty of opportunity for knowing the facts about Alexandria, does not show that he was acquainted with any such method of appointing the patriarch as Eutychius mentions.[1]

The state of things at Rome and Corinth at the end of the 1st cent. and in the first half of the 2nd cent. needs separate consideration. The epistle of Clement of Rome to the Corinthians, written about the year 95, lays strong stress on succession from the Apostles as a part of the ordered system of the Church. The ministry, says Clement, is from the Apostles, and so, through the Apostles, from Christ, and, through Christ, from God. His epistle does not afford any clear evidence whether he regarded this Apostolical succession as necessarily preserved by means of bishops. The word 'bishop' is used in it, as in the NT, to denote the same persons as the presbyters. The presbyters are spoken of as filling posts of authority at Corinth. It is not clear whether these were the posts of chief authority. In two passages (3, 6) there is a doubt as to the meaning of the words 'rulers' (ἡγούμενοι, προηγούμενοι) and πρεσβύτεροι, and in another passage (3–5) there is a doubt about the meaning of the phrase 'men of account' (ἐλλόγιμοι ἄνδρες). Of these passages taken by themselves there are three possible interpretations. (1) The phrases 'rulers' and 'men of account' are used in a specific sense to denote the holders of a specific office; the word πρεσβύτεροι in chs. 3, 6 denotes the presbyters and not simply older men; it follows that the 'rulers' held an office superior to the presbyters, corresponding to that of diocesan bishops. (2) The phrases 'rulers' and 'men of account' are not used in a specific sense, but are simply synonyms for the presbyters; the word πρεσβύτεροι in chs. 3, 6 denotes older men, not the presbyters; it follows that the presbyters held the highest rank in the ministry at Corinth and ruled the Church there, but there is no reason to suppose that they had not been ordained in such a way as to receive the episcopal powers which in Asia Minor and at a later time in the West were limited to the diocesan bishops. (3) The presbyters held the highest rank and exercised the chief rule, and there is no reason to suppose that they were ordained in any different method from the presbyters of later times. A like question arises about Rome in connexion with the *Shepherd* of Hermas. Alluding to a past generation, Hermas speaks of apostles, bishops, teachers, deacons. In referring to the ministry of the present, Hermas mentions deacons, presbyters, bishops (about whom nothing shews whether they are to be identified with the presbyters, as in the NT and St. Clement of Rome, or to be distinguished from them), prophets apparently itinerant, 'rulers of the Church' (οἱ προηγούμενοι τῆς ἐκκλησίας), and Clement (*Vis.* ii. 2 (6), 4 (2), (3), iii. 5 (1), 9 (7), *Mand.* xi. 7, *Sim.* ix. 25, 26 (2), 27 (1), (2)). Apart from the reference to Clement, which has already been mentioned, there is the same doubt as in the epistle of Clement of Rome whether the 'rulers of the Church' are to be identified with the presbyters or to be distinguished from them. The presbyters are said to preside over the Church (τῶν πρεσβυτέρων τῶν προϊσταμένων τῆς ἐκκλησίας); and the 'occupants of the chief seats' (τοῖς πρωτοκαθεδρίταις) are either identified with or closely associated with the 'rulers of the Church.' Here again there are three possible interpretations: (1) there are three groups of officers, Clement the bishop, the 'rulers' as a special class under him, the presbyters; (2) there are two groups, Clement the bishop, and the presbyters also called 'rulers'; (3) there is one group only, described as presbyters or as 'rulers,' of whom Clement was in the chief place as the presiding presbyter, but was not the holder of any different office from the rest. It is probable that decisions in regard to the interpretations to be placed on the epistle of Clement and the *Shepherd* of Hermas concerning this matter will be largely influenced by views of the evidence as a whole; and that in forming this general view the determining factor will be the importance attached to the list of the bishops of Rome as indicating a succession of single bishops at Rome from the first on the one hand, or to the position of the prophets regarded as a ministry independent of official rule on the other hand.

3. **Later times.**—It is clear that from the middle of the 2nd cent. onwards the settled system of the Church was episcopal, and the episcopacy that of a single bishop, everywhere (on the theory of an exception at Alexandria, see above), and that this was the case at Rome and in the West as well as in Asia Minor and the East. Episcopacy and the rule of a single bishop then remained as the constant and universal tradition until the 16th cent., when the need of it was challenged in some quarters, and considerable bodies of Christians

[1] See a note by Bishop Gore in *JThSt* iii. [1902] 278–282; cf. C. H. Turner, in *Cambridge Medieval History*, vol. i. [1911] p. 160 f.

who were without episcopal government gradually grew in numbers and in importance. The existing state of affairs is the outcome of influences derived from the pre-Reformation tradition and of new influences which arose in the course of the Reformation. In the churches of the East, episcopacy is regarded as of Divine origin, and as the Divinely appointed means for the preservation and rule of the Church and the transmission of sacramental grace, and as essential in those who ordain. In the Church of Rome, bishops are held to be of Divine institution and appointment, and are the only ministers of ordination. Their position as rulers has been greatly modified by the claims and practice of the Popes. It has been much disputed whether the episcopate is a distinct order from the priesthood or only an extension of it. Most of the great schoolmen, including Aquinas (*Sent.* IV. xxiv. 3; *Sum. Theol. Suppl.* xl. 5), but not Duns Scotus (*Sent.* IV. xxv. 1, 2 ad 3), held that it is not a distinct order. The Council of Trent, while asserting that the hierarchy is Divinely instituted and consists of bishops, presbyters, and deacons, and that bishops are superior to presbyters and have the power of confirming and ordaining, and that the power of bishops is not common to them with the presbyters, was careful not to make any decision on this disputed point (Sess. xxiii. can. 6, 7). Of late years the prevailing opinion has been that the episcopate is a distinct order. In the Church of England great care has been taken to prevent the ministrations of any ministers who are not episcopally ordained, and it is declared that 'from the Apostles' time there have been these orders of ministers in Christ's Church, bishops, priests, and deacons' (preface to the ordinal); but the phraseology used in the twenty-third Article of Religion, by not defining 'men who have public authority given unto them in the congregation to call and send ministers into the Lord's vineyard,' stops short of requiring an opinion that in the abstract episcopacy is necessary to the maintenance of the ministry. Anglican divines have agreed that episcopacy is right; they have differed in the degree of emphasis with which they have asserted this; and they have not been agreed on the question whether episcopacy is actually necessary to a valid ministry as well as the proper means of conferring it. The German and Swiss Old Catholics and the Old Episcopal (popularly known as 'Jansenist') Church of Holland have retained episcopacy. The German Lutherans have abandoned it. The Danish and Norwegian Lutherans, though retaining the title 'bishop,' are clearly without an episcopal succession, and 'bishop' is merely a name for a chief officer or superintendent. The case of the Swedish Lutherans stands on a different footing from that of the Danes and Norwegians, and there has been much discussion whether they have really preserved the episcopal succession which they believe that they possess. The Moravians claim an episcopal succession; but in their case also there is considerable doubt about the facts. Their bishops are simply an ordaining body; the rule is in the hands of boards; they recognize the validity of presbyterian ordination, and do not regard bishops as necessary for the administration of confirmation. The various Nonconformist bodies in Great Britain and Ireland and the allied communities in America do not possess episcopacy.[1]

4. General considerations.—It is necessary to set aside some confusions of thought which are often made, and to notice arguments of a general character which, in one direction or the other, have influence with many minds. (1) The principle of episcopacy is not necessarily bound up with the rule of a single bishop, which is often called monepiscopacy or monarchical episcopacy. It might equally be preserved by a college of bishops and by a single bishop, by a collegiate or collective episcopate and by monepiscopacy. For instance, the principle is unaffected in regard to the Church of Rome in the 1st and early 2nd cent., whether the present writer is correct in holding that during this period one bishop bore rule, as in later years, or whether J. Langen held rightly that the chief government was in the hands of a college of bishops. Episcopal succession from the Apostles might exist apart from that particular form of episcopacy which has been termed monepiscopacy. (2) Further, as episcopacy does not necessarily involve one particular form, so succession does not in the abstract necessarily involve one particular method. As a matter of fact, the laying on of hands is found wherever there is evidence one way or the other. But, supposing it were the case that what is termed tactual succession did not exist in a particular period, this would not necessarily invalidate that succession whereby a bishop succeeds his predecessor in the see which he occupies. To take an instance, even if the precarious argument that, since the laying on of hands is not mentioned between the NT and the *Canons of Hippolytus*, therefore it was not practised between the end of the 1st cent. and the end of the 2nd, were sound, this would not necessarily prove that episcopal succession from the Apostles did not exist. Indeed, the natural inference from the passages in Irenæus and Tertullian, in which they emphasize the succession of the bishops (see above), is that the succession on which they lay stress is that of the succession in the sees. (3) Nor, again, must the principle that the continuity of the Church is maintained by means of the episcopal succession be confused with the quite different question of episcopal rule. To the present writer the evidence for both is cogent; but, whatever the evidence for either may be, the preservation of the Church's life through bishops is one thing and the government of the Church by bishops is distinct and different. (4) The antithesis between spirit and form, which has often been used for the purpose of minimizing the importance of any kind of outward ministry, is not of weight in view of human conditions in the present stage of existence, and of man's bodily nature. (5) It is obvious that there is much in the history of the 1st and early 2nd cent. in regard to the ministry which is obscure. There are difficulties of interpretation, difficulties of correlating one part of the evidence with another, difficulties in deciding which section of evidence is of more value than another. On some historical matters it may be too much to hope that agreement will ever be reached. To the present writer the consideration of the historical questions suggests the conclusion that episcopacy was continuous in its essential features from the time of the Apostles, and that the ordinary method, at least, was that of a single bishop. But he is conscious that the really decisive argument to his mind for episcopacy as a practical system is derived from its continuous and universal acceptance in the Church, from at any rate the middle of the 2nd century to the 16th century. Whether we speak of the witness of the Spirit in the mystical body of Christ, or of the

[1] The 'Protestant Episcopal Church in the United States of America' (in communion with the Church of England) owes its orders to Bishop Seabury, who was consecrated by three Scottish bishops in 1784, and to Bishops White, Provoost, and Madison, who were consecrated by English archbishops and bishops in 1787 and 1790. The first 'bishop' of the so-called 'Methodist Episcopal Church' in America was Thomas Coke, who was set apart as a 'superintendent' by John Wesley in 1784, and received the title 'bishop' from the American Methodist Conference in 1787.

sense of the Christian consciousness, or of the voice of the Catholic Church, this universal acceptance throughout so many centuries makes a strong claim. It may well be said that for the practical Christian the operations of the Spirit in the Church must decide how the life of the Church is maintained; and a question on this subject receives a very emphatic answer in the long-continued unanimity with which it has been believed that without the bishop there is not the Church. (6) Yet an argument of a different kind may be drawn from the signs of spiritual life which have been observed in non-episcopal bodies of Christians since the 16th century. There are those who say that this fact weighs with them more heavily than the unanimity of many past centuries, even when this unanimity of the past is coupled with the impressive spectacle of the theory and practice of the churches of the East, of the Church of Rome, and of the Church of England at the present time. Those who so think do not consider that their contention is adequately met by any considerations derived from the unquestioned truth that 'the power of God is not tied down to visible sacraments' (Aquinas, *Sum. Theol.* III. lxviii. 2; cf. Hooker, *Laws of Ecclesiastical Polity*, v. lvii. 4), and that His grace may overflow the channels of the covenant. (7) It is probable that the decision between the two conflicting lines of thought, the one of which attaches most importance to the vast agreement through the Christian centuries among episcopal Christians, and the other to the life which has been manifested in non-episcopalians, really rests on pre-suppositions which run very deep in fundamental thought, and are connected with doctrines outside the scope of the present article, and in particular those concerning the whole question of Church authority. See CHURCH, vol. iii. p. 624.

DARWELL STONE.

EPISTEMOLOGY.—I. Introductory.—Epistemological problems are at present the most interesting subjects of philosophical inquiry. Many books have recently been written on the problem of knowledge, many have been devoted to the history of attempts to solve it. These attempts have been made from various points of view, and there is a wide difference between the solutions offered. With some, Epistemology is merely a branch of a particular problem of logical inquiry, for it is thought that the bounds of knowledge, its method, and its validity are given when Logic has found its proper place and is duly acknowledged. But in their case Logic has, like Aaron's rod, swallowed up all the other sciences, and logical processes are the whole both of knowledge and of reality. With others, knowledge is only a branch of psychological inquiry; and, when Psychology has completed its work—in its description of the origin, the growth, the nature, and the result of knowledge—Epistemology is also held to find its place and its justification. In all these cases, and in others which we do not mention, Epistemology is denied to be a separate discipline, and its problems are submerged in other inquiries. But it is not possible for these problems to be merged in Logic, in Psychology, or in Metaphysics, as the history of modern philosophy abundantly shows.

It may, however, be granted that the epistemological problem is not the first for the individual mind or for the race. Historically we find that philosophy begins with Metaphysics. What is the form of the universe? What is its origin? What is reality? What is the nature of the soul? What is the body? And what is the relation of the soul to the body? These were the first questions that men asked, and they gave such answers as were possible. It was the difficulty of answering them or of resting satisfied with the answers given that led to the further inquiry as to the nature of knowledge and its possibility. For the answers were not only many but contradictory, and they gave rise to the further question, Is the human intellect able to solve such problems? From the historical point of view, Epistemology is a critical reflexion on Metaphysics. It is an endeavour to ascertain why and how the contradictory answers which have arisen in metaphysical inquiry have emerged, and whether these are not due to a disregard of the limits of the human mind, and an unwarranted application of cognitive processes to matters beyond its ken.

While it is true that the epistemological problem arises out of the failure of metaphysical inquiry, it is also true that it emerges elsewhere and otherwise as soon as men begin to reflect on knowledge itself. At the outset knowledge is not a problem. Its nature and validity are taken for granted. Men assume naively that they are in contact with reality, that the objects which they know they know surely and immediately, and all that is needed is that the knowledge be verified in practice. They regard this first and immediate knowledge as certain, and objectively true; or rather, since the question of objectivity and subjectivity has not yet arisen, and their thinking and its outcome have never been questioned, they abide in the conviction that the knowledge they possess is adequate and true. At first, both in the individual and in the race, knowledge is not concerned with itself, or with its processes; it is simple, immediate, and direct. It is only when difficulties arise in the practical application of knowledge that the mind begins to reflect on knowledge itself, its origin, its nature, and its limits. The external attitude is first: men look outwards; they do not question the reality of common experience, or conceive of themselves as thinking beings at all. They are lost in the object, in the endeavour to master the means whereby they may subserve their ends. The question of the self, of themselves as experiencing subjects, and of the bearing of the nature of themselves as the subjects which make knowledge does not arise until reflexion has well begun. Apart from the distinctions which have emerged between Logic, Psychology, Metaphysics, and the Theory of Knowledge, there is no doubt that at the basis of all knowledge there is first the experience which is more or less indefinite. For

experience does not begin with a recognition of the distinctions which subsequent reflexion finds within it. At first it is vague and indefinite. The elements within it are not distinguished. These distinctions are the work of reflexion: we find within experience elements which we call feeling, thought, and volition. These we discover to be ultimate, that is, we cannot identify thought with feeling or with volition, though all three are present in every experience. Similarly, we find in the sphere of knowledge that there are many elements which can be distinguished, and processes which can be considered in abstraction from the others—sensation, perception, imagination, conception, general laws, and so on; so that we may regard sensations becoming associated together, and by the apperceptive activity of the mind worked into perceptions; and perceptions by the same activity becoming images; images becoming conceptions; and conceptions being worked up till they become ideas (*Begriffe*). Ideas in their turn give rise to newer and wider judgments, till the whole contents of consciousness are organized and placed in sure and definite relation with reality. Such is the kind of picture sometimes painted of the process and outcome of knowledge on its subjective side; and on the objective side objects keep pace with the subjective evolution, being bound together in order, so that the subjective and objective are only opposite sides of reality.

But many questions arise, such as the relation of sensation to perception, of perception to conception, of conception to judgment and to idea, and these questions are not yet answered. One fundamental question is, Can we consider any of these mental activities without involving all the others? Does not the simplest intellectual experience involve the whole activity of the mind, and is not the whole experience of the rational being implicitly present in the first rudimentary experience? When we concentrate attention on, say, perception, is not the rational activity of the perceiving subject involved in every perception?

2. Solidarity of mental movements.—Leaving these questions unanswered for the present, let us look for a little at the first abstraction which we make when we separate the cognitive activities from the volitions and from the feeling experience of man. Can we have a real Epistemology when we take the cognitive activities by themselves, and separate them from the other experiences inseparably bound up with them?

'In knowledge, the knower appears to himself as an active and sensitive intellect. The knower feels sure of the existence of himself and of his object, the thing known; he is certain of his painful or pleasurable feelings, and of those feelings we call sensations, which are in him, but which he nevertheless attributes to the objects as their *external* cause. The knower is, above all, an intelligent will. He knows his object; the thing known, as he acts upon it, moves it, moulds it, makes or destroys or modifies it; and is himself moved, moulded, or otherwise affected by it. Without intellect there is no knowledge; without feeling there is no knowledge; without doing and experiencing the effects upon ourselves and our object, of this doing, there is no knowledge. And yet these elements, or factors, are all given together in the unity of the act or process of cognition' (Ladd, *Knowledge, Life, and Reality*, p. 61).

It would seem, then, that Epistemology must be careful lest, in dealing with its own problems, it may treat them in so abstract a fashion as to make the solutions untrue or inadequate. It must not proceed on the supposition that a purely cognitive experience is possible. It must accept from Psychology the facts which it establishes regarding the complexity of every act of cognition, and the further fact that not cognition but conation is the fundamental element in experience. It cannot investigate of itself, or inquire into the origin of experience, or go back to the first beginning of cognition. No science can go back to its own origin. Nor is there any science of origin. We cannot recall the beginning of our experience, nor can we say what experience is the simplest possible. But we can say that all experience is process. What we can discern as we look back on our experience is just this continuous process of change—change felt and experienced—and also processes in which there is continuous interchange. There seem to be interchanges between external happenings and subjective feelings, interchanges between our acts and external changes in the objects we act on. And all along the process there is the constant play of feeling, cognizing, acting, none of which takes place without the others. We note also that, at the outset, feeling, acting, and thinking take up the whole field; the subject is so occupied with these interests and processes, its whole range of consciousness is so focused on the object in view, that it is not aware of itself or its changes, or of the interest which led it to make selections or to form a world for itself to which it would direct its attention. Likes and dislikes are there, desire and aversion are present, and the objects which are primarily attended to are those which one longs for, or desires to avoid. In the activity aroused by objects which excite feeling, objects grow so as to be defined as desirable or undesirable, and this activity is directed towards the attaining of the one set or the destroying of the other; and, in order to do this, the various objects are classified, recognized, known, so as to be brought, as far as possible, within the moulding influence of our action. All these processes may go on, and, in fact, have gone on, ever since men began to be or act; and yet a man may not have reflected on himself as the subject which feels, thinks, and acts. The subject is wholly occupied at the outset, and for long after, with the objects of its knowledge, desire, or action; it is so busy with their recognition, classification, and arrangement, so as to master them for its own use, that it scarcely ever regards its own nature, its own activity, or its own aims at all. Least of all has it discriminated among its own states, or distributed its own activity into its several kinds. Feeling, thinking, willing, are there, but only in the form of undistinguished activity. Nor ought reflective analysis ever to forget that, while it may distinguish the several elements in thought, they are inseparable in reality.

It may well be, then, that knowledge, will, and feeling are indispensable aspects of consciousness. Knowledge always involves an act of attention (see art. ATTENTION, vol. ii. p. 212), and attention as mainly aroused by interest, or stimulated by feeling. While attention thus expresses an attitude of the mind, it is equally certain that it also expresses an act of will. For will invariably involves some awareness—a means to be used in order to reach an end. An act of will looks at a present situation in order to modify it, with the view of reaching a goal. This is emphatically true when one pursues a reasoned course in order to reach a desired end, but it is also true of the most impulsive act of will. Even in an impulse there is some apprehension of a situation, and some desire to change it in order that it may better fit our purpose. It may further be said that every actual process of consciousness involves awareness, and this awareness is of a purposive kind. It is not possible to enter into a full analysis of this purposive element in every act of consciousness, but reference may be made to such writers as Stout, Royce, and Ward for a full account of this interesting analysis. Knowledge is itself teleological, it is selective of its own content, and its selection is determined by interest, and by a desire to control the world for its own purpose. Knowledge and action are thus correlative to each other,

and each must have its place in a systematic exposition of the activity of consciousness. On the other hand, both knowledge and will must be considered in relation to a basis of immediate feeling which arouses attention and prompts to endeavour, with a view to an increase of pleasurable feeling, or an avoidance of an experience which is painful. Feeling is thus an inspiration to endeavour, whether in the region of thought or of action. It is the signal to awareness, it arouses the attention, it inspires the action, it prompts towards the realization of a fuller experience. According as we lay stress on knowledge, will, or feeling, we shall have in the first place a world of truth or fact, in the second place a world of ideals more or less realized, and in the third place a world of appreciations, in which values and worths are the main feature. These three worlds ought to be one, and the present endeavour of philosophy is to make them one; and thus the worlds set forth in their exclusiveness by idealists, empiricists, and pragmatists must finally appear as aspects of that real world to construct which is the ultimate aim of philosophy.

While we thus caution ourselves that an abstract Epistemology must in its very nature be one-sided, and must ever be held in control by the other aspects of consciousness, it is yet a legitimate aim to consider knowledge in itself, apart from those implications which are inseparably bound up with it as a matter of fact. It is legitimate to consider the operations of Logic apart from Psychology, and also to deal with problems of Metaphysics by themselves. But each of these involves the others, and each is constantly applying to the others for help and guidance. So, abstract Epistemology, or the discussion of the nature of knowledge, its limits, and its validity, may so far be considered in separation from the other philosophical sciences; yet the conclusions to be drawn from the discussion are themselves abstract, and are not forthwith to be regarded as true and adequate for the description of concrete reality.

3. **Cognition as 'awareness.'**—Let us try then to get back to the simplest possible cognitive position. Even this will have elements in it which we shall be obliged to neglect, if we are to have only a cognitive position to attend to. When we seek the simplest possible cognitive position, we are not seeking the origin of knowledge. We have already said—and it is a commonplace—that inquiry into origins is beyond the business of science. But we may ask, What is the fact about knowledge which involves the latter in its most elementary form? We obtain knowledge in its simplest form when we go back to the most elementary description of consciousness which we possess. It is simply that of *awareness*, or of simple apprehension. We may neglect for the moment the fact that awareness has in it a voluntary and a feeling element, and concentrate our attention on the fact that it has a cognitive element. Both Locke and Kant agree that all knowledge begins with experience, and from this there is no dissent on the part of any philosopher. What then is the simplest form of experience, or the ultimate datum from which knowledge starts? Have we any state of mind which may, for this purpose, be regarded as ultimate, which, itself unexplained, may afford the explanation of everything else? The ultimate fact seems to be, not a stimulus of any kind, or a dependence of a state of consciousness on any sense organ, but an immediate presence to consciousness. What I feel, what I taste, what I see, need no further evidence of their existence than the fact that I feel, taste, or see them. I am aware of them, and this awareness is a primary act of knowledge. It depends on nothing but itself. Here, if anywhere, we have an act of knowledge seemingly concerned with present reality, and with that alone. It is to be remarked again, by way of caution, that we isolate, for the purpose of study, the act of knowledge from the other elements in the complex state of consciousness which we call awareness. When we speak of knowing, of willing, or of doing, we abstract these from the normal state of consciousness which usually involves all three. Pure thought, pure feeling, pure will, are abstractions, not names of any concrete reality. Awareness is a state of consciousness which possesses all the elements of experience. Here we concentrate attention on the cognitive aspect of awareness. We may from this point of view name it *apprehension*, which is the simplest and the most ultimate of all cognitive acts. At the same time, it is contended that even the simplest state of consciousness has a cognitive aspect. The consciousness of the present is itself an act of knowledge. If at this stage we may use language more applicable to a subsequent stage of the argument, a state of consciousness is the state of any conscious subject, and it has an object. But, it may be said, is every conscious state one which may be described as knowledge? Would not this be a contradiction of the statement that knowledge, feeling, and volition are not to be derived from one another, that they are primary and underivable? It may be granted that each of these aspects of intelligence has peculiarities inseparable from its very existence, which must be described from attributes peculiar to itself. On the other hand, it may be justly contended that every state of feeling has its cognitive aspect, that every state of knowledge has its feeling tone, and that every volition has its emotional and cognitive aspect. Still we may concentrate attention on the cognitive aspect which is present in every mental state. Awareness is mainly cognitive, even if it be also volitional and emotional. This awareness at its simplest implies the consciousness of a content present to us, and an assurance that we are so far in possession of a knowledge of it. It seems to be the simplest of all the acts of knowledge, and cannot be derived from anything more simple.

We are aware that the last statement is deeply contentious, and one which is attacked fiercely and from different standpoints. Idealism contends that the simplest act of knowledge is constituted by thought-relation, and we cannot have an act of knowledge which does not involve relations constituted by thought. Empiricists, on the other hand, tend to isolate sensations, and to make these the sole foundation of possible knowledge. We have not space fully to argue the question, but it may be said, in answer to the former, that even Idealism must have some data from which to start. Something must be given if thought is ever to make a start. And the common starting-point of all the subsequent explanations of experience is just this position of awareness. Awareness may be so interpreted as to involve the whole outcome of completed experience. It may, indeed, be truly said of it that it is the awareness of a subject, and this is sufficient to justify all the claims of idealism. On the other hand, empiricism may contend that the first thing is the sensation, and that the awareness is second, and the effect of the sensation. But it seems more consistent with the fact of experience, and with the whole analysis of the case, to take awareness as the first thing we meet with; it seems to be the ultimate fact beyond which we cannot go, itself unexplained, yet the explanation of everything else. From this primary and underived fact we may explain all the phenomena, whether these take the form of the ordered world of knowledge known as science, on

the one hand, or all the facts which are formed into the ordered knowledge which we call by the name of Logic, Psychology, or Metaphysics, on the other. Awareness is the pre-condition of all the systems, and it is well to take it as the starting-point of any theory of knowledge which can in any way be adequate to the fact.

4. **Contents of knowledge.**—Taking, then, this attitude of awareness as the starting-point for the discussion of knowledge, what do we find? The consciousness of a here and now, with a content more or less defined. This is the irreducible minimum, the ultimate datum of all experience. Apart from all subtlety of argument and all attempts at explanation, this is sure. There is a present experience, and from immediate experience every theory of knowledge must start. The simplest form of immediate experience is just this awareness. No doubt the latter is a property of every form of life. It seems to lie at the bottom of adaptation, and may be considered as a characteristic of life in general, or a property of organic life, which helps an organism to adapt itself to its environment. As life becomes more organized, awareness is there in increasing measure. Organic habits and interests grow up, and in higher organizations they are the means by which the organism adapts itself to its environment. It is a matter of observation that every organism has a working knowledge of Nature, and is so far aware of the hindrances and helps towards its self-preservation. This is a characteristic of all life, and without it life would be impossible. How far adaptation to environment may be regarded as something which flows out of intelligence on the part of life is a question which does not admit of any definite answer; but the fact of adaptation is undoubted. Yet in a self-conscious being adaptation to environment must in the long run become a conscious process, and intelligent foresight will take the place of instinctive adaptation. At the same time it must be conceded that adaptation to environment, even in a being implicitly self-conscious, consists in adjustments common to men and the lower organisms. Men are practising science even before they recognize it. Even the tracks made by sheep up a hill-side are wonderfully engineered, taking the line of least resistance. The people of a village who have never heard of Euclid, in making their paths through the fields, act on the principle that the two sides of a triangle are longer than the third side.

We must recognize, then, that organic habits and instincts have a significance for knowledge, and that knowledge of a kind has made some progress before reflexion begins, or at least while reflexion is in a rudimentary condition. Instincts, beliefs, habits, are part of that original endowment of man in virtue of which he is able to make himself at home in the world in which he has to live. Those habits and beliefs develop in man in interaction with the environment, and, before reflexion begins, he is prepared for the recurrence of day and night, for the succession of the seasons, and can anticipate the procession of natural events in the emergencies of his daily life. Organic habits and beliefs, increased by the experience of many generations handed down from father to son and recorded in language, may grow to so great an extent that, in virtue of them, men may learn to obtain control over the world so far as immediate necessity requires. This must be taken into account when we seek to understand the mystery of knowledge. Analyzing this complex body of knowledge with which an individual starts, we see that so much is due to the primary endowment of the individual, which enables him to make himself at home in the world in which he is to dwell. We may not exactly measure the extent and limits of this primary disposition, or inquire how much of it is due to traditional lore and how much to instruction on the part of parents and friends. It is not possible for one to tell how much is due to nature and how much to nurture. But, at all events, for every individual born into this world a portion is assigned; he obtains an inheritance of nature and culture which enables him to start, by no means ill-furnished, on the work of living. No doubt much of this knowledge is uncritical, unsifted, and much of it must be cast aside as untrustworthy, but it is there, and this unsifted knowledge is what an individual must start with.

Coming back, then, to awareness as the simplest datum of a possible knowledge, let us ask what is implied by it. Of course the two elements which are combined in every act of knowledge are present here in their most rudimentary form. There is the attitude of the mind which is aware, and the object of which it is aware. What the nature of the object may be it is premature to inquire. It may be its own feeling of pleasure or of pain; it may be the change from one state to another; it may be an impression from without; but in every case there is an awareness of an object. And then there is the awareness itself, considered simply as an attitude of the subject. This awareness, thus simply considered, gives us the starting-point of knowledge. It passes through the various grades of experience, until, as the outcome of growing experience and of reflexion on itself, it becomes the full-orbed distinction which we call the distinction between subject and object, which is implied in all human knowledge. The subject has its own nature, characteristics, modes of action, its rules, its principles, and its laws which condition all knowledge. Objects have also their own characteristics, their own natures, and their own correspondences. So all knowledge is conditioned by the knowing subject and by the objects which are known. The two are in relation to each other, and the whole question is as to what is the relation, or what are the relations, of subject and object within the world of knowledge. Are we to think of subject and object as a distinction which is ontological? Are we to think of this distinction as the same which we name 'self' and 'not-self'? Are we to place the two under the law of causality, and name the one 'cause' and the other 'effect'? Are we to look at the object as the governing element in the formation of knowledge? Or, are we to look at the subject as the maker of Nature, and to state our theory of knowledge in consistency therewith? All these questions confront us as we begin to wrestle with the epistemological problem, and the history of philosophy may be called the history of the attempt to answer them. Other questions also arise. There is the question of the possibility of knowledge, and of the various attitudes assumed thereto on the part of the human spirit. These attitudes are, or have been, mainly three. There is the attitude called *scepticism*, which denies the possibility of knowledge, and which has appeared in various relations in the history of human thought. There is the attitude, also common, which we call *dogmatism*; and, finally, there is *criticism*, or an examination of the principles which are implied in the possibility of knowledge both on the side of the subject and on that of the object. All these attitudes must obtain recognition in a discussion of knowledge, its possibility, and its existence as fact. Further, there are questions as to the relation of knowledge to the object that is known. Is the object of knowledge independent of the fact that it is known? Is knowableness an essential quality of things? And, if the object is knowable, what is the machinery by which it is knowable? Is

knowledge in immediate relation to its object, or is it representative?

It is clearly out of the question in this article to give anything like an adequate account of the various attitudes of the mind towards the epistemological problem, or to institute an inquiry into the characteristic features of scepticism, dogmatism, or criticism. It is equally impossible within any reasonable limits to set forth the various theories which have appeared in history regarding the relation of thought towards its object, or to give a full account of naturalism, empiricism, idealism, or the theories of knowledge contained under these or similar names. To deal with empiricism fully would be to give a complete account of English philosophy from Hobbes down to J. S. Mill, with a glance at the philosophy of Shadworth Hodgson. One main characteristic of this philosophy is that it regards the object as the determining element in knowledge, and looks at the relation of object to subject as one of causality. Nor can we give a full account of idealistic constructions of experience, whether subjective or objective, for that would be to attempt to write the history of philosophy since Kant, not to speak of the contribution made to thought by the splendid achievements of Greece.

We must travel by a shorter route, which will not leave the above questions without an answer. We shall look at them first from the point of view of mind, or of the subject, and second from that of the content of knowledge, or of knowledge as affected by the nature of the object. On the one side, all knowledge is the product of the active subject; and, no less, knowledge, if it is valid, must correspond with reality. Under the first head all questions regarding the successive steps by which the subject articulates its knowledge into an ordered whole might well be discussed, and under the second all questions as to the validity of knowledge or its relation to its objects might find a place. All questions regarding the activity of the subject in organizing its knowledge —whether these are materialistic, realistic, or idealistic—would find a place in the inquiry into the nature of intelligence and its mode of working; while those relating to validity, and the attitude of the mind towards knowledge, whether this is sceptical, dogmatic, or critical, would find their fitting place under the latter heading.

5. **Epistemology and sense-experience.**—Starting afresh from the concrete fact of our experience, which must be considered the primary fact of our mental life—the awareness of a content—we must seek to show how this really involves, or contains implicitly, what is evolved into the structures of Metaphysics, Psychology, Logic, and Epistemology. All the mental sciences spring out of this fact of awareness—a fact of which the simplest analysis gives position, discrimination, and comparison. These are not independent acts or processes, nor can they be regarded as constituting the fact of awareness. They are simply aspects of this fact, and are not before it in point of time. They are in themselves abstractions, and are to be viewed as strictly subordinate to the reality out of which they spring, and apart from which they have no meaning. On the other hand, the simplest facts of mind, even sense-impressions and ideas, cannot be facts of mind at all unless they have in them, implicitly at least, the rudimentary forms of those features of distinction and relation which have become articulate in the elaborated forms which we find in our highest thought. To make explicit what is involved in the simplest form of experience is the function of philosophy.

Here we are at the parting of the ways; and, according as we take the one path or the other, we are committed to a system or a mode of interpretation of experience which is far-reaching. What is the fact of which we are aware, and what does it mean? In modern language, is it a simple 'that' or is it a 'what'? Is the whole duty of man, as a thinker, simply to write shorthand descriptions of his own sensations, their order, their organization, and their outcome? This is the view held in some quarters: the objective relations of these sensations are regarded as something unknowable. To inquire into this view would necessitate an investigation into the nature of sensation and its meaning, into the relation of a sensation to the mind which has it, and into the nature of the relation to the occasion of its being felt. On this head we refer to the masterly discussion by Ward in his article 'Psychology' (*EBr*[11] xxii. 547) and to his Gifford lecture, *Naturalism and Agnosticism* (ii. 116 f.):

'Sensations *have* form; in other words, they have inalienable characteristics, quality, intensity, extensity; as people say again nowadays, they have a "what" as well as a "that." Again, they are not isolated; but, as I have already urged, they are changes in what—for want of a better word—I have been fain to call a presentational continuum. The so-called "pure sensation" of certain psychologists is a pure abstraction; as much so as the mass-point of the physicist, but without perhaps the same warrant on the score of utility. The whole doctrine of the gradual elaboration of perception out of purely subjective material is fast being relegated to the region of psychological myth. . . . It is physiology rather than psychology that has kept the notion of sensations as subjective affections in vogue. Primary or perceptual presentation is all we mean, and such a term has the advantage of making the objective character explicit, and of ignoring physiological implications with which we have nothing to do.'

Taking this, then, as the view which Psychology presents to us, we may neglect the controversy as to simple sensations, and take for granted that every sensation has an objective as well as a subjective reference. What shall we say as to the relation of thought to sensation, perception, conception, and to all the categories in which thought seems to sum up the contents of knowledge, and the nature of experience in general? Will the analysis of thought give to us the interpretation of experience, and will obedience to the categories of thought ensure the validity of our thinking? Is thought responsible for matters of fact? What is the function of thought in relation to experience? In particular, what (to use the language of Ward) has thought to do with perceptual presentation? Instead, therefore, of following up in detail the description of the elaboration of the forms of our knowledge from perceptual presentation through perception, image-making, and conception, to the highest forms of Logic and Metaphysics, let us look at the part which thinking may be said to play in the making of knowledge.

Before considering this question, we must have some conception of what sense-experience means and implies. For, on any view, there is such a thing as sense-experience or a consciousness of objects in a world of sense.

'It is because in our experience there is given a broad distinction between two features of the contents [of consciousness] —on the one hand that of extension, on the other hand the negative thereof (the absence of extendedness) with, probably, as its positive associate, the element of feeling—that we are first enabled to make a distinction between subjective and objective' (Adamson, *Development of Modern Philosophy*, i. 291).

Here Adamson found the simplest form of experience, the most rudimentary form of objectivity on the one hand and of subjectivity on the other. At this stage of experience both the objective and the subjective are undefined, but from it the development of both subject and object proceeds, until we come to full self-consciousness on the one hand, and full consciousness of a defined object on the other; and these are the complementary aspects of complete knowledge. The first aspect of sense-experiences which forces itself on the mind is their

opposition. On the one side there is extension, and on the other there is feeling or a state of consciousness; and how are these to be reconciled? The objects which affect us seem to be out there, beyond us; are they really what they seem to be? We need not recall the story so picturesquely written in the history of human thought, of how the relation of the mind to its objects, as this is set forth in sense-experience, has culminated in Scepticism on the one hand and Solipsism on the other. Doubt as to the very existence of an external world, followed by doubt as to the existence of an internal world, has arisen from the attempt to make sense-experience the whole experience of man. Yet sense-experience is a fact, and has to be taken into account on any theory of knowledge. The characteristic quality of it is the simple immediate existence of a conscious content. 'I see,' 'I hear,' 'I feel,' 'I taste,' and so on, simply give, so far as sense is concerned, the present experience and nothing more. 'This,' 'that,' 'here,' 'now,' are indications of the presence to consciousness of a sense quality. No doubt, there is a difference between these indications—'here' is one thing, 'now' is another—but they are only variations of the same kind of conscious life. Take any object of perception, and abstract from it all that has been evolved by conscious activity in elaboration of it in former experience, and what is left for pure perception is only an experience of a 'here' and 'now.' What is perceived is not an articulated object, say a horse, with all the characteristic marks of a horse as it is to a scientific mind, or even to a practical mind, with all the implications of a gathered knowledge; it is only a difference of colour which is presented to sense. This is commonplace ever since Berkeley's classic analysis of the nature of vision—an analysis which is true of all our interpretations of sense-experience. When we strip sense-experience bare of all that is added to it by interpretation, we have only a present content of consciousness—in practical experience it is not possible to make so drastic an abstraction.

On the other hand, it is vain to say that the nature of things is to be perceived. The statement *Esse est percipi* is without meaning unless we add to bare perception those perceptual judgments by which a mere presentation of difference of colour and shape becomes a judgment of distance, of character, and so on. But, when we do so, we have come to a perception which is charged with the meanings introduced into it by a long experience, functioned by interpretations gathered by a mind in contact with reality, and which has formed judgments in accordance with its own nature and the nature of things. It has been customary to refer to perception as the standard and norm of knowledge. But, when this is done, we have passed from perception as simple sense-experience, and have introduced into it all the series of interpretations which have been gathered from the action of the mind in interaction with the objects of its experience. Perceptual presentation (to use the phrase of Ward) implies more than can be justified from sense-experience. It is possible, indeed, on the basis of the latter to arrive at something like a universal. That universal is precisely what Ward calls a 'presentational continuum'; or, as the same thing is expressed by Baillie,

'The universal is just the *continuity of the process which makes up the life-history of immediate sense-experience*. This may, by selective interest or otherwise, appear in distinct phases or parts. But each as readily becomes its opposite, and this fluent interchangeableness constitutes the identity between them. The incessant change of sense-life is due to its being a mere variation of the same simple form of existence, is due, in fact, to the interchangeableness of its content: a "this" can equally well become a "that," a "now" a "then," and so on. This incessant change of similar elements is all that sense-life consists in. Hence its variability, its endless fleeting character, its instability, its inadequacy to satisfy the desire for a stable ideal, or constant organizing universal. Hence, so far from being the ultimate touch-stone of reality, as some have held, it is just what is perpetually slipping from our grasp. Its being is change, its life the death of its moments. As for constituting a support, which some have tried to make it, against sceptical attack, it is bound to prove the best weapon scepticism can use. The incessant change, which constitutes its life as a universal, makes it impossible for a "this" or "that" to maintain a substantial permanent reality external to the subject. A "this" or "that" has no reality of its own at all: its nature falls into the universal process of change' (*Idealistic Construction of Experience*, p. 152 f.).

Even in sense-experience, then, there is something at work which transcends it. In the formation of percepts, in the process of perception, there is already an activity of the subject at work. Nor is it possible to isolate the process of perception, or to consider it in abstraction from the more elaborate processes through which mind works. The sharp distinction so often drawn between perception and conception cannot be maintained. For, as men now are, with their inherited culture, with their social life in family and school, perceptions are charged through and through with trans-subjective meanings; and it is not possible for us to get face to face with a pure perception. The very fact that we have to name the various perceptions, and that names are words charged with meanings, makes it impossible for us to regard perception as the norm of knowledge. Here thought has been at work, and the very giving of names proves that we can no longer interview consciousness in its naked simplicity. We may seek to isolate the process of perception, and may, indeed, note its characteristics; but at the best we only succeed in proving that it is a stage in the development of the subject on its way to complete self-consciousness, and a stage of the objects on the way towards complete organization in a world of knowledge. It is almost axiomatic that the evolution of the subject towards its ideal is also the evolution of the world of knowledge into an organized form. The subject is growing, and, as it evolves, so does the world of knowledge, for these are aspects of the same reality.

6. **Thought and sense-perception.**—If, then, even in sense-experience we have traces of interpretation—and interpretation is the work of thought—we may formally ask, What is the function of thinking in the growth of knowledge? It is necessary to note here that, in the case of sense-presentations coming to us from the objective world, they come and go without any control over them on the part of the subject. Whatever passes within our sphere of vision makes its own impression on the eye, and the visual image is there, whether we attend to it or not. Sounds are heard, and the hearing of them is beyond the control of the ear. So with all sense-presentations. Even the flow of ideas in the mind itself seems sometimes to be unregulated, informed by no principle, and uncontrolled by any reference either to the objective world or to the interests of the self. Both in the case of sense-presentations, and of ideas associated in a mere flow without inner connexion, and uncontrolled by reference to purpose, we have illustrations of conscious movements which seem to have no rational connexion. This is obvious both in sense-presentations and in the case of ideas, as may be shown by a reference to the laws of association. What has once come together somehow in experience tends to come together again. The most unlike things which have come together tend to recur together. Illustrations of this abound. Take the relation of thought to words, or of words to the music of the song, and we find that thought and word are inseparably united, and the words of a song are wedded to the music. This is one order

of the contents of consciousness. But there is another order, in which we seek to establish not contingency but necessity, not accidental conjunction but inner connexion. Over against the uncontrolled flow of sense-presentations, and the unregulated flow of ideas accidentally associated, we place the exercise of a mental activity of our own. We seek to place together the things which, we think, belong together. We may recognize that they belong together, not because they have happened to come together in some passing phase of our experience, but because they are fixed in changeless relations. The properties of a circle belong together, and cannot be separated without destroying the notion of a circle. Thus, science is the attempt to ascertain the things and qualities which belong together, and to replace a contingent and accidental order by one that is fixed and connected. Nor is the activity of thought limited merely to the recognition of the things which belong together in the objective order of the world—whether that order is fixed by the peculiar constitution of the actual world to be ascertained by experiment and observation, or fixed by ideal combinations (as in pure mathematics) constructed solely by the mind. For mind is creative. In the normative sciences there is not merely recognition of things which belong together; there is the power of saying that some things *shall* belong together. In the one case, the self is the discoverer and the interpreter of an order which it has not instituted; in the other case, it is a law-maker, determining both the end which it has in view and the means by which it is to be accomplished. Here it is possible to 'give to airy nothing a local habitation and a name.' In this sphere we certainly find the activity of the subject, the expression of itself and of its own purpose, where the train of thought is dominated by a purpose, and the means are arranged by which a new meaning is given to the material so arranged as to fulfil a purpose. As Adamson has remarked: 'Taken in the mass, our thinking appears (1) as a subjective activity; (2) as the expression of some purpose, and therefore as self-conscious; (3) as relating together the materials supplied by presentations and representations' (*op. cit.* ii. 258).

Leaving the discussion of the first two characteristics of thinking for the moment, we shall dwell on the third, namely, that of relating together materials supplied by presentations and representations. We have already seen that the aim of thinking is to bring together what belongs together. Now, it is clear that the presentational continuum does not bring together what belongs together; it presents experiences as they happen to come. It, therefore, gives no principle of rational connexion. Nor do the happenings which are merely associated together supply the linkage which we are in search of. What are the criteria of things which belong together? How are they to be related? In the first place, we connect them according to the rational principles of the mind which links them together, and, in the second place, according to the native connexions of the things themselves. But in every product of knowledge these are together. True, in dealing with the two factors of knowledge, we may neglect one or other for the sake of convenience; but we must always try to restore the wholeness of what we have thus disrupted for the time.

7. The conceptual and perceptual order.—In his latest book, unhappily unfinished, W. James says, with all the emphasis of italics: 'The intellectual life of man consists almost wholly in his substitution of a conceptual order for the perceptual order in which his experience originally comes' (*Some Problems of Philosophy*, p. 51). And on the previous page he says: 'If my reader can succeed in abstracting from all conceptual interpretation and lapse back into his immediate sensible life, . . . he will find it to be what some one has called a big blooming buzzing confusion, as free from contradiction in its "much-at-onceness" as it is all alive and evidently there.' The phrase has all the picturesqueness which we expect from its author. But is it true or adequate? The sensible life is, so far, an ordered life. Impressions which come to us through the senses are filtered as they come. Eye, ear, and all the other senses select out of 'the big blooming buzzing confusion' those waves of sight and sound which can be transformed into sensations; and, even at the very beginning, the eye does not see sound, or the ear appreciate light. But the eye does have a picture of a coloured something, which is not confused, or blooming, or buzzing. At the outset, therefore, there is not confusion, but something which is already full of order; sense-impressions are definite and ordered, and the work of science is to ascertain, define, and describe the order.

But can it be fairly said that the order in which our experience originally comes is the perceptual order? Or, if it is, can we separate thus abruptly the perceptual from the conceptual order? Can we have percepts by themselves? James evidently thought that we could, for in all his books he refers constantly to the perceptual order as the norm and criterion of valid knowledge. To us, on the other hand, a percept is as much the work of thought as a concept. Even sensation itself, in so far as it has a meaning, is a work of thought.

8. Thought and reality.—It may be well to guard ourselves at this stage against a possible misunderstanding, which might arise from speaking in separate terms of thought and reality, and the relation between them. We do not mean by Epistemology, or the theory of cognition, an examination of the nature of knowledge as something apart from the reality which is then taken as an external standard. Rather we regard the treatment of thought, and the analysis of reality itself, as the attempt to reach a world of reality considered as a system of ideas, which may actually become the world of reality. It is our interpretation of reality, and is part of the reality which is constructed by intelligence in response to the whole universe of experience. The environment of thought is neither an external world nor a supposed world of action; it is the whole world of experience, which is to be articulated into system, and made such as to answer to our intelligence. Not, indeed, that we may ever hope to transfer all reality into our system of thought, which for the thinker is the reality he can command and use. Yet our system of thought falls far short of reality. For, while the world which each mind constructs for itself out of its own experience is the world of which it is the centre, there must be a world common to all intelligences, or, in other words, a higher experience than ours, which in its organized state is the supreme world of reality. All the worlds which seem separate and unconnected, as constructed by each for himself, have common ground and purpose in that experience which is higher and deeper than ours. In this view, reality is independent of our judgment, and is something which far transcends our experience. Yet our judgment and its outcome must be held to be an element in that higher experience, and the world we construct is part of the world that is what it is for the higher experience.

As, on the one hand, reality must be held to transcend the final worlds which knowledge builds out of our experience, so, on the other hand, there is a something given before thought can begin its constructive work. Our immediate feeling has a

content of its own, something which is there in a sort of unity and simplicity which we have not made, but only experience. It is a mode of contact with a world not yet realized or resolved into its elements. We do not confer on that immediate experience either its immediacy or its individuality; we experience it in its unity. The first step of the action of thought on that immediate feeling is to break up its formal unity, to distinguish elements within it, and to pass beyond it into another kind of unity, namely, that which is conferred by thought. But to restore the lost unity is very difficult, and the whole task of philosophy is to restore that unity which is first given in feeling, disrupted by thought, and made diverse by the analysis which thought has performed upon it. Thus, in the end, we strive to attain, by the exercise of discursive thought, to something like intuition of unity, the unity of a whole, what life started with in that intuition of unity which is the characteristic of our feeling life. For the mind, in its constructive attempt to think the world, finds that it passes its strength either to attain to intuition which envisages the world as a whole—that is only for a higher experience than ours—or to rest content in the simple immediacy of feeling which gives us a sense of wholeness in our simplest experience.

It is the province of Logic (*q.v.*) to set forth the categories of mind, or the machinery by which it does its work, as it is the province of Psychology to set forth cognition considered as a merely mental process. It is the part of Epistemology to accept from the sister sciences the description of the process of knowledge considered as an internal fact, and to accept from Logic the deduction of the categories, their inter-relations, and their worth as instruments for the organization of knowledge. We need not, therefore, dwell here on the significance of space and time as the forms within which all our intuitions take place. Nor need we inquire into the subjectivity or objectivity of space and time. Sufficient for our purpose is the fact that all our mental life is conditioned by these forms; at least all our sense-presentations are of such a kind as never to transcend the boundaries of space and time. Into the origin and nature of our conceptions of these we are not called to enter. It is sufficient to say that they are forms into which mind gathers its experiences, and that it is constrained to regard all things as things in one space, and all events as happening in one time. In these forms it finds the first possibility of a unity of experience.

9. **Thought and self.**—The notion of space, then, dominates all our thinking with regard to things, and time does the same with regard to the inner life. It is another matter, however, when we ask ourselves how the notion of time governs all the phenomena of the inner life. Can we in this relation do without the supposition that the very possibility of time depends on the fact that there is a continuity of the thinking subject to which the events that happen to it, or in it, are referred? Is not the permanence of the thinking subject the condition of the possibility of the notion of time? We are aware that this is a keenly contested question.

'It is a fact recognized explicitly or implicitly by every one, that the manifold and constantly changing experiences that enter into the life history of an individual mind are in some sense owned by a self or ego which remains one and the same throughout their vicissitudes. But, when we begin to inquire into the precise nature of the unity and identity ascribed to the self, and the precise sense in which its experiences belong to it, we are confronted with a fundamental divergence of views. On the one hand, it is maintained that, just as the unity of a triangle, or of a melody, or of an organism consists merely in the special mode in which its parts are connected and correlated so as to form a specific kind of complex, so the unity of what we call an individual mind consists merely in the peculiar way in which what we call its experiences are united with each other. On this view, when we say that a desire is some one's desire, we merely mean that it enters as one constituent among others into a connected totality of experiences having a certain sort of unity and continuity which can belong to experiences only, and not to material things. In opposition to this doctrine, it is strenuously maintained by others that the identical subject is not merely the unified complex of experiences, but a distinct principle from which they derive their unity, a something which persists through them and links them together. According to these writers, it is an inversion of the truth to say that the manifold experiences through their union with each other form a single self. On the contrary, it is only through their relation to the single self as a common centre that they are united with each other. Of these two conflicting theories, I feel bound to accept the first and to reject the second. The unity of the self seems to me indistinguishable from the unity of the total complex of its experiences' (Stout, 'Some Fundamental Points in the Theory of Knowledge,' p. 6 [one of the Essays published by the University of St. Andrews in connexion with the Five Hundredth Anniversary of its Foundation, 1911]).

With his usual felicity of diction and lucidity of argument, Stout states the grounds of his rejection of the second view and his acceptance of the first. Yet even his subtlety and power cannot prevent his argument from appearing paradoxical.

'The rôle which they ascribe to the subject of consciousness ought rather to be ascribed to its object. The general principle is that the changing complex of individual experience has the unity and identity uniquely distinctive of what we call a single self or ego, only in so far as objects are apprehended as one and the same in different acts or in different stages and phases of one and the same act. In other words, the unity of the self is essentially a unity of *intentional* experience, and essentially conditioned by unity of the object as meant or intended' (*ib.* p. 7).

We humbly suggest that in this quotation, and in the subsequent reasoning, Stout has virtually taken up the position of the theory which he has formally rejected. How can the unity of the self be a unity of intentional experience if there is no subject to form the intention? If objects are apprehended as one and the same, surely there must be a subject which apprehends them. The present writer feels bound, therefore, to accept the second of the above views and to reject the first. Without arguing the question further, he would simply say that 'I am not the thoughts I think,' in other words, 'I am not thought, but I think, and I who now think am the same who thought yesterday.' The conclusion—to lay stress on the epistemological interest—is that thought exists only in relation to a conscious and abiding subject. But the latter is not merely an abstract identity; it lives, and moves, and grows, and realizes itself just in proportion as it masters its objects, and is able to fit them into the unity of a world of truth. Still we may express our indebtedness to Stout for the emphatic way in which he brings out the close connexion between the unity of the subject and that of the object. For it is a characteristic of thinking, or of thought, that, in addition to its being a mental event, it claims to represent a truth which is independent of the latter. It is no doubt true that every thought as a mental event is particular; in fact, all the contents of consciousness as mental events are particular; but the mystery of knowledge lies just here, that a particular mental event, or a series of such, claims to be valid for an order of fact or of reason which our thought does not make but discovers—an order which is common to all and not special to one.

10. **Judgment the category of thought.**—This order, which I do not make but discover, is one which I am able to discover because it is in itself in relation to my intelligence, and can be construed by me in accordance with these principles on which I act as an intelligent being. These rational principles are implicit in every act of judgment, and the rational principles of my judgment are found to be at work in the order which I discover. What these principles are it is the business of Logic to set forth. For our purpose it is necessary to refer to only one of these categories, namely, that of Judgment, which is the form which

thought uses in the apprehension of truth. Logic is coming more and more to recognize judgment as the one category which involves all other categories in its operation, and in its discussion of logical principles the doctrine of the judgment holds the foremost place. We refer to Sigwart's *Logic* in illustration. The various forms of the judgment may be found in treatises on Logic, and need not be detailed here. But the fundamental conditions of the judgment are fundamental conditions of thought itself. Judgment in every form of it involves a relation to the thinking self or to the unity of the mental subject. This holds good even on the hypothesis of Stout, as quoted above. It is the self that judges, and it judges in consistency with the totality of its rational experience, or at least it ought to do so. In the second place its judgments must be consistent with each other; in other words, all judgments must have regard to the law of identity and contradiction. If we are to have a constant and consistent meaning, we must think according to that law. Again, our judgment must have regard to the fact of connexion among the objects of thought. The irresistible belief that things are connected, and that the connexion may be discovered, lies at the basis of every judgment. What the connexion is the mind may not know, and sometimes finds it hard to discover, but that such a connexion exists is a conviction without which there can be no judgment.

In dealing with the judgment in its various forms and applications, we ought to remember that there is one element common to all, which no judgment can explicitly set forth. In all judgments, reference is explicitly or implicitly to the subject which judges. It is the subject which supposes, affirms, judges. The subject may itself be the object of reflexion. Thought itself may be the object of thought, and it may be reflected on till all its implications become explicit, and its modes of acting may be articulately set forth. But that does not exhaust the meaning of the subject. Is thought capable of exhausting in its own way all the meanings which are implied in the function of 'self,' 'subject-self,' 'knower,' as over against the objects of thought, object-self, and so on? We may think about the subject, may make it an object of thought; but, the more we do so, the more is the reference to a subject a persisting relation. Exhaust the meaning of self by making it an object of thought as much as we please, yet at the end the self persists as the final condition under which knowledge of the self as object is possible. The meaning of self or subject as capable of statement as object of thought does not exhaust its subjective meaning.

'The great attempts of philosophers have been, on the one hand, to show that the self as "subject" is nothing but the self as "object"; and, on the other hand, to show that the self as "object" is only a sort of re-statement of the self as subject; or, yet again, to show that the self as object arises as a sort of cognitive screen or blind before the self as subject, so that the latter is hopelessly obscured or hidden—the subject disappearing in the realm of the "unknowable," or the "thing-in-itself"' (Baldwin, *Thought and Things, or Genetic Logic*, ii. 407).

In this relation we may quote from the essay of Stout (*l.c.* p. 8):

'The self is the same self, inasmuch as throughout the process of pursuit it is aware of the desired object as the same, and inasmuch as it is aware of the object attained as identical with the object pursued. The best example, however, is supplied by continuity of attention. Attention is continuous when it is throughout directed to the same total object from varying points of view, so as to distinguish successively its different partial features, aspects, and relations. For instance, in observing a flower with a view to its classification as a botanical specimen, the stamens, root, and leaf arrangement may be successively distinguished. The total object is a flower as a specimen to be classified, together with the whole body of botanical science so far as this may be relevant to the classification. The partial features of this total object are successively discriminated, and in their turn cease to be discriminated. But there is continuity of attention, inasmuch as the partial features successively discriminated are throughout implicitly apprehended as being partial features of the same complex unity.'

As a description of the work done by the mind in the classification of a flower, this leaves nothing to be desired. But to speak of attention as continuous because it is throughout directed to the same object seems a rather inadequate account of attention considered as a mental process. Nor does it describe the attitude of attention as continuous; for, as a matter of fact, the process of attention by which the flower is classified may not be continuous: it may be distributed over many times, and is so when we work on any subject and resume it after an interval. But the main point is that the process of attention as described by Stout is attended by a consciousness of the strain of attention. I may be absorbed in the attempt to classify the flower, but on reflexion I am conscious that I was attending all the time. In fact, all the objective meanings—even those in which the subject or thought itself has been thought of—are over against a subject-self. The self is not to be merged in its own products, and the unity of the object seems to be inadequate to produce that unity of the subject which is the presupposition of knowledge. For, push the matter back as far as possible, even after all is done there will remain the fact of a subject over against all the objects of thought or objective meanings, as the very ground of the possibility of knowledge. In the last resort it is the self that makes knowledge, it is the self that judges, and the series of judgments organized according to the nature of the subject and according to objective conditions form the kingdom of truth, which it is the aim of thought to work out. The first condition of the possibility of knowledge is just this reference to a subject, which becomes, in the process of working out the kingdom of truth, a self-conscious subject, to which all the objects of knowledge finally assume the form of a coherent world of truth. In this ideal goal, truth and fact become one; and the content of mind, articulated into system, becomes the content of reality as well. But such a goal is never attained by the finite mind; it remains an ideal, but one that influences and shapes all our lesser and more partial systems of actual knowledge. So, the real question becomes not how to attain to the notion of the unity of the subject from the object, as Stout really does, or to attain the unity of the object world from the subject, but how to construe both subject and object as related unities in a wider unity which transcends and yet contains both. Are not subject and object subsumed in the wider world of experience? Are they not really given in the earliest experience possible to a subject which finally becomes a thinking subject? Are not both factors really present in the first cognitive experience, which we have already found to be present even in the sense-life? No doubt in our reflective analysis we place the subject over against the object and the object over against the subject, and make their relation to each other one of utter opposition; yet the relation of opposition is a relation after all, and even in opposition the two are really held together in the unity of one experience.

11. Intelligibility of the objects of knowledge.—In any case, there is a conformity between cognition and its objects. What is the meaning of that conformity? Are we to say that cognition must conform to objects, or are we to say that objects must conform to cognition? This is the experiment of Kant, who, finding that the assumption that cognition must conform to objects had led to scepticism, asked what would be the outcome of the supposition that objects should conform to cognition. His question and the answer to it were epoch-making in the history of thought, and every theory of knowledge must take them into account.

In answering his question, Kant endeavoured to discover the nature of reality from the conditions of its intelligibility, and in doing so he constructed the world of objects, step by step, on the plan of the world of knowledge. If there is such a world intelligible to us, the conditions of its intelligibility, Kant says, are such and such. Whether the actual world was of the kind which answered to these conditions was, and is, a question which Kant could not answer. For his solution had regard only to the conditions of intelligibility, and not to the actual world of human experience. So his intelligible world remained a phenomenal world, purely hypothetical; and the question of the relation of this phenomenal world to reality remained unanswered, or, rather, the answer was farther removed than ever. Instead of the old dilemmas, we find ourselves in the presence of a new one, and one more radical than ever; for we have removed the older difficulties, only to be confronted with a new contrast between reality and appearance, between phenomena and things-in-themselves, between the world of the knowable and its relation to the world of the unknown and the unknowable. How did the new hypothesis of the conformity of objects to cognition, and the consequent setting forth of the conditions of knowledge, lead to this contrariety of the world of reality as beyond the phenomenal world? If conformity to our cognition, as in the new question asked by Kant, and its answer, removes reality from our knowledge, and restricts our knowledge to phenomena, there is time to ask another question as to the relation of thought and things. When and where in experience does intelligibility begin? Are we to regard intelligibility as something impressed on things by the action of the mind? Does mind constitute objects? Of course, if objects are to be intelligible, they must conform to the nature of the intelligence which apprehends them. But is the intelligibility conferred on the object, or is it to be supposed intelligible in itself? Are objects really what Hume—and in this Kant seems to be at one with him—calls independent facts, and are events really disconnected which are outwardly and contingently gathered together in our minds by purely mental relations? Kant did in his philosophy show that the Nature known by us as knowable is systematic, and finally came to the conclusion that this systematic character is analogous to the unity of self-consciousness. But consistent thinking leads us back to the conception that this systematic character of Nature is not conferred on it by us, that, in fact, it is implicit in the earliest experience of rational beings; and the business of our thinking is to make explicit what is implicit there, and to articulate in detail what is inchoately present at the beginning.

And yet, while we regard as true the relation of thought to an intelligible world, it must not be supposed that the world of thought and the systematic world discovered by it are identical. Nor can we suppose that the two are so connected that the analysis of thought and its action will give us the real world. While thinking is a real factor in the making of the world, as we know it, it does not follow that the real world is one thing when real thinking begins, and another when it ends. For us, as thinkers and actors, it is so, and the reality for us expands with its explanation, and, through the operations of thought in the processes of conceiving, judging, inferring, the indefinite becomes definite, and the vague contents of first impressions are articulated into a systematic whole, and differences are held together in a unity which contains and explains them, and so for us the world is made. Yet the law of gravitation was at work before Newton formulated the law of inverse squares, and the conservation of energy was a law of things before Joule made his experiments and expounded its meaning.

It is not possible, then, to identify the movements of the world, or the succession of events, with the dialectical movements of our thoughts. Yet the latter may render explicit what lies before us in the world of mere concrete experience. It is necessary for the philosophy of the present time to go further back in its analysis than where Kant began, and to show that the world of ideas into which thought has gathered its experience had relations with fact long before reflexion began, and that the difference between sense and understanding, between fact and truth—in whatever way we put this ever-recurring contrariety—is less absolute than empiricism has supposed. The correspondence between the perceptual and the conceptual worlds is closer than has been supposed. As we have already said, percepts are a product of the activity of thought, and concepts are in touch with perceptual reality. The processes which we may describe in our text-books as if they were separate and in isolation are, after all, continuous, and are put into operation as the mind in interaction with its objects comes to self-realization.

We must, then, set aside the assumption that knowledge begins with a series of subjective states, and from these strives to reach a world beyond itself. Subjective states as such are never present without some objective reference, whatever that reference may be. Even feeling, which has been described as subjectively subjective, has in it a content which cannot be explained without a reference which leads beyond that state considered in itself. Pleasure and pain, though subjective states, have an objective reference. More clearly is this true of the states of consciousness which we describe as conation and cognition. These have objects, desires, aims, purposes; and they reach forth towards their objects. Thus we are justified, from the psychological point of view, in saying that there are objective and subjective elements in the simplest cognition. All the changing states of consciousness have objective references, which may be described as both subjective and objective; and the process of thinking is just the articulation of these correlated elements into the fabric of our thought, whether that thought is occupied with the analysis of itself, or with the body of knowledge which is the full possession of mankind. Thus we seek to advance from thought to things, not from things to thought; these are together at the outset of cognition, and full cognition ideally realizes them as one. Instead of holding that thought determines reality, it would be better to say that reality determines our thought, and that, when reflexion uses the apparatus of nótion, judgment, and reasoning, it is guided by principles which are true of reality as well as characteristic of thought.

More especially it may be affirmed that the aim of the mind in its judgments is always objective. It seeks universality and necessity, and strives to connect together what belongs together. But there is a distinction in its procedure, which marks also a distinction in the form of judgment. There are judgments which involve the constraint of belief, or active endorsement and acknowledgment. There are judgments which are attended by active belief, and with the conviction that it is impossible not to believe. This attitude of genuine belief, of acceptance, of control over the mind, is characteristic of certain judgments. Here the mind is in an attitude of certainty; it knows, and can act on the assurance that this judgment is true. But there are judgments which seem only

probable. Here the mind is in a state of suspense; it questions, assumes, and comes to a conclusion from which it withholds that position of certainty which in other situations it asserts. It is not possible here to enter fully into the positions of those who have been called lately the Austrian school, or to dwell on the suggestive work of Meinong and others. (As to the meaning of assumption, see Meinong, *Über Annahmen* [1910], and Baldwin, *Genetic Logic.*) It is sufficient to say that judgment, when it coerces belief, is always, or is always regarded as, of objective reality and validity. It regards itself as true, and as valid in the sphere of fact.

12. **Connectedness of objects of thought; significance of mathematics for Epistemology.**—We come now to what we stated to be the third mark of true knowledge—the assumption of connectedness among the objects of our thought. That there is such a connectedness, which we do not make but discover, we regard almost as axiomatic. What the connectedness really is has to be discovered in every case. The postulate of the mind is that there is a connectedness; this is its formal attitude in relation to all the objects of its knowledge. With regard to things, it postulates the relation of cause and effect, and other universal axioms which it regards as necessary. No doubt there has always been a tendency to press universality and necessity in their abstract form to extremes, and to bind all experience into these unities of abstract thinking. As an illustration of this, we may instance the tendency to make that necessity, of which mathematics may be cited as the symbol, the type and norm of all experience. We see this tendency at work in the attempt to reduce all the sciences to a mathematical form, and in particular to reduce biological problems to physical and chemical terms.

Yet, after all, the study of the history of mathematics, especially in some of its more recent developments, is not without interest to the student of the theory of knowledge. In his *Prolegomena to all Future Metaphysic*, Kant asks the questions, 'How is pure mathematics possible? How is pure science possible? and How is pure metaphysic possible?' He thought he had established the validity of the mathematical sciences by showing that they are confined to phenomena, and do not apply to things-in-themselves. In mathematical science the mind is in contact with things which may be regarded as constructed by the mind itself, and the knowledge of such things does not apply to things-in-themselves. Whether this really involves the doctrine of the relativity of knowledge and of the unknowable we do not stay to inquire. Our present aim is to look at mathematics and physical science generally, in the interest of Epistemology. For in mathematics we may distinguish between the thinker and his thought, as we do in other branches of science. We may look at science from the point of view of a record of the mind that thinks, relates, elaborates, and as a record of the inter-relations of the facts of Nature as these are understood and interpreted. It has been held that in mathematics the mind is creative, that it has made the facts with which it deals, and that in this sphere there is no difference between mathematical science and mathematical thought. We make our definitions, we state our axioms, we claim our postulates, we have our intuitions; and, reasoning from these, we have framed our geometry, elaborated our algebra, and constructed our calculuses. In this sphere, at all events, it is claimed that the mind has constructed its objects, and has not only constructed them, but has also called them into being. But it has to be borne in mind—and here the pragmatist has something to say which is relevant—that geometry, algebra, and all the other branches of mathematical science have arisen in response to the demand of practical need. Geometry arose to meet the demands of land-measurement, and algebra arose simply as an extension of arithmetic. These sciences arose out of practice, and even in its highest forms mathematics may be viewed as a measuring and calculating instrument invented by the mind in its desire to make Nature subservient to its own purpose. There are those who regard this as the main interest of mathematics, and there are others who regard mathematics as the type of true knowledge. The latter look at the applications of mathematics as of interest only in so far as they suggest problems in pure mathematics. They are inclined to think that all the sciences remain imperfect and crude until they have come under the mathematical yoke and submitted themselves to its rule and method. But the ultimate question in Epistemology is, Does thought determine reality, or does reality determine thought, or what is the relation between thought and reality? Granted that mathematics is so far a mental product, in fact much more a mental product than the more concrete sciences are, still we may ask, What is the relation of the constructive mind to the science which it has constructed?

If we go back to the first beginnings of mathematical science, we find that it grew out of practical need. It was an instrument made for the overcoming of Nature. Man had to master his environment, and in the struggle he came to those constructions which we find used as a means for measuring and counting. But, when man drew his first circle or saw the mystery of parallel lines, a new view burst upon him. The figures became something in themselves and to be studied for their own sake; so we find various demonstrations discovered by many thinkers, various problems solved, until at length Euclid gathered the geometrical science of his time into that book which still remains the foundation of geometrical science. We find men also studying the various properties of the sections of the cone, and setting them forth, largely for practical use, but also with a desire to know all the possible meanings of the construction which they themselves have made. Numbers were useful for counting, but their characteristic features were themselves the object of abiding interest. So it has been through all the history of mathematical science and mathematical thought. Mathematical formulæ may be regarded as concepts, and they play the part in mathematical thinking which concepts play in other thinking. But the meaning and scope of concepts or of mathematical formulæ, and their worth and validity, are things not given when they are formed. In both cases the intent and meaning are the objects of endless research. Thus we find, throughout the ages, those thinkers to whom mathematical thoughts owe their advance towards systematic coherence occupied with examining and strengthening the foundations of mathematical reasoning, purifying its methods, submitting them to proofs ever increasing in rigour, and putting to stringent tests the scope and range of current conceptions. Geometry by itself made progress, algebra by itself became more and more comprehensive and thorough; and, by their union in the hand of Descartes and their cross-fertilization, a new era in mathematical science began. Analytical geometry arose, and out of it sprang the calculus. Here, too, men were occupied with the meaning of the new formulæ which they had invented. For a new formula, though the work of mind, obtains an objective value as soon as it is formulated. Mathematicians had to study their own

formulæ, to follow out their implications, and they were often surprised at the new and strange worlds which opened out to their investigation. For the new formulæ not only solved old questions, but opened up new problems to solve. Analytical geometry advanced; and, were we writing on mathematics, we should see how geometry also responded on its part, and learned a method of a breadth and generality similar to those at the command of the analytic method. A new geometry arose, beautiful in itself, and useful as the test and illustration of the more abstract method of analysis. The significance of this growth is that here we see how the product of thought becomes in turn the object of thought, and also how concepts may become enlarged and purified, and be made more universal and more particular by the exercise of that thinking power which first constructed them. This is one feature of the epistemological value of mathematics.

But there is another aspect equally significant. Mathematical formulæ, as we saw, arose out of practical need, and were invented in order to obtain control over Nature. Equally every new departure and every extension of mathematical formulæ were dictated by practical need, and their validity was tested by ability to solve the problems which were presented to men by the practical difficulties they encountered in the course of their widening experience. On the one hand, men strove to make their formulæ more consistent, more logical, more flexible, and more comprehensive; and, on the other hand, they applied them to the solution of practical problems. We may note here the great advance which Newton made by the conception of fluxions—a new conception, by the use of which he passed beyond the static world of concepts, in which every concept was regarded as eternally one and the same, to a world of motion, of change, of continuity. Even change had been regarded before him as discrete, discontinuous, made up of steps, each step being regarded as equal to another. By the use of the concept of fluxions Newton enabled mathematics to accommodate itself to the notion of continuous change.

'All applications of mathematics consist in extending the empirical knowledge which we possess of a limited number or region of accessible phenomena into the region of the unknown and inaccessible: and much of the progress of pure analysis consists in inventing definite conceptions, marked by symbols of complicated operations; in ascertaining their properties as independent objects of research; and in extending their meaning beyond the limits they were originally invented for,—thus opening out new and larger regions of thought. A brilliant and most suggestive example of this kind of reasoning was afforded by a novel mode of treating a large class of physical problems by means of the introduction of a special mathematical function, termed by George Green, and later by Gauss, the "Potential" or "Potential Function." All the problems of Newtonian attraction were concentrated in the study of this formula: and when the experiments of Coulomb and Ampère showed the analogy that existed between electric and magnetic forces on the one side, and Newtonian forces on the other; still more when Fourier, Lamé, and Thomson (Lord Kelvin) pointed to the further analogy which existed between the distribution of temperature in the stationary flow of heat and that of statical electricity on a conductor, and extended the analogy to hydrostatics and hydrodynamics,—it became evident that Nature herself pointed here to a mathematical dependence of the highest interest and value' (Merz, *History of European Thought in the Nineteenth Century*, ii. 698 f.).

We might give many instances of the advance of mathematical thought, and note how, as knowledge widened, new problems arose, and, as they arose, new inventions or modifications of old methods were made in order to grapple with them. Our present interest is not, however, in the development of mathematical thought, but in the light which that development casts on Epistemology. That interest may be illustrated by the concluding phrase of the foregoing quotation: 'Nature herself pointed here to a mathematical dependence of the highest interest and value.' Mathematical formulæ have an interest in themselves as products of thought—a world in themselves, self-contained—and they can be exhibited as logical illustrations of consistent thinking. But they have a deeper interest in the fact that they represent the actual, and are interpretative of a real world beyond themselves. The mind is interested in its own work, and seeks to understand it; but it is more deeply interested in the world, and ever desires to direct its attention to those hints which Nature herself points out. With this view Science is ever ready to modify her conceptions, to discard her notions which have proved inadequate, to revise and subject to criticism every concept which is found unfit to follow the intimations of Nature. All mathematical formulæ may be regarded as concepts, and the way in which mathematics is ever revising her concepts gives a useful lesson to thinkers on other spheres of knowledge, no longer to regard their concepts as fixed, unchangeable, eternally the same, but fluid, ever ready to adapt themselves to fresh problems. Abundant illustrations might be given of the way in which mathematics is ever modifying, changing, enlarging her concepts, but these may be taken for granted here. Still more striking illustrations might be derived from the history of physics and chemistry in recent years. If a student of these sciences fifty years ago, familiar with the language of text-books at that period, were to open a text-book written at the present day, he would find that he had to learn a new language and furnish himself with a new set of concepts. The latter we need not enumerate, for the fact is obvious to every student. What is insisted on here, in the light of recent physics and chemistry, is the lesson they teach us with regard to the epistemological problem. Here at least concepts are not regarded as of fixed, unchangeable content. We may note also how mathematics strives to recognize the ever-changing flexibility of Nature and the subtle flow of reality; and the progress of this science has been from the static and the fixed to the variety and the flexibility which in its way seeks to correspond with the manifoldness of Nature. So also in chemistry, and in physical chemistry—a new science made by the cross-fertilization of physics and chemistry.

The lesson is that concepts are not fixed, unchangeable, and static, but that they are, or ought to be, as definite, yet as fluid, as the world they deal with. But, if the identical meaning and fixed content which have been characteristic of a concept persist and cannot be changed, then we let it remain to characterize a certain meaning interesting in the history of thought; and for the new meaning a new term is found, fit to express it. What we learn from the story of science and its practice is that our concepts ought ever to be in active commerce with the widening experience of man, and must always be held in subjection to that experience. We are not to pour Nature into the mould of our concepts, and regard them as the measure of the possible and the limit of what is actual; rather are we to regard our concepts as tentative, as attempts to gather into a convenient form what we have already learnt from the indications of Nature as to its own meaning. We learn from mathematics that it is possible to construct a world of logical consistency and logical meaning worthy of the highest admiration for its symmetry and beauty, but we learn also that this mathematical world by no means gives us that particular world in which we dwell, and which we must learn to know. The mathematical world is consistent with many kinds of worlds, whereas ours is a particular world, and has its own character and meaning. No doubt it is consistent

with the mathematical world, which is a comfort. Yet the very triumph of mathematical science points out its limitations. Is there a knowledge which is not mathematical? In other words, are there realities which cannot be counted, measured, weighed? If there are, and if these are such as can somehow be known, clearly we are in a sphere in which mathematical reasoning is inept. Even in the spheres in which mathematical reasoning has been so triumphant, it is found, as in physics, that the changes in Nature depend not so much on the quantity of mass and energy as on their distribution and arrangement. While there are thus truths of reason which are valid for all objects, whatsoever they may be, and while there are what we call laws of Nature, valid for the physical world in which we live, there are actual facts of collocation and facts of distribution and arrangement which cannot be deduced from the necessities of reason, or from the laws of Nature; these have to be ascertained. Any fact is consistent with the laws of Nature and with the ideas of reason, but what the fact is must be otherwise discerned than by deductive compulsion. Concepts, as we say, are and must be subject to constant revision; but, revise them as we may, there are many things and experiences which escape their grasp.

13. **Limits of mathematical thought.**—Mathematical science has, therefore, its limits; experience is not to be measured by them, however great and far-reaching they may be. Dissatisfaction with mathematics, physics, and chemistry, as the norm and measure of experience, has been variously expressed. For instance, Baldwin gives energetic expression to his dissatisfaction in the following note:

'The essential requirement, I take it, if one would accustom oneself to thinking in genetic terms, is that one free himself from the compulsion of the mechanical and a-genetic concept of causation. We have all been hypnotized by the thought of cause of the type of impact, transfer of energy fixed in quantity, with a formulation of effect in terms of an equation with composition of forces issuing in a resultant—as in the "parallelogram of forces." We are told that nothing can be in the effect that is not already in the cause. All this is a partial and forced interpretation of nature. If science deals only with such causation series, then the great body of what we may in the large sense call "conditioning," or "sequence," remains uninterpreted. The Adaptations, Growths, Novelties, in nature are as much in evidence to the scientific observer as are the Identities, Conservations, and Effects. Why may not the subsequent term of a sequence have something in it not already present in the antecedent term? It usually does. The causal interpretation commonly gives an abstract meaning reached by excluding certain phases or characters of the event called the effect. The genetic progression recognizes *all the characters* of the event, allows the causal interpretation as an abstraction, but attempts to reconstitute nature in the fullness of her processes of change from the mode that conditions to the richer mode—be it what it may—that succeeds' (*op. cit.* i. 25, note).

The protest is emphatic enough, but it might have been accompanied by a recognition of what has been accomplished by the assumptions it criticizes. By the use of mathematical formulæ, by the study of physics and chemistry, by the evolution of mathematical thought, science has penetrated far into the arcana of Nature. Assuming, as it did, that there were an order and arrangement to be found out in Nature, science, by inventing mathematical formulæ ever more comprehensive and more subtle, was able not only to set forth the more conspicuous elements of the natural order, but to set it forth in its continuity, and in so doing advanced towards the conception of unity. These mathematical formulæ also raised fresh problems, which, in being solved, led to interpretations of natural phenomena the existence of which lay far beyond the unaided vision of man. So the content of knowledge, the control of Nature by knowledge, and the validity of knowledge as illustrated by its practical verification have been abundantly justified by the sciences. Yet mathematical science has its limitations as well as its temptations. Its very success as an instrument for the enlargement of knowledge within its own sphere led to that abuse against which Baldwin has protested so emphatically. It is limited, we again say, to what can be numbered, weighed, and measured. But there is valid knowledge of what cannot be dealt with in these ways. Still further, those things which lend themselves to mathematical treatment can be set forth as externally related to each other. They act and react on each other, and influence each other in ways that can be measured. They attract or they resist each other, and then behave as if all that is characteristic of them could be summed up in a statement of their external relations. From the point of view of physics the world is made up of matter, of energy, and so on. Individuality does not appear in the world of physics. Rudiments of it begin to appear in the fact that one chemical element will combine with others only on its own terms, and from the facts of crystallization. But mathematical science becomes helpless when anything like true individuality begins. Given a thing with an inner nature of its own, with predilections, or with anything which would make it something for itself, and then we need concepts for its description which pass beyond mathematical formulæ. Science abundantly recognizes this; but, when it does, it ceases to be quantitative and becomes qualitative. It is no longer a science of magnitudes, it deals with qualities, which are quite beyond the scales of magnitude. For not only can science deal with the great generalizations like the laws of gravitation, conservation of energy, and the like, it can also recognize the uniqueness of the unique, the particularity of the particular. There is a process of scientific thought which passes from the general to that which appears only once, and to events which occur only once and never again.

14. **The determinant and the teleological judgment.**—But these particular events and singular occurrences require to be described, description needs language, and language is conceptual. True, but there are conceptions and conceptions, and the mind is flexible enough to coin new concepts to express its new experiences. So it is when we pass from the inorganic world to a world which presents us with objects which cannot be fully described from an external point of view, to those which have a meaning within themselves and cannot be explained as mere points in a system of forces. We may deal competently with physical masses when we regard the mass as concentrated at the centre of gravity; we can deal with chemistry as a system of combining weight, and from other abstract points of view; but when we deal with living matter we are in a world of peculiar actions and reactions, which cannot be stated in terms of attraction and resistance. So we have here to ask a different question. Kant asked, How is science possible?, and he gave his characteristic answer, which had regard both to mathematics and to physical science. We have to ask, How is biology possible? Here, too, the formal answer of Kant as to the function of the mind may be carried over without differentiation. For the attitude of mind is the same towards all its knowledge. The difference between the physical and the biological sciences is determined not by the character of the subject but by the character of the object. So in biological sciences we have to use not the determinant judgment but the teleological. In this sphere we have quite a different series of reactions, and we have to change our method and our nomenclature accordingly. For now we have something which can be called selections, choices, adaptations to environment, growths, changes along definite

lines; and we must construct suitable concepts for their expression. Yet men are unwilling to take the trouble, or to yield up the control which the use of quantitative concepts apparently gave them over the world to which they were applied. Hence we have had the extension of mathematical and physical formulæ to cover the field of life. Biological phenomena were attenuated till they were brought under the formulæ of mathematics, physics, and chemistry. No doubt this attempt was so far a just one, because living forms, so far as they are quantitative, are subject to measurement, and are, therefore, fit subjects for mathematical analysis. What cannot be mathematically analyzed are simply the internal states even of the protozoa. If a thing has an inside, and its relation to other things in space is not determined merely by its outside, then that relation must, if it is to be adequately described, take into account the inside as well as the outside. But that means a new calculus, a new set of concepts, and one does not see why science should not set itself, without prejudice, to make concepts fitted to express the new relations. It is interesting to quote in this connexion the following distinction drawn by Paulsen:

'It is worthy of note that a peculiar relation exists between our external or phenomenal knowledge and our understanding of phenomena which rests on interpretation. We may express it in the form of a paradox: *The better we conceive things the less we understand them*, and conversely. We conceive the inorganic processes best, that is, we can define them so accurately as to make them calculable. The vital processes are not so easily reduced to conceptual mathematical formulæ and calculation. Biology works with empirical laws altogether, the complete reduction of which to ultimate elementary laws of Nature has so far proved to be impossible. Man is the most incalculable being in existence. Hence it is that his acts are still regarded as absolutely indeterminate, or as the effects of an indeterminate agent, the so-called free will, which is simply equivalent to denying the possibility of conceiving or defining him. The reverse is true when it comes to understanding. Human life is the only thing that we understand perfectly. We reach the maximum of understanding in history: it is less complete in zoology and botany, and vanishes altogether in physics and astronomy, where we have the most perfect mathematical conception of things' (*Introd. to Philosophy*, Eng. tr., 373 f.).

15. 'Begreifen' and 'Verstehen.'—Paulsen's distinction between *Begreifen* and *Verstehen*, as thus set forth, is an interesting one, and may be regarded as both useful and convenient, from a popular point of view. But it is difficult to make the distinction good from a logical, a psychological, or an epistemological point of view. For, in the first place, what he regards as 'understanding' and as 'conceiving' are both mental processes, and are both the work of mind; and the distinction between them is one not of kind but of degree. In the second place, mathematics and physics, and especially chemistry, are not sciences which depend on calculation alone. Both physics and chemistry are experimental sciences, and, so far as they are experimental, they belong to what Paulsen calls 'understanding.' No physicist would limit his knowledge of any substance merely to what he can calculate about it. He feels he knows radium in its particularity, and is face to face with it as a real thing. He conceives it, and he understands it in its nature and in its behaviour. So here the distinction is inept. In the third place, when he says that man is the most incalculable being in existence, and refers to free will, one would like to know what is his view of free will. To be fair, he does not say that he holds that view of free will which he describes in the passage. But he so far identifies himself with that indeterminate view as to use it as an element in the position that man cannot possibly be conceived or defined. Is man intelligible? Can a doctrine of freedom be intelligibly set forth, and used as a principle of explanation in a description of man? We submit that all that can be inferred from the distinction between *Begreifen* and *Verstehen* is that mathematical, physical, and chemical concepts have their limits, and have to give place to other concepts when we pass from the physical sphere to the sphere where quantity ceases to obtain, and quality takes its place.

So, then, when we strive to obtain controlling knowledge of beings which are something for themselves and cannot be set forth merely in relation to other things in a world in space and time, we have to change our mode of conceiving them in order to suit the altered circumstances. The determinant judgment must give place to the teleological. We have to conceive a kingdom of means and ends, of things inter-related with a view towards a purpose. A new form of causation or linkage must be found. And the new concepts are forthcoming if only they have fair play. Final causes may be sneered at as vestal virgins, and may be discredited from many points of view, yet in modern times teleology has come to its own. The theory of evolution, and all that it implies, has reinstated purpose as the ruling idea of modern thought; and in all spheres of inquiry we have learned to value history as the key to the explanation of the world of external things. Evolution makes room for novelties, for something in the effect which was not in the cause, and we have to alter our conceptions to make them fit the facts. The processes of the world are not repetitions of former happenings; they are growths, developments, evolutions; and the growths are intelligible and may be stated in terms which may be understood.

16. Objects as linked together by the teleological judgment.—Our Logic, Psychology, Epistemology, must be made flexible enough to meet the new situation. Not that the situation is new in reality, for the processes of evolution have gone on from the beginning; only men had changed the flowing, growing, evolving world into a static world which could be calculated in numbers, weights, and measures. Now that we have come to a better understanding of the world, let us alter our formulæ to correspond. In seeking to do so, we may not cast all the blame of former failures on our conceptual modes of thought. For we have no other means of thinking than by concepts, and our vigilance ought to be directed towards the endeavour to make them adequate to their task. This can be done by the recognition of the differences between the objects which we think about, and by the recognition of the fact that notions fitting and adequate in one sphere are not applicable to others with different qualities and characteristics. For example, a little ago, we spoke of order, continuity, and unity as notions which have a meaning within physical science. In physics, however, order may mean nothing more than arrangement, but in the biological sciences, and especially in the sciences which deal with man, order means something more: *e.g.* when we speak of the social order, where the conception is bound up with the highest social, ethical, and religious interests. Continuity has also to take on a larger meaning, as the subject with which it deals becomes more complex. For here it is not the continuity of cause and effect, nor is it the linkage of mere sequence; we have to think of continuity as constituted by a purpose which seems to gather the contingent into something which gives it a reasonable meaning. So also with unity and with individuality. In truth it is only when we come to the action of life, only when we study things that have an inside, that we can attach a definite meaning to individuality. There is a certain indefinite nuance of individuality attached to an atom of matter, but then its individuality is

limited by the fact of its inertia: it moves only as it is moved. It has its attractions and its repulsions, but it moves in response to them without any hesitation or choice. In living matter the response seems to be of a different kind; the organism responds according to its own nature. As we ascend the scale of organization, individuality receives wider and more precise meanings until it becomes personality, of which we cannot speak now. In living creatures we do not speak of inertia, but of self-preservation—a very different conception. We can speak also of reproduction, and of heredity, and of those sentiments which seem to lie at the basis, or to accompany the fact, of self-preservation—of love, and hunger, which assume deeper and deeper meanings as the human race moves onward to higher progress.

This does not mean, therefore, that, when we pass from the sciences which are mainly occupied with inorganic matter, we are to do without concepts; it means only that we must form our concepts fitly to represent the new facts. It is essential to hold that new concepts may be formed, or old concepts may be modified, and that new ideas may be evolved to meet the new needs. But with regard to these concepts, the laws of reason and the principles of Logic still hold good; only we may regard them as outside the scope of quantitative measurement. That is simply to say that sentiments are not to be calculated in foot-pounds, and that we do not measure love by the yard. It may be measured in intensity, if not in extensity. There is needed a treatise to deal with the teleological judgment, which will place it on the same level as the determinant judgment. It is not enough to regard the determinant judgment as the type of judgment in general, and to place it on a platform of its own, as the only form of universal and necessary implication, and to regard the teleological judgment as merely empirical. This was the way of Kant. But it may be doubted whether the distinction between empiricism and idealism is as absolute as it has been assumed to be. If there is an order of the world, if that order can be understood, and if there are principles of arrangement in the world, then it may be postulated that the empirical order is also rational; and the judgments which have been regarded as purely empirical may also have a meaning in relation to the ideas of reason. That is too large a question to be discussed here. But, if the assumption of idealism that the real is the rational has any truth in it, then the distinction between empiricism and rationalism tends to disappear. What is empirically true may not be rationally false. Mathematics has shown us that facts and relations experimentally discovered may, with proper assumptions, be expressed with the utmost generality and necessity. Faraday's electric discoveries were mathematically explained by Clerk-Maxwell, and his mathematical formulæ were physically verified by Hertz, and applied to practical uses by Marconi.

17. **Relation of the determinant to the teleological judgment.**—This may be variously illustrated. Indeed, so copious are the sources of illustration that we are at a loss which to select. They are not opposed to each other. Rather the relation is that the teleological judgment steps in to afford an explanation where the determinant judgment ceases to be intelligible. The teleological presupposes the determinant judgment. In the case of the latter we are occupied with the understanding of things as they are—their nature, their modes of action, their inter-relations, and so on; but when these are so far understood, we are prepared for a new kind of action. Just in proportion to our knowledge of things as they are, are we able to impress new meanings on them, and make them subservient to our purposes. We investigate Nature, and transform it into our sciences of astronomy, dynamics, physics, and chemistry; or we measure and calculate heat, light, electricity; and, having so far mastered these, we proceed to new constructions, the explanation of which is not found in the abstract sciences, but in their applications. It is here that teleology begins, and it has a place in the theory of knowledge, not merely on empirical but also on other grounds. The whole system of efficient causes is implied in every machine, in every work of art, and in every construction which man has impressed on Nature. So we mould, alter, control Nature, and make her do our will; and she lends herself to the expression of new meanings which have been impressed on her former system of working. We make our harbours, build our ships, construct our roads and railroads, invent all the instruments of peace and war, sow and reap and gather into barns, build our houses, and plan cities; beyond these, we have our arts and sciences, our poetries and philosophies, and we seek to set forth our relations to the unseen powers on which we depend; and in all these efforts of man the distinguishing and guiding principle is the teleological judgment. The assumption is that Nature makes room for us and for our efforts, does not resent our attempts to mould her to new meanings, or refuse to carry out our purpose, when we ask her intelligently to do so. A machine is a new meaning impressed on Nature, in order that man may do his work. It is possible to explain a steam-engine as a system of mechanical forces; or we may write a history of its invention, and trace the course of its evolution from the kettle of Watt to the engines which drive Atlantic liners across the sea. In this history no mention need be made of the minds which successively made those changes which increased the complexity, efficiency, and usefulness of the steam-engine. But every step of the process, looked at from another point of view, illustrates the action of the teleological judgment. Applied science is always teleological. Machines are constructions with a meaning which goes beyond the machine regarded only as a mechanical construction. The meaning is impressed on a system of efficient causes, in order to make it work out a purpose. Thus in the case of any machine we pass beyond the sequence of cause and effect, and beyond the linkage of mechanical explanation; we are in the presence of things of another kind—things which require new concepts for their description and interpretation.

18. **Validity of teleological knowledge.**—Here, too, we may instance something which is of significance for knowledge. We may recognize that there is a valid knowledge of the individual. Individuality is a valid concept, though in our logical and psychological systems there is apparently no room left for it. Psychology tells us formally that it has no place for biography; and Logic tends, on almost every scheme, to pass away from what it calls the mere individual. But, on any theory of knowledge, room must be left for the idiosyncrasies of the individual. Surely a biography may be written, and may contain true and adequate knowledge, and there may be a description of the uniqueness of the unique. Hamlet and Macbeth have been described, and attempts have been made to understand Julius Cæsar and Napoleon; nor have Plato, Aristotle, Kant, and Hegel been set aside as unintelligible, though all of them have risen above the commonplace; and we still seek to comprehend the great poets, not by subsuming them under general categories, but by diligently studying them in the circumstances of their life. We place such

men under the subsumptions of the teleological judgment, with its categories of purpose and freedom; we find room for the study of individuality and personality as something which really appears in the world of phenomena.

But it is in the biological sciences that the teleological judgment is conspicuously present. Here the categories of unity, individuality, purpose, come into view. An organism cannot be defined without implicating all these at least. We cannot describe an organism without the recognition of it as a whole. Nor can we describe any organ in it without the implication that the organ has a meaning only in relation to the whole organism. We may, for descriptive purposes, reduce the phenomena of an organism to a number of systems, such as the circulatory, the muscular, etc.; but, after this description, we have to go back to the recognition of the organism as a living system, all the parts of which are in relation to the whole, and the whole is realized through the inter-relations of the parts. Still further, there is the fact that for the understanding of the organism the principle of unity and of action is within it. It has an inside. It is an old observation, 'Plant the skill of the shipbuilder within the timber, and you will see how Nature works.' The skill of the shipbuilder is within the timber in the case of every organism. This conclusion has been forced on us more and more ever since the epoch-making work of Darwin. It is not necessary to point out how, even contrary to the tendency of Darwin himself, teleology has been enthroned in the highest place in the sciences which deal with life, and Epistemology recognizes the significance of the concept, and has to make room for it. In every organism considered in its individuality, in every species considered as a concept descriptive of a certain kind, in the slow process of the evolution of living forms, we have been taught to see, in the growth of living things, a tendency towards a goal, a means towards an end; and this tendency has all the system of efficient causes at its service. It is not necessary to dwell further on the story of evolution as it is told to us at present; the great epistemological interest of it lies in the fact that a new set of concepts is at the service of the theory of knowledge—concepts which have the merit of recognizing a sphere of knowledge and of action, which had been inadequately recognized in our logical and psychological inquiries. A study of the theory of evolution and its procedure will yield fruitful results for Epistemology.

19. Criticism of the teleological judgment.—A critical inquiry into the teleological judgment would necessitate, in the first place, an investigation into the psychological conditions of its exercise, and, in the second place, an inquiry into the objective products which are the outcome of that exercise. Psychologically, we should need to investigate the whole field of purpose, the phenomena of means and ends, the fact of aim and desire, the power of forming ideals, and the means at our disposal in order to carry them out. For it is indisputable, it is, indeed, a fact of common experience, that living creatures have some power of using Nature for their own ends. It is a fact that rational creatures have a certain power of self-guidance, and of modifying Nature, and of making Nature subserve their ends. They sow and reap, they can use the changing of the seasons in order to store up food for future need, they can adapt themselves to their environment, not merely by organic modifications as lower animals do, but by adapting the environment to their needs. They clothe themselves in heavier raiment when the seasons change, they build houses, they seek their food, and everywhere in human life we see men moulding Nature in order to make life more easy, more comfortable, and more successful. We need not dwell on the fact of the teleological process; it is manifest. It is one element in adaptation, and it is thus a proof of the validity of the scheme of means and ends which is characteristic of life in general.

In the second place, a critical analysis of the teleological judgment would lead us into the objective investigation of all the works of man. These, again, are of the most important kind for the purpose of Epistemology. We might look at these works of humanity from various points of view. We might look at them as bodies of truth, and seek to test their scientific value. We might regard them from the point of view of description, and set them forth in that descriptive process which is another name for explanation. Or we might seek to appreciate them, to estimate their worth, and their æsthetic, logical, psychological, and metaphysical values. But, from our present point of view, our aim is to regard them as a set of human ideals concretely realized in the art, the science, the poetry, the philosophy, and the religion of mankind. Teleology would thus become a history of the ideals of mankind, as these are embodied in the history of literature, to use a comprehensive word which includes all the works of man enumerated above. Teleology studied in this comprehensive sense would give us most valuable material for a complete view of human knowledge, and would set us free from the tyranny of mere science, with its exclusiveness and its incompleteness. It would enable us to set its proper value on history as the supreme record of human endeavour, and to realize from a new point of view that distinction which Paulsen sought to establish in the quotation already made. The study of ideals, as these have been objectively realized in the life of a people, as realized in art, in sculpture, and in painting, as realized in the great poets of the world, as also in the philosophies of all nations, would open out to us the objective realizations of the teleological processes of the human mind and their several worths.

20. Teleology and ideals.—The power to frame ideals, and to appreciate them when they are set before us, is one of the characteristics of man. If this be so, then there must be some way of setting forth the procedure of the mind in the formation of ideals, and some way by which their validity and influence may be tested. This involves an investigation into the whole subject—an investigation which can hardly be said to have begun. For it would mean an investigation into the whole of human creations, as these are embodied in institutions, constitutions, political activities, national characteristics, and international influences. All these may be regarded as embodiments of characteristic ideals, and their sources and influences would have to be considered. Again, art, science, poetry, literature—in fact, all the achievements of man in the world he has made—would have a place in the great analysis of ideals, their nature and influence. Out of this investigation there would issue a new set of concepts, to describe the experience of mankind in this relation, to supplement and correct, or at least to modify, conclusions drawn from the system derived from man's primary intercourse with the world around him. Here, then, there may be great gain for the theory and nature of knowledge, if one could only find a way to utilize it. It is the glory of ideals to be great and broad and comprehensive, too rich and full to be the same to all, too wide to be realized in any single form or mode. Take the ideal in any sphere of human aspiration—architecture, for example—and we find it to be made up of certain qualities,

none of which can be neglected in any building worthy of the name—qualities such as strength, beauty, dignity, fitness, durability. Each of these may be realized in different ways: there may be many varieties of architecture. But each style has its ideal; architects have their visions, and they have examples in which former ideals have been realized; and so, out of the grandeur of their vision, and out of the fullness of their knowledge, they build, and the building remains an illustration of the working out of an ideal. So in art we may make a study of the vision which the artist saw, examine the way in which he realized his vision in the concrete form of painting or of statue, and note the limitations and restrictions laid on him by the material in which he has worked. So also in poetry, and in literature generally, we may trace the sources of the ideal; we may note how it grew, what it fed on, and how it was realized; and we may be persuaded that in these investigations we have a real illustration of the growth and law of human knowledge. Here we are delivered so far from the bondage of the actual. We are in a sphere where the human mind, master of its own experience, or so far master of it, sets itself to embody its own meaning and its own vision in a real objective form, so that it is no longer a private meaning, but one that can be the common possession of all men. This translation of a private, individual vision into forms which become a common possession is one of the characteristic ways of human achievement, and one of the ways of raising men to a higher level. We may study the work of the great masters in painting, sculpture, architecture, poetry, science, metaphysic, and in the study of them learn a lesson in the characteristics of what knowledge is and means, which we could never learn from the abstract discussions by which men have sought to delimit knowledge, and to assign to it bounds beyond which it cannot pass. Here, too, we may study in concrete form that great subject of individuality and personality which eludes the analysis of discursive thought. We may allow Psychology to occupy the place of the abstract spectator, and to say that Psychology is not biography; we may allow Logic to lay down the conditions of thought, and to elaborate the categories under which all fruitful thinking is to be conducted; and we may allow Metaphysics to deal with the ultimate problems of reality, and need not refuse generous recognition of their validity and worth, and yet claim that in the work of men there are revealed principles of thought and action and fields of knowledge of which they take but little cognizance. For there is real knowledge in this sphere, which all must recognize as real.

In this sphere we are not independent of Psychology, Logic, Metaphysics, or Ethics. For these supply the principles upon which our study of the achievements of men must proceed. In all our actions we must be logical, psychological, metaphysical, and even mathematical; but the sciences mentioned do no more than prescribe the conditions under which we work; they do not fix the vision which the seer sees or the ideal which he seeks to realize. In order to understand the vision, we must postulate the man who sees, and the mind which has been in the presence of the ideal. But the vision has been seen, the ideal has been set forth, and these are as much facts as are the facts of physical or chemical science, and as such they may be known and set forth in practice. Here, too, we may study the activity of man in its creative aspects, and note the conditions under which such activity is possible, for it works under conditions. In art the conditions are primarily those set by the material in which the artist works. The sculptor must have regard to the marble or other material in which his creative faculty labours. He has also to work under the mathematical, physical, and chemical conditions to which all human creations are subject. Mental conditions are also present, but need not again be enumerated. Yet, when the artist respects all these conditions—and if he neglects any of them, his work must fail—within them, indeed by means of them, he embodies his vision and realizes his ideal. The conditions do not fix the vision, nor do they contain the ideal; they only say that, if the artist is to work, these conditions must be fulfilled. If we are to understand the new product, the only cause to be assumed is the artist. And to understand him, if we can, we must pass from the general conditions under which he has worked, and study him as something which cannot be subsumed under general rules. For the proof of this we must refer to the critical studies of artists and poets, which, happily, are not non-existent, though they too often lose sight of their particular subject, and get lost under the general rules which are applicable to all men, and therefore are not illustrative of the singular genius they seek to describe in his habit as he lived. There must be some way of studying and understanding great men, for great men have appeared on the earth, and have been active in making history; and such a study is not without significance for the theory of knowledge.

21. **Teleology and history.**—The mention of history leads us to the recognition of what it is, what it means, and how it is to be understood. Paulsen, as quoted above, says that this is what we all understand but cannot conceive. This presupposes that conceiving is only of the general, the abstract, the universal, and necessary. But concepts may be changed, and their range enlarged, and they may be made such as to represent the reality with which we have to deal. We see how, in physics and chemistry, we have a new set of names to represent the new understanding of Nature to which men of science have come. Why should it not be so in the sphere of history? Are we to say that our failure to conceive belongs essentially to the very nature of conceptual knowledge? Even in that case, the limitation and the imperfection of knowledge are not determined by the knower or by the known, but by the imperfection of the instrument by which the knower seeks to express himself. If this is so, then there is hope for knowledge. It must revise its instruments, and make them more elastic and more fit for their purpose. The naked eye must be aided by the microscope, and the language must become more precise and more fluid at the same time. We must find a way of expressing the particular as well as the general, nor ought we to preach agnosticism until we have exhausted the possibilities of expressing the knowledge which we plainly possess, though it has escaped the meshes of our previous formulæ.

The study of the productions in which the human spirit has objectively expressed itself ought to give rise to the science of ideals. There is true and real knowledge to be found in this line of investigation, however great may be the difficulty of bringing it under rules and categories. Above all, in the sphere of religion and ethics we are face to face with sets of facts which have not yet been formulated. Here, too, we are in the sphere of creative personalities, though there are other spheres in which these have reigned. It is curious to observe that in the history of mathematical thought we are ever in the presence of creative personalities. From Pythagoras to Lord Kelvin every advance in mathematics is connected with a personality; and, when we get an account from the Town Council for electric light, we are charged for so many units

called by personal names illustrious in the history of electric discovery. But in the sphere of religion and ethics personalities dominate. Ideals are created by them, are appreciated by other men, and become the living influence by which history is determined and character is formed.

'Real, deep devoutness, such as controls the whole life, is certainly a power that is only to be found in a few. But it is on the basis of those few that the nature of an age's piety must be determined, just as we must determine the art of a period on the basis of the real artists. For in those devout men, as in those artists, lives the eternal, ever-moving spirit of religion and of art, and they compel the rest, even though slowly and gradually, to follow after them, and at least to acknowledge as form and authority that which they cannot receive as spirit. But many out of the throng do receive a ray of the spirit, and warm their cold life with it. Any one, therefore, who desires to depict the piety of the West in the fifth century must describe the piety of Augustine; whosoever wishes to understand the piety of the twelfth and thirteenth centuries must study the piety of Bernard of Clairvaux and Francis; he who seeks to grasp the piety of the sixteenth century must make acquaintance with the piety of Luther, Calvin, and Knox; and so throughout.

But these names show what a power piety has been in the history of the world and of civilization; these names show that the fear of the Lord was the beginning not only of wisdom but also of might. Ought I to add the name of Cromwell or of Muhamed? The greatest events and changes in the history of the world have had their origin in religion—not in the public religion, but in the purely personal, in that secret religion which remains hidden in the individual, until it suddenly jets forth as if from a newly breaking spring' (Harnack, *HJ* x. [Oct. 1911] 70 f.).

We quote this interesting and profound passage as an illustration of our thesis that the knowledge of individuals and of personalities is real and valid knowledge, even though it cannot be predicted, and cannot be calculated. Harnack has shown that piety, purely personal, has been the source of the greatest events and changes in the history of the world; and this is true not only of piety, but of every characteristic of creative personalities who have been centres of influence for their age and generation. Rightly to understand the influence of man on man, and the receptiveness of the average man towards the personal influence which streams forth from the exceptional man, would be to see the inner connectedness of history, and to differentiate history from the mechanical action which is the rule of the lower world.

'As there exist graded series of special and more general laws for the things, there are also numberless steps between the influence of the average man, whose will is included only in the will of his neighbours, and the will of the religious leader, or the artistic genius, or the hero whose will tunes the will of millions, and enters in pure identity into the minds of whole nations. As nothing is entirely disconnected, nothing is absolutely unimportant there; but only by this emphasizing of the important and decisive does the system of identities become an organized whole, in which the fate of peoples, in their leading spirits and in their quiet masses, can be understood' (Münsterberg, *The Eternal Values*, 152).

Leaving now the study of the products of mankind in the light which they cast on the problems of knowledge, let us look for a little at history, and endeavour to find why the methods and assumptions of natural science are inapplicable to history. We assume, indeed, a connectedness in history, but we soon find that the connectedness is not that of cause and effect, or mere temporal perseverance, as the causal judgment finally amounts to. In the historical world, or in the world in which men live and work, objective things assume a new form. They become not only a system of causes and effects, but one of means and ends. They are objects of desire or aversion, objects to be attained, or somehow moulded to subserve human purposes. The ultimate aim of natural study, in order to know the external connectedness of things, is to use that knowledge in order to institute a new connectedness, the explanation of which is to fulfil the aim of the worker. The transformation of the actual into the ideal always follows the track of human effort. When the actual becomes an object of desire, it is invested at once with new properties, and is transformed into an object which has a new meaning—a meaning arising out of the relation placed on it by the fact that it has become an object of desire. In history all objects are considered as objects of will, and their natural qualities are transformed accordingly.

In history, therefore, what is dealt with is no longer objects as seen in their scientific connectedness, but objects seen in their new transformation as interesting in their relation to the fulfilment of human need. Thus a new science arises, with new methods and aims, also with new categories to set forth all that newness, which yet has a connectedness that can be understood. It will become a science which deals with subjects, with wills in action and interaction with the world in order to transform that world into a world of values and worths. The new science will take into account the fact of individual wills and personalities, and endeavour to show how these wills become the general will, or how individualities, while maintaining their distinctness and their peculiarity, become a conscious part of an organic whole, which will have its own reality. We shall have to widen our conception of organism to express this new form of it. Just as politically we have to find a new conception for the British Empire, which is a system of relatively independent nationalities, bound in a unity such as the world has never seen before, so it is with regard to the new conception of organism.

Real objects or objects out in the world of space become ideal when they enter into the world of desire. It is just the fact of this transformation which marks out the science of history from other sciences, and it is in this sphere that we are to look for the connectedness which obtains and must obtain in history as in other sciences. The connectedness does not lie in the thought of the tendency of things to persist in their present state, but in the capacity of being transformed to meet human desire. It is not in connexion with the past that in history we seek explanations; it is in the unity impressed on natural objects when seen in the light of the possibility of their transformation to meet and to fulfil the purposes of man. That there is here an actual connectedness admits of no doubt, and to set forth this connectedness is an important task for knowledge. In history, then, there exists a real world which has arisen through human effort; and, if it is to be understood, it must be regarded in the light of the characteristic activities of man. How human wills agree to act in common, how ideals can be impressed on the average man, how men act together, have a common purpose—are questions of great interest. How meanings arise, how they are communicable, and how ideals may become the common possession of a people—are questions which we may put but which we cannot answer here. Looking back over the past, we find that all ideals have been traced by the peoples to their great men. All religions trace themselves ultimately to a personal founder; all laws have been ascribed to a personal legislator. And, in general, every advance in civilization has been ascribed to individual discoverers, inventors, or thinkers. In the transformation which takes place in objects when they become objects of desire, a great function is discharged by those who are great enough to indicate to the common mind what objects they ought to submit to this transformation. What ought men to desire? What ought they to avoid? Here come in all the ethics and all the religions of the world, and the transformations which they have effected on the common world.

We may instance also the ideals which in the history of the world have become national—Hebrew, Assyrian, Babylonian, Indian, Greek, Roman, Teutonic, English, Scottish. Ideals are

there, with all their greatness, and also with all their limitations; and the influence of a national ideal on the members of the nation can be described. That ideal every individual within the nation makes his own, shapes his conduct according to it, and thus makes the national will his own will. Again, one may arise within the nation who transcends the national ideal, yet is within it; and so he may modify it, and, without breaking with the past, open out new paths in which the feet of the ordinary man can safely tread. The main thing insisted on here is that history has to be understood from the point of view of ideals, that these are descriptive of the varied desires of man, and that the outcome of historical endeavour is determined by the efforts of men to realize their ideals. For these they suffer, strive, work; in the accomplishment of them they find themselves and their lasting joy. In a word, the sphere of history is the sphere of the teleological, and history is the story of the strivings of men to reach the ideal which somehow they possess.

22. The teleological judgment as a system of values.—Here, again, we see how mind changes its methods and its language as it comes into new fields of study. It does so in consistency with the laws which regulate its own procedure, and also in consistency with the nature of the objects it seeks to understand. In the fields of ethics, religion, and history it has to construct a system of values, for these are of essential importance in a world of ideals. But as a discussion of them will be found in art. VALUE, we need not deal with the subject here. Nor do we find it possible to discuss the problem of ignorance or of error. The problem of error lies alongside the problem of truth, and accompanies it all the way (see art. ERROR AND TRUTH). The subject need be discussed here only in so far as it bears on the task and nature of knowledge. Of course, all along the line of the effort to complete the task of knowledge there lies the possibility of mistake. The epistemologist may make a mistake in Psychology when he considers knowledge as a mental process. He may make a mistake in his description of the process through which the subject elaborates its objects, classifies them, transforms them. He may make universals which are not really such and land himself in the perplexity of those who work with inadequate instruments. In the sphere of Logic many mistakes may also be made, which may be found treated in detail in any treatise on Logic, under the name of 'fallacies.' Mistakes also occur in the metaphysical field which may render unfruitful the whole discussion of the epistemological problem. In our attitude towards the problem of knowledge we may be dogmatic, or we may be sceptical. We may have an attitude of belief towards that which is essentially incredible, or we may refuse belief to truth which can be shown to be valid and trustworthy. All these things are possible, and many of them have been present as matters of fact in every age. What then? Are we to despair of knowledge, or of the possibility of coming to a right apprehension of knowledge, its worth, its validity? What are we to say of those systems which mark out a certain boundary and declare that beyond it there is the unknowable? Is it possible to say what are the bounds of knowledge, and if so, how far is it possible? Can this be done from the point of view of the nature of the knower, or from the nature of the known? We have not found this to be the case. We have not found it possible to delimit the sphere of knowledge, or to set it aside as a process inapplicable to anything which can fall within experience. We have found its methods to be often inadequate; we have seen that it is apt to make conceptions which have proved powerful and adequate within one range applicable, without further inquiry, to another set of things, and to make one aspect of experience dominant over all experience, just because this has been more manageable and useful in its endeavour to control its objects.

23. Teleology and criticism.—Along all these lines knowledge has to be vigilant if it is to fulfil its purpose. Here, too, eternal vigilance is the price of safety; if knowledge is to hold itself and its products in secure possession, it must subject all its assumptions, its categories, its processes, to a criticism which must grow ever more stringent as knowledge increases. Criticism of beliefs must ever be undertaken anew as the experience of man widens, and his power of separating the true from the false increases. Criticism of the mind and of the axioms which it has held as absolutely true must be looked at afresh in the light of increasing knowledge, and of a fuller consciousness of the mind itself. Logical procedure will need revision constantly; and, if criticism is ever called for with regard to knowledge regarded as the work of the knower, it is always in order also with regard to knowledge as it is determined by the nature of the object. For not all that passes under the name of knowledge, but only that which has been tested, sifted, and weighed in the balance of criticism, is worthy of the name.

Add to this that criticism is not a fixed, unchangeable process of appreciation or of evaluation. It is an evolution which goes on from more to more. We are to learn what it means. It has grown to considerable proportions in other spheres; and literary, historical, and scientific criticism has already performed a great work in the way of purging our knowledge and of purifying our conceptions of what has happened in the past. Philosophical criticism, or the criticism of philosophical systems, has helped to make clear the problem of philosophy, and to define what it can wisely attempt. The great work which Kant began is not yet completed, and there must be a criticism of the critical philosophy itself. It has been criticized, but mainly from partial points of view, and in the interests of a philosophy constructed on a different basis. But the thing which is most needed is *a criticism of the process of criticism itself.* This also is, or may be, a constructive work of the highest philosophical importance. For it would give us an instrument of the utmost value for the determining of philosophical tendencies, and provide us with a test of their worth, truth, and validity. But the critical view of criticism itself is also subject to growth, and evolves; and, as it evolves, it helps us in the process of distinguishing the true from the false, and helps us to sift out of our judgments the inadequate, the unreal, and the untrue.

Meanwhile knowledge grows, and the power of the mind to grasp its objects grows. Nor can we assign any limits to this growth, for mind grows by the exercise of its functions, and with this growth there goes the evolution of knowledge, and with the growth of both there goes the growth of criticism, or the examination of all that is concerned with knowledge. The story of later philosophy is instructive in this respect. Idealism is learning to appreciate worths, and to hold a high respect for matters of fact. Empiricism is learning to have respect to rational principles, and is ceasing to look at mental processes as mere effects wrought on the mind by an objective world. Other signs of a more hopeful tendency to look at philosophy as able to recognize all the elements of experience are not wanting. Most hopeful of all is the growth of criticism itself, or the earnest scrutiny bestowed on all its processes by philosophy itself,

and the resultant purification of our methods. May we not take it that the long processes of building up our knowledge step by step may be hastened as man becomes master of his methods? Eminent mathematicians have been able to see the outcome of lengthened demonstrations in a brilliant flash of intuition; their mathematical formulæ have been again turned into pictures, and they read them as the ordinary man reads the pages of a book. May not intuitions be the goal of all our discursive reasoning?

Meanwhile, from the subject or from the object there is no hindrance to the hope of the indefinite increase of our knowledge. Intensively it will increase as we learn more of ourselves, of the world, and of the Maker of the world; extensively it may increase until it stands over against the world, and recognizes that through and through it is an intelligible world, a world that may be understood. With the increase of knowledge the knower grows, and the mastery of the world grows also.

'I am a part of all that I have met;
Yet all experience is an arch wherethro'
Gleams that untravell'd world, whose margin fades
For ever and for ever when I move'
(Tennyson's *Ulysses*).

LITERATURE.—This is so vast that only a selection from the more recent can be given here. The great systems from Plato and Aristotle downwards have a close bearing on the subject of Epistemology, but only a general reference to these is necessary. The same remark applies to the Histories of Philosophy; nor do we enumerate all the recent works on the problem of knowledge. The following selection is offered, mainly because of the indebtedness of the present writer to the works named:—R. Adamson, *The Development of Modern Philosophy*, 2 vols., London, 1903; J. B. Baillie, *Idealistic Construction of Experience*, Edinburgh, 1906; J. M. Baldwin, *Thought and Things, or Genetic Logic*, London, vol. i. (1906), vol. ii. (1908); H. Bergson, *Time and Free Will*, Eng. tr., London, 1910, also *Matter and Memory*, do. 1911, and *Creative Evolution*, do. 1911; B. P. Bowne, *Theory of Thought and Knowledge*, New York, 1897; E. Cassirer, *Das Erkenntnisproblem*, Berlin, vol. i. (1906), vol. ii. (1907); T. M. Forsyth, *English Philosophy*, London, 1910; T. H. Green, *Collected Works*, 3 vols., do. 1885; W. James, *Some Problems of Philosophy*, do. 1911; W. Jerusalem, *Introd. to Philosophy*, Eng. tr., New York, 1910; H. Jones, *The Philosophy of Lotze*, Glasgow, 1895; G. T. Ladd, *Knowledge, Life, and Reality*, London, 1909; A. D. Lindsay, *The Philosophy of Bergson*, London, 1911; J. T. Merz, *Hist. of European Thought in the Nineteenth Century*, Edinburgh, vol. i. (1896), vol. ii. (1903); H. Münsterberg, *The Eternal Values*, London, 1909; F. Paulsen, *Introd. to Philosophy*, Eng. tr., New York, 1907; R. B. Perry, *The Approach to Philosophy*, London, 1905; R. Reininger, *Philosophie des Erkennens*, Leipzig, 1911; J. Royce, *The World and the Individual*, New York, vol. i. (1900), vol. ii. (1901); C. Sigwart, *Logic*, Eng. tr., London, 1895; J. Ward, *Naturalism and Agnosticism*, do. 1899.

JAMES IVERACH.

EQUIPROBABILISM.—**1. Definition.**—Equiprobabilism is a form of probabilism (*q.v.*) which stands midway between simple probabilism and probabiliorism. The equiprobabilistic principle may be stated thus: the *opinio minus tuta*, *i.e.* the opinion *quæ libertati favet*, may be followed, on condition that it is as probable as the *opinio tuta*, *i.e.* the *opinio quæ legi favet*; we may not, on the contrary, follow the *opinio minus tuta* if it is considerably less probable than the *opinio tuta*. Probabiliorism does not admit of following the *opinio minus tuta* unless it is more probable than the *opinio tuta*. Simple probabilism demands only a strong probability in favour of the *opinio minus tuta*.

2. Founder.—Alfonso Maria di Liguori (*q.v.*) is generally regarded as the founder of the equiprobabilistic system. This theologian was originally a rigorist, as he tells us in his *Morale Systema*. He afterwards went over to simple probabilism, and then to equiprobabilism. There are signs of the latter evolution in several of his writings prior to the year 1762, but it was openly completed at that date, for it was in 1762 that the founder of the order of Redemptorists published his *Breve dissertatione dell' un moderato dell' opinione probabile*. It is difficult to say whether this change of opinion was suggested to him by the thought of the abuses to which simple probabilism gave rise, or by the desire to avoid seeing his doctrine suffer the discredit into which the ethics of the Jesuits had fallen at that time. St. Alfonso, in his equiprobabilistic system, rests on the authority of Eusebius Amort, who published a *Theologia scholastica et moralis* in 1753. Junius († 1679), Antony Mayer the Jesuit, author of a *Theologia scholastica* which appeared in 1729, and Rasslar, author of a *Norma Recti*, published in 1713, are also regarded as forerunners of equiprobabilism, but equiprobabilism as a theory distinct from simple probabilism makes a definite start only with Alfonso di Liguori. In ch. iii. ('de Conscientia') of his *Homo apostolicus ad audiendam confessionem instructus* (see the 1837 ed., Paris and Besançon), Alfonso formulates his opinion as follows:

'Tertia igitur, quae nostra est sententia, dicit quod quum opinio quae libertati favet est aeque probabilis atque opinio illa quae legi favet, sine dubio et licite sequi potest.' Nevertheless he calls attention to the fact that, in a matter of faith, one must always follow the *opinio tutior*.

3. Controversies.—Towards the end of the 18th and the beginning of the 19th cent. probabiliorism and even tutiorism became predominant, and remained so until the time when the Jesuits and other scholars revived the doctrine of St. Alfonso. Among his modern disciples special mention is due to Father Gury, the author of a very well-known *Manuel de théologie morale*, and to Gousset, who insists strongly upon the equiprobabilism of his master. In 1864, Antonio Ballerini, the Jesuit, published a *Dissertatio de morali systemate S. Alphonsi* for the purpose of showing that Alfonso di Liguori had never taught equiprobabilism, and of claiming him absolutely for the side of the simple probabilists. This dissertation called forth an answer from the Liguorians, and in 1872 the *Vindiciæ Alphonsianæ* appeared. This great work is a special plea in favour of St. Alfonso and equiprobabilism. It seeks to prove that this theologian was the inventor of the equiprobabilistic system, and that this system was always his. The authors relied chiefly on the dissertation of Liguori, written in 1749, entitled *De usu moderato opinionis probabilis in concursu probabilioris*. No one before Liguori, they said, had ever spoken of a moderate use of probable opinion. In their eyes equiprobabilism was the most correct, most sensible, and easiest rule of moral conduct. They summed up their master's doctrine as follows. (1) In a case of doubt as to the existence of a law, the *opinio quæ libertati favet* must be as probable as the *opinio quæ legi favet*. (2) In doubt with regard to the extinction of a law which has certainly existed, the *opinio quæ libertati favet* must be sufficient ground for moral certitude. (3) In doubt concerning a fact which involves a non-moral danger, the surest opinion must always be followed; in other words, one has no right, under pretext of probability, to endanger, in any given case, the interests of a third person.

The *Vindiciæ Alphonsianæ* led to a lengthy controversy. In 1873 a pamphlet was published in Belgium, entitled *Vindiciæ Ballerinianæ*, in support of the argument of Ballerini (his dissertation is reprinted in the pamphlet) that Liguori was always a defender of simple probabilism. In the same year a discussion took place in the newspaper *L'Univers* (see the issues of 8 May, 25 June, 29 July, 28 Oct. 1873), in which Ballerini himself participated. He took his stand upon Liguori's early writings, and recalled the fact that even Liguori's own partisans had claimed that he never changed. Besides, if he did change, says Ballerini, it would be better to follow his original opinion. The same author recurs to the subject in the 1893

edition of Gury's *Manuel*, to claim the authority of St. Alfonso in favour of the argument: one may follow an opinion which is truly and wholly probable, rather than a sure opinion which is equally or even more probable, in the purely moral sphere, when no question of fact comes into consideration.

Numerous books and articles were devoted to this controversy. It is both historical and theoretical. The points at issue were: (1) What exactly did Alfonso di Liguori teach? and (2) What value is to be put on equiprobabilism as a directing principle of conscience?

As far as the first point is concerned, it may be remarked that this historical question is interesting mainly to biographers of Alfonso di Liguori. The Jesuits and their partisans maintain that St. Alfonso never taught anything but moderate probabilism, and that he repudiated laxity only; the majority of Liguorians assert, contrary to the evidence of facts, that the founder of their order was always an equiprobabilist. Some Liguorians, however, admit that the equiprobabilism of their master dated only from 1762. On account of the want of precision that characterizes St. Alfonso's terminology, it is quite easy to find arguments in his writings in support of all these different opinions.

As regards the second point, equiprobabilism has certainly had more opponents than supporters. Among the former we may mention—besides Ballerini—Lehmkuhl, Huppert, Le Bachelet; and among the partisans of equiprobabilism may be named Aertnys, Ter Haer, and Jansen.

Some of the opponents of the equiprobabilistic system claim that it is only an attenuated form of simple probabilism; others acknowledge the original character of equiprobabilism, but only to demonstrate that this principle is illogical and inapplicable. They hold strictly by the three fundamental rules of probabilism: (1) liberty is prior to law, and cannot be dispossessed of its rights except by an absolutely certain law; (2) a doubtful law is not obligatory; and (3) if a *vere et solide probabilis* reason exists against law and on the other side of liberty, the law becomes doubtful. The substance of their reasoning is as follows: it is impossible to measure exactly the degrees of probability of different opinions, and therefore a comparison between the reasons which militate for and against liberty is of little value; besides, even if there is a more probable opinion in favour of law, the latter remains none the less doubtful. One may act even with a certain *formido malitiæ*, for only moral certainty, in favour either of the law or of liberty, excludes this *formido*, because it excludes every hesitation of judgment. Between a simply probable opinion and a morally certain opinion there are no intermediate degrees. In most cases only the so-called reflex principles, and in particular the principle *lex dubia non obligat*, have practical certitude, which, of course, must not be confounded with theoretical certitude.

To these arguments the equiprobabilists reply that only a comparison between different opinions can decide if one of them is *vere et solide probabilis*. Practical certitude is of a subjective kind, and to obtain it we must consult our personal feeling. If the law is more probable than the opinion favourable to liberty, there is no real doubt. Now, nothing but real doubt removes the obligatory character of law. It is perfectly possible to determine, in a given case, that such and such an opinion is more or less probable than another. It should be noted that equiprobabilists as a rule admit the general principles of probabilism formulated above. Jansen, however, calls attention to the fact that it is incorrect to claim that liberty, being prior to law, has a presumption in its favour (*libertas possidet*), and that it is always the existence of law that has to be demonstrated. According to him, liberty exists only by virtue of law, the source of our rights as of our duties. He does not, as the Roman Catholic moralists usually do, place liberty in opposition to law, but he affirms that law is in itself more probable than liberty, and that, consequently, it must prevail if there is another reason in its favour.

Considering the general principle of probabilism, simple probabilism is unquestionably more logical than equiprobabilism. The latter is a timid protest against a purely legal morality, in favour of the subjective conscience, an attempt to stay the abuses inherent in simple probabilism which degenerates almost certainly into laxity. What makes the controversy which we have just summed up interesting is that at the present time, in the sphere of Roman Catholic morality, equiprobabilism is the last intrenchment behind which a small number of defenders are fighting against the principles and morals of the Jesuits. Probabiliorism and tutiorism have now no supporters.

LITERATURE.—Döllinger-Reusch, *Gesch. der Moralstreitigkeiten in der röm.-kathol. Kirche seit dem sechszehnten Jahrhundert*, Munich, 1889; the works of Liguori, esp. his *Theologia moralis* and *Homo apostolicus ad audiendam confessionem instructus*, and his letters: *Lettere di S.A.M. di Liguori . . . pubblicate nel primo centenario della sua beata morte*, 3 vols. Rome, 1887; Gousset, *Théol. morale*, Paris, 1844; *Vindiciæ Alphonsianæ seu Doctoris Ecclesiæ S. Alphonsi de Ligorio, episcopi, et fundatoris Congregationis St. Redemptoris doctrina moralis vindicata a plurimis oppugnationibus C.P. Antonii Ballerini, Soc. Zweifel,' p. 161 ff.; Jansen, 'Probabilismus u. Kritik,' p. 316 ff.; and various other articles by the same authors continuing this controversy. The *Theol. Quartalschrift*, 1897, contains an art. by Koch, entitled 'Die Entwickelung des Moralsystems des hl. Alfons v. Liguori, auf Grund seiner Briefe dargestellt'; see also artt. 'Liguori' and 'Probabilismus,' in *PRE*³.

E. EHRHARDT.

EQUITY.—In common usage, 'equity' denotes what is right as distinct from what is according to law. The law represents what is enacted by Parliament or the legislature, and, though it may intend to embody the right, it does not always do so, and men then judge the case according to 'equity.' 'Equity' thus comes to mean some 'law of nature,' as it did in Roman Law, or the consensus of opinions of what is right in the circumstances. The distinction is an old one familiar to Greek philosophers and Roman jurists.

Aristotle (*Nic. Eth.* v. 10) remarks that the equitable and the just are sometimes identified and sometimes distinguished. This is because 'justice' and 'equity' are in common parlance regarded as synonymous with the right, but in legal parlance the 'just' is merely according to positive law or legislative enactment, and the 'equitable' is something in accordance with some other supposed

'law' or principle. This supposed 'law' is the mind's sense of right, or some standard assumed to represent it. In speaking of the obscurity and equivocation of the terms, Aristotle says: 'What obscures the matter is that, though what is equitable is just, it is not identical with, but a correction of, that which is just according to law. The reason of this is that every law is laid down in general terms, while there are matters about which it is impossible to speak correctly in general terms.' Hence, when a positive law does not strictly apply to the special case in hand, an appeal has to be made to 'equity,' which means some principle of 'justice' or right on which the legal enactment is supposedly based or which it is intended to serve. For instance, the law may be that a person convicted of murder shall be hanged, but the conviction may be wrong, and, when there is reason to believe this, 'equity' may come in, when process of law will not deal with the matter and remit the punishment.

Sir Henry Maine (*Anc. Law*, p. 60 ff.) suggests that the distinction between 'justice' and 'equity' grew out of the contradictions in the positive law which recognized class distinctions, and the growth of a sense of equality in the application of the right.

'It is remarkable,' he says, 'that the "equality" of laws on which the Greek democracies prided themselves . . . had little in common with the "equity" of the Romans. The first was an equal administration of civil laws among the citizens, however limited the class of citizens might be; the last implied the applicability of a law, which was not civil law, to a class which did not necessarily consist of citizens. The first excluded a despot; the last included foreigners, and for some purposes slaves. On the whole, I should be disposed to look in another direction for the germ of the Roman "Equity." The Latin word "aequus" carries with it more distinctly than the Greek ἴσος the sense of *levelling*. Now its levelling tendency was exactly the characteristic of the Jus Gentium, which would be most striking to a primitive Roman. The pure Quiritarian law recognized a multitude of arbitrary distinctions between classes of men and kinds of property: the Jus Gentium, generalized from a comparison of various customs, neglected the Quiritarian divisions. The old Roman law established, for example, a fundamental difference between "Agnatic" and "Cognatic" relationship, that is, between the Family considered as based upon common subjection to patriarchal authority and the Family considered (in conformity with modern ideas) as united through the mere fact of a common descent. This distinction disappears in the "law common to all nations," as also does the difference between the archaic forms of property, Things "Mancipi" and Things "nec Mancipi." The neglect of demarcations and boundaries seems to me, therefore, the feature of the Jus Gentium which was depicted in Æquitas. I imagine that the word was at first a mere description of that constant *levelling* or removal of irregularities which went on wherever the prætorian system was applied to the cases of foreign litigants. Probably no colour of ethical meaning belonged at first to the expression; nor is there any reason to believe that the process which it indicated was otherwise than extremely distasteful to the primitive Roman mind.'

The ethical colouring which the conception obtained was probably due to the influence of Christianity, with its sense of the value of individual men and their equality before God and so before the law. It thus came to represent the basis upon which positive law at least pretended to stand. It was at first the mere correction of anomalies in the application of the law, but the rise of the idea that all laws had a basis higher than mere legislative enactment, and did not rest on the arbitrary will of the lawgiver or a capricious contract, gave it an ethical meaning superior to all others in authority, and made it the ground on which common law had to rest for its justification.

LITERATURE.—Aristotle, *Nicomachean Ethics*, bk. v.; H. Maine, *Ancient Law*[10], Lond. 1907, ch. iii.; T. E. Holland, *Jurisprudence*, Oxf. 1880. See also art. 'Equity,' in *EBr*[11].

JAMES. H. HYSLOP.

EQUIVOCATION (Logical).[1]—Equivocation is one of the verbal fallacies, that is, one of those in which a conclusion is not validly inferred, because of the improper or ambiguous use of words in the course of the argument. In particular, equivocation is that verbal fallacy which is due to the employment of the same word in two senses. For example, 'The holder of some shares in the lottery is sure to gain the prize; and, as I am the holder of some shares in the lottery, I am sure to gain the prize'; or, again, the old illustration, 'Who is most hungry eats most, who eats least is most hungry, therefore who eats least eats most.' As there are three terms in the syllogism, and as each of these terms appears twice, there are three possible places where equivocation may be located: on the one hand, in the middle term, or wholly in the premisses; on the other hand, in either the major or the minor term; and so, in part, in the conclusion. But it is usually to be found in the middle term. Since in equivocation we use the words denoting one of these terms in two senses, we really have not one term but two, and so altogether four in our syllogism. Thus equivocation, as is true of so many other fallacies, is but a species of the fallacy of four terms.

[1] For equivocation in the ethical sense, see CASUISTRY, LYING.

Jevons gives three causes which especially lead to equivocation: (1) the accidental confusion of different words, *e.g.* mean (the average) and mean (the despicable); (2) the giving of the name of one object to another object with which that object is associated, *e.g.* church, house, court; (3) the giving of the name of one object to a second object in some respect similar to the first, *e.g.* sweetness (of music), light (of knowledge). But behind the equivocal use of words there is always of necessity some ignorance regarding the things for which the words stand; and in some cases it is difficult to decide whether to call the fallacy equivocation or one of the material fallacies, especially accident (*q.v.*). Hence it happens that the complete exposure of an equivocation is often far more than merely a matter regarding the meaning of a word, being rather an analysis and discrimination of the objects themselves denoted by the word. For example, to make clear the meaning of such words and phrases as 'identity,' 'I,' 'laws of Nature,' 'the freedom of the will,' in philosophy—not to mention ambiguous words and phrases which have played an important part in the history of theology, ethics, economics, and other sciences—has proved not only a difficult task for the student, but also an important step forward in the development of his science. See, further, art. LOGIC.

W. T. MARVIN.

ERASMUS.—See HUMANISTS.

ERASTIANISM.—**I. Definition, derivation, and delimitation of the term.**—The opening of Figgis's brilliant essay, 'Erastus and Erastianism' (in *JThSt* ii. [1900] 66 ff.), 'Was Erastus an Erastian?' suggests, on the one hand, the distance between the views actually propounded by Erastus and the principles of modern Erastianism; and, on the other hand, the difficulty of fixing the meaning of an elusive term in political nomenclature; while the title of Bonnard's invaluable monograph, *Thomas Éraste et la discipline ecclésiastique* (Lausanne, 1894), fixes the attention upon the limited area of the controversy with which Erastus was concerned. Robert Lee, in his historical Preface to *The Theses of Erastus touching Excommunication*[1] (Edinburgh, 1844), labours to exhibit the ignorant abuse of the terms 'Erastian' and 'Erastianism' by those who, in the heat of the Disruption, applied them to the Established

[1] The translation published by Lee is a revision of the first Eng. tr. of the *Theses*, entitled, *The Nullity of Church Censures* (London, 1659), and containing an account of Erastus taken from Adam Melchior's *de Vitis Germanorum Medicorum*. Another tr., *A Treatise of Excommunication*, appeared in 1682 (London, printed for L. Curtis).

Church of Scotland. With this defence of the Church of Scotland we may compare the words of R. I. Wilberforce, *Sketch of the Hist. of Erastianism* (London, 1851):

'It will be found that Presbyterianism, to whatever other evils it has been open, is at least a deadly enemy of Erastianism. Beza was the first to write against Erastus, and no ecclesiastical body is more hostile at present to the encroachment of the civil power than the Scottish Kirk' (ch. i.).

We may quote also the following passage from Figgis:

'The real object of Erastus was to give clear expression to the denial of any right to coercive authority in the religious society apart from the State.[1] He decided, in fact, to prevent the Evangelical churches becoming what one of them claimed to be in Scotland and actually became in Geneva, a *societas perfecta*, with all its means of jurisdiction complete and independent' (*Camb. Mod. Hist.* ii. [1902] 743; cf. also Lee, Pref. p. xxix, and W. Cunningham, *Discussions on Church Principles, Popish, Erastian, and Presbyterian*, Edinburgh, 1863, pp. 164, 207).

Figgis's reference to 'the simpler definition of Erastianism as the theory that religion is the creature of the State' (*JThSt* ii. 83) is hardly the account of the matter which modern religious Erastians like Fremantle and Gwatkin would admit, though it expresses the tendency of mere political Erastianism which Hobbes propounded in the great forty-second chapter of the *Leviathan*, 'Of Power Ecclesiastical.'[2] As Machiavellianism[3] subordinates morality to political exigencies, so Erastianism, pushed to extremes, subordinates religion.

An attempt at even the most cursory review of the operation of Erastianism is rendered difficult, not only by the persistence and variety of political intervention in ecclesiastical affairs since Christianity was 'licensed' by Constantine, but still more by the notorious fluidity of the term, and by the contradictory judgments of historians and political philosophers as to the determining factors of the ecclesiastical policies of the princes and statesmen—even of churchmen—whose acts are called in question. In the criticism of theorists, too, as we have seen in the case of Erastus, the application and justification of the epithet are often matters of debate. How far a monarch, for instance, was actuated by a genuine desire to propagate Christianity and to extirpate heresy in his dominion; how far he merely subordinated the organization, the influence, and the sanctions of the Church to the aggrandizement of his personal power or the prosperity of the State—these are problems which not only must frequently remain insoluble puzzles of regal psychology and casuistry, but will always be differently treated according to different conceptions of the mutual relations of Church and State.

The divergent verdicts recorded on the careers of Constantine the Great, Clovis, and Charles the Great furnish conspicuous instances of the difficulty of estimating the quantity or the quality of the Erastianism that has actuated the great makers of Church history. It is necessary, too, to distinguish between the home and the foreign policy of monarchs like William I., Henry II., and Henry VIII. of England; for statesmanship that was Erastian in its treatment of the Church of England was not necessarily Erastian in its attitude towards the claims of Rome. The anti-Papal Statutes of Edward I. and Edward III. were but patriotic and enlightened efforts to check the disintegration of the body politic that was increasingly threatened by the alienation of jurisdictions and temporalities, by the extension of judicial and fiscal immunities, and by the still further weakening of the sovereignty of the State through the legative system and the intrusion of foreigners into even the metropolitan sees. The problem of the Erastianism of bishops need not detain us. As regards some of the most famous of these, the question of the master they elected to serve has received different answers. Thomas Becket changed sides on his translation from a civil to an ecclesiastic office; whereas Lanfranc, in his support of the Conqueror, furnishes an example, not so much of Erastianism, as of the defence of the autonomy of a national see. The famous epigram of James I., 'No bishop, no king,' not only enunciates the principle that in the first half of the 17th cent. the permanence of episcopacy was the condition of the stability of the monarchy, but furnishes the diagnosis to the embitterment of the struggle between the religious parties of the following reign. *Prima facie*, the subserviency of Laud to Charles I. appears as treason to the Church, when contrasted with the independence exhibited by Peckham towards Edward I. But, so far as Episcopalians accept the implication of Erastianism for Laud's contemporaries or successors, the charge is admitted only through a certain inversion of the term (cf. Patterson, *Hist. of the Church of England*, London, 1909, p. 334 f.).

We should be inclined to say that, so far as clerical Erastianism co-exists with the maintenance of the spiritual and even the political claims of the Church, such Erastianism can only regard the State as being itself ultimately the minister, not the master, of the Church; the tributary, not the patron. State oversight and support of the Church are, according to this view, not only advantageous to the prestige, the welfare, and the morality of the State; they conduce to the efficiency and prosperity of the Church, which would be imperilled by disestablishment or any form of self-supporting autonomy. Nor has the operation of Erastianism proved invariably injurious, however problematic we may regard the advantage of the State's tutelage of the Church. Often has the secular power limited hierarchical tyranny, to the advantage of true religion as well as in its own interests. Even the decadent Byzantine Empire furnishes, in the persons of Leo the Isaurian and his hyper-iconoclastic son, Constantine V., instances of monarchs whose efforts to extirpate superstitions—especially the worship of images—which the Church successfully maintained against all Imperial measures range them among the champions of progress and enlightenment. Bury has shown that Constantine V. was animated by true statesmanship in his aversion to the depopulating practice of monachism, and much of the ecclesiastical policy of the later Byzantine Emperors was, like that of Constantine I. at Nicæa, dictated by an honest desire to heal the schisms made in the State itself by the virulence of Christological controversy. Finally, we have to observe that, once the Edict of Milan (313) had reversed the injunction, 'Non licet esse vos,' Constantine the Great had no option but to become *episcopus episcoporum* (though he claimed to act as such only in the externals of religion), for the care of the State religion was as much a duty as a prerogative of the Emperor. On the other hand, while Constantine was politic enough to see the advantage of availing himself of such an auxiliary to government as Christianity presented—an aid which heathenism in its totality was unable to render—he could no longer allow

[1] '"Erastianism," as a by-word, is used to denote the doctrine of the supremacy of the state in ecclesiastical causes; but the problem of the relations between church and state is one on which Erastus nowhere enters. What is known as "Erastianism" would be better connected with the name of Grotius' (art. 'Erastus,' in *EBr*[11]).

[2] 'Many of us—most of us, in fact—are Erastians with certain limitations; Hobbes was an Erastian without limitations' (W. G. Pogson Smith, in Essay prefixed to *Hobbes's Leviathan reprinted from the Edition of 1651*, Oxford, 1909, p. xxx).

[3] How Machiavelli was 'caught up in the growing controversy between Church and State, and identified with the party who maintained that the political authority must outweigh the religious,' is discussed by Burd, *Il Principe*, Oxford, 1891, p. 57 f.

the greatest of all *sodalicia* to operate throughout the Empire independently of his superintendence.

2. Life and work of Erastus.—

Thomas Lüber was born at Baden, in Switzerland, on 7th September 1524. On his matriculation at the University of Basel in 1542 he adopted, in accordance with the fashion of the time, the Greek equivalent (*Erastus*) of his family name. In 1544 he quitted Basel and proceeded to Italy, where the generosity of a rich patron enabled him to spend nine years—three at Bologna and six at Padua. First he studied philosophy, and afterwards medicine, graduating as doctor in the latter. In 1557, while he held the appointment of physician to the court of the Count of Henneberg, in South Germany, he received almost simultaneous invitations from two German princes. Declining the offer of the Duke of Saxony, he accepted the professorship of medicine which Otto Henry, the Elector Palatine, offered to him at the University of Heidelberg. He was attached to the new faculty of medicine, in the capacity of professor of therapeutics, on 3rd May 1558. At the end of the same year he was unanimously elected to the Rectorship for the following year, having already, as Bonnard suggests, received at Heidelberg the degree of doctor of philosophy. He immediately exhibited great ability and energy in the development, not only of the study of medicine, but of culture and science generally, while his election to the Church Council of the Palatinate drew him forthwith into the vortex of those Confessional conflicts in which Heidelberg, 'a refuge for theological eccentrica of all nations' (Figgis, p. 69), enjoyed an unenviable pre-eminence.

Erastus, who remained throughout his life attached to the Zwinglian party, of which he was the leading layman at Heidelberg, incurred the hatred of the Lutherans at the beginning of the year 1559 by his opposition to the intolerant action of Hesshusius, the Lutheran dean of the faculty of divinity, in attempting to refuse the doctorate to Stephen Sylvius. On 12th February the Elector Otto Henry was succeeded by Frederick III. The former had been a tolerant Lutheran, whereas Frederick was strongly anti-Lutheran. In the Colloquies of 1560 between the Reformed theologians of the Palatinate and the Saxon representatives of the Lutheran confession, Erastus, at the request of the Elector, defended the Reformed doctrine of the Supper, gaining the approbation of the Calvinist Olevianus (1536–1587), who had been appointed director of the College of Wisdom at Heidelberg. In August the Reformed faith was introduced, both Lutheranism and the residual Roman Catholicism of the Palatinate being proscribed by edict. Two years later Erastus supported in a synod the introduction of the Reformed Catechism of Heidelberg, which Olevianus and Ursinus had composed, and in the same year (1562) was printed, by the Elector's command, the *Büchlein vom Brotbrechen* ('Pamphlet on the Breaking of Bread'), of which Erastus was undoubtedly the author. John Marbach of Strasburg issued the Lutheran rejoinder, which evoked, in 1565, the second contribution of Erastus to the sacramental quarrel.

An account of the part taken by Erastus in the theological disputes at Heidelberg before the controversy that gave his name a dubious renown is not only indispensable for the right appreciation of his standpoint on the question of excommunication and discipline, but also advantageous for the study of what may be called the normal 'Erastian' character of the Protestant States of Germany. In April 1564, Erastus, as one of the Elector's theological lieutenants, was prominent at the Colloquy with the Württemberg doctors at Maulbronn, and two years later he accompanied Frederick on his mission to Amberg. The 10th of June 1568 was the red-letter day in the discipline-controversy at Heidelberg, when George Withers of Bury St. Edmunds, afterwards Archdeacon of Colchester, but at present a refugee in consequence of the Vestiarian controversy in England, maintained before the University his theses in defence of the authority of the ministers, along with the Presbytery, to perform all that related to church discipline (including excommunication) upon all offenders, not excepting princes. The Heidelberg Catechism (Articles 81–85) had already enunciated the principle of the excommunication of impenitents and hypocrites, and had been followed by two successive ordinances, of which the first was drawn up by Olevianus, who, however, was opposed to the second, because it reserved to the prince the right of pronouncing excommunication in the strict sense, namely, that of exclusion from the Lord's Supper. It was the debate begun by Withers that fanned the long-smouldering flame. Erastus opposed Withers on the second day, a friend having taken his place in his absence on the first. In the dispute thus inaugurated, Olevianus, on the side of Withers, was supported by his fellow-Calvinists, Ursinus, Zanchius, Tremellius, and Dathenus. Chief among the allies of Erastus were Neuser, Sylvanus, and Willing, with Simon Grynæus, the brother of J. J. Grynæus, who had married the sister of the wife of Erastus. The first two were subsequently accused of heresy and even of infidelity. Sylvanus was executed; and, though no complicity with their errors can be proved against Erastus, the odium in which these associates involved him accelerated the defeat of the anti-disciplinarian party, the discipline being established by an edict dated 13th July 1570, and the pleas of Erastus rendered nugatory.

Before the end of August 1568, Erastus had all but completed a *commentarium*—as he called it in his letter to the Zürich theologian Bullinger—against the proposed discipline. His arguments were thrown into the form of one hundred Theses on excommunication. Copies of the work, which he had no intention of publishing, were circulated in manuscript. Soon afterwards the Theses were reduced to seventy-five. From Zürich he was supported, from Geneva assailed. In the course of the first half of the following year appeared, also in manuscript, Beza's reply, which, as printed in 1590, bore the title, *Tractatus pius et moderatus de vera excommunicatione et christiano presbytero*. On Christmas Eve 1569, Erastus completed his longer work in six books—five in reply to Beza, and the sixth in reply to Ursinus, Zanchius, and (probably) Boquin, dean of the faculty of theology at Heidelberg. This manuscript bore the title, *Thesium (quæ de excommunicatione positæ fuerant) Confirmatio*.

Erastus, though again elected Rector for 1572, was two years later put under the ban of the Heidelberg consistory, and in 1575, the year before his excommunication was revoked, he was accused, but unsuccessfully, of anti-Trinitarian tenets. On 26th October 1576, Frederick III. was succeeded by Ludwig VI. A violent Lutheran reaction ensued; Luther's Catechism supplanted that of Heidelberg, and the Reformed theologians were dislodged from Court and Church. On 31st July 1579, the Elector, having subscribed the Formula of Concord, commanded the University professors to adopt the new confession or to resign. Erastus, like the majority of his colleagues, chose the latter alternative, thus proving that he was no 'Erastian in the ordinary sense.' In 1580 he removed to Basel, where his brother-in-law Grynæus had been professor of theology since 1575. At the beginning of 1581 he was admitted into the *collegium medicorum* of Basel, and in the summer began to teach ethics, of which he was appointed professor in the following January. He died on the last day of the year 1583, two days after the first anniversary of his election on the governing council of the University. Though inferior in spiritual insight and moral enthusiasm to many of the second generation of the Reformation, his career justifies the epitaph in St. Martin's Church at Basel, 'Acutus Philosophus, Elegans Medicus, Sincerus Theologus, Heidelbergensis Academiae Columen, Basiliensis Lumen.'

More than five years after the death of Erastus appeared a volume containing: (1) the seventy-five *Theses*, with a preface, (2) the *Confirmatio*, and (3) thirteen letters relating to discipline and the controversy at Heidelberg, addressed to Erastus by Bullinger, Gwalther, and others. The work bore the title: '*Explicatio gravissimae quaestionis, utrum excommunicatio, quatenus religionem intelligentes et amplexantes, a sacramentorum usu, propter admissum facinus arceat, mandato nitatur divino, an excogitata sit ab hominibus.* Autore clariss. viro Thoma Erasto D. medico. Opus nunc recens ex ipsius autoris autographo erutum et in lucem, prout moriens iusserat, editum . . . Pesclavii. Apud Baiocum Sultaceterum, Anno Salutis MDLXXXIX.' 'Pesclavii' (Poschiavo) was merely a pseudonym for London, and the following name the anagram for Jacobus Castelvetrus, who had married the widow of Erastus.

The two main questions in dispute between Erastus and Beza were those of Excommunication and the Organization of Discipline. Erastus, while recognizing the existence of exceptional cases where excommunication may be lawfully exercised, denies any right of withholding the Sacrament from professors of the Christian faith who, notwithstanding a moral lapse, are nevertheless desirous of participating, such desire being,

in his opinion, sufficient proof of their repentance, and the Sacrament being, like the Word, a means of grace intended to benefit all, whereas it is an abuse of it to make it an occasion or instrument of punishment by withholding it. Nowhere, he holds, in the Law of Moses[1] or in Jewish history is excommunication the penalty for moral offences as distinct from ceremonial disqualification. Further, by a minute exegesis (according to the hermeneutics of the time) of NT passages, Erastus eliminates from the latter also all authority for excluding believers from the Lord's Supper, concerning the significance and efficacy of which sacrament his views are consistently Zwinglian.

Erastus emphatically disclaims any desire to weaken Church discipline. 'Nihil desidero magis quam ut severissima in Ecclesia morum disciplina servetur' (*Thes.* xvii.). But the question at issue is, Who, in a Christian State, is the depositary of disciplinary authority? It is here that we reach the problem of Erastianism and of Erastus' relation thereto. As men are subject to two governments—the invisible, whereof God is the Head, and the visible, whereof the magistrate is the head (and he, *ex hypothesi*, a Christian)—a State containing two or more distinct visible authorities is an anomaly, as much a monstrosity as a two-headed body:[2]

'God having entrusted to the Christian magistrate the sum-total of the visible government, the Church has by no means the right to exercise (in a Christian country) a power of repression distinct and independent of that of the State' (Bonnard, 134).

Erastus holds that such is the teaching of the OT and the NT. To claim visible power for the Church is tantamount to robbing Cæsar of what belongs to Cæsar, and the height of usurpation is to summon princes to the Church's tribunal and to excommunicate them. The Christian magistrate, though he may be admonished according to the word of God, and may profitably choose pious laymen to assist the ministers in superintending public morals on his behalf, is not to be set in antithesis to the Church as the profane power by the side of the sacred. The Church may warn and censure offenders, but punitive action belongs to the magistrate alone.

Without inquiring how far the objection of Erastus to the exercise of disciplinary jurisdiction by the Church was conditioned by his dislike of the Genevan tribunal of 'godly elders' at Heidelberg, we must endeavour to trace the connexion between his views on the specific question of the right of the Church to exercise discipline, especially that of exclusion from the Sacrament, and the wider question of the supremacy of the temporal power in matters spiritual—a question touched but incidentally by Erastus, who is more interested in Scriptural disquisitions than in the discussion of principles in politics and history. Both the extent and the boundaries of his contention may be defined as follows. In a State where all profess the true religion, all coercive authority (from which excommunication, however, is excluded[3]) resides in the magistrate alone, the functions of the Church being restricted to teaching, exhortation, and the due performance of worship. (Only where the magistrate is not a Christian or is unorthodox may the Church set up her own tribunals; but from these, also, the power of excommunication is withdrawn.)

[1] The fallacy involved in the analogy assumed between the Jewish and Christian dispensations is noted in the art. 'Erastus,' in the *Catholic Encyclopædia* (London, 1883).

[2] Contrast Keble's observations on 'Supposed Erastianism in some Parts of Hooker: real Amount of his Concessions in that Way,' in his ed. of Hooker's *Works*[7], Oxford, 1888, vol. i. p. lxxx; also p. lxxxvii: 'All Erastian reasoning implies that *co-ordinate authorities are incompatible.*'

[3] The views of Erastus on the right of a citizen to communicate are diametrically opposite to those expressed by Locke, while in some measure like them as regards the efficacy of the Sacrament: 'The whole force of excommunication consists only in this . . . the participation of some certain things, which the society communicates to its members, and unto which no man has any civil right, comes also to cease. There is no civil injury done unto the excommunicated person by the Church ministers refusing him that bread and wine, in the celebration of the Lord's Supper, which was not bought with his, but other men's money' (Locke, *Letter concerning Toleration*, London, 1714, ii. 237).

Our sketch of the life and teaching of Erastus presents him as a Zwinglian whose opposition to the Lutheran doctrine of the Supper underlay his antagonism to excommunication, and whose antipathy to the Calvinistic discipline was the exciting cause of his denial, in favour of the magistrate, of the Church's right to any coercive action. Yet his true relation to Erastianism must be sought, not so much in the propositions which the *Explicatio* and the *Confirmatio* actually formulate, as in the common orientation, of Lutherans and Zwinglians especially, towards the rival claims of Church and State, a theocracy being rather the Calvinistic ideal. It was not so much the opportune publication of the writings ('alowed' by Whitgift's *imprimatur* in 1589) as the appeals to the authority of Erastus by the Arminians against the Calvinists in Holland that gave Erastianism the varying connotation which, since the politico-ecclesiastical debates of the Stuart period, it has possessed in Great Britain. The opponents of Arminius and his friends reproached them for appealing 'to the superior magistrate against the ecclesiastical authority' (Figgis, p. 78, note). Both Grotius (who published in 1614 his Erastian treatise *de Imperio Summarum Potestatum circa Sacra*) and Althusius (whose view of the holiness of the State places him, with Luther, the Anglicans, Zwingli, and Erastus, against the Jesuits and the Presbyterians with their theory of the Church as *societas perfecta*) regard a Christian commonwealth as a State wherein the clergy form but one class of officers. Though it was Grotius who elaborated what we call Erastianism, he himself does not mention Erastus, and holds other views on excommunication. Nevertheless, the fact that Erastus was the first to assert in a Protestant country the principle of the subordination of the Church to the State entitles him to what ambiguous fame attaches to his memory in the name 'Erastianism.'

3. Erastianism in history.—(I.) *FROM CONSTANTINE TO THE REFORMATION.*—(*a*) *The period of the Ecumenical Councils.*—Concern with the affairs of the Church was for Constantine and his successors a political necessity. Yet it is easy to exaggerate the actual amount of Imperial interference exercised, and to forget the extent to which the motives of the State were in the interests of peace.

Though it was the great African sectary, Donatus, who asked the famous question, 'Quid Imperatori cum Ecclesia?' the Donatists set the precedent of an appeal to the State by one section of the Christian Church against another, thus necessitating the reference of the controversy to the Council of Arles (314 or 315). The Donatist schism was destined, despite Imperial generosity and coercion, commissions and conferences, to rend Africa until it was conquered by the Vandals after the death of Augustine. The Nicene Council, convened by Constantine for the purpose of allaying the strife that already threatened the peace of Egypt, proved to be rather the beginning of a world-wide controversy that continued to harass Church and State until Theodosius gave Arianism its death-blow. 'Arianism was put down as it had been put up, by the civil power' (Gwatkin, 'Arianism,' in *Camb. Med. Hist.* i. [1911] 141). The so-called Second Ecumenical Council held at Constantinople in 381—to which only Eastern bishops had been summoned—was convened primarily for the purpose of coping with religious disorders in the capital itself. Not the least justification for the use of the term 'Byzantinism' (the usual synonym for 'Erastianism' on the Continent[1]) is found in the fact that,

[1] For the equivalence of the terms 'Erastianism' and 'Byzantinism' (the latter being regarded as preferable), see Figgis, p. 101, and Hobhouse, *The Church and the World in Idea and in History*, London, 1910, p. 392 ff. 'This doctrine [of the superiority of the civil power to the ecclesiastical] is often called by Continental writers Byzantinism, a name suggested by the

ever since Constantine transferred his capital from Nicomedeia across the Bosporus to Byzantium, which henceforth bore his name, Constantinople became not only the storm-centre of the strife of creeds, but also, for the most part, the *venue* of the Emperor's negotiations with the Church in the Eastern Empire.

In the entourage of the Arian prelate Eusebius of Nicomedeia, with their allies (including Eusebius the historian, bishop of Cæsarea), we have the first instance of what may be called an Erastian party, their aim being to support the form of Christian faith guaranteed to give them most influence at Court, and, on the other hand, to strengthen the Imperial supremacy over the Church. Foakes-Jackson has suggested that the support of Arianism by Constantius, to whom the problem of Church and State presented great difficulties, was an endeavour to secure peace by the Emperor's endorsement of what appeared to be the creed of the majority. Nor must we forget that Athanasius, as Patriarch of Alexandria, was regarded as wielding an authority that might be detrimental to the unity of the Empire. Perhaps even the pagan reaction under Julian (361–3) was to some extent motived by a desire to substitute for Christianity, which Julian had forsworn, a non-contentious system of belief founded upon a popularized Neo-Platonism. The orthodox Valentinian (364–375), unlike his brother the Arian Valens (364–378), endeavoured to maintain as much neutrality as possible, neither protecting the persecuted orthodox of the East nor permitting Hilary to remain in Milan to challenge the orthodoxy of the Arian bishop, Auxentius. Like Hosius of Corduba, whose influence with Constantine at Nicæa was probably the principal factor in securing the Emperor's insistence upon the homoousian Creed, Theodosius the Great (379–395) was an orthodox Spaniard, the sincerity of whose religious zeal is proved less by his anti-pagan and anti-heretical legislation than by his acceptance, as penance for his responsibility for the massacre at Thessalonica (391), of a temporary excommunication at the hands of Ambrose. 'His proclamation *de Fide Catholica* is one of the most important legal documents in the annals of the Christian Church. It declares the Imperial will that all nations and peoples in the Empire shall follow the religion which the Apostle Peter introduced into Rome, and "which the Pontiff Damasus and the Bishop of Alexandria now profess."'[1] Gratian (374–383) had already broken the last official link of the Empire with paganism by abdicating the title of Pontifex Maximus, and Theodosius had supported his youthful colleague (an apt disciple of Ambrose) in refusing to replace the altar of Victory in the Senate. Honorius (395–423) and Arcadius (395–408), the sons of Theodosius, who succeeded to the rule of the West and the East respectively, differed, like the brothers Valentinian and Valens, in the extent of their intervention with the Church—the Western Emperor, according to the rule that prevailed, henceforth being the less pragmatical. Nevertheless Honorius, besides convening the conferences with the Donatists (411), whose recalcitrancy he vainly sought to repress, by an edict of 418 banished Pelagius and his principal followers, notwithstanding their recent acquittal by Zosimus, the vacillating Pope who forthwith marked his recantation by calling upon the Italian bishops to subscribe his anti-Pelagian *Epistola Tractoria* (417). But more importance, for our inquiry, attaches to the reprimand addressed by Honorius to Arcadius after the condemnation of Chrysostom, Patriarch of Constantinople, at the Synod of the Oak, near Chalcedon (404). Chrysostom's deposition and tragic exile were the result, not so much of the displeasure of Arcadius, fomented though it was by the patriarch of the jealous see of Alexandria, as of the offence which his fearless denunciation of frivolities and delinquencies had given to the 'monstrous regiment of women' (as John Knox called the government of Mary Stuart), now for the first time, in the person of the Empress Eudoxia, becoming a force in the Eastern Empire. The importance of the letter of Honorius lies, as Bury has pointed out, in the fact that it contains a declaration by an Emperor of the principle which Hosius and Hilary, in their opposition to Constantius, had first asserted, namely, that the interpretation of Divine things was the concern of churchmen, while it was the due observance (*obsequium*) of religion that concerned the Emperors.[1] Here is anticipated the later distinction between *ius in sacris* and *ius circa sacra*.

unwarrantable control exercised by the Emperors of the East over the Patriarchs of Constantinople and the Greek Church during the Middle Ages, while in this country it is generally known by the name of Erastianism' (Cunningham, p. 164; see also p. 207).

[1] Hobhouse, 103.

Not without reason did Nestorius, the Patriarch of Constantinople, who, soon after his transference from Antioch to the capital, inaugurated the bitter controversies of the succeeding centuries, give to his autobiography the title 'Tragedy.' The vehement wrangles about the Two Natures in Christ occasioned in the first place the Council of Ephesus (431), at which Nestorius was condemned. Seventeen years later Eutyches propounded the opposite heresy, asserting but One Nature of Christ after the Incarnation; and this first form of Monophysitism triumphed in the tumult of the 'Robber Synod,' as Pope Leo (*Ep.* xcv. 2) designated the Council summoned by Theodosius II. to Ephesus in 449. The change of attitude in Theodosius, who was at first inclined to favour the Dyoprosopic teaching of Nestorius, was probably due to the influence which, before the Council of 431, Cyril had succeeded in exercising upon the Imperial ladies. But the death of Theodosius in 450 brought about a speedy reversal of his policy. The Empress Pulcheria and her consort Marcian, supporters of the doctrine of Two Natures, decided to summon another Ecumenical Council, and that, too, against the wishes of Leo, who preferred that the question at issue should be determined by the authority of his *Tome*, rather than by the decision of a Council dominated by the Emperor and Empress. Thus Monophysitism, in its Eutychian form countenanced by Theodosius II., was repudiated by Pulcheria and Marcian, the *Definition* of Chalcedon inclining more to the teaching of Nestorius than to that of his successful persecutor, Cyril. Yet the pressure which Marcian at Chalcedon (like Constantine at Nicæa) put upon the majority of the Eastern bishops only embittered the reaction, for the Nearer East remained Monophysite. In 482, the Emperor Zeno issued the *Henoticon*, which, though probably composed by the Patriarch Acacius, was resented by a number of bishops for the very reason that it was issued on the authority of the Emperor alone. 'Zeno tried the autocratic short cut out of controversy by the prohibition of technical terms.'[2] Nestorius and Eutyches were both anathematized and the anathemas of Cyril against Nestorius approved, the doctrine of Chalcedon being implicitly condemned and the symbols confirmed at Ephesus (431) asserted to be adequate. Needless to say, the *Henoticon* proved but an abortive Eirenicon, and the next Pope, Simplicius, excommunicated the Emperor. Seventy years after the issue of Zeno's *Henoticon* to the bishops of Egypt, the Fifth

[2] Alice Gardner, 'Religious Disunion in the Fifth Century,' in *Camb. Med. History*, i. [1911] 516.

Ecumenical Council (Constantinople, 553) was held at the bidding of Justinian, and in connexion with the form which the Monophysite controversy had now taken through the Emperor's action in condemning, in the edict known as the 'Three Articles' or 'Three Chapters' (*Tria Capitula*), to wit, the works of the three leading theologians of the Antiochene School, Nestorius, Theodore of Mopsuestia, and Ibas of Edessa. Pope Vigilius, who had for some time been practically a prisoner in the East and had refused to sign the 'Three Articles,' recanted after his condemnation at the Council, thus finally subordinating to the Imperial will the theological opinion of the West. The basis—the agenda—of the Fifth General Council

'was an edict drawn up by the Emperor; it adopted theological tenets formulated by the Emperor. This is the most characteristic manifestation of Justinian's Cæsaro-papism' (Bury, ii. 5).

So far did Justinian push his ecclesiastical absolutism that just before his death he deposed the Patriarch of the capital for rejecting the edict in which the Emperor, who had lapsed into the heresy that Christ's earthly body was incorruptible, commanded the assent of all patriarchs and bishops to the Aphthartodocetic doctrine.

For the disaffected Monophysites of the East, Justinian had not gone far enough in the assertion of One Nature, and Sergius sought to win them over by the admission that the Two Natures operated by means of one theandric energy. Exactly a hundred years from the time when Pope Vigilius was the prisoner of Justinian, Pope Martin was brought to Constantinople, whence he was banished to the Crimea by the Emperor Constans II., who, in accordance with his conservatively Roman attitude towards the doctrine of the Church, had prohibited, in his *Ecthesis* (638) and his *Typos* (648), the employment of such technical theological terms as engendered strife. Martin paid with his life the penalty of condemning both Monothelitism and the Emperor's two edicts. Constantine IV., on the other hand, displayed a genuine impartiality in leaving to the bishops at the Council of 680 untrammelled power to decide the issue. However great was the doctrinal importance of their condemnation of Monothelitism, greater historical interest attaches to their anathema of Pope Honorius, who was adjudged to have supported the Monothelite heresy in 635.

It is unnecessary to follow the Erastian policy of the Eastern Emperors (whose Cæsaro-papism became the inheritance of the Czars of Russia) after the Seventh Ecumenical Synod, held at Nicæa in 787. Leo the Isaurian (718–741), who attempted to suppress the superstition of image-worship, was confronted both by a revolt under Cosmas, and with the ban of Pope Gregory II. But his most illustrious opponent was John of Damascus, who, himself the subject of the Khalif, maintained in three apologies that Emperors had no prerogative to manage the affairs of the Church.[1] Constantine Copronymus, the son of Leo, continued his father's policy with an iron hand. He was, as we have already mentioned, a hater of monks as well as of images, and anticipated the policy of those later Emperors in the West who sought to overthrow the power of the Pope. Constantine strove, not to enforce doctrines, but to abolish those customs or institutions of the Church which he regarded as detrimental to the State. Twelve years after his death the Second Ecumenical Council—supported by the astute and cruel Irene, the widow of his successor—established the worship of images; and in 842, Theodora—the disloyal widow of another iconoclastic Emperor, Michael Balbus—celebrated the Feast of Orthodoxy on the restoration of the worship which her husband had temporarily checked.

[1] Harnack, *Dogmengesch.*, Eng. tr. iv. [1898] 323, 328.

For the orthodox Eastern Church, because of her cultus, her Monophysitism, and her dependence upon the Emperor, 'it was easy to be,' as Oman says, 'as no other Church has ever been, the State Church, and at the same time non-political' (*The Church and the Divine Order*, London, 1911, p. 134)—words that recall the statement of Freeman (*Historical Essays*, Third Series, London, 1892, p. 265):

'To the Eastern Roman the orthodoxy of the Eastern Church made up for the lack of nationality in the Eastern Empire. The sway of Christ and Cæsar went together. In the true Byzantine mind the two ideas could hardly be conceived asunder.'

(*b*) *The struggle of the Empire and the European kingdoms with the Papacy.*—The iconoclastic controversy forms a significant transition, from the history of the developing Byzantinism that dominated the religious life of the later Roman Empire in the East, to the history of the titanic conflict of the Romano-German Empire with the Papacy. As King of the Franks, Charles the Great had already vindicated his headship over the Frankish Church, nor had he hesitated to reject the decisions of the Ecumenical Council of 787. He presided at all the Frankish ecclesiastical councils, and even in the Papal domain exercised all the rights of the lord of the land. The fact that there was at the moment no Emperor in the East may, apart from the necessity of securing Charles's personal support, have been a factor in determining the action of Pope Leo III. (795–816) in crowning him Emperor on Christmas Day, 800. On the death of Charles (814), we pass from the rarely challenged supremacy of the Emperor over the Church to the Church's assertion of her right to temporal supremacy as well as to absolute spiritual authority over Emperors and princes. The interests of the monarchs of the separate countries, too, both within and without the Empire, were all alike imperilled by the growing claims of the Papacy, from Nicholas I. (858–867) to Innocent III. (1198–1216); but the question of Erastianism itself, in any given circumstance of domestic policy, is complicated by the phenomena of feudalism and the rise of national Churches. Notwithstanding the strong hand with which monarchs like William the Conqueror dealt with ecclesiastical affairs, a very real limitation of regality was involved in a recognition, however grudging, of the Papal supremacy.[1] An obvious effect of the success of the Papal pretensions was the curtailment of Erastian statecraft throughout the West. The brunt of the struggle fell upon the German Emperors, because of the unique relation which they bore to the Popes, who were regarded, by princes outside the Empire, as foreign potentates exercising in the separate realms a jurisdiction more or less resented. To the Emperors the Popes were colleagues, for neither the rivals themselves nor the theorists who severally supported them envisaged the struggle as a contest waged by two different societies. But, though it would be a misreading of history to speak of the conflict as between Church and State—having regard to the prevalent theocratic conception of the Holy Roman Empire as one society with two functions, *sacerdotium* and *imperium*, discharged by different officers—the crux of the struggle was, nevertheless, the recurrent question of the supremacy of the spiritual or of the temporal power in the State. The representative anti-Papal theories,[2]

[1] Freeman holds that, had it not been for the Romanizing influence of Edward the Confessor and William, the Church of England would have become as subordinate to the State as was the Eastern Church (*The Norman Conquest*, v. [Oxford, 1876] 494 f.).

[2] The magnitude of the mediæval literature relating to the controversy may be inferred from the fact that Gierke enumerates no less than 160 Publicists, Legists, and Canonists from the 11th to the 16th cent. (Gierke-Maitland, *Political Theories of the Middle Age*, Cambridge, 1900, pp. lxiii–lxxvi).

which we shall briefly summarize, demonstrate the strength of the dialectical defence of the right of princes, and the force of public opinion allied with them. Time after time did the temporal power at bay display its *de facto* if not its *de jure* superiority, as is instanced by the death in exile of Gregory VII. (Hildebrand, 1073–1085), who abased Henry IV. at Canossa (1077), and of Alexander III. (1159–1181), who humbled Frederick I. (Barbarossa) at Venice (1177). So, too, the French kings avenged, by the Babylonian captivity of the Popes at Avignon, the blow to regal prestige that was involved in the fall of Frederick II., the last of the Hohenstaufens (1212–1250). From the earlier doctrine of the Church herself, that the State was co-ordinate with her, and from the original idea of a pre-existent harmony between the two powers, both policy and speculation drifted to the more and more emphatic assertion of their distinctness and even opposition. It will suffice for our present purpose to review the anti-Papal theories of two great Italians and two great Englishmen—Dante (1265–1321) and Marsilius of Padua (died after 1342); William of Occam (died in 1347) and John Wyclif (1324–1387).

(*a*) The *de Monarchia* of Dante is not only 'the most purely ideal of political works ever written' (Edmund G. Gardner, *Dante*, London, 1900, p. 66), but is at once the epilogue or epitaph of the Empire as the earthly Kingdom of God, and 'a prophecy of the modern State, and of that doctrine of the Divine Right of kings, which formed for long its theoretical justification against clerical pretensions' (Figgis, *From Gerson to Grotius*, Cambridge, 1907, p. 28). The first book shows that the temporal monarchy—whereof the Empire is the unique embodiment—is necessary for the well-being of the world; the second, that the Roman people, under the jurisdiction of whose Emperors Christ deigned to be born and to suffer, succeeded by Divine Will to the empire of the world; the third, that the authority of the Roman Monarch or Emperor depends immediately (*sine ullo medio*) upon God. The Supreme Pontiff and the Emperor are man's two necessary guides of life, corresponding to the two ends of life—eternal life and temporal felicity. It was the conflict between John XXII. (1316–1334) and Ludwig of Bavaria (1314–1347), who attempted to depose each other, that made the *de Monarchia*, hitherto almost unknown, an armoury of Imperialist arguments, the supporters of Ludwig including William of Occam, whom Pope Clement regarded as having inspired Marsilius of Padua.

(*b*) Marsilius of Padua (whose *Defensor Pacis* was, by the command of Henry VIII., published in an English translation, *The Defence of Peace*, by William Marshall, in 1535) anticipates, in his views on excommunication, the radical attitude of Erastus. He maintains not only that coercive power belongs exclusively to the State, but even that no compulsion may be exercised in the matter of religious belief. Sovereignty rests with the whole body of citizens, acting as the faithful lawgiver, and the prince appointed by them. The civil ruler has full regulative and judicial power over the Church. Papal decrees have no temporal effect, and all bishops are equal.

(*c*) William of Occam espoused the cause of Ludwig of Bavaria against John XXII., by whom Occam and Michael of Cesena, the General of the Franciscan Order, were banished from Avignon during the Minorite quarrel on the subject of clerical poverty, this being the cause of Occam's opposition to the Papal claim to unlimited *plenitudo potestatis*, both temporal and spiritual. He contends that the whole hierarchy, from the Pope downwards, is a human order, and not immediately Divine. Were the Pope's power unlimited, he could depose princes, and reduce Christianity to an unprecedented slavery. Occam would even advocate a college of Popes in preference to a monarchical Papacy. The ordinary judge of the Pope is the Emperor, but the Church at large has jurisdiction over him. In case of heresy he could be deposed by a General Council representing the whole Church. Inasmuch as every society can make laws for itself, the Church, assembled as a General Council on the basis of parishes, could appoint a successor. Occam maintains that Christ alone is Head of the Church, and his principles are not only subversive of Papal domination but also assertory of the fact that the true faith resides among the pious. He anticipates both Wyclif's conception of grace as the ground of dominion and Calvin's conception of the true Church as consisting of the spiritual community.

(*d*) Wyclif has been accounted more Erastian than Erastus. In his *de Officio Regis* and other tractates he asserts the king's Divine right to disendow the Church. Even the laity have the right to withhold revenues from unworthy ecclesiastical superiors. Wyclif's advance upon contemporary anti-Papal theories consists in his extension of the State's *dominium*. Not content with maintaining the State's autonomy in civil affairs, he asserts both its right and its duty to intervene in the administration of the Church when she neglects her duty. The spiritual office is a *ministerium*, not a *dominium*, but this *ministerium* the secular lords may take away from irreligious clerics. The link between Wyclif and Luther is supplied by John Hus (1373–1415), whose treatises, *de Ecclesia*, *de Potestate Papæ*, and *Determinatio de ablatione temporalium a clericis*, show how completely he had absorbed Wyclif's anti-Papal teaching.

(ii.) *THE REFORMATION.*—(*a*) *Germany.*—It was inevitable that the Reformation should be established in the various German States, as in other countries, only by the help of the secular power. If the German princes and nobles had not responded in sufficient numbers to Luther's appeals in 1520, and if Charles V. had not honoured Luther's safe-conduct to Worms, the attempts of Luther at reform would have proved as fatally futile as did the premature efforts of Arnold of Brescia and Savonarola. Luther's *Address to the Christian Nobles of the German Nation* (1520) bore immediate fruit in the list of grievances against the Roman see which the States drew up two years later at the Diet of Nuremberg. On the ground of the priesthood of all believers, Luther appealed to the German princes to undertake the reformation of the Church—the duty which the bishops refused to perform.[1] At the Diet of Speier (1526) the principle was adopted which forms a land-mark in the history of the Reformation—that, in the matter of putting in force the Edict of Worms, whereby Luther was placed under the ban, each component part of the Empire should act as it pleased. The principle afterwards formally ratified at Augsburg (1555), *cujus est regio, ejus est religio*,[2] secured the religious autonomy of each Catholic and Lutheran State independently of the Emperor, whilst investing the prince with absolute authority to impose upon his subjects the religion professed by himself. The German Reformation, in its political aspect, heralded the modern State, and resulted in a new conception of the authority of the territorial prince in ecclesiastical affairs.

Luther's opinions on the relation of the Church to the State form one of the most debated themes connected with the history of the Reformation. Zwingli and he were in practical agreement as to the functions of the secular power in matters ecclesiastical, and on this subject in general—apart from the specific question of excommunication—the views of the Zwinglian Erastus, as we have seen, present no material divergence from those of Luther. Difficulty has been experienced in reconciling apparently discrepant judgments of Luther at different epochs, but these may be harmonized by taking cognizance of the change which his earlier opinions underwent after the Peasants' War and the outbreak of the Anabaptists. 'To Luther it always remained clear that the work of the magistrate in the Church could never be more than a help to the task of ruling purely by the word of God. But Luther has no successor in this protest' (Oman, 227 f.).

(*b*) *England.*—So closely is Erastianism interwoven with the history of the Church of England, that the record of its operation here is to a great extent conterminous with the ecclesiastical history of the kingdom, the English kings having always claimed a visitatorial authority over the Church. Before Henry VIII. the greatest assertors of the independence of the Crown against Papal jurisdiction from without and clerical immunities within were William the Conqueror, Henry II., and Edward III.[3] The first two were concerned with the problems of civil and ecclesiastical tribunals, William being also occupied with the matter of

[1] A fundamental theory of the German Reformation was that of the transference of episcopal jurisdiction from the bishops to the Protestant princes, or, rather, that of the recovery by the princes of the power which, though naturally theirs, had been usurped by the bishops. The 'Episcopal System,' ratified by the Compact of Passau (1552), professed merely to restore to the prince his inherent ecclesiastical rights. See Wilberforce, *op. cit.*, with reff. to Carpzovius, Gerhard, and Stryk.

[2] '*Cujus regio ejus religio* is a maxim as fatal to true religion as it is to freedom of conscience; it is the creed of Erastian despotism, the formula in which the German territorial Princes expressed the fact that they had mastered the Church as well as the State' (Pollard, 'Religious War in Germany,' in *Camb. Mod. Hist.* ii. [Cambridge, 1903] 278). On the important diplomatic consequences of the Peace of Augsburg to England, see Lindsay, *Hist. Reformation*, Edin. 1906, i. 398, note 2.

[3] Longman, *Life and Times of Edward III.*, Lond. 1869, ii. 92–96.

investitures. Hildebrand recognized the right of lay investiture as a privilege enjoyed by English kings, while William rejected Hildebrand's claim to suzerainty over England. The conflict of Church and State waged between Becket and Henry II. centred in the question of the validity of the Canon Law, together with the numerous claims to privileges or immunities made by the Church on the basis thereof, especially as regards the civil impunity of criminous clerks.[1]

The sixth session of Henry VIII.'s Reformation Parliament (1534-1535) witnessed the culmination of the breach with Rome, the *Act of Supremacy* giving the King the title of 'Supreme Head on earth of the Church of England,' while the *Treason Act*, under which Fisher and Moore were condemned, included, under the category of treason, maliciously depriving the sovereign of any of his royal titles or calling him a schismatic. With Henry's ecclesiastical legislation, Erastianism in England enters upon a new phase. Even before the rupture with Rome had been consummated by Clement VII.'s refusal of the divorce with Katherine, Convocation had recognized the King as 'Supreme Head,' and reluctantly acquiesced in the 'Submission of the Clergy' (1532). In Elizabeth's *Act of Supremacy* (1558) her father's claim to the headship of the Church was modified. She was declared to be 'Supreme Governor of this realm as well in all spiritual or ecclesiastical things or causes as temporal'; but section 20 of the Statute recognized the limitation of the royal prerogative in matters of doctrine, reserving the right of the clergy in Convocation to assent.[2] While the professed purpose of the Statute was to restore 'to the Crown the ancient jurisdiction over the State ecclesiastical and spiritual, and abolishing all foreign power repugnant to the same,' it was the monarch's personal authority, rather than that of Parliament, that was herein enhanced, and the *Acts of Supremacy*, both of Henry VIII. and of Elizabeth, were important factors in Tudor absolutism. On the other hand, the developments of Protestantism in Puritanism, Independency, Quakerism, and other movements towards religious and political liberty and equality, effected the ultimate overthrow of the Stuart dynasty. Now were laid the foundations both of modern Erastianism and of the manifold opposition to it. Even when Hooker published his *Laws of Ecclesiastical Polity* (1593-94), the fundamental assumption of his Erastianism (not unlike the basis of Arnold's idea of a Broad Church co-extensive with the nation) was already falsified by the fact that the State, even viewed as Protestant, was no longer of one religion. From the beginning of Elizabeth's reign the interminable controversy of Church and State assumes a new significance. It no longer hinges upon the rival claims of Pope and Emperor or King. The vindication of the spiritual autonomy of presbyters, of congregations, and even of individuals against the authority of Sovereign, Parliament, or Magistrate compelled inquiry into the true nature of the Church of Christ. Yet it must not be forgotten that, as Hutton[3] says, 'the English Revolution was thoroughly Erastian in its treatment of the Church question,—a complete contrast to the Scots.' The Erastianism of the Independents was in great measure due to their anti-Presbyterianism. The House of Commons, despite its suspicion of

king and bishop, refused to abdicate its supremacy *circa sacra*.

(c) *Scotland*.—In no Protestant country has greater opposition been shown to the very suggestion of Erastianism than in Scotland. Not only the Secession of 1733 and the Disruption of 1843 (the latter especially being, in the first instance, a protest against lay patronage and intrusion), but also the growing effort on the part of the Established Church to free itself from State control, shows how deeply engrained in the Scottish religious consciousness is that idea of the essential autonomy of the Kirk which John Knox acquired during his exile in Geneva. The revolt against Erastianism in Scotland may be said to have begun when the Scottish Estates, on 25th Aug. 1560, abolished the Papal jurisdiction and the Mass.[1] But it was especially in connexion with the repeated attempts of the Stuart kings of England to establish prelacy that the term 'Erastianism' acquired in Scotland its evil connotation.[2] Resistance to successive Acts which were understood to be aimed against the Presbyterian Church of Scotland after the Restoration inspired the heroism of a series of movements—those of the Covenanters, the Protesters, the Conventiclers, the Hamiltonians, and the Cameronians.

Nor have the principles that underlie the discussion of the relation between Church and State been in any country more learnedly, eloquently, and judiciously handled than in Scotland. Probably no Church in Christendom is in this respect more ecclesiastically-minded, in the true sense of the term, than the Presbyterian Church of Scotland, whether Established or Free. The current opinion of many modern English ecclesiologists, that the Established Church of Scotland enjoys almost complete autonomy, is a mistake. On the question of State aid it has been tersely expressed that the Established Church of Scotland was non-voluntary, the Free Church was voluntary on conditions, and the United Presbyterian Church was voluntary without conditions.[3] Apart from the Disruption of 1843, when resentment at the decision of a legal tribunal was of the essence of the movement, in more recent times similar resentment was shown on the part of the United Free Church against the claim of a majority of the lay tribunal of the House of Lords (1st Aug. 1904) to control and determine the development of doctrine in the Free Presbyterian Churches of Scotland. Thus the religious history of Scotland exhibits opposition to Erastianism, whether the State control be exercised legislatively or administratively.

ERINYES.—See EUMENIDES.

ERROR AND TRUTH.—Both in its philosophical and in its popular acceptation the word 'error' is applied to false opinions. But popular usage also gives to the term a still wider meaning, whereby it includes not only false opinions, but numerous forms of practical failure, and of defective conduct, whose relations to conscious beliefs are by no means constant or easily discoverable. The derivation of the word illustrates the naturalness of associating the conception of a false opinion with the idea of some such act as wandering, or straying, or missing the way. It seems, therefore, as if a first approach to a sharper definition of 'error' would be aided by clearly distinguishing between the practical and the theoretical applications, and then confining the philosophical use of the term, so far as possible, to theoretical errors. But we shall find it impossible to define even theoretical error without reference to some genuinely practical considerations. However much we try to avoid popular confusions, we shall be led in the end to a concept of error which can be stated only in teleological terms, and which involves the idea of action for an end, and of a certain defect in the carrying out of such action.

The present article, after distinguishing, as far as possible, the concept of theoretical errors, or of false opinions, from the popular concept of practical errors, and after stating some of the best known views regarding what a false opinion is, will seek to indicate the nature of a solution of the problem in terms of a doctrine about the relation of the cognitive to the volitional processes.

1. Practical errors and false opinions.—When one emphasizes the practical aspect of an error, one sometimes makes use of the more drastic word 'blunder.' A blunder is something which involves serious maladjustment, defect in conduct. Errors in the sense of blunders may be due to false opinions, or may even very largely consist of such. On the other hand, they need not involve false opinions, and *must* involve actions which do not attain their goal. These actions may be only partly voluntary; but the relation of their defective aspects to the accompanying voluntary processes is what makes us call them errors. Thus, we speak of the error or blunder of the marksman who misses his mark; of the player who fails to score, or who permits his opponent to score when the game calls for some device for hindering the opponent from scoring. We speak of the musician's error when he sings or plays a false note. Such errors may, but often do not, result from, or accompany, false opinions or misjudgments. Thus one may fail as marksman, as player, or as musician, either through misjudgments or through defects of physical training, of temporary condition, of mood, or of attention—defects which may involve no false opinions whatsoever.

In the moral realm, the relations between such practical errors on the one hand and false opinions on the other are especially momentous and intricate. Here, in fact, the theory of moral error involves all the main problems about the relations between knowledge and action. A sin is very generally called an error. 'We have erred and strayed from thy ways like lost sheep.' The error is, first of all, practical. It has also some relation to knowledge. Yet, since sin appears to depend upon some degree of knowledge of the right, the 'error' in question does not merely result from a false opinion about what one's duty is. On the other hand, that sin involves 'unwisdom,' and so does in some respect depend upon false opinions, is very generally asserted. Any careful discussion of those practical errors which have a moral significance will, therefore, show that it is no merely accidental confusion which has led to our use of a word derived from our experience of wanderings from the right path as a term which is also to be applied to false opinions. Opinions certainly express themselves in actions; and voluntary actions are guided by opinions. The resulting relations of cognition and volition, especially in the moral world, are amongst the most complex and intimate which are known to us anywhere. They are relations which we can neither ignore nor wholly disentangle. Hence the clear separation of theoretical error and practical error, at least in the moral world, is impossible. For sin involves both theoretical and practical defects.

We can, however, make some approach to such a separation of the theoretical and practical aspects of error if we turn for aid to a very different realm, namely, formal logic. The distinction between true and false propositions involves certain well-known general relations, such as formal logic considers and analyzes. We may use these relations for what they are worth in attempting to define what a false opinion is. Having thus laid a basis for further analysis, we may attempt to clear the way through some of the more complex regions of the problem of error.

The distinction between true opinion and false opinion obviously depends upon, but also is obviously not identical with, the formal logical distinction between true and false propositions. This close relation and important difference between these two distinctions appear upon a brief study of the considerations which formal logic employs in dealing with the concepts of truth and falsity. True and false are, for the formal logician, predicates belonging to propositions, quite apart from any question as to whether anybody believes or asserts those propositions. With regard to the predicates 'true' and 'false,' formal logic uses, upon occasion, the following well-known principles, which we may here provisionally accept as a basis for further inquiry: (1) every proposition (supposing its meaning to be precise) is either true or false, and cannot be both true and false; (2) to every proposition there corresponds a determinate proposition which is the contradictory of the first proposition; (3) the relation of contradictories is

reciprocal or 'symmetrical'; (4) of two contradictory propositions, one is true and the other is false. These may be here regarded, if one chooses, merely as defining principles, explaining what one means by propositions, and how one proposes to use the logical predicates 'true' and 'false.'

Granting these purely formal principles, of which all exact reasoning processes make constant use, it is obvious that propositions taken collectively as a system constitute an ideal realm wherein to every truth there uniquely corresponds its contradictory falsity, and to every false proposition its contradictory true proposition. The realms of truth and falsity are thus formally inseparable. To know that a given proposition is false is to know that the corresponding contradictory is true, and *vice versa*. Omniscience regarding the realm of truth would, therefore, equally involve knowing true propositions as true and false propositions as false; nor could the one sort of knowledge be defined or real without the other.

But no such formal logical necessity appears to connect true opinion and error. No one can know that $2+2=4$ is true without thereby knowing that $2+2\neq4$ (that is, the contradictory of the former assertion) is false. But we can conceive of a computer who should never make any errors in computation; and such a computer might even be supposed so perfect, in the possession of some superhuman infallibility of computation, as not even to know what it would be to err in his additions. We ourselves, when we use the assertion $2+2=4$ as an example of a peculiarly obvious proposition of computation, find this bit of summation one about which it is rare or difficult for a man 'in his sober senses' to err. Yet for us the knowledge of the truth of the proposition $2+2=4$ is logically inseparable from the knowledge of the falsity of the contradictory of this proposition.

In sum, then, true and false propositions are logically inseparable. To possess a knowledge of truth is, therefore, inseparable from the possession of a knowledge of what falsity is, and of what false propositions mean. But a being can be supposed to know truth and falsity, and their distinctions and relations, without having any tendency to fall a prey to error. At all events, no purely formal logical reasons, such as for the moment concern us, can be given for supposing that a being who is capable of knowing truth should be capable of falling into error. The more concrete distinction between true opinion and error must, therefore, be different from the formal logical difference between truth and falsity. The latter may be viewed as a logically necessary distinction between inseparable objects. The former must be due to motives or causes, and must imply mental tendencies and situations of which formal logic, taken in its deliberate abstraction from the fullness of life, gives no account.

The concept of a false opinion is thus obviously distinct from that of a false proposition, and not every true opinion requires that the corresponding false opinion should be held by somebody. It is the purpose of advancing science, of education, of the propagation of truth, to diminish and, so far as may be, 'to banish error' from the minds of men. If this purpose were somehow miraculously attained, there would be as many false propositions in the formal logician's ideal realm of truth and falsity as there ever were; but human errors would have ceased.

2. The leading definitions of error.—To define false opinion, hereupon, as the acceptance or the mistaking of false propositions for true ones, or of true for false ones, is a familiar device of philosophers, but it throws no light upon the real nature of error. For, to mistake a falsity for a truth, to accept a false opinion as true—what is this but simply to make a mistake, or to hold a false opinion? This supposed definition is but a tautology. Not thus is the nature of error to be clarified. Further light upon the subject can be obtained only through (1) defining more exactly the distinction between true and false propositions; and (2) showing upon what further distinctions the conception of error depends. Some of the best known efforts to accomplish this result must next be summarily stated and criticized.

(i.) *The 'correspondence theory of truth and falsity'* and the definitions of error based upon it deserve to be stated, because they are familiar, and because they have formed the starting-point for supplementary doctrines and definitions and for corrections. According to the view now in question, a proposition is true if it reports, or describes, or portrays 'facts as they are.' The emphasis is laid upon the 'as.' A true idea 'corresponds' in its structure to the thing, or reality, or fact of which it is a true idea; a true proposition is one which asserts that an idea does thus correspond to the facts, when it actually so corresponds. Or, again, if the account given by a proposition conforms to the structure of the facts of which it attempts to furnish an ideal portrayal, the proposition is true. Thus, a proposition may relate to the number in a real flock of sheep. In this case an idea, gained by counting the sheep, is first formed, and then the assertion is made that this numerical idea represents the real number of sheep present in the flock. The correspondence of the idea with the facts constitutes that to which the assertion is committed. If the correspondence exists, the assertion is true.

Such being (according to the 'correspondence' theory) the nature of truth, error takes place when, because of inadequate observation of the sheep, or because of some other psychological defect on the part of the one who counts, a numerical idea which does not correspond to the real number of the sheep arises in the mind that is subject to the error; while, because of these or of still other psychological motives, the false proposition, 'Such is the number of the sheep,' comes to be asserted. That the correspondence does not exist makes the proposition false. That this non-existent correspondence is asserted and believed to exist constitutes the essence of the error.

In order to understand what error is, and how it arises, one therefore needs, according to this view, to analyze the nature of belief, and the motives which lead the erring mind to make assertions. From this point onwards, the definition and the theory of error have always required the consideration of various associative, affective, or volitional factors of the process of making and believing assertions—factors of which pure logic, considered in its usual abstraction, can give no account. In brief, the nature of truth and falsity once having been thus defined, the nature of error depends upon some disposition to accept or to assert an untrue proposition—a disposition which cannot be due to the merely logical nature of the untruth itself, but must be referred to the prejudices, the feelings, the ignorance, the wilfulness, or the other psychological fortunes of the erring subject.

What further accounts, upon this basis, have been attempted as explanations of the essence of error, there is here no space to set forth at length. A few points must be noted. One may assert: (1) that error in such a case as the foregoing, or in the more complex cases of superstitions, supposed theological heresies, false philosophies, errors in scientific opinion, false political doctrines, etc., may be mainly due to a negative cause—the mere

ignorance of the erring subject, his lack of 'adequate ideas,' the absence of correct and sufficient portrayals of fact. What a man lacks he cannot use. If he has no ideas that correspond with the facts in question, how can he make true assertions? Error is then, at least in the main (according to the view now in question), due to privation. For instance, I may not even attempt to count the sheep in the flock. I may merely guess at random. In such a case, error seems to be due merely, or mainly, to my lack of ideas. Such a negative theory of error was worked out by Spinoza, and applied by him, as far as possible, to decidedly complex cases. Naturally, according to Spinoza, 'the order and connexion of ideas' corresponds to 'the order and connexion of things.' This, for Spinoza, is the case with even the most worthless of our human imaginations. But, for psycho-physical reasons, which Spinoza discusses at length, most ideas of the ordinary man, relating to his world, are extremely 'inadequate'; that is, such ideas correspond only to very fragmentary aspects of the real world. The majority of men live 'ignorant of God and of themselves, and of things.' This ignorance prevents them from possessing the stock of ideas which could furnish the basis for true opinions. Men fill the void with errors. Yet none even of their errors is without basis in fact. They simply judge, without restraint, concerning that of which they know not, just because they know so little. This doctrine of error as ignorance, if accepted, would give us the most purely and completely theoretical definition of error which has ever been offered.

Plainly, however, ignorance is not of itself error. I cannot err concerning facts of which I know so little as to have no idea whatever about them; just as I cannot, in a speech, make grammatical blunders of whose existence I have never heard. Some other factor than ignorance determines the actual acceptance and utterance of false propositions. This even Spinoza himself has in the end to recognize. In his study of the errors of human passion, he makes the mechanical associative process, and the resulting passions themselves, factors in the genesis of error. Thus we are inevitably led to further theories.

One may assert: (2) that error is due to whatever moves the will of the erring subject to make assertions even in the absence of ideas that correspond to real objects. This volitional theory of error played a considerable part in Scholastic doctrine; was obviously useful in giving reasons for the moral condemnation of the errors of heretics, infidels, and schismatics; and has, in fact, an obvious and important basis in the psychology of opinion. Descartes recognized it in connexion with his own form of the doctrine of the freedom of the will. Spinoza, who rejected the theory of free will, and defined both intellect and will in terms of his psycho-physical theory of the associative process, still on occasion was obliged, as just pointed out, to use his own version of the doctrine of 'human bondage' as an explanation of the fatal errors into which the play of our inadequate ideas and of our passions leads us. In other forms this theory of error is widely accepted. From this point of view an error is a wilful assertion of a false proposition —an assertion made possible, indeed, by the erring subject's ignorance of the ideas that do correspond with reality, but positively determined by his willingness to assert. False beliefs are thus due to a combination of ignorance with the will to believe.

One may insist: (3) that the affective processes which condition the mood called 'belief' are the principal factors in making a false proposition, when it chances to be suggested, seem plausible. Where error is propagated by social contagion, or is accepted through reverence for authority, not so much the will as the emotional life of the erring subject seems to be the factor which makes error possible. Here, according to the previous view, ignorance of ideas that do correspond with reality is a condition of error, but constitutes neither its essence nor its sufficient cause. An error, according to the present view, is a false opinion which, because of its appeal to the sentiments, the feelings, the prejudices, of the erring subject, because it is harmonious with his social interests or with his private concerns, wins the subject over to the state of mind called belief.

One may further maintain: (4) that the principal cause of error is whatever associative, perceptual, or imaginative process gives such liveliness, strength, and persistence to ideas which as a fact do not correspond with reality, that the erring subject is forced, in the absence of sufficient corrective ideas, or (to use Taine's expression) for lack of 'reductors,' to regard these ideas as representatives of reality. Theories of error founded upon this view have played no small part in the psychiatrical literature which deals with the genesis of pathological forms of error, and have been prominent in the teachings of the Associationist school generally. From this point of view, an error is a false proposition whose assertion is forced upon the erring subject through the mechanism of association, and mainly because no other ideas than those which this assertion declares to correspond with the facts can win a place in the subject's mind when he thinks of the topic in question.

The foregoing accounts of the nature and source of error have all been stated with explicit reference to the 'correspondence' theory of truth. This theory supposes that the test of truth is the actual conformity of a representative idea with the object which it is required to portray. Idea and object are viewed as distinct and separable facts, just as a man and his portrait or photograph are possessed of a separate existence. The representative idea is external to the object. Truth depends upon a certain agreement between such mutually external facts. And, just as the idea to whose truthfulness as a representation a proposition is committed is external to its object, so, as we have now seen, the motives which lead to error appear, in the accounts thus far given, to be external to the meaning, and to the truth or falsity, of ideas and propositions. The falsity of a proposition, so far as we have yet seen, gives no reason why the error involved in believing that proposition should be committed. The truth of a proposition, also, in no wise explains why the true proposition comes to be believed—unless, indeed, with Spinoza, one comes to accept, for metaphysical reasons, a theory that ideas are by nature in agreement with objects. In case, however, one does accept the latter theory without any limitation, then error can be defined only in negative terms as due to mere absence of ideas. Such an account of error, as we have also seen, is incapable of telling us what it is, and is inadequate to explain the most familiar facts about its occurrence.

If, then, the truth or the falsity of a proposition does not of itself explain why we come to get a true or a false belief, the existence of error, for one who accepts the correspondence theory of truth, has to be explained by psychological motives which are as external to the logical meaning of true and false propositions as the ideas of the correspondence theory of truth are external to their objects. Some propositions are true. Their contradictories are false. So far, we have a system of facts and relations that seems, according to this

account, to be wholly independent of the psychological processes of anybody. But of these true and false propositions, some are believed by men. If the propositions believed are true, we have not explicitly considered in the foregoing the psychology of the process by which they come to be believed. But, if the beliefs are beliefs in false propositions, some accounts of how the errors arise have been suggested. These accounts all appeal to motives which do not result from the falsity of the propositions, but from the feelings, the will, or the associative processes of the erring subject—all of them influences which are due not to the logical distinctions between true and false, but to the mental fortunes of the believer.

Unfortunately, however, since the true beliefs of the subject must also have their psychology, quite as much as the false beliefs, and since the will, the feelings, the associative processes, the conditions which determine 'lively ideas,' and the like, must be equally effective when true propositions are believed as when false beliefs triumph—all the foregoing accounts leave us dissatisfied should we be led to ask: What are the processes which prevent error and give us true beliefs? For, apart from Spinoza's assumption of the universal agreement between 'the order and connexion of ideas and the order and connexion of things'—an assumption which makes error in any but a purely negative sense impossible—the truth of a proposition is a fact which in no wise explains why we mortals should come to believe that proposition to be true. And, if we explain the true belief as due to the will, the feelings, the associative or other psychological processes of the subject, these factors, as the theories of error so far stated have insisted, work as well to produce error as to beget true opinion. The one thing of which we have so far given no account is the way in which the difference between true opinion and error arises—the factor which is decisive in determining whether a given state of opinion, in a given subject, shall be one which accepts true propositions or, on the contrary, embraces errors.

Of course, the need of such an account has frequently been felt by the partisans of the 'correspondence' theory of truth. Innumerable portrayals exist of the ways in which conformity of idea and object can be furthered or attained by psychological processes. Ideas can be made 'clear and distinct,' observations of tho object can be rendered careful, prejudice can be kept in abeyance, feeling can be controlled, judgment can be suspended until the evidence is incontestable, and so on. By such means error can be more or less completely avoided, and agreement with the object can be progressively obtained. There is no doubt of the practical importance of such advice. There is also no doubt that the processes of control and of clarification which are in question are psychological processes, which the inquiring subject can find or produce within himself. It becomes plain, however, as one reflects, that to insist upon such matters is more or less to modify, and in the end to abandon, the representative theory of truth as consisting merely in the conformity of ideas to objects that are external to these ideas.

For how does one know, or why does one judge, that clear ideas, careful observations, the avoidance of prejudice, the suspension of judgment, and the other psychological devices of the truth-seeker, actually tend to make the subject escape from error, and win true opinion? Is it because, from some point of view external both to the object and to the ideas of the subject, one observes how the subject gradually wins a closer conformity with his object through using the better devices, and through avoiding the mental sources of error? If so, then whoever has this point of view, external both to the object and to the cognitive process, is already somehow acquainted with the constitution of the object, and is aware what propositions are true about the object quite apart from the psychological fortunes of the poor subject, whose escape from error is to be aided by such wise counsels. As a fact, philosophers who give such counsels very often behave for the moment as if they, at least, had not to wait for a slowly acquired conformity with the nature of reality, but were already assured of their own grasp of the object, and were therefore able to give such good advice to the erring psychological subject. No purely psychological theory of the way in which a conformity to an external object can be gradually acquired through clear ideas, freedom from prejudices, and so on, can serve to explain how the critic of human truth and error has himself acquired his assumed power to see things as they are, and thus to guide the psychological subject in the right path. That sort of attainment of truth which this theory attributes to the philosopher who teaches it is just what it does not explain.

In fact, a little reflexion shows that, when we hold, as we very rightly do, that a certain wise conduct of our ideas, feelings, will, observations, processes of recording observations, and other such mental enterprises helps us towards truth, and aids us to avoid error, we are comparing, not ideas with merely external objects, so much as less coherent with more coherent, unified, clear, and far-reaching forms of experience, of cognition—in general, of insight. If we once see this fact, we have to alter our definition of truth, and herewith our definitions both of true opinion and of error.

Truth cannot mean mere conformity of idea to external object: first, because nobody can judge an idea merely by asking whether it agrees with this or with that indifferent fact, but only by asking whether it agrees with that with which the knowing subject meant or intended it to agree; secondly, because nobody can look down, as from without, upon a world of wholly external objects on the one hand, and of his ideas upon the other, and estimate, as an indifferent spectator, their agreement; and thirdly, because the cognitive process, as itself a part of life, is essentially an effort to give to life unity, self-possession, insight into its own affairs, control of its own enterprises—in a word, wholeness. Cognition does not intend merely to represent its object, but to attain, to possess, and to come into a living unity with it.

Accordingly, the theories of error which have been founded upon the 'correspondence' theory of truth must be, not simply abandoned, but modified, in the light of a richer theory of truth. A true proposition does, indeed, express a correspondence between idea and object, but it expresses much more than this.

(ii.) Another definition of truth, which has its foundation far back in the history of thought, but which has been of late revised and popularized under the names of Pragmatism, Humanism, and Instrumentalism, may next be mentioned.

According to this view, an idea is essentially something that tends to guide or to plan a mode of action. A proposition expresses the acceptance of such a mode of action, as suited to some more or less sharply defined end. Now, a mode of action inevitably leads to consequences, which arise in the experience of the active subject. These consequences may be called the 'workings' of that idea which tended to guide or to plan this mode of action. These workings may agree or disagree with the intent of the idea. If the idea agrees with its expected workings, that idea is true, and with it the proposition which accepts that idea as

suited to its own ends is true; otherwise the idea and the proposition are erroneous. Such is the definition of truth which is characteristic of Pragmatism.

The case of the right or wrong counting of the flock of sheep will serve to illustrate the present theory of true opinion and of error quite as readily as to exemplify the representative theory of the same matters. A flock of sheep is not merely an external object to be portrayed. It is, to the one who counts it, an interesting object of human experience. He counts it in order to be ready to estimate his possessions, to sell or to buy the flock, to know whether he needs to hunt for lost sheep, or because of some other concrete purpose. His counting gives him an idea, perhaps of what he ought to ask of a purchaser, or of a plan for the shearing or for the market, perhaps of whether he ought to search for missing sheep. When he accepts and asserts that some determinate number represents the actual number of the flock, he, no doubt, takes interest in the correspondence between the idea and the object; yet his real object is not the indifferent external fact, but the flock of sheep as related to his own plans of action and to the practical results of these plans. The only test of the truth of his count, and, in fact, the only test that, when he counts, he proposes to accept, is that furnished by the workings of his count. Does his idea of the number of sheep, when accepted, lead to the expected results? One of these results, in many cases, is the agreement of his own count with that made by somebody else, with whom he wishes to agree concerning a sale or some other enterprise. Or, again, he expects the enumeration which he makes at one time to agree with the result obtained at some other time when he counts the flock anew. Furthermore, a habit of inaccurate counting betrays itself, in the long run of business, in the form of failure to get expected profits, or in the form of a loss of sheep whose straying is at one time not noticed because of the inaccurate counting; while later experience shows, in the form of the experience which traces the loss, the non-correspondence of expectations and results. Such expectations, tests, and agreements define the sort of truth that is sought.

What so simple and commonplace an instance illustrates, the whole work of the natural sciences, according to the pragmatist, everywhere exemplifies. The Newtonian theory of gravitation is accepted as true because its ideas lead, through computations, to workings which agree with observation. The older corpuscular theory of light was rejected because certain of its consequences did not agree with experience. The same process of testing hypotheses by a comparison of expectations with outcome can be traced throughout the entire range of empirical investigation.

As to the cause and essence of error, upon the basis of this theory of truth, there can be, according to the pragmatist, no very subtle difficulties to solve. The whole matter is, upon one side, empirical; upon the other side, practical. Experience runs its course, however it does. We, the truth-seekers, are endeavouring to adjust our actions to empirical happenings by adapting our expectations, through the definition of our ideas, and through the forming and testing of our hypotheses, to the observed facts as they come. As we are always in our practical life looking to the future, and are seeking the guidance which we need for our undertakings, our propositions are hypotheses to the effect that certain ideas will, if tested, agree with certain expected workings. If the test shows that we succeed, then, just when and in so far as we succeed, our propositions prove to be then and there true. If we fail, they prove to be errors. Truth and falsity, and, consequently, true opinion and error, are not 'static' properties or fixed classifications of our ideas or of our hypotheses. Both the ideas and the propositions 'come true' or 'fail to come true' through the fluent and dynamic process of the empirical test. Thus every truth is true, and every falsity false, relatively to the time when, and the purpose for which, the individual idea or hypothesis is tested.

Absolute truth or permanent truth, and equally absolute falsity or permanent falsity, are, from this point of view, purely abstract and ideal predicates, useful sometimes for formal purposes, when we choose to define our purposes in terms of logical or of mathematical definitions. 'Concrete' truth and error are of the nature of events, or series of events, or of 'the long run' of experience. That many of our ideas should not 'work,' or that many of our hypotheses should result in disappointed expectations, is, for the pragmatist, merely an empirical fact, requiring a special explanation no more than do the marksman's misses or the player's failure to score. We are not perfectly skilful beings; experience is often too fluent or too novel for our expectations. The wonder is rather that this is not more frequently the case. That man is as skilful a player as he is of the game of ideal expectations and anticipated consequences is a matter for congratulation. But failure is as natural an event as is success.

The traditional accounts of the psychology of error mentioned above are readily accepted by Pragmatism, precisely in so far as they are indeed accounts which experience justifies. No doubt, ignorance is a source of error. We are, in fact, ignorant of all except what experience, in one way or another, permits us upon occasion to prove by actual trial. This ignorance permits errors, in the form of false expectations, to arise. Prejudice, emotion, wilfulness, and the associative process unite to engender expectations which may prove to be false. Nor is there any known cause that uniformly ensures the attainment of truth. The difference between success and failure in our adjustment to our situation is simply an empirical difference. We have to accept it as such. No deeper account can be given than experience warrants.

The result of the pragmatist's definition of error obviously forbids any sharp distinction between theoretical and practical errors. The presence or absence of conscious ideas, of definite expectations, of articulate hypotheses, remains (in case of our always more or less practically significant maladjustments of our acts to our situation) as the sole criterion for distinguishing between erroneous opinions, on the one hand, and blunders that are made, on the other hand—merely as the fumbling player may fail to get the ball, or as the nervous musician may strike the false note—blindly, and without knowing why one fails, or what false idea, if any, guided one to the failure. This reduction of all errors to the type of practical maladjustments is a characteristic feature of Pragmatism.

If the 'correspondence' theory of truth makes the distinction between true and false opinions something that is quite external to the logical distinction between true and false propositions, the pragmatist's theory of truth and error in propositions seems, on the contrary, to go as far as is possible to annul altogether the difference between these two sorts of distinctions. For the pragmatist it is merely a formal device of the logician to regard truth and error as in any sense permanent properties, or predicates of the supposed entities called propositions. What actually occurs, what empirically happens, is a series of concrete agreements and disagreements between expectations

and results. These happenings, or 'the long run' of such happenings, constitute all that is concretely meant by truth and error. Whether one says, 'This proposition is true or false,' or, 'This opinion is true or false,' the concrete fact to which one refers is the sequence of testings to which ideas are submitted when their expected workings are compared with the expectations. Since logicians like to abstract certain 'forms' from the matter of life, they may, if they choose, define the entities called true and false propositions, and then leave to the students of the concrete the study of the fortunes of mere opinions. As a fact, however, according to Pragmatism, propositions live only as opinions in process of being tested. The distinctions with which we began this discussion have their own provisional usefulness, but only as abstractions that help to prepare the way for understanding life. A proposition becomes true in the concrete when the opinion that it is true leads to expected workings, and becomes false when the belief in it leads to workings which do not agree with expectations.

Such, in sum, is the pragmatist's solution of our initial problem. It emphasizes very notable facts regarding the relations between logic and life, and between thought and volition. Yet it fails to satisfy. For it can only be stated by constantly presupposing certain assertions about experience, about the order, the inter-relations, the significance, and the unity of empirical facts to be true, although their truth is never tested, in the pragmatist's sense of an empirical test, at any moment of our experience.

Thus it has been necessary to assume, even in stating the view of Pragmatism about truth, that ideas can be formed at one time, and submitted to the test of experience at another time, and perhaps by another person, just as Newton's hypotheses were formed by him, but were tested, not only by himself, through a long course of years, but by later generations of observers. It has been necessary to assume that one can form expectations to-day, and compare them with facts to-morrow, or next year, or after whatever length of time the conditions make possible. But this assumption requires the truth of the proposition that the meaning, the object, the purpose, the definition of the ideas and expectations of one moment, or period of time, or person, not only can be but are identical with the meaning, object, purpose, definition of the ideas and expectations of another moment, temporal region, or person. Now such an assertion, in any one case, may be regarded with scepticism, since it is, for human beings, unverifiable. Nobody experiences, in his own person, or at any one time, the identity of the ideas, meanings, expectations, of yesterday and to-day, of himself and of another person, of Newton and of the later students of Nature who have tested what they believe to be Newton's ideas. One may, in each special case, doubt, therefore, whether the idea formed yesterday is the same in meaning as the idea tested to-day, whether two men mean the same by the hypotheses which they are trying to verify together, and so on. But this much seems clear: however doubtful, in the single case, any such proposition may appear, unless some such propositions are true, there is no such process as the repeated testing of the same ideas through successive processes of experience, occurring at separate moments of time, or in the experiences of various human observers. But in that case it is not true that the proposition, 'Such a testing of ideas by the course of experience as Pragmatism presupposes actually takes place,' expresses the facts. If, however, this proposition is not true, the whole pragmatist account of truth becomes simply meaningless. On the other hand, if the proposition is true, then there is a kind of truth whose nature is inexpressible in terms of the pragmatist's definition of truth. For there are propositions which no human being at any moment of his own experience can ever test, and which are nevertheless true.

Much the same may be said of the pragmatist's assertion regarding the 'workings' that an idea is said to 'possess,' or to which it is said to 'lead.' These 'workings,' by hypothesis, may extend over long periods of time, may find a place in diverse minds, and may involve extremely complex reasoning processes (*e.g.* computations, as in the case of the Newtonian theory of gravitation) which are very hard to follow, and which no human mind can survey, in their wholeness, at any moment, or submit to the test of any direct synthetic observation. The proposition, however, 'These are the actual, and, for the purposes of a given test, the logically relevant workings of the idea that is to be tested,' must itself be true, if the empirical comparison of any one of these workings with the facts of experience is to be of any worth as a test. The truth of the proposition just put in quotation marks is a truth of a type that no one man, at any instant, ever personally and empirically tests. In every special case it may be, and in general must be, regarded as doubtful. Yet, unless some such propositions are true, Pragmatism becomes a meaningless doctrine; while, if any such propositions are true, there is a sort of truth of which Pragmatism gives no account.

What holds of truth holds here, in general, of the conditions which make falsity possible. And the whole theory of true and false opinion, and consequently the definition of error, must be modified accordingly. In brief, Pragmatism presupposes a certain unity in the meaning and coherence of experience taken as a whole—a unity which can never at any one moment be tested by any human being. Unless the propositions which assert the existence and describe the nature of this presupposed unity are themselves true, Pragmatism has no meaning. But, if they are true, Pragmatism presupposes a sort of truth whereof it gives no adequate account. To say this is not to say that Pragmatism gives a wholly false view of the nature of truth, but is only to insist upon its inadequacy. It needs to be supplemented.

(iii.) Over against the theory of truth as the correspondence between a wholly external object and an ideal portrayal, and also in contrast with Pragmatism, there exists a theory of truth which defines that concept wholly in terms of a harmony between the partial expression of a meaning which a proposition signifies and the whole of life, of experience, or of meaning, which, according to this theory, ideas and propositions intend to embody so far as they can. A proposition is true in so far as it conforms to the meaning of the whole of experience. Such conformity can never be attained through the mere correspondence of a portrayal with an external object. It can exist only in the form of the harmonious adaptation of part to whole—an adaptation that can best be figured in the form of the adaptation of an organ to the whole of an organism.

If one reverts to the comparatively trivial instance of the sheep and the counting, the present view would insist, as Pragmatism does, upon the fact that, in counting sheep, one is attempting to adjust present ideas to the unity of an extended realm of experience, in which the observed sheep appear, now as grazing in the field, now as having their place in the herdsman's enterprises, now as passing from one ownership to another, and so on. The one who counts wants to get such a present

idea of the sheep as will stand in harmonious unity with all else that can be or that is known with regard to them. The truth involved in the process of counting is itself of a relatively abstract and lower sort; and hence is ill adapted to show what truth really is. For, in fact, to treat sheep merely as numerable objects is to treat them as what, on the whole, they are not; hence to say, 'They are so many,' is to utter what is in some respects false. For they are sheep, and to say this is to say that each is a living organism, a unique individual, a product of ages of evolution, and a being possessing values beyond those which commerce recognizes. Hence a numerical account of them has only 'partial truth,' and therefore is false as well as true. The only wholly true account of the sheep would express (not merely portray) their character as facts in the universe of experience and of reality. One can say, at best, of the proposition about their number that it is true in so far as it expresses a view about them which harmonizes, to the greatest extent possible for a numerical statement, with what experience, viewed as a whole, determines the place and the meaning of one's present experience of the flock of sheep to be.

Truth, from this point of view, is an attribute which belongs to propositions in a greater or less degree. For single propositions, taken by themselves, give us abstract accounts of facts, or rather of the whole in which every fact has its place, and from which it derives its characters. A proposition is an interpretation of the whole universe, in terms of such a partial experience of the nature of the whole as a limited group of ideas can suggest. This interpretation is always one-sided, precisely in so far as the group of ideas in question is limited. In so far as the partial view harmonizes with the whole, the proposition is true. Since the partial view, being one-sided, can never wholly harmonize with the whole, each separate proposition, if taken in its abstraction, is partially false, and needs to be amended by adding other propositions.

This general theory of truth and falsity, while its sources run back into ancient thought, is especially characteristic of modern Idealism. That the truth of propositions about experience is a character determined by their relation to the ideal and virtual whole of experience, to the 'unity of apperception,' is a thesis which forms part of Kant's 'Deduction of the Categories.' The later developments of the 'Dialectical Method,' by Fichte and Hegel, and the analogous features of Schelling's thought, led to more explicit theories of the relations between truth and falsity, and to the doctrine that every proposition, considered in its abstraction, is partially false, and needs amendment. Hegel, in the preface to his *Phänomenologie*, asserted that 'Das Wahre ist das Ganze,' and interpreted this as meaning that only what a survey of the total process of experience signifies enables us to know truth, while 'partial views,' such as we get on the way towards *absolutes Wissen*, are at once true and false—true, as necessary stages on the way to insight, and therefore as in harmony with the purposes of the whole; false, as needing supplement, and as showing this need through the contradictions which give rise to the dialectical process. In Hegel's *Logic* this view of truth is technically developed. With a different course of argument, with many original features, and with a more empirical method of investigation, a view of truth and error which belongs to the same general type has in recent times been developed by Bradley.

If one accepts such a theory of the 'degrees of truth and falsity,' and of truth as the harmony or organic unity between a partial view and the ideal whole of experience or of reality, the essence of error—that is, of false opinion—must receive a new interpretation. In the history of the development of Absolute Idealism, the theory of error has taken, on the whole, two distinct forms.

(1) According to the first of these forms, usually emphasized by Hegel, error exists merely because it is of the essence of a partial view to regard itself as the total and final view, precisely in so far as the partial view inevitably passes through the stage of 'abstraction,' in which it defines itself to the exclusion of all other points of view than its own. Did it not pass through this stage, it would not be a live or concrete view of things at all. It simply would not exist. But (according to Hegel) the whole, in order to be an organism at all, requires the parts to exist. And, if the parts are—as in the case of opinions—partial views of the whole, and if the whole requires them to exist, each in its place in the system of spiritual life, it is the whole itself, it is the Absolute which requires the partial view to make, as it were, the experiment of regarding itself as true—that is, as an absolutely whole view. If a man is merely counting, he takes his objects simply as numerical; and then real things seem to him, as to the Pythagoreans, to be merely 'numbers.' Such a view, as an abstraction, is false; but as a stage on the way to insight it is inevitable; and as a concrete phase of opinion it is an error, that is, a positive belief in a falsity, or, again, a taking of a partial view for the whole. To be sure, this 'dwelling on the abstraction,' this *beharren* or *verweilen* in the midst of falsity, is a phase; and since, for Hegel (just as [illegible] for the Pragmatists), the apprehension o[illegible] is a living process, not a static contemplation, this phase must pass. An experience of the 'contradictions of finitude' must in its due time arise, and must lead to the recognition that the partial phase is false. This is what happens in the course of the history of thought, when the successive systems of philosophy—each a partial truth, required by the necessity of the thought-process and by the life of the *Weltgeist* to regard itself as absolutely true—succeed one another with a dialectical necessity that tends to larger and truer insight. The same sequence of necessary errors, which are all of them partial truths taking themselves to be whole and final, appears in the history of religion.

(2) To Bradley, and to others among the more recent representatives of Idealism, to whom the dialectical method of Hegel appears in various ways unsatisfactory, this account of the way in which error arises, and, as a phase of experience and of life, is necessary, does not appeal. For such thinkers, error is, indeed, defined as a partial and (in so far) false view, which is not merely partially false and partially true, but takes itself to be wholly true. The existence of such a disharmony between part and whole, in a realm of experience where the metaphysical presuppositions which these writers accept seem to require organic wholeness and harmony to prevail, and to be of the essence of reality, is an inexplicable event, which must be viewed as in some unknown way a necessary 'appearance,' not a reality.

As a statement of the ideal of truth which is alone consistent with rational demands, the Idealism thus summarized seems to be, in great measure, successful. But its success is greatest with respect to the conception of truth as the teleological harmony or adjustment of a partial to a total view of experience and of its meaning. Precisely with regard to the problem of the possibility of error, that is, of disharmony between the demands of any partial interpretation of experience and that which is revealed and fulfilled by the whole of

experience, the idealistic theory of truth and of error has proved to be, thus far, most incomplete.

3. **Conditions of a solution of the problem of error.**—The foregoing survey shows that a satisfactory theory of error must meet the following requirements:

(1) It must be just to whatever interest in a decisive and unquestionably 'absolute' distinction between true propositions and their contradictory false propositions is justly urged by formal logic. That is, no account of truth and error in terms of 'partial views' and 'the total view' of experience must be used to render the contrast of true and false anything but a decisive contrast, as sharp as that between any proposition and its contradictory.

(2) The theory of error must take account of the actual unity of the cognitive and the volitional processes. It has been the office of recent Pragmatism to insist, in its own way, upon this unity. But Hegel, in his *Phänomenologie*, also insisted, although in another fashion, upon the fact that every insight or opinion is both theoretical and practical, is an effort at adjustment to the purposes of life, an effort to be tested by its genuine rational success or failure.

(3) The theory of error must recognize that truth is a character which belongs to propositions so far as they express the meanings which our ideas get in their relations to experience, and not in their relations to wholly external objects.

(4) That the rational test or the success of ideas, hypotheses, and opinions lies in their relations not to momentary experiences, but to the whole of life, so far as that whole is accessible, must also be maintained.

(5) The existence of error, as disharmony between the partial view which actively and, so to speak, wilfully asserts itself as the expression of the whole, must be explained as due to the same conditions as those which make possible finite life, evil, individuality, and conflict in general.

(6) Theoretical error cannot be separated from practical error.

(7) A revision of Hegel's dialectical method, a synthesis of this method with the empirical tendencies of recent Pragmatism, a combination of both with the methods of modern Logic seem, in their combination, to be required for a complete treatment of the problem of error. An error is the expression, through voluntary action, of a belief. In case of an error, a being, whose ideas have a limited scope, so interprets those ideas as to bring himself into conflict with a larger life to which he himself belongs. This life is one of experience and of action. Its whole nature determines what the erring subject, at his stage of experience, and with his ideas, ought to think and to do. He errs when he so feels, believes, acts, interprets, as to be in positive and decisive conflict with this *ought*. The conflict is at once theoretical and practical.

LITERATURE.—Aristotle, *Metaph.* vi. 4, 1027*b*, ix. 10, 1051*b*. On the Scholastic concept: Thomas Aquinas, *Summa c. Gent.* i. 59, *Summa Theol.* i. 17. 1. In modern philosophy: Descartes, *Princ. Phil.* i. 48, *Med.* v. 42; Spinoza, *Ethica*, i. prop. xxx., ii. prop. xxxiv., and *de Emend. Intell.*; Locke, *Essay on the Human Understanding*, iv. chs. 5, 20; Kant, *Kritik der reinen Vernunft*, Riga, 1781, p. 81. On recent discussions: W. James, *Pragmatism*, London, 1907, *The Meaning of Truth*, do. 1909; F. C. S. Schiller, *Humanism*, do. 1903, *Studies in Humanism*, do. 1907, art. 'Pragmatism' in *EBr*[11]; H. H. Joachim, *The Nature of Truth*, do. 1906; F. H. Bradley, *Logic*, do. 1883, *Appearance and Reality*[2], do. 1897; art. 'Truth' in *DPhP* (contains an important statement of the views of C. S. Peirce).

J. ROYCE.

ESCHATOLOGY.—The principal subjects treated of in this article are the 'last things' strictly so called—the idea of judgment and retribution, or of a Day of Judgment, Millennial ideas, the catastrophic end of the world and its renewal, and how the dead are related to that end of all things. The different views regarding the state of the dead are discussed in the article STATE OF THE DEAD (see also BLEST [ABODE OF THE], MESSIAH, RESURRECTION).

1. **Savage races.**—(*a*) *Retributive notions.*—The question of the existence of the idea of future retributive justice among savages is not easily settled, as certainly, in some cases where it is believed in, it may be traced to outside influences—Hindu, Buddhist, Muhammadan, or Christian. Still, even here the idea must have been latent or already expressed in some form, else it would not so easily have been adopted. While a mere continuance of present earthly conditions is frequently believed in, distinctions according to rank, wealth, or power are commonly found. The future of the soul is also dependent upon the nature of the funeral offerings, or upon burial or non-burial, or upon the person having been tatued, circumcised, mutilated in some particular way, or provided with certain amulets. An approach to a retributive doctrine is found in the wide-spread view—extending upwards to the ancient Teutons and Mexicans—that cowardice debars from Paradise or incurs actual punishment; courage being here a savage virtue which is rewarded. Again, since gods and spirits frequently punish in this life sins (not necessarily strictly moral shortcomings) against themselves—tabu-breaking and the like—it was easy to extend this to the future life. Hence, neglect or contempt of worship, ritual, tabu, etc., is frequently punished in the Other-world, or keeps souls out of the more blissful state.

This is a common belief in Melanesia and Africa (see *ERE* ii. 683 f.; Brown, *Melanesians and Polynesians*, 1910, p. 195), in Polynesia (Ellis, *Pol. Researches*[2], 1832, i. 396 f.), and in S. America (Naupés [Coudreau, *La France équinoxiale*, Paris, 1887, ii. 195 f.]).

In certain cases crimes which are detested by the tribe, and therefore by the tribal gods, and which are severely punished on this earth by torture or death, are also believed to be punished beyond the grave—a natural deduction. These crimes are mainly murder or theft committed against fellow-tribesmen, sorcery, adultery, incest, as well as lying, and even niggardliness.

For examples, see Brown, *op. cit.* 195; Codrington, *Melanesians*, Oxford, 1891, p. 274; *ERE* ii. 685[a]; Post, *Grundriss der ethn. Jurisprudenz*, Oldenburg and Leipzig, 1894–5, i. 41 (Amer. Ind.); Rink, *Tales and Trad. of the Eskimo*, 1875, p. 41; see also *ERE* iv. 255[b], 256. Actual retribution (apart from outside influences) is also alleged among the Andaman Islanders (Man, *JAI* xii. [1883] 158, 162), Australians (Parker, *More Aust. Legendary Tales*, 1898, p. 96), Haidas, Salish, and other Amer. Indian tribes (Harrison, *JAI* xxi. [1891–2] 17; Wilson, *TES* iii. 303), Mintiras of Malacca (Steinmetz, *AA* xxiv. 582), Ainus (*ERE* i. 252[a]), Masai (Merker, *ZE* xxxv. [1903] 735). In most of these instances the nature of the punishments points to native ideas. In some cases the 'wicked' are simply annihilated (Grinnell, *Pawnee Hero Stories*, 1893, p. 355).

A judgment is necessarily implied where a division on various grounds, or actual punishment by the gods, or exclusion from Paradise is believed to take place in the Other-world; but it is only sporadically that it is expressly stated to occur (Khonds [Hopkins, *Rel. of India*, Boston, 1895, p. 530], Chippewas [Dunn, *Oregon*, 1844, p. 104], Guinea Negroes [Pinkerton, *Voyages*, xvi. 401], Ainus [*ERE* i. 252]). Some of the West African secret societies probably teach a future judgment. Out of such primitive views the idea of judgment in the higher religions was evolved.

The judgment may simply be an examination by some being or animal, to discover whether the person has the necessary distinctive mark which admits to Paradise, or has done certain things according to custom in this world (Codrington, *op. cit.* 256, 257, 265, 280; Pinkerton, iii. 303 [Massachusetts Indians]). In other cases some ordeal, appointed occasionally by a divinity or spirit, has to be undergone, which tests the man's fitness for the blissful region (Schomburgk, *Reisen in B. Guiana*, Leipzig, 1848, iii. 818; Thomson, *The Fijians*, 1908, pp. 121, 125, 128). Or it may consist in sending the good by one road leading to Paradise, and the bad by another leading to a place of pain (Mooney, 'Siouan Tribes,' *Bull. 24 BE*, 1894, p. 48; Bancroft, *NR* iii. 524 [Karok]; Coudreau, *op. cit.* ii. 195 f.). Or, again, the bridge

which the dead must cross becomes an ordeal, the bad being unable to cross it, or they are repelled by its guardian (Landau, *Hölle und Fegfeuer*, Heidelberg, 1909, p. 60; *ERE* i. 493a, ii. 854). 'Bad' does not always here mean the morally bad; but the beings who examine and test the soul are primitive judges of the dead. Sometimes the spirits of the dead debar murderers and other undesirable persons from the blissful region, and force them to remain apart or in an undesirable place, or to wander restlessly on earth, and in some cases it is the spirits of persons injured in life by the new arrival who inflict such punishments—a natural extension of the idea of blood-revenge, surviving also in higher religions (Codrington, 269, 274 f., 279, 288; Brown, 444 [New Guinea]; Couard, *RHR* xlii. [1900] 268 [Algonquins]; cf. Landau, 186 f.).

(*b*) *The Final Catastrophe.*—The Andaman Islanders believe that spirits, apart from souls, go to a gloomy jungle below the earth, which is flat. But a time will come when a great earthquake will cause the world to turn over. The living will perish and change places with the dead. Spirits will be re-united with souls, and live on the renewed earth, in which sickness and death will be unknown (Man, *JAI* xii. 161 f.). Many American tribes (north and south) expected a catastrophic end of all things—frequently by fire, as the world had before been destroyed by water. But in such cases it was believed that, as certain persons escaped the flood to re-people the earth, so some would be hid from the fire and re-people the new world (Schoolcraft, *Indian Tribes*, 1853–56, i. 319, iv. 240, 420; Brinton, *Myths of New World*[3], Philad. 1896, p. 253 f.). In a Choctaw legend the dead were to resume their bodies and live on the renewed earth. A similar re-peopling of the purified and renewed world after its final destruction by water was believed in by the Eskimos (Brinton, 302; Egede, *Nachrichten von Grönland*, 1790, p. 156; Boas, 'Central Eskimo,' *6 RBEW* [1888] 588 f.). Probably Christian teaching has here influenced existing native beliefs. The Mexican belief in a series of world-ages or 'suns'—each terminated by a catastrophe, from which only a few were saved for the new age—is akin to these. The Mexicans did not know when the existing age would terminate, but only that it would be at the end of a cycle of 52 years; nor does it appear how the dead would fare at this consummation. This conception of the end of the world-age seems to have been unrelated to the myth of the return of Quetzalcoatl and the renewal of the Golden Age (J. G. Müller, *Amer. Urrel.*, Basel, 1855, p. 511 f.; see AGES OF THE WORLD [Prim. and Amer.]). The Peruvians also believed in a former destruction of the world by water, and in its future destruction, signalized by an eclipse of sun or moon, in which the sun would vanish, the moon fall on the earth, and a conflagration or drought would follow, in which all would perish (Müller, 396; Brinton, 254). It is obvious that such myths are extensions of the observation of actual catastrophes and unexplained natural phenomena, and of the terrors inspired by them.

2. Egyptian.—Of any Egyptian doctrine of a final catastrophe there is no record. The idea of judgment of the soul after death appertained to the Osirian faith from the time of the XVIIIth dynasty, though it is found in connexion with the Rā doctrine in the *Book of the Gates*. In this the judgment takes place in the Hall of Osiris—the sixth domain through which the sun passes on his nightly journey; but in the *Book of the Dead* the judgment was preparatory to entering the true paradise of Osiris—the Fields of Aalu.

The soul was brought into the presence of Osiris the judge, by Anubis. Before him stood the balance in which Thōth the scribe would weigh the heart of the deceased against the feather which symbolized righteousness, or the image of Maat. Thōth was also the scribe who registered the result with tablet and style. Around were seated the 42 Divine assessors to whom the famous 'negative confession' was made. If the soul passed through the ordeal of the balance, which may have been a test of the truth of the confession, it was rewarded by Osiris; but if not, it is possible that it was eaten by the monster Am-mit, 'Eater of the Dead,' or shared the fate of annihilation with the enemies of Osiris, who were hacked to pieces or thrown into pits or a lake of fire. How far such a retribution could be overcome by 'words of power' is uncertain. These punishments are referred to in the *Book of the Gates*; but, so far as they concerned souls, they could not be eternal, for the soul was annihilated. How judgment on the followers of Rā was pronounced is uncertain, but again in the *Book of the Gates* and the *Book of That which is in Dvat* we hear of the horrible punishments by which the annihilation of Rā's enemies was brought about, and these enemies almost certainly included the wicked. This annihilation, according to Budge (*Gods of the Egyptians*, 1903, p. 265), was the misinterpretation of a Nature-myth of the sun attacking with his rays and fiery glance. See also the whole scene of the judgment described in a story of a visit to Amenti, where annihilation, as well as fearful punishments of the wicked, is found (Griffith, *Stories of the High Priests of Memphis*, Oxford, 1900, p. 45 f.). Cf., further, artt. EGYPTIAN RELIGION, p. 243a, and ETHICS AND MORALITY (Egyp.), p. 475.

3. Teutonic.—Though the general view of the division of souls at death among the Teutons is non-moral, glimpses of a more ethical division and of a daily judgment after death by the gods are obtained. Crimes, such as offences against kinsmen and gods, murders, adultery, and perjury, were punished (see BLEST, ABODE OF [Teutonic], vol. ii. p. 708). Much more detailed is the picture of the final world-catastrophe as found in *Völuspá* and *Gylfaginning*; and, since it involves gods, but is not produced by them, it is automatic—a proof of its originality; while the whole picture of the catastrophe includes various elements in the mythology.

All the regions and beings hostile to the Æsir, or gods, prepare for the final conflict, and those enemies whom the former had bound break forth to take part in it—the Midgard serpent, the Fenris wolf, Hel, and Loki. The world has become wholly evil, and this evil is especially marked by the loosening of the ties of kindred. Signs in Nature—storms, floods, and the three-fold Fimbul winter—precede the end. Those beings now unbound, along with Surtr and his train from Muspelheim, attack the gods; and Odin, Freyr, and Thor fall before their onslaught. The sun is darkened, the stars vanish, earth sinks into the sea, and fire bursts forth. After this a new earth springs from the waves, with green meadows. Its fields bring forth without labour, evil and sorrow are unknown, and the gods renew their youth on Idavöllr. Perhaps this new earth is the hidden paradise of Mimir's grove, in which Lif and Lifthrasir are hidden and survive the great winter, according to one myth, or this catastrophe, so that a new and blessed race may spring from them and re-people the earth (*Vafthrudnismál* [Vigfusson-Powell, *Corpus Poet. Boreale*, Oxford, 1883, i. 67]; *Gylfag.* § 53). But there is also added the conception of a final judgment by 'a mighty one from above.' The righteous now dwell in Gimlé, the wicked are condemned to Ná-strand.

How far all this has been moulded by Christian influences is still uncertain. Most probably floating eschatological myths have been fixed in an orderly narrative by the poet of *Völuspá* under such influences. There is a certain resemblance to Persian eschatology, while a world-catastrophe is hinted at in tales which have no connexion with *Völuspá* (Grimm, *Teut. Myth.*, Eng. tr., 1880–88, pp. 429, 815).

4. For Celtic eschatology, see art. CELTS, in vol. iii. p. 302 f.

5. Greek and Roman.—In the earlier Greek poets, Homer and Hesiod, nothing is said of judgment. But such enemies of the gods as the Titans are shut up in Tartarus (Hes. *Theog.* 713 ff.; Homer, *Il.* xiv. 279, cf. viii. 13), while Tityus, Tantalus, and Sisyphus suffer torments (*Od.* xi. 576 f.). Minos in the under world gives laws to the dead (θεμιστεύοντα νέκυσσιν), but he does not appear to act as judge (*Od.* xi. 567 f.). But, under the influence of the Mysteries and of the Orphic and Pythagorean cults, the ideas of judgment and retribution became prevalent, and are found in later writers. Pythagoras taught a judgment of souls (Iambl. *Vita Pyth.* 29 f.), and the Orphic judgment is depicted on the vase on which Æacus, Triptolemus, and Rhadamanthus appear as judges (J. E. Harrison, *Prol. to Study of Greek Rel.*[2], Cambridge, 1908, p. 599). In the Mysteries it was also taught that the uninitiated, the profane, and the unjust were punished in the Other-world.

Generally the judges, who exist independently in Pluto's kingdom, are three in number—Minos, Rhadamanthus, and Æacus—and they were appointed to this office because they had acted justly on earth (cf. Plato, *Gorgias*, 523). But the Mysteries added a fourth, Triptolemus, and Plato refers to all four as true judges in Hades (*Apol.* 41). They give judgment in a meadow at the parting of the ways, one of which leads to the

abode of the blessed, the other to Tartarus.[1] Their sentences or symbols (σημεῖα) of their deeds are bound upon souls (Plato, *Gorg.* 523, *Rep.* x. 614 f.). Their shadows were the accusers of souls, according to the satire of Lucian (*Menippus*, 10)—probably a popular idea.

The ideas of the Orphics and Pythagoreans are reproduced by Pindar (see *Ol.* ii. 55 f.; *Thren.* frag.) and Plato, but the conception of judgment and retribution is connected with that of metempsychosis. Ten thousand, or, in the case of pure souls, three thousand, years elapsed before the soul returned to its primal home. Judgment took place at the end of life, when the soul was rewarded, or punished in places of correction (εἰς τὰ ὑπὸ γῆς δικαιωτήρια). At the end of a thousand years the soul chose a new body, human or animal, and was born on earth, to undergo further probation there, and to be rewarded or punished once more at death. Some souls, however, were too wicked ever to return, and remained for ever in Tartarus (Plato, *Phædrus*, 248 f.; *Rep.* x. 614 f.; cf. *Gorg.* 523; and, for a reference to similar teaching in the Mysteries, *Laws*, ix. 870).

In the *Phædo* (107, 113) the soul is led by its dæmon to the place of judgment, and is then sent to bliss, or to purgatorial punishments followed by rewards for good deeds. Incurable sinners never leave Tartarus.

Such beliefs as these were probably widely diffused among the Greeks, as we may gather even from the numerous passages referring to judgment and the fate of souls in Lucian's satires and from the caricature of Aristophanes. The dramatists seldom speak of a judgment of the dead (cf. Æsch. *Suppl.* 218 f., *Eum.* 263 f.), but it is referred to sporadically in other authors and on grave inscriptions. The Stoics held that evil souls were punished after death. Punishment was, however, purgatorial, though bad souls might become extinct. Seneca speaks of death as a day of judgment when sentence will be pronounced on all (*Ep.* xxvi., *Herc. fur.* 727 f.; see Zeller, *Stoics*, 1870, p. 205 f.). The Epicureans rejected all such views, and taught that the soul died with the body (Lucr. iii. 417 f.; cf. Hippol. *Refut. Hær.* i. 19). While among the Roman people their native religion taught nothing of judgment and future penalties, the poets accepted the Greek ideas and the names of the judges of the dead, and frequently referred to them. Thus in Vergil's picture of the under world, Minos judges certain crimes, and Rhadamanthus judges in Tartarus (*Æn.* vi. 426 ff., 540 ff.; see other passages collected in Ruhl, *De mortuorum judicio*, Giessen, 1903, p. 76 ff.).

The conception of the end of all things was philosophical rather than popular and mythical, but the Stoic doctrine of the ἐκπύρωσις became popular. How was the conception of the future life related to the cyclic change?

In Plato's theory of the two ages ever recurring, those who died in the period of disorder, when the universe was left to itself, were in the new age—the Golden Age—born from the earth as old men, and grew ever younger. The end of each period, when the earth began to move in an opposite direction, was marked by great convulsions of Nature. In the Stoic doctrine of the cyclic conflagration, all souls (or those which have not become extinct) are then resolved into the World-Soul or Primal Fire. This world-catastrophe over, the formation of a new universe begins (Cicero's *renovatio*), and all things repeat themselves as in the previous cycles, and every person again plays his part in it. Did this include personal identity? Some answered that the persons were distinct without a difference, others regarded them as different (see Zeller, 155 ff.). Seneca, who gives a vivid picture of this world-conflagration (*Consol. ad Marciam*), seems to have looked forward to living again in the next cycle (*Ep.* xxxvi. 10). See AGES OF THE WORLD (Greek and Roman).

6. Hindu.—Although in the *Rigveda* no clear statement of judgment is found, and Yama appears mainly as king of the region of bliss, yet he is to some extent an object of terror, and a dark underground hell is spoken of as the fate of evil-doers (iv. 5. 5, vii. 104. 3, ix. 73. 8). In the *Atharvaveda* the torments of this place are also referred to (v. 19). The later views differ widely from this, through the gradual introduction of the belief in transmigration, while Yama is now the judge of the dead. The popular view is represented by various passages in the *Śatapatha Brāhmaṇa.* The dead pass two fires, which burn the wicked, but let the good go by: they are weighed in a balance, and their fate is thus decided. The good pass to bliss; the wicked suffer in hell, or are re-born as a punishment. In the *Upaniṣads* re-birth in various conditions, in heaven, hell, or on earth, appears as the result of ignorance of the true end of existence, viz. release from the chain of cosmic existence and absorption in the world-soul. Hinduism in all its forms endorses this view. All go to Yama over a dreadful road, on which the pious fare better than the wicked. Yama or Dharma judges and allots the fate. Through endless existences and re-births—in human, animal, or plant forms—alternated with lives in the heavens or hells, the soul must pass. The Hindu doctrine of the Four Ages is connected with eschatology. The Four Ages—*kṛta, tretā, dvāpara*, and *kali*, each with its dawn and twilight periods—form a *mahāyuga* of 12,000 years, each of which is equivalent to 360 human years, thus resulting in a period of 4,320,000 years. A hundred such periods form a *kalpa*. At the close of the *Kali* age, or more usually now at the close of the final *kali* of a *kalpa*, there is an apparent destruction of the world by fire and flood. The gods are absorbed by Brahma, along with their heaven and all good persons in it. Then follows the age-long sleep of Brahma (equal to the length of a *kalpa*), after which he re-creates the world. The process of transmigration begins anew, and all are re-born in higher or lower forms, to renew their cosmic existence, save those who desire final and absolute absorption in the Supreme (see *SBE* vii. 77 f.; xxv. pp. lxxxiv, lxxxvii; xxxiv. 212; Hopkins, *op. cit.* 419 f.; Barth, *Rel. of India*, 1882, p. 93; AGES OF THE WORLD [Indian]).

7. Buddhist.—In Buddhism the idea of *karma* afforded an automatic principle of judgment, whereby the person after death entered upon an existence, higher or lower, according to his actions. At death, the force resulting from actions combined with clinging to existence causes creation of the five *skandhas*, or constituent elements of being. This is so swift that there is hardly any break in the continuity of personality, which is thus re-created in one of the six states—gods, men, *asuras*, animals, plants, *pretas*, or inhabitants of one of the hells. The shortest term of punishment in a hell is 500 years, but one may rise from that to life in a higher state, while a life in heaven may be succeeded by a life on earth or in one of the hells. But already in early Buddhism we find the idea—taken over from Brāhmanism—that the warders of hell drag the wicked before Yama, who condemns them to one of the hells (Monier-Williams, *Buddhism*, 1889, p. 114 f.). But it is in Northern Buddhism that this idea is more particularly developed. Here there is the conception of a judgment of the soul after death in the courts of the ten judges of the dead, one of whom is Yenlo (Yama). He judges with strict impartiality, and also fixes the hour of dissolution.

After the deceased is clad in the black garment of sins, or in the shining garment of good deeds, the latter are weighed against evil in a balance. If the sins exceed, punishment follows; if good deeds, reward. Scenes of the judgment and of punishments are painted on the walls of temples, depicted in books, or formed with clay figures. The judgment-halls are arranged like earthly tribunals. There is also a belief in a bridge over which souls pass; the good cross it easily, but the wicked fall from it to torments. Souls are subject to re-birth after existence in heaven or hell, this also being fixed by the judges. This conception of judgment is also found among the

[1] Plato says that Rhadamanthus judges souls from Asia, Æacus those from Europe, while Minos, as the oldest, decides difficult cases (*Gorg.* 524).

Taoists (Edkins, *Chinese Buddhism*, 1880, *passim*; *As. Journ.* xxxi. [1840] 209 f.; Legge, *Rel. of China*, 1880, p. 119 f.; de Groot, *Actes du 6me Cong. Intern. des Orient.*, sect. iv. [1885] 97 f.).

The Buddhist conception of *kalpas* has already been discussed (AGES OF THE WORLD [Buddhist]). Each great *kalpa* ends with the destruction of the present universe—by water, fire, or wind. Creatures do not perish with the universe. Most of them are re-born in higher spheres, which cannot be destroyed. Others still in hell are re-born in the hell of some universe, the time for the destruction of which has not yet come.

8. Parsi.—Some of the various elements of the eschatology of the *Bundahiš* and other later documents are already found in the *Avesta*, but it is quite uncertain how far all are primitive, and it is more than likely that the earlier belief was one in mere continuance of the soul. After death the soul hovered near the body for three days and nights—if righteous, assisted by Srôsh against demons; but if evil, tormented by evil angels. Then, according to its condition, it started for the Other-world with an escort of good or evil beings. Now the Chinvat bridge was reached. Here the righteous met a beautiful virgin—the sum of his good deeds—who conducted him to Paradise, where he was introduced to Ahura, welcomed by Vohumano, and given heavenly raiment and a golden throne (*SBE* iv. 373 f.); and (according to later belief) the wicked met an ugly hag—embodying his evil deeds—who led him to hell, 'the obscure world' (*SBE* iv. 219, xviii. [*Dâṭistân-î Dînîk*, xxv. 5]). A weighing of the deeds of men at the bridge in the balance of Rashnû Razista, or a decision by three judges—Mithra, Rashnû, and Srush—is spoken of in later documents. Those whose good deeds balanced their evil deeds were kept in Hamêstakân, a kind of intermediate state (*SBE* xxiv. 18; *Book of Ardā Virāf* [ed. Haug and West, Bombay, 1872], v., vi. 9 f.).[1] The bridge extended over hell and led to Paradise. For the souls of the righteous it widened, but for the wicked it narrowed to the breadth of a thread or a razor-edge, and they fell off or were cast into hell (*SBE* iv. 219).

Here we may glance at the Iranian theory of the world-ages, each of four periods of 3000 years. Towards the beginning of the final 3000 Zarathushtra is born. Towards the beginning of the second millennium of this period, evils increase, there are signs in heaven and earth, and now Hûshêṭar is born. Religion is restored, and he brings back the creatures to their proper state. Towards the beginning of the final millennium Hûshêṭar-mâh is born. In his time creatures become more progressive and men do not die. But now evils again increase. The serpent Azhi-Dahâk, confined in Mt. Demavend by Freṭun, breaks forth, but is destroyed by Sâm; and at the close of the period Sôshyans, the Persian Messiah, 'who makes the evil spirit impotent and causes the resurrection and future existence,' is born (*Bahman Yašt*, iii. 1 ff.; *Bundahiš*, xi. 6 f.; *Dînkarṭ*, vii. 9 f.; for the chronology, see West, *SBE*, v. Introd. lv f.). Now begins the new order of things. All mankind, beginning with Gâyômarṭ, followed by Mâshya and Mâshyôî, are raised from the dead (cf. 1 Co 15[23], and *Vita Adae et Evae*, 42; *Apoc. Mosis*, 13[41] [Adam is first raised, then his descendants]). Then follows the great assembly, in which each sees his good and evil deeds. The righteous are set apart from the wicked; the former are taken to heaven, and the latter cast back to hell for 'the punishment of the three nights'—their final punishment. Fire now melts the earth and remains like a river.

[1] This state appears to have two parts, one for the not *quite* righteous, and one for the not wholly sinful (*Dâṭ. Dînîk*, xxiv. 6, xxxiii. 2). But souls of some sinners are often said to remain in hell 'till the resurrection'—perhaps implying that others are released from it. Or a specified time in hell is mentioned (*SBE* iv. 87 f., 81, 82, 135).

All must pass through it, but to the righteous it is like warm milk, to the wicked like molten metal. Ahriman and his hosts are defeated by Ahura and his angels, and perish in the conflagration (cf. *SBE* xxiii. 306 f.). Now all come together; relations recognize each other; men have the age of 40 years and children of 15 years. All are now immortal and clad in spiritual bodies, and awards are apportioned according to merit. Hell becomes pure, and is brought back for the enlargement of the world. The earth is renewed and made immortal and extends to heaven (*Bund.* xxx.; *Dînk.* ix.; *Dâṭistân-î Dînîk*, xxxii. 14). The anticipated joys both of heaven and of the renewed world are of a highly spiritual character (Söderblom, *La Vie future d'après le mazdéisme*, Paris, 1901, pp. 128, 269; for the Yima legend, see *ERE* i. 208).

9. Muhammadan.—Muhammadan is based upon Jewish and Christian (and possibly Parsi) eschatology, though there are some important differences. After death all persons are visited in the grave by two angels, who examine them as to their faith. If the answer is satisfactory, the dead sleep on in peace; otherwise, they are struck with a hammer and the earth pressed down upon them.

There is a general belief that before the judgment the faithful dead are in a state of repose. They are said to enter *al-Barzakh*. They dwell in or near the grave, but the wicked are tormented there or in a foul dungeon (*SBE* vi. p. lxix; Sale, *Koran*, Prel. Discuss. § iv.; Hughes, *DI*, 1895, *s.v.* 'Barzakh').

Many wonderful signs precede the Last Day or the Day of Judgment (*yaum ad-dîn*; cf. *as-Sâ'a*, 'the Hour'), the time of which is known only to God. The Mahdi will establish a reign of righteousness; ad-Dajjâl, or Antichrist, will appear and be slain by Jesus, who will become a Muhammadan; Gog and Magog will be released. . . . Then the angel Isrâfîl will sound the trumpet, which will be followed by frightful convulsions in Nature. At the second blast all creatures will die. At the third the resurrection will take place, and all will rise to give an account of themselves out of the book of their deeds. God is set on His throne with His angels. The recording angels who follow men all through life witness against them, and the works of men are weighed in a balance. The judgment lasts 1000 or 50,000 years. All must now cross the bridge aṣ-Ṣirâṭ, which passes over hell to Paradise, and is finer than a hair and sharper than the edge of a sword. The righteous cross it easily, but the wicked fall or are thrown from it to hell. Earth and heaven are changed.

The righteous pass to the seven regions of Paradise, the sensual joys of which, as described in passages of the Qu'rân (dating, curiously enough, from Muhammad's monogamous period), are such as would appeal to people living in a desert region, and are often direct transcripts of old pagan verses (Jacob, *Altarab. Beduinenleben*[2], 1897, p. 107 f.). They are often spiritualized by Muhammadans, while in the Qu'rân itself more spiritual joys are set forth (xiii. 20-24). Many also regarded the torments of the seven regions of hell as purgatorial, at least for sinful believers and perhaps for all (Macdonald, *Development of Muslim Theol.*, 1903, p. 130; Bukhâri, *Ṣaḥîḥ*, viii. 170). Some hold that heaven and hell did not come into existence until the Judgment, and Jahm ibn Safwan taught that both would finally pass away and God would remain alone (Macdonald, 138). Many deny that men are judged by their works, and the corporeal resurrection is also often set aside.

10. Hebrew and later Jewish.—(*a*) Not till a comparatively late period of Hebrew history is there any idea of a retributive judgment at any period after death.[1] The soul passes to Sheol, but 'death is itself a final judgment; for it removes man from the sphere where Jehovah's grace and judgment are known' (W. R. Smith, *Prophets of Israel*, 1897, p. 64). Retribution is limited to this life, and eschatology is almost invariably connected with the development of history; its subject is the

[1] While the general Bab. view of the after-life seems to have regarded it as unconnected with morality, it has been thought that some traces of a retribution-doctrine and of a judgment of the dead may be found, *e.g.* in the poem of the Descent of Ištar (see Jeremias, *Bab. Conception of Heaven and Hell*, 1902, p. 49).

nation. Many of the elements of later Jewish eschatology are already found in the prophetic books, even in the earliest, although some of the passages in Amos, Hosea, Micah, etc., relating to the Messianic Kingdom are later interpolations. Jahweh appears in judgment upon Israel and also the nations, though this judgment is less a process of investigation than actual vengeance. The time of judgment, preluded by or including various woes, is summed up comprehensively as 'the Day of Jahweh' (see below), the day of Jahweh's vindication against the sinful nation. He punishes it or the wicked in it with the scourge of the Gentiles and with captivity; but, as in Zephaniah and later prophets, there is a wider retribution. The Gentiles, sometimes conceived as His instruments in punishing Israel (Hab 1^{12}), are themselves punished because of their mad pride and idolatry (cf. Is 14). Famine and pestilence and the sword lay the people waste. The wicked, whether of Israel or of the nations, are objects of Jahweh's fury; they flee before Him and are destroyed (Am 3^{2}, Is 8^{22} 11^{4} 13^{11} 17^{9} $24^{21f.}$ $37^{22f.}$, Zeph $1^{17f.}$, Nah 1^{8}). Nature itself is convulsed at His presence—sun, moon, and stars are darkened; the heavens are shaken or rolled together; mountains and hills are scattered; the earth is burned or destroyed by water, or shaken, removed, or dissolved (Am 9^{5}, Zeph $1^{2f.\ 14f.}$, Nah $1^{3f.}$, Hag $2^{6.\ 21f.}$, Hab $3^{6f.}$, Is $2^{12f.}$ $13^{10f.}$ 24. $34^{4f.}$, Ezk 38^{19}).

This conception of Nature convulsed at Jahweh's appearing is connected with the idea that, behind the great phenomena of Nature—earthquake, fire, flood, storm, lightning—are His power and presence. These are manifestations of Him (Ps $18^{7f.}$, Hab 3, Jg $5^{4f.}$). This idea is rooted in the old Nature religion, which had its storm-, thunder-, and earthquake-gods, or personified these phenomena themselves.

An additional historical feature in the midst of eschatological ideas is that of the Captivity as a punishment or part of the judgment. Jahweh's controversy with His people is that because of their neglect of Him they must be punished, while through punishment, even that of captivity, lies the way to restoration and the establishment of His will in the hearts of a regenerate nation. Punishment is the means of reformation for Israel, as well as for the nations (Hos 6. 10^{12} 14, Jer 24^{7} $31^{33f.}$). Or, more generally, through all those woes which are the expression of His judgment He is preserving a faithful remnant who survive because of their faithfulness (Mic 7^{8}, Am 3^{12} 5^{15} $9^{8f.}$, Is $4^{2f.}$ 6^{13} $10^{20f.}$ $11^{11f.}$ 27^{13} $28^{5f.}$ 44^{22}, Zeph 2^{3} $3^{18f.}$, Hab 2^{4}), or who are the nucleus round which gathers the reformed and repentant nation (cf. the repentance of the *nation* in Hos 2^{14} $6^{1f.}$ $11^{10f.}$ 13^{14}). They are restored to the land, or they remain in it because the destruction of the kingdom would not agree with the accomplishment of the Divine purpose (Isaiah). Now begins the reign of peace and safety on earth. Throughout, Jahweh is regarded as the Deliverer, and it is He or the manifestation of His glory (Is 4^{5}) that continues to dwell under the new conditions among His people as Ruler and Judge, and to be their 'everlasting light' (Is $2^{2f.}$ $4^{2f.}$ 40^{3} 60^{19}, Zeph $3^{17f.}$, Zec 2^{11}); He reigns in Jerusalem (Is 24^{23} $65^{17f.}$). But in some prophecies Jahweh sets over the restored people an ideal warrior—or priest-king, semi-Divine (cf. *El Gibbôr*, 'Mighty God,' Is 9^{6}), or endowed with the Divine spirit (Is 11^{2}), or of David's line, to sit on the throne of David and to execute justice. Under him (or perhaps under a line of such kings) the righteous nation will dwell in peace, and his whole delight will be in the fear of the Lord (Is $9^{1.\ 5.\ 6}$ $11^{1f.}$ 32^{1}, Jer $23^{5f.}$ 33^{15}, Mic 5^{2}, Zec $6^{9f.}$ $9^{9f.}$; cf. Ps 110). This king is the 'Messiah' or 'anointed one' of later Judaism.

In Is 42 to 53 *passim*, we find the servant who suffers, not for his own sins but for the sins of others, who dies and is then highly exalted. He is the deliverer of Israel, as well as the light and teacher of the nations. By him an ideal Israel, or the righteous remnant, or even an individual (as in 52^{13}–53), may be intended. But, though the passages have a close bearing on Christ's Messianic work, they were not certainly regarded by the Jews as Messianic before the time of our Lord. In the Talmud the Suffering Servant is sometimes regarded as equivalent to Messiah suffering with His people; and Justin (*Dial. with Trypho*, 68, 69) makes his Jewish interlocutor accept the doctrine of the Suffering Messiah. But this does not point to a general Jewish belief, nor is there any trace of the latter in the Gospels.

Zion will now be re-built and become the spiritual metropolis of the earth, an immovable city and a quiet habitation, established on the top of the mountains; and to it shall all nations flow (Is 2^{2} 4^{5} 33^{20} 40. 65^{18}, Mic $4^{1f.}$, Jer 30^{18}, Zec 2, Ezk $40^{1f.}$). Nature will be changed; there will be new heavens and new earth (perhaps a later conception); the moon will shine as the sun, and the sun's light will be increased sevenfold. There will be abundance of waters and of provender for flocks and herds. These, as well as men, will multiply exceedingly, and there will be marvellous fertility and increase in corn and wine. The desolate land will become like the garden of Eden (Am $9^{13f.}$, Is $30^{23f.}$ $35^{1.\ 2.\ 7}$ 65^{17} 66^{22}, Hos 1^{10} $2^{18f.}$, Zec 8^{12}, Ezk $34^{14.\ 27}$ $36^{9f.\ 30.\ 35}$). According to Ezk $47^{1f.}$, a river will flow from the temple. It will be full of fish, and on its banks will stand trees with unfading leaves and continuous fruit—the leaves used for medicine, the fruit for food (cf. Ps 46^{4}, Rev $22^{1.\ 2}$). Further, the wildest animals will live at peace with each other, and 'a little child shall lead them'; or there will be no more any evil beasts (Hos 2^{18}, Is $11^{6f.}$ 35^{9} 65^{25}, Ezk 34^{25}). All human ills will be done away; the lame will walk, the deaf hear, the dumb speak, the blind see; and there will be no more weeping, sorrow, or sighing (Is 30^{19} $35^{3f.}$, Ezk 34^{16}). The ransomed will obtain joy and gladness; the members of the restored nation will be given a new heart and spirit, they will no more do iniquity, the law will be written in their hearts, and all will know the Lord (Is 35^{10}, Ezk 36^{26}, Zeph 3^{13}, Jer $31^{31f.}$ 'the new covenant').

While the picture of the happy future on earth is now more sensuous, now more spiritual, there is no doubt that it is largely described in terms of the mythical Eden and the past Golden Age, according to a principle which emerges more clearly in later Apocalyptic—that of renewal, or of restoring the present state to its former condition (cf. § 15, and *Ep. Barn.* 6^{3} ἰδού, ποιῶ τὰ ἔσχατα ὡς τὰ πρῶτα). (1) Peace among animals, no ravenous beast, the child (=Adam) leading them; cf. Is $11^{6f.}$ 35^{7}, Ezk 34^{25} with Gn $2^{19.\ 20}$. (2) Desert and waste become beautiful and fertile; cf. Is $35^{1f.}$, Am 9^{13} with Gn 2^{9}, Ezk $31^{8.\ 9}$. (3) Abundance without labour; cf. Gn $3^{17\text{-}19}$. (4) The waters and the trees; cf. Ezk $47^{1f.}$, Ps $46^{4f.}$ with Gn $2^{9f.}$. (5) The new state is on a mountain, in accordance with the idea that Paradise was on a mountain; cf. Is 2^{2} 11^{9} with Ezk 28^{14}, Gn 2^{10} (where the presence of a river suggests a height), Is $14^{13.\ 14}$ (the north and heaven are the same, cf. Ezk 1^{4}). This mountain is now to be Mt. Zion (Is 35^{10}, Ps 48^{2}).[1] (6) There is to be no bodily defect or sorrow (Is $35^{5f.}$) or war (Is $2^{2f.}$ 11^{9}, Mic $4^{1f.}$, Zec $9^{9.\ 10}$, Jer $23^{5.\ 8}$), but everywhere happiness and contentment (Is 25^{6} $55^{1\text{-}3}$), while Jahweh will be present among men—all features of the past Golden Age. (See Gunkel, *Schöpfung und Chaos*, Göttingen, 1895; Oesterley, *Evol. of Mess. Idea*, London, 1908, pp. 135 f., 252 f.; Volz, *Jüd. Eschat.*, Tübingen, 1903, p. 296 f.) These ideas of future earthly bliss correspond also with the picture of Other-world bliss as conceived in later Judaism and in Christianity. They suggest, in effect, heaven on earth; hence they could be directly transferred to the picture of the heavenly Paradise seen in Jewish and Christian visions.

Throughout these prophecies the blessings of the future are on this earth and for the righteous remnant of Israel—the living in whom the nation finds its true immortality, a future rather than the present generation. But it is obvious that, since the state of the dead in Sheol was a dreary one, the question must have pressed for solution—Are the righteous dead to have no share in the future joy? Hence the gradual emergence of the belief that they would rise to share in this earthly felicity. This satisfied, to some extent, the growing and passionate desire for communion with God after death. What had been already used as a

[1] Cf. Bab. myth of the mountain of the gods in the north (Hommel, *Die Insel der Seligen in Mythus u. Sage der Vorzeit*, Munich, 1901, p. 35 f.).

daring metaphor to describe the restoration of Israel (Hos 6^{2}, Ezk 37) now, possibly under Persian influences (though it is not absolutely necessary to assert those), became a vital doctrine, stated for the first time in Is 26^{19}. Thus, after the judgment was accomplished, the righteous remnant, or the purified nation along with the righteous dead, would form the Kingdom of God in the renewed earth, of which a renewed Jerusalem would be the spiritual centre.

When the restoration was completed, and when these blessings seemed as far off as ever, the prophets still spoke of a time of judgment as imminent, in which the nations and the wicked would be destroyed. According to Haggai, it would be a day of destruction for the heathen, followed by the establishment of the Messianic king ($2^{6f.\ 22f.}$). In Joel there is the first appearance of an actual scene of judgment, preceded by signs in the heavens. The nations are assembled in the Valley of Jehoshaphat, judged, and destroyed; but Israel, already purified and restored, now enjoys peace and blessing. In Malachi ($3^{1f.}$), Jahweh will come, preceded by Elijah (an idea perhaps suggested by the story in 2 K 2)[1] or His messenger, to judge and destroy the wicked, to recognize those who had trusted in Him, and to dwell in Jerusalem. Out of this conception of a judgment still in the future arises the later eschatology, which, however, made use of all the elements of the earlier, as detailed above.

Thus in Daniel, following the vision of the four beasts (=the world-powers of Babylon, Media, Persia, and Greece), there is a judgment scene. The Ancient of Days sits with His hosts, and the books are opened. Dominion is taken from the beasts, and the fourth beast is slain. Now begins an eternal kingdom on earth possessed by the saints (regenerate Israel), typified by 'a Son of Man' or a human being, to whom all nations are subject ($7^{9ff.}$). But, according to another picture, there is a period of great trouble, in which Michael delivers Israel, or every one whose name is written in the book. There is also a resurrection, of some of the righteous to everlasting life, and of some of the wicked to everlasting shame and contempt (probably in Gehenna)—the latter an entirely new conception (12^{2}).

Occasional references to the blessed future on earth occur in the Apocryphal books. God will arise to judge and destroy the heathen and unrighteous (Sir 35^{18} $36^{3f.}$). Israel is delivered and the gathering of the dispersed follows (36^{11} 50, cf. Bar 2^{34} $4^{36.\ 37}$ 5^{5-9}, 2 Mac 1^{27} 2^{18} 7^{37}, cf. 1 Mac 2^{57}), and the kingdom endures for ever. In Tobit $13^{1f.}$ the people are scourged and then brought out of all lands. Jerusalem is restored in beauty, and the nations bring gifts and serve God ($13^{11f.}$ $14^{5f.}$). The resurrection of the just only is taught in 2 Mac, in a somewhat material fashion ($7^{9.\ 11.\ 14.\ 22.\ 23}$ 12^{44} 14^{46}). But it is uncertain whether they are raised up to the future kingdom on earth, though 7^{24} as well as the date of the book seems to support this view.

(*b*) A doctrine of future retribution emerged gradually in Hebrew thought. It is adumbrated in Ps $49^{14.\ 16}$ $73^{17f.}$, and more clearly in Is $24^{21.\ 22}$ (4th cent.?), 50^{11} 66^{24} (5th cent.?), and in Dn 12^{2}. Besides retribution in this life, the wicked are punished in the other world according to 2 Mac 6^{26} $7^{34f.}$ In Wisdom the wicked are punished after death ($4^{19f.}$) and judged by the righteous dead. These ideas appear more definitely in Apocalyptic literature.

(*c*) *The Day of Jahweh.*—In its earliest conception the Day of Jahweh must have meant a mythical manifestation of Jahweh in the majesty of terrible natural phenomena conquering hostile evil powers. The whole conception is based on mythical ideas, and to the end the Day was regarded as accompanied with dreadful convulsions in Nature out of which a new order was evolved.[1] This primitive view gave place to another popular idea. The Day would be one in which Jahweh would judge and destroy Israel's enemies, who now (and also in the Prophets) take the place of the hostile evil powers. It would be a day of battle like the 'day of Midian' (Is 9^{4}; for the corresponding Arab idiom, see W. R. Smith, *Prophets*, 398). There was no ethical element here; Israel was to be avenged because of her devotion to outward ritual. Jahweh would manifest Himself in light (Am 5^{18}); there would be abundance in the land and festival gladness ($5^{16f.\ 18}$). There would be a renewal of the conditions of the Golden Age. To this conception Amos, followed by other prophets, gives a direct denial. Israel must also be judged and suffer in the Day of Jahweh, a day of darkness, sorrow, and fear, because she has neglected the ethical side of His religion ($5^{18f.}$). The unrighteous nations hostile to Israel, and regarded often as the instruments of Israel's punishment, would also suffer, but mainly Israel (3^{2}). Thus Jahweh's character as a righteous God would be vindicated. If the passages in Amos and Hosea referring to a restoration following upon these judgments be later interpolations, then they, like Micah, regard the Day as one issuing in nothing but doom. But this idea soon gave place to another. The nation purified, or a righteous remnant, and in some cases the heathen nations also, would find the Day ultimately issue in blessing. Here the prophets in part take over the popular view of the Golden Age issuing out of the manifestation of Jahweh in the convulsions of Nature, but at the same time they spiritualize it, and limit this bliss to those who survive because of their righteousness. The restoration is to be not on a natural but on a righteous foundation.

This is more particularly seen in Nahum and Habakkuk, in whom a conception of the Day is found which somewhat resembles the popular one in form, but differs from it in essence. Judah is now regarded as already righteous (Nah 1^{15}, Hab 1^{4}), and the Day of Jahweh is His terrible vengeance against her wicked foes. Thus His righteousness and that of Judah are vindicated.

In Jeremiah and Ezekiel the relation of the individual to Jahweh is emphasized (Jer 9^{24} $31^{29.\ 30}$, Ezk $14^{12f.}$ $18^{4.\ 20f.}$). Hence with them the Day of Jahweh was less a manifestation of His judgment on the nation than on the individuals composing it, and it issued in the restoration of righteous individuals (Jer $3^{13f.}$ 24^{7} $31^{33.\ 34}$, Ezk $6^{8f.}$ 7^{16} 11^{19} $14^{13f.}$ 33^{16} $39^{28f.}$). The nations as such also share in the judgment (Jer $25^{15f.}$ 46 ff.). The relation of the nations who survive the judgment to the blissful Kingdom is differently viewed in these Prophets, and their differing views were reproduced in later works.

According to Jeremiah, the nations participate in the Kingdom (3^{17} $4^{1.\ 2}$ 12^{16} 16^{19})—a view which is followed by other prophets (Mic $4^{1f.}$, Zec 2^{11}), for some of whom the idea of a Day of Jahweh hardly exists, its place being taken by that of Israel as the means of the world's restoration (cf. Is 45^{14} $49^{22f.}$ 2^{2-4} [post-exilic] $19^{21f.}$, cf. Ps $22^{27f.}$ 65^{2} 87). In Malachi, where the same hope is found, there is a Day of Jahweh. According to Ezekiel, while the righteous remnant will be restored, the nations will be utterly destroyed in the Day of Jahweh's vengeance ($21^{25f.}$ 25 ff. 35; cf. 38. 39). This view has already been found in Nahum and Habakkuk. It is found also in other prophets, who look forward after the Return to a destruction of the nations (Is 34, Hag 1^{9} $2^{6f.\ 20f.}$, Zec $1^{18f.}$) previous to the establishment of the new era. Or the nations or such of them as survive the Day will become servants of Israel (Zec 2^{11} $8^{20f.}$, Dn 7^{14}, and see above). In Ezk 38. 39 hosts coming from the north, Gog from the land of Magog, against *restored* Israel, are utterly destroyed (cf. Zec $14^{1f.}$)—an idea destined to play an important part in later eschatology, Jewish and Christian (see Bousset, *Rel. des Judentums*, Berlin, 1903, p. 206 f., *Antichrist*, 1896, p. 128 f.).

The idea of the Day as an actual judgment-scene or assize is found in Jl $3^{2f.}$, when the heathen are assembled in the Valley of Jehoshaphat, where

[1] Cf. Sir 48^{10}, *Sib. Or.* ii. 187 f., Mk 6^{15} 9^{11} etc.; see also § 8, where it is shown that two prophets precede the Persian Sōshyans.

[1] See Gunkel, *Zum religionsgesch. Verständnis des Neuen Test.*[2], Göttingen, 1910, p. 22; Gressmann, *Der Ursprung der israelitisch-jüd. Eschat.*, Göttingen, 1905.

Jahweh sits to judge them, after the restoration of His people to whom they have been hostile and who are now penitent. The nations are destroyed. A world-judgment is already suggested in Zeph 1$^{2. 3. 16}$ 3^{8}, Is 34, Jer 25$^{15ff.}$, Hag 2^{22}, and it reappears in Daniel.

Various names for the Day of Jahweh in the OT are 'the Day' (Ezk 7^{10}), 'that Day' (Is 30^{23}), 'the time' or 'that time' (Ezk 7^{12}, Jer 31^{1}), 'the Great Day' (Jl 2^{11}, Zeph 1^{14}), 'the Day of wrath' (Zeph 1^{15}, cf. Ro 2^{5}); cf. 'the Great Day of His wrath' (Rev 6^{17}). In Apocryphal and Apocalyptic literature the phrase which refers to the time of judgment, either before or after the Messianic Kingdom, varies, but it covers ideas similar to those already found in the Prophets—'the Day of Judgment' (*Enoch*, *Secr. of En.* 39^{1}, 4 Ezr 7^{39}, *Apoc. Bar.* 60^{8}, *Test. xii. Patr.* [Levi 3^{2}], Jth 16^{17}, *Jub.* 10^{17} 22^{21}), 'the Day of the Great Judgment' (*Jub.* 23^{11}, *Secr. of En.* 50^{4}). Other titles are 'the Day of the Great Consummation,' 'the Day of tribulation, darkness, or slaughter,' 'that Great Day' (see Charles, note to *En.* 45^{2}, p. 125 f.); 'the Day of the Great Condemnation' (*Jub.* 5^{10}), 'the Day of the Lord's judgment' (*Ps. Sol.* 15^{13}), 'the Day of the Wrath of Judgment' (*Jub.* 24^{30}), 'the Day of turbulence and execration and indignation and anger' (*Jub.* 36^{10}), 'the Day of the Mighty One' (*Apoc. Bar.* 55^{6}), 'the Consummation of the times' or 'of the ages and the beginning of the Day of Judgment' (*Apoc. Bar.* 13^{3} 60^{8}, cf. 29^{8}, also 23^{7} 'My redemption [=Day of Judgment] has drawn nigh,' cf. Lk 21^{28}, 1 P 4^{7}), 'the Visitation' (*Ass. Mos.* 1^{18}), 'the Day of the Ordinances,' or 'the Day of the Ordinance of the Lord in the righteous judgment of God' (*Test. xii. Patr.* [Levi 3^{3}]). Sometimes God, occasionally Messiah (*En.* 62^{3} 69^{27}), acts as judge. In the NT the phrase passes over to our Lord's Parousia with which is joined the Judgment, and it appears in the forms 'the Day of the Lord Jesus' (1 Co 5^{5}, 2 Co 1^{14}), 'the Day of Jesus Christ,' 'the Day of Christ' or 'of our Lord Jesus Christ' (Ph 1^{6} 2^{16}, 2 Th 2^{2}, 1 Co 1^{8}), 'the Day of the Lord' (1 Th 5^{2}, 2 P 3^{10}), 'the Day' or 'that Day' (1 Co 3^{13}, 2 Ti 1$^{12. 18}$ 4^{8}, 2 Th 1^{10}), 'the Day of Judgment' (Mt 10^{15} 11^{22}, 2 P 3^{7}, 1 Jn 4^{17}), 'the Great Day of God' or 'of his Wrath' (Rev 16^{14} 6^{17}); cf. Lk 17^{24} 'so shall the Son of Man be in his Day,' and St. Paul's pregnant phrase, 'the Day of Wrath, and revelation of the righteous judgment of God' (Ro 2^{5}).

(*d*) *Apocalyptic eschatology.*—In approaching the period of Apocalyptic literature, it must be borne in mind that, while its roots are fixed in and nourished by OT prophecy (where also Apocalyptic ideas are not unknown, *e.g.* Ezk 37 ff., Zec 1 ff.; cf. also Dn.), its anticipations are of a much more detailed character, and announce coming events in a formal manner. It also occupied a different standpoint from that of the orthodox Pharisaic schools. This literature was of a popular character, and did much to quicken that belief in the Messiah and the coming of the Kingdom, as well as the individual hope of the future, which were so characteristic of the people's thoughts in Christ's time. Moreover, it can hardly be doubted that He and those who wrote of Him were familiar, if not with that literature, at least with the popular views to which it had given birth. This raises a strong presumption that the eschatology which He taught or which was attributed to Him followed the lines of current ideas, but, as will be seen, with important differences.

(i.) In Apocalyptic writings the coming of Messiah, or the advent of the new order, often inaugurated by God Himself, or the final judgment, is preceded by terrors and sorrows (the 'Messianic woes') and by frightful convulsions in Nature. God or Messiah destroys the enemies of Israel, and spiritual foes—Beliar, demons, evil angels—are also destroyed. Meanwhile, through all these horrors, the true Israel is concealed (cf. Is 26^{20}, *Enoch* 96^{2}, *Ass. Mos.* 10). Then follows the eternal or temporal Kingdom on earth, the somewhat sensuous description of which—great fruitfulness, eating and drinking, begetting numerous children—together with more spiritual ideas—the absence of sin, the nearness of God to His people—reproduces the thought of the Prophets. While in some writings Messiah has no place (certain sections of *Enoch* and *Apoc. Bar.*, *Ass. Mos.*, *Secrets of Enoch*), in others he is introduced mechanically, but in others again he has a most important place (*Test. xii. Patr.*, *En.* 37 ff., *Ps. Sol.*, 4 Ezra, sections of *Apoc. Bar.*), and, as in *En.* 37 ff., he acts as Judge. The destruction of Israel's enemies easily passes over into the thought of a Last Judgment of Israel and the actions already adumbrated in the Prophets; and this, in necessary association with ideas of Resurrection, is a dominating conception of Jewish eschatology. Prominent, too, in some writings is the thought of future and final bliss or torment in the Other-world.

The Apocalyptic writings show three well-defined notions of the future: (1) continuing the prophetic conception, there is judgment followed by the establishment of a blissful Kingdom on earth or on a renewed earth (*En.* 1–36. 37–70 [new heaven and earth], 83–90; *Sib. Or.* iii. 194 f.; *Test. xii. Patr.*); (2) the Kingdom is temporary, and at its close Judgment begins, followed by the dawn of the eternal world (*En.* 91 f., *Apoc. Bar.* [various sections], *Secrets of Enoch*, 4 Ezr., and possibly *Ps. Sol.*, *Jub.*, *Ass. Mos.*); (3) no Kingdom on earth, but an imminent future Kingdom in the Other-world.

(1) *The eternal earthly Kingdom.*—In *Enoch* 1–36 (*c.* 170 B.C. [so Charles, ed. *Book of Enoch*, 1893, p. 26]) there is a preliminary judgment. Azazel and the angels who lusted after women are set in the place of darkness (10$^{4f.}$) until the judgment. Disobedient stars are confined in a waste place over an abyss of fire. Sinners have a place apart in Sheol till the judgment. The consummation and judgment are accompanied by shaking of the mountains and rending of the earth. God appears with ten thousands of His holy ones, and executes judgment on Mt. Sinai (ch. 1). Azazel and the angels are cast into an abyss of fire, along with all others who are condemned, including the wicked in Sheol (10^{6} 13. 21$^{1f.}$ 27^{3}). The righteous dead are raised and, with the righteous who are alive, dwell in peace on earth, which will be full of desirable trees and vines, yielding seed and wine in abundance. The righteous will live till they beget a thousand children, and will know neither sorrow, pain, nor trouble. Labour will be a blessing. Righteousness and peace will be established, and the earth will be cleansed. The righteous eat of the Tree of Life, which gives them long life. They enjoy the presence of God, who will sit on a throne in a high mountain, and they never sin again. The remaining Gentiles become righteous and worship God.

A not dissimilar picture is found in *En.* 83–90, but here a human Messiah, symbolized by a white bull (90^{37}), is described vaguely as dwelling in the Kingdom, though not introducing it. Still more important, the idea of a new Jerusalem—not a purified earthly Jerusalem, but an entirely new city set up by God—is found (90^{29}; see § 14). The Judgment is depicted under the figure of God sitting on a throne. Sealed books are opened and set before Him. The stars and angels are judged and condemned to an abyss of fire, along with apostate Jews (90$^{20ff.}$). The risen righteous are transformed into the likeness of Messiah and live eternally.

In the *Testament of the Twelve Patriarchs* (109–105 B.C.) the dispersed of Israel, or Israel after repentance, are restored. God appears (Sim. 6, Asher 7^{3}) on the earth and destroys the spirits of deceit. But in other parts a sinless Messiah—king, prophet, and priest—appears and wars with the enemies of Israel or with Beliar, from whom he takes the captivity (Dan 5$^{10. 11}$), binds him (Levi 18), or casts him into the fire (Jud. 25^{4}). Sin now comes to an end (Levi 18). The resurrection of Enoch, Noah, Shem, Abraham, Isaac, Jacob, the twelve patriarchs, and all men (Benj. 10$^{6f.}$), some to glory, some to shame, follows. All are judged, and the judgment is accompanied by convulsions of Nature (Levi 4$^{1f.}$). There are snow, ice, and fire, and spirits of retribution preserved in the heavens, as well as armies for vengeance on the spirits of deceit and Beliar (Levi 3). The Gentiles share in the Messianic Kingdom which is on this earth. The saints are said to rest in Eden and the New Jerusalem (Dan 5$^{10. 11}$), or in Paradise which Messiah opens (Levi 4$^{1f.}$).

In *En.* 37–70 (1st cent. B.C. [so Charles, p. 29]) there is a preliminary judgment on the dead (41$^{1f.}$). The righteous are oppressed and cry for help. The supernatural and pre-existent 'Son of Man' appears with the Head of Days. He sits on the throne of his glory, set there by the Lord of Spirits, that he may judge (45^{3} 48$^{2f.}$ 49^{4} 61^{8}–62). The dead (Israelites?) are raised. Angels, good and evil, are judged before him, as well as the kings of the earth and all who dwell in it (51. 54. 61$^{5. 8}$; cf. 49^{4}). The wicked are consigned to Gehenna or driven off the face of the earth (38^{3} 41^{2} 45^{6} 53. 54). God transforms heaven and earth as a place for the righteous to dwell in (the first time heaven is categorically mentioned as an abode for the righteous). The Kingdom is here not conceived sensuously, though the righteous 'eat with that Son of Man' (62^{14}). The Elect One dwells with the righteous, who are clothed with garments of His glory (62^{16}), and live for ever. They find righteousness with the Lord of Spirits (58$^{1f.}$).

In the third book of the *Sibylline Oracles* God sends a king who brings all war to an end. Now the kings of the earth assemble about Jerusalem, but are destroyed. Israel dwells safely under God's protection. Earth yields boundless wheat, wine, and oil. There is abundance of trees, cattle, and sheep. There is no more drought or famine. Is 11$^{6-9}$ is here paraphrased. The eternal Kingdom, with Jerusalem as its centre, extends over

the whole world, for the heathen now worship God and live at peace (vv.[65ff.]). The eternal Messianic Kingdom is referred to in Jn 12[34].

(2) *The temporary earthly Kingdom.*—(*a*) Meanwhile a temporal Messianic Kingdom had been brought into prominence. The eternal earthly Kingdom had its incongruous elements—sensuous and earthly, spiritual and heavenly; and the separation of these was perhaps aided by the influence of Hellenistic Judaism and its eschatology—the immediate entrance of souls into their state of bliss or torment at death. The idea of a temporal Messianic Kingdom, which ultimately issued in that of a Millennium, was 'a compromise between the old hope of the prophets, which they expected to be realized in the present world, and the transcendental hope of later Judaism' (Gunkel, in Kautzsch, *Die Apokr. und Pseudepigr. des AT*, Tüb. 1900, ii. 370). The first appearance of this idea is in one of the sections of *Enoch* (91–104, *c.* 134–94 B.C. [so Charles, p. 28]). Here, under the influence of the 70 years of Jer 25[12], the doctrine of 10 world-weeks is found. The first 7 of these are increasingly wicked; at the end of the 7th the 'elect of righteousness' receive revelations concerning the whole creation (93[3f.]). Now begins the Kingdom, and in the 8th week sinners are delivered into the hands of the righteous for destruction; the latter acquire houses, and the temple is built in glory. The righteous judgment is revealed to the whole world in the 9th week. Sin vanishes from the earth, which is, however, written down for destruction. At the end of the 10th week the great Judgment occurs. The earth is destroyed; the first heaven departs, and the new heaven appears (91[12f.]). The righteous dead rise to it from their intermediate abode (91[10] 92[3] 103[4] [? resurrection of the spirit]); they live in goodness and righteousness, and walk in eternal light in Heaven (104[2]). In this book the wicked at death are cast into Sheol (99[3]), and here they are confined for ever (103[7. 8]). Sheol has thus become hell.

In some other works of this period it is not clear whether the Kingdom is temporal or not. Thus in the *Book of Jubilees* (*c.* 135–96 B.C.), after the usual 'Messianic woes,' there is a return to righteousness and a Messianic Kingdom, with God dwelling in Zion in a new sanctuary (1[26. 29] 23[13f.]). Heaven and earth are gradually renewed as a conditional result of man's being transformed spiritually (4[26]). There will be no Satan or any evil destroyer, and men will attain to 1000 years (23[27. 29]). The verse which says that God will 'descend and dwell with them throughout eternity' (1[26]) seems to point to the eternity of this Kingdom; but, on the other hand, it seems to terminate with the great Judgment (see *Bk. of Jub.*, ed. Charles, 1895, p. 150, note on 23[30]), in which the fallen angels and their children, Mastema or Satan, and all sinners are to be judged (4[19. 24] 5[10] 10[8] 23[11]). The resurrection is not definitely mentioned.

The same uncertainty characterizes the *Psalms of Solomon* (*c.* 70–40 B.C.), with their vivid presentation of the Messianic hope, and of a personal Messiah, Χριστός, who will appear and drive out from Israel the heathen and sinners, but with spiritual weapons, and gather together the holy people, and rule them in holiness. The earth will be divided among them. The heathen will serve him as vassals, and Jerusalem, purified and made holy, will be the centre of his holy and wise rule (*Pss* 17. 18). There is to be a final day of judgment (15[13. 14]); but, as this is never said to precede the Messianic Kingdom, and as the duration of the latter is probably 'conterminous with that of its ruler' (Charles, *Crit. Hist. of Doct. of Fut. Life*, 1899, p. 223), we may assume that it occurs at its close. It is a day of mercy for the righteous,[1] who rise to life eternal (3[16] 13[9]) and inherit life in gladness (14[7]), but of recompense for the wicked, who receive Hades (the abode of sinners, 16[2]), darkness, and destruction for ever (3[13] 14[6]).

The temporal Kingdom is probably also to be found in the *Assumption of Moses*, dating from the beginning of the Christian era. After a time of repentance (1[18]), God arises in wrath, and, amid convulsions of Nature, interferes on behalf of Israel. Satan will be no more. 'Then thou, O Israel, wilt be happy' (10[8]). Finally, Israel is exalted to the firmament, and thence looks down upon its enemies in Gehenna (or on earth?) (10[3ff.]). There is no Messiah in this book.

A clearer view of the temporal Kingdom is to be found in some of the constituents of the *Apocalypse of Baruch* (A.D. 50–70). It will be preceded by tribulations and convulsions of Nature which do not affect Palestine (27–29[2]). Messiah is then revealed (29[3] 39[7]). In two of the sections he slays (1) the leader of the hostile fourth empire, Rome (39[5]–40[3]; the 'leader' is a kind of Antichrist [see *ERE*, vol. i. p. 578[b]]); or (2) the hostile nations which have trodden down the seed of Jacob. The others he spares (72[2f.]). The Kingdom is temporal (εἰς τὸν αἰῶνα), and lasts until 'the world of corruption' is at an end (40[3] 73[1]). It is also sensuous. Behemoth and Leviathan serve as food for the righteous remnant—the 'Messianic banquet' (cf. 4 Ezr 6[49f.]).[2] The earth yields fruits 10,000-fold; each vine has 1000 branches, each branch 1000 clusters, each cluster 1000 grapes, each grape produces a cor of wine. Winds bring aromatic perfumes, clouds distil the dew of health, and the treasury of manna again descends (29[4f.]; cf. Is 25[6-8]). There is joy, no weariness, disease, anxiety, or sin. No one dies untimely; women have no pain in childbirth. Wild beasts minister to men. There is no toil in labour (73. 74). At the close of this period, 'the Consummation of the times' (30[3]), Messiah returns to heaven (? see 30[1]), and the righteous rise. Now begins the Day of Judgment (59[8]), and the time of increased perdition and torment for the wicked (54[15. 21]).

(β) But with this period there arose attempts at giving the exact duration of this temporal Kingdom, connected with the growing view of the world-ages.[1] Jeremiah's prophecy of the coming of the Kingdom after 70 years (25[12]) had not been fulfilled. At a much later time (*c.* 168 B.C.) the writer of Daniel returns to the number 70, but re-interprets it as 70 weeks of years (see Cornill, *Die siebzig Jahrwochen Daniels*, 1889), looking for the establishment of the Kingdom after 8½ years (9[24]). The writer of *Enoch* 83–90 also re-interprets it, and speaks of 70 shepherds, to whose care the nation is given from the beginning of the heathen attack until the establishment of the Kingdom (89[59ff.]), the period of their rule being subdivided into 12, 23, 23, 12 (=70) times (89[72] 90[5]). A more exact method of dating is found in *En.* 91–104 (early in 1st cent. B.C.). Here the world's history is divided into 10 week-periods (93[3f.]). At the close of the 7th begins the Messianic Kingdom, in the 9th the revealing of Judgment, and in the 10th the Judgment and the end, opening up a period of limitless weeks (91[2f.]). The writer is living towards the close of the 7th period (93[10]). In the *Secrets of Enoch* (*c.* A.D. 1–50), the author, perhaps basing upon the Persian conception of the duration of the human race during 6 millenniums,[2] uses an argument which was to become popular in later times (§ 15). The world having been created in 6 days, these days, each of 1000 years (Ps 90[4]), represent the course of the world's history, followed by the Sabbath rest of 1000 years. This 'rest' is the duration of the temporal Messianic Kingdom (without a Messiah) now first regarded as a millennium. It is followed by the Day of Judgment, which the righteous escape, receiving a final award in Paradise (9); but the wicked are cast into hell in the third heaven (10). There is no resurrection.

In 4 Ezra, after many signs, wonders, and evils, Enoch and Elijah are revealed, and evil is blotted out (6[18ff.]). Then Messiah, God's Son, is revealed 'with those that be with him,' and his Kingdom lasts for 400 years (this period was arrived at by comparing Gn 15[13] with Ps 90[15]; see Gfrörer, ii. 253). Those who have escaped the woes and evils rejoice in it, as well as 'those revealed with him'—possibly the righteous dead now raised (Charles, 286; cf. 13[52], where Messiah is revealed with certain OT saints). Messiah now dies, along with all men. There is a 7 days' silence, followed by the resurrection of *all mankind*, and the last Judgment, a day in which none of the phenomena of Nature is existent, only the splendour of the Most High. It endures a week of years. The righteous enter Paradise and the wicked Gehenna (5. 6. 7). Messiah is here conceived of as a semi-Divine and a mortal being, and he has no part in the Judgment. If the idea of a first resurrection is really to be found here, it is obviously carried over from those earlier views, in which all the righteous rose to share in the eternal Messianic Kingdom. It is also found in the Talmud (Weber[2], 304 f.).

(3) *The Other-world Kingdom.*—Although the persistence of the hope of the Kingdom is one of the most remarkable features of Judaism, and one shared by no other ethnic religion, yet an extremely pessimistic view of the world led in some quarters to a complete abandonment of any hope of a Messianic Kingdom. This is found in two of the sections of *Apoc. Bar.*, written after the fall of Jerusalem (see Charles's ed., 1896, p. lv). The Final Judgment is soon to take place (20[2] 23[7] 25). Souls will be brought forth, of the righteous from their 'treasuries,' of the wicked from their place of temporary punishment (30[2-5]). The earth gives back their bodies in the form in which it received them in order that they may recognize each other. Then follows the Judgment, at which books are opened in which sins are written (24[1] 49. 50; cf. 21. 23. 24[1]). Afterwards the bodies of the righteous are transformed to glory, and they receive 'the world which does not die,' and dwell in the heights of that world (51). The wicked suffer torment (30[5] 51[6] 52[3]). The transitory creation is renewed; there appears 'a world which does not die' (32[6] 48[50] 51[3]). For a similar but less detailed picture of the future, see ch. 85, also the so-called 'Apoc. of Salathiel' in 4 Ezr 4[34f.], and 4 Maccabees.

(ii.) In later prophetic books the *Resurrection* includes the righteous and also wicked Israelites. In Apocalyptic books it generally excludes the wicked (*Test. xii. Patr.*; 2 Mac., *En.* 83 ff. 87 f. 90[33] 91 f. [resurrection of the spirit], *Ps. Sol.* 3[16] [bodily or spiritual]). But it sometimes includes the wicked Israelites or some of them, though their resurrection may not be a bodily one (*En.* 22[11] 51[1. 2]; but cf. 61[5] [righteous in a spiritual body] 51[4] 62[15. 16]). Again, in others, perhaps as a result of Christian influences, there is taught a resurrection of all, both Jews and Gentiles, righteous and wicked (*Apoc. Bar.* 30[2-5] 50. 51, 4 Ezr 7[32f.],

[1] The Judgment is a 'day of mercy' for the righteous, but so also is the day when Messiah appears (18[5]). Does this mean that the Judgment takes place on that 'day'?

[2] Cf. Ps 74[13f.], Ezk 29[5] 32[4f.]. In *Enoch* 60[72] Leviathan and Behemoth are said to be 'parted.' In the Talmud (*Baba bathra*, 74*a*) the saints are to feast on Leviathan in the time of Messiah. In the Targum of pseudo-Jonathan on Nu 11[26f.] Israel will feast on the ox prepared for them from the beginning (see Gfrörer, *Gesch. des Urchristent.*, Stuttgart, 1838; Weber, *Lehre des Talmud*, 1880, pp. 156, 195, 370, 384). In Persian eschatology the marrow of the ox Hadhayôsh serves as food of immortality to the righteous (*Bund.* xix. 13, xxx. 25; cf. also *JE* viii. 38 f.).

[1] In *Apoc. Bar.* 23[4] f., when Adam sin … e to be born was numbered; and, until it is f … rection cannot take place. Cf. 4 Ezr 4[36], Rev …

[2] Six millenniums preceded these (se…

Test. xii. Patr. [Benj. 10]; cf. *Sib. Or.* iv. 181 f.). The Talmud looks forward to a resurrection of the righteous only, though occasionally a resurrection of the righteous Gentiles, or even of all Gentiles, is taught (Gfrörer, ii. 276 f.; Volz, 247; Eisenmenger, *Entdecktes Judenthum*, Königsberg, 1700, p. 908 f.). In *Jub.* $23^{30.\,31}$ the *spirits* of the righteous are glorified; cf. *Ass. Mos.*, and the Alexandrian Jewish school—Sirach, Philo, also the Essenes and Sadducees. In *Secrets of Enoch* $22^{8f.}$ righteous souls are clad in 'the raiment of God's glory' (cf. the Pharisaic belief in Jos. *BJ* II. viii. 13 [good souls receive 'other bodies']; see Schwally, *Leben nach dem Tode*, Giessen, 1892, p. 171 f.).

Dn 12 is the first place in the OT where the Final Judgment includes the dead. A not dissimilar idea of a final judgment for certain of the dead, already subjected to a preliminary judgment, appears in Is $24^{21.\,22}$. In these Apocalyptic books, where punishments are allotted to evil angels or the dead before the Final Judgment, a preliminary judgment is also implied or stated. Such a judgment is often inflicted on the living by Messiah, or the saints, at the beginning of the temporal Kingdom. In either case it is followed by the Final Judgment, which allots the last and worst condition of the wicked. Where the Messianic Kingdom is eternal, the Final Judgment usually precedes it. But, where it is temporal, it occurs at its close.[1]

(iii.) The *condition of the dead* between death and the Resurrection or Final Judgment may be summarized as follows. Sheol is an intermediate state in which the righteous are separated from the wicked. From it the righteous rise to the eternal Messianic Kingdom (*En.* 1–36; cf. 2 Mac). Occasionally it becomes also the final state of punishment for the wicked or for some of them, though Gehenna is the more usual term for this state (*En.* 22^{13} 99^{11}, *Ps. Sol.* 14^{6} 16^{2}, *Ass. Mos.* 10^{10}, *Jub.* 7^{29} 22^{22}, Talmud; cf. also the fiery abyss in *En.* $18^{11f.}$ $21^{8f.}$ for wicked angels). A similar conception of Sheol as an intermediate abode is found in *En.* 91 f., 4 Ezr 4^{41}, *Apoc. Bar.* 11^{6} 23^{6} 52^{2}, Josephus; but here the righteous rise to a Kingdom in heaven, or to a Messianic Kingdom in a new heaven and earth (*En.* 37 f.), although, as in 4 Ezra, there is a first resurrection to a temporal Kingdom. Where Sheol is regarded as a place of torment for the wicked at death, the righteous go to a separate division of it as an intermediate abode, or else to an intermediate Paradise (*Jub.* 7^{29}, *En.* 61^{12}, *Secrets of En.* 32^{1}). The older conception of Sheol as a general place of the dead is still found sporadically, unassimilated with the newer ideas (see Volz, *Jüd. Esch.* 289). The final reward of the righteous is generally 'everlasting life' (Dn 12^{2}, *En.* 40^{9}, *Secr. of En.* 65^{8}; cf. Mk 10^{17} etc.)—usually in heaven, or in the new heaven and earth. That of the wicked is 'everlasting destruction' (*Ps. Sol.* $15^{12f.}$). They remain in Sheol or suffer torments in Gehenna or the 'abyss of fire.' Annihilation by fire which goes forth from God is referred to in *Asc. Is.* 4^{18}. Torments, fire, and darkness are frequently mentioned; and fire, ice, and snow, as well as spirits of retribution reserved for the Day of Judgment, occur in *Test. xii. Patr.* (Levi 3^{2}). In later Judaism, Gehenna is the purgatory of faithless Jews, but Gentiles are eternally punished in it.

(iv.) The place of the *Gentiles* in the earthly Messianic Kingdom varies in Apocalyptic books. The righteous heathen worship God (*Sib. Or.* iii. 710 ff.). Those who have not been enemies of Israel are spared, and are subject to Messiah or Israel (*En.* 10^{21} 90^{30}, *Apoc. Bar.* $72^{2f.}$, *Ps. Sol.* 17^{32}; cf. Rev $21^{24f.}$ 22^{2}), or those who repent and accept the light of Messiah are gathered in with Israel and enlightened (*En.* $48^{4.\,5}$ 50^{2-5}, *Test. xii. Patr.* [Levi 18^{9}, Naph. $8^{3f.}$]). But in other cases (mainly 1st cent. B.C.) the Gentiles are doomed to destruction and punishment (*En.* 37 f., *Ass. Mos.* 10, 4 Ezr $13^{37f.}$, and also in later Judaism). In *Jub.* 23^{30} (cf. 50^{5}) they are driven out of Palestine (cf. *Sib. Or.* v. 264, Jl 4^{17}).

(v.) *The two ages.*—The present state of things (temporal, evil, and corruptible) is often contrasted with the future state (blissful, eternal, and incorruptible). Hence arose the doctrine of the two ages—this and that æon, ὁ αἰὼν οὗτος (cf. Ro 12^{2}, 1 Co 1^{20} $2^{6.\,8}$), הָעוֹלָם הַזֶּה; and ὁ αἰὼν ὁ μέλλων or ὁ ἐρχόμενος (Mk 10^{30}, Eph 1^{21}, cf. 2^{7}), הָעוֹלָם הַבָּא (cf. 'the great æon,' *Secr. of En.* 58^{5} 61^{2}). This age corresponds, on the whole, with the transient world-ages (see above). The new age begins either with the Messianic reign—eternal or temporal—or (a later view) at the end of the Messianic Kingdom which introduced a still higher order, or the heavenly state (4 Ezr $7^{30.\,31}$, *Apoc. Bar.* $44^{9ff.}$). In *Apoc. Bar.* $74^{2f.}$ the temporary Kingdom is mediant between the two ages. The end, completion, or consummation of the age, or the times, or of all things, is often referred to and is confidently awaited; and these phrases are very common in the NT (Dn 7^{26} 12^{13}, *Apoc. Bar.* 27^{15}, Mt 13^{39} 24^{3} 28^{20} ἡ συντέλεια τοῦ αἰῶνος; cf. He 9^{26} συντέλεια τῶν αἰώνων, 1 Co 10^{11} τὰ τέλη τῶν αἰώνων, 1 P 4^{7} πάντων τὸ τέλος).

A common Jewish expression, from the 1st cent. onwards, was 'to take possession of the future æon.' For a similar idea, cf. *En.* 48^{7}: the Son of Man 'shall preserve the portion of the righteous,' and Col 1^{12}. See Gfrörer, ii. 212 ff.; Schoettgen, *Horae Hebr.*, Dresden, 1733, i. 1153 ff.; Schürer, *HJP* II. ii. [1885] 133, 177.

(vi.) *Parsi influences on Jewish eschatology.*—Darmesteter (*SBE* iv. [1880], Introd. lvii ff.) and others saw a strong Jewish influence on the Avesta. Other scholars have maintained that there was a considerable borrowing from Parsiism in the formation of Jewish eschatology, just as in other beliefs. The question is complicated by the fact that we do not know whether the later Parsi beliefs also existed in earlier times. There are certainly profound differences between the two eschatologies. Moreover, though superficially there appear to be strong resemblances between them,—*e.g.* the idea of world-periods, the binding and conquest of evil powers, preliminary judgments and awards after death, the belief in a Messiah, the destruction of the world in connexion with resurrection and judgment, the resurrection, the renewal of the worlds,—a detailed comparison of these general likenesses reveals many discrepancies. Many elements of Jewish eschatology have their roots in Semitic mythology, and it is probable that the Parsi influence was not generally fundamental, but merely formative in the case of beliefs which were already in existence or in process of being born, with occasional transmission of details.

On this subject, see Böklen, *Die Verwandtschaftsverhältnisse der jüd.-christl. mit der pars. Eschatologie*, Göttingen, 1902; Stave, *Ueber den Einfluss des Parsismus auf das Judentum*, Haarlem, 1898; Cheyne, *Origin of the Psalter*, 1891, p. 381 ff.; Mills, *Avesta Eschatology*, Chicago, 1908; Söderblom, *op. cit.* 301 ff.; Bousset, *Rel. des Judentums*, 473 ff.

II. **Eschatology in the Gospels.**—(*a*) The interpretations given to our Lord's eschatology have been many. It has been taken with absolute literalness; it has been spiritualized; it has been regarded as subject to interpolation, greater or less; or its originality is admitted, but its ex-

[1] In the Jewish-Christian *Test. of Abraham* (2nd cent.) there are 3 judgments—the 1st at death, by Abel; the 2nd by the 12 tribes of Israel, at the Advent; the 3rd by the Lord Himself (§§ 13, 14; see *TS* ii. 2. 29 ff.).

pected fulfilment is regarded as a mistake and an illusion which, however, does not disannul Christ's real greatness. In reviewing our Lord's teaching, we must keep before us certain important probabilities: (1) that He used the current Apocalyptic language as the vehicle of a greater truth; (2) that Apocalyptic language which He did not use has been attributed to Him; and (3) that His sayings were misunderstood and a wrong colouring given to them. M. Arnold's maxim is here of importance: 'Jesus above the heads of His reporters.'

Christ's teaching points to two separate ways of regarding the Kingdom of God. It is a present spiritual reality (Mt 11^{12} 12^{28} 13$^{16.17}$, Lk 17$^{20f.}$ ἐντὸς ὑμῶν). But it has also a future consummation—the 'glory of His Kingdom,' the παλιγγενεσία. The one condition is a preliminary to the other. The present Kingdom revealed in righteousness is to spread until it is universal.[1] St. Paul's conception of the Kingdom is similar. It is a present and purely spiritual state (Ro 14^{17}, Col 1$^{13f.}$), but our full inheritance of it is in the future (1 Co 6^{9} 15^{50}, Gal 5^{21}, Eph 5^{5}). But in some sayings of Christ the future Kingdom is introduced suddenly and is catastrophic. How are these different aspects—development and catastrophe—to be reconciled? The eschatological theory that Christ thought that the Kingdom would be inaugurated immediately after a short period of 'Messianic woes,' He Himself being revealed as Son of Man, or Messiah, after a supernatural removal and transformation, but that, having seen this to be impossible, He began to speak of a future Kingdom and brought on His death in order that the catastrophic coming of the Kingdom might at once follow, cannot be proved.[2] Moreover, there was no Jewish precedent for such a conception of Messiah. Nor can it be certain that Christ looked forward to an immediate coming of the (future) Kingdom.

In Mt 10^{23} a coming of the Son of Man before the disciples go over all the cities of Israel is foretold. This completes a section (vv.$^{17-23}$) which has no parallel in the Mk. (6$^{7f.}$) and Lk. (9$^{1f.}$) accounts of the mission of the Twelve, these ending with the command to shake off the dust from their feet (cf. the parallel mission of the Seventy, Lk 10$^{1f.}$). This discourse in Mk. and Lk. (= Mt 10$^{1-16}$) is thus complete in itself. This is seen in the fact that the additional section in Mt. (v.$^{17ff.}$) has parallels in the Eschatological discourse in Mt 24 = Mk 13 = Lk 21. Verse ^{23} has thus nothing to do with the mission of the Twelve, and is perhaps a mistaken form of the formula found in Mt 24^{14}, Mk 13^{10}, unless it refer to Pentecost or the destruction of Jerusalem. Hence it cannot have the meaning given to it by Schweitzer (*Quest*, p. 357), that the Parousia will take place before the return of the Twelve from their hasty journey. Further, the sufferings prophesied (v.$^{17ff.}$) are thus not those which will befall the Twelve on their mission, but refer to a state of things after Christ's death and before the unknown future Parousia (cf. Jn 16^{2}). They are the 'Messianic woes' of current eschatology.

The two methods of regarding the Kingdom, present and future, correspond to the Jewish conception of a temporary, followed by an eternal Kingdom (§ 10 (*d*)), but with important differences. Christ has come and established a Kingdom of God on earth—not, however, a sensuous Kingdom, but a reign of righteousness; and not a reign of righteousness mechanically produced, but the result of the gradual yielding of human wills (cf. 2 Co 5^{17}). But the consummation of the Kingdom was not on earth but in heaven. To this our Lord looked forward, but He probably accepted and taught that the consummation would have its catastrophic beginning, here following Apocalyptic eschatology. But we do not know how far this adoption of current thought is original, or how far it is merely attributed to Christ. Eschatology has an important place in Christ's teaching *as we have it*, yet there are other elements, and it is too often forgotten that we have not a complete record of all He taught.

The present Kingdom is not sensuous or introduced by catastrophic or other signs (save the coming of Elias = John Baptist), but spiritual and 'not of this world' (Jn 18^{36}). The future Kingdom is heavenly, and thus, as far as men are concerned, the two aspects, present and future, are one and the same. Cf. Mk 10^{5}, where men's method of receiving the Kingdom is the condition of their enjoying its future consummation. The future Kingdom corresponds to the heavenly Kingdom of later Apocalyptic, but is far more spiritually conceived (see Oesterley, *Doctrine of the Last Things*, 1908, p. 190 ff.).

A prophecy of the Parousia and Judgment is already found in Mk 8^{38}—the Son of Man is to come in the glory of His Father with His holy angels. But we shall consider first the eschatological discourse Mk 13 = Mt 24$^{1ff.}$ = Lk 21$^{5ff.}$. It opens with a prophecy of the destruction of the Temple, followed by the question as to the time and sign of 'these things,' viz. the Temple's destruction. The discourse answers the question, but it goes much further.

In Mk 13^{4} and Lk 21^{7} the question refers only to the destruction of the Temple. Therefore the eschatological form of the question in Mt 24^{3}—'the sign of thy coming and of the end of the age'—may be regarded as an interpolation. The reply must simply have been one referring to the destruction of Jerusalem—a subject often spoken of by Christ—as well as the doom of unbelieving Jews. It is specifically referred to in Lk 19$^{41f.}$, and less clearly in 23$^{28f.}$, where it is near at hand. Cf. also Mt 12$^{43f.}$, 23$^{37f.}$, Mk 12^{1}, Lk 11^{51} 13$^{1f. 34f.}$.

In Mk 13, with the prophecy of signs preceding and accompanying the fall of Jerusalem is mingled a prophecy of an event of much wider significance, preceded by signs of more world-wide importance.

The most striking difference in these two prophecies is that, while the one peril is imminent (vv.$^{9.11.29.30}$), the other is at an unknown date (v.^{32}), this passage following on the other and offering a strange contradiction to it if both refer to the same event (cf. Lk 12^{40}). Hence probably v.^{10} belongs to the second prophecy—before the end, not before the fall of Jerusalem, must the gospel be preached among all nations. Again, v.^{24} 'after that tribulation . . .' must refer to the wars and convulsions of vv.$^{7.8}$, not to the destruction of Jerusalem, if we follow the line of traditional Apocalyptic. Thus the mingling of two prophecies—one referring to Jerusalem, the other to the Parousia—by some one who believed in the imminent coming of the Son of Man, confirmed or gave rise to the current view that it would take place soon after the destruction of Jerusalem.

The composite character of this passage is also seen in the fact that in the parallel passage in Mt 24 are inserted vv.$^{26-28. 37-41}$. These are not found in the parallel passage in Lk., but occur with him in a different connexion, viz. after the saying that the Kingdom cometh not with observation, etc. (17$^{20-22}$). In Mt. they break the continuity of the passage and occur separately, while in Lk 17 they are brought together (vv.$^{23. 24. 37. 26. 27. 34. 35}$) with some additions (vv.$^{28. 29. 32. 33}$), which have parallels elsewhere in Mt 10^{39} 16^{25} (cf. Mk 8^{35}). Again, Lk 17^{31} occurs in a different context in Mt 24$^{17.18}$ = Mk 13$^{15.16}$. (In Lk. the sections describing an outward coming of the Kingdom are surely out of place in a description of the Kingdom as 'within you.') Mk 13$^{9-13}$ occurs in Mt 10$^{17-23}$ in connexion with the mission of the Twelve, where it is clearly out of place, and it is much shortened in Mt 24$^{9.13.14}$. The passage regarding the coming of the Son of Man and the sending forth of His angels (Mk 13$^{26.27}$) may combine words spoken separately, viz. Mk 8^{38}, Mt 13$^{40f.}$, in which the final day is differently described as a coming of the Son of Man on clouds with angels, and a sending forth of angels (though for a different purpose—'to gather out all that offend,' as against 'to gather in the elect').

The composite character of the discourse may thus be assumed. By many critics vv.$^{7. 8. 14-20 (21-23 ?) 24-27. 30. 31}$ are regarded as a Christian adaptation of a Jewish Apocalypse, written just before the fall of Jerusalem, or a Christian Apocalypse using Jewish materials, and containing many direct parallels with Jewish Apocalypses (see Charles, p. 326 f., ed. *Ass. Mos.* pp. 80, 87), as well as with prophetic eschatology. The reference to the coming of the Son of Man shows that it is at an unknown (cf. Lk 12$^{35. 39. 43}$, Mt 25$^{1f.}$) and possibly distant time (cf. 'at even,' etc.). Hence it is unnecessary to include vv.$^{14-20}$ in this Apocalypse, for they form a natural sequel to the verses dealing with the signs of the fulfilment of 'these things,' *i.e.* the destruc-

[1] Cf. Harnack, *Sayings of Jesus*, 1908, p. 232: 'If any one finds it impossible to accept the antinomy "the Kingdom is future and yet present," argument with him is useless.' See also Sanday, *HJ* x. [1911] 102.

[2] For these views, see Weiss, *Die Predigt Jesu vom Reiche Gottes*, Göttingen, 1910; Schweitzer, *Von Reimarus zu Wrede*, Tübingen, 1906 (Eng. tr. *The Quest of the Historical Jesus*, 1910); Tyrrell, *Christianity at the Cross Roads*, 1909. Cf. also F. C. Burkitt, 'The Parable of the Wicked Husbandmen' in *Trans. 3rd Intern. Cong. Hist. Rel.*, Oxford, 1908, ii. 321 ff.

tion of the Temple, which is near at hand. Whether they are original to the answer is a different question, and the probability is that they are not (cf. v.^{14} 'readeth,' not 'heareth,' and the completely different form in Lk 21^{20} 'compassed with armies').

Thus the prophecy relating to Jerusalem contains—

vv.$^{5.6}$ Appearance of false Christs.
vv.$^{9.11.13}$ Persecution of disciples.
v.^{12} Family quarrels.
vv.$^{14-20}$ Warnings and woes.
vv.$^{21-23}$ Appearance of false Christs and prophets.
vv.$^{28-31}$ Near approach of these events.

Probably this discourse has been coloured by the eschatological thoughts of its reporter, for it is unlikely that our Lord would give details of the event. Lk 19$^{43f.}$ 21$^{20f.}$ would then also be so coloured or interpolated.

This leaves the purely eschatological passage—

vv.$^{7-8}$ Wars, earthquakes, famines; the *beginning* of sorrows, but the end is *not yet* (ἀλλ' οὔπω τὸ τέλος; Lk 21^{9} οὐκ εὐθέως).
v.^{24} After *that* tribulation, further phenomena in Nature (cf. Lk 21$^{25.26}$), which are not so much a sign as an accompaniment of
vv.$^{26-27}$ The coming of the Son of Man.
vv.$^{32-37}$ The unknown time of the coming. Warnings to watch.

The inconsistency of an unknown coming being heralded by signs is inevitable in Apocalyptic, and occurs in 1 and 2 Thess.

Thus the eschatological passage, vv.$^{7.8.24-27.32f.}$, gives a clear picture in prophetic and apocalyptic style of the Parousia at an unknown and probably distant time.[1] That it was spoken as it stands need not be asserted, but it is unnecessary to suppose that it has been taken bodily from an existing Apocalypse. Christ's references elsewhere to the Parousia are less detailed, but their language corresponds.

The sudden but unknown Parousia of the Son of Man is often mentioned—Mt 24^{44}=Lk 12^{40}; Lk 17^{24}; cf. Mt 24$^{27.37f.}$ The Son of Man is to come in the glory of His Father and in His own glory with His holy angels, or in the clouds of heaven, to reward every man according to his works, or to be ashamed of those ashamed of Him (Mk 8^{38}=Mt 16^{27}=Lk 9^{26}; cf. Mt 25^{31}, Mk 14^{62}). The Son of Man is to send His angels to gather out of the Kingdom all that offend, but the righteous will shine as the sun (Mt 13$^{41-43}$). The judgment is further described in the discourse of the Sheep and the Goats (Mt 25$^{31-46}$). For other references to the Day of Judgment, see Mt 12$^{41.42}$=Lk 11$^{31.32}$; Mt 11^{22}=Lk 10^{14}; Mt 11^{24}.

To these passages there are parallels in Dn 7^{13} 'came with the clouds of heaven,' and in *Enoch*, where the Son of Man is described as sitting on the throne of His glory to judge (45^{3} 61^{8} 62^{5} 69^{27}). Angels of punishment take the wicked and execute judgment upon them (62^{11}). Thus these, as well as the passage in Mk 13, echo the language of Apocalyptic.

The passage, 'When in the regeneration,' etc. (Mt 19^{28}), does not occur in the parallel passage Mk 10$^{28f.}$=Lk 18$^{28f.}$. But it occurs in a different connexion in Lk 22$^{29.30}$, where it is obviously out of place with what precedes. It may be an eschatological addition suggested by such an incident as Mt 20$^{20f.}$; cf. Mt 25^{21}. It is the natural result of speaking of inheriting the Kingdom of Heaven (Mt 25$^{33.34}$), but it is found in older Apocalypses; cf. *En.* 108^{12} 'I will seat each on the throne of his honour'; *Test. xii. Patr.* [Jud. 25^{1}], at the resurrection Judah and his brethren will be chief of the twelve tribes; cf. Benj. 10^{7}; cf. also Rev 3^{21}. The idea of judgment by the righteous is already found in Dn 2^{44}, *En.* 91^{12} 95^{7} 96^{1} 98^{12}; Wis 3^{8}, cf. 1 Co 6$^{2.3}$.

Christ spoke so often of the judgment on Jerusalem that we can hardly doubt that in His mind it was a Divine judgment, and, as such, a coming of the Son of Man to the city which had rejected Him.[2] Much of the detail is obviously interpolated, and it was not the Final Judgment (as Wendt [*Teaching of Jesus*, 1892, ii. 364 f.] insists), though the horror excited by the fall of Jerusalem caused an inevitable mingling of the two events in Synoptic tradition. Possibly, therefore, Mt 10^{23} may have been spoken with reference to this event as a 'coming.' (One may here compare the punishments on the unfaithful churches in Rev 2$^{15.16}$ 3^{3}, which are regarded as a 'coming' of Christ.) After this 'coming,' Christianity would shake itself free of Judaism and enter on that long period

[1] The time unknown to the Son is recalled in Rev 14^{15}, where the angel carries the message to the Son of Man announcing that now the time has come.

[2] See Durell, *Self-Revelation of our Lord*, 1910. For the different suggestions in Christ's teaching about the Kingdom—present, near future, more distant future—see Sanday, *HDB* ii. 620.

of growth which is pointed to in Mt 13$^{24f.36f.47f.}$ 25^{19}, Mk 2$^{19.20}$ 4$^{26f.}$. Thus, in a sense, the present Kingdom on earth has its catastrophic coming or point of development, analogous to the catastrophic coming of the future heavenly Kingdom.[1]

The emphasis laid on the unknown time of the coming, as well as the mingling of two events in Mk 13, helps to elucidate those passages which look forward to it within 'this generation.' In Mk 8^{38} 9^{1} (=Mt 16$^{27.28}$, Lk 9$^{26.27}$) 'some shall not taste of death till they have seen the kingdom of God come with power' (Lk. 'see the kingdom of God'; Mt. 'see the Son of Man coming in his kingdom') immediately follows on a reference to the Parousia and Judgment. The latter, said elsewhere to occur at an unknown time, is here combined with an event said to be near at hand. Two different things are spoken of, or were spoken of, at different times and combined by one who believed in the imminent catastrophic coming and establishment of the Kingdom. It is impossible to suppose (as Dobschütz does, *Eschat. of the Gospels*, 1910, p. 116) that there is here no real contradiction because, in putting the date at the end of His generation, Christ gives no real date. It should be noted, however, that Mt. is more eschatological than Mk., who again is more so than Luke. This is an example of the way in which to a non-catastrophic saying regarding the Kingdom there may be given such a colouring. The Kingdom coming, or coming in power, was not necessarily catastrophic, like the 'coming' of the previous verse. Already it had come as an unseen power; the future coming with power within 'this generation' might quite well refer to a spiritual outpouring, such as Joel foretold and such as occurred on the Day of Pentecost (cf. Jn 14^{26} 15$^{26.27}$ 16$^{7f.}$). This was seen by the disciples. It was also a judgment, marking out the Christian community, the faithful, who were rewarded with a deeper spiritual life, from those who put Christ to shame by not accepting His message.

That this is the case may be seen from the fact that the Parousia is invariably spoken of as a coming of the Son of Man with His angels, followed by a judgment (Mk 8^{38}, Mt 13^{49} 16^{27} 25^{31}, Lk 9^{26}). This differentiates it from the simple seeing the Kingdom, or coming of the Kingdom with power (Mk 9^{1}, Mt 16^{28}, Lk 9^{27}), and suggests that these phrases do not refer to the Parousia properly so called. Similarly, the Kingdom is already come in the presence of Christ in the world (Lk 17$^{20f.}$), and His invisible presence might also be felt in all future spiritual, moral, or national crises.

That the future unknown coming may also be a distant coming is seen from the form of the saying, Mk 13^{35} 'at even, or at midnight, or at cock-crowing, or in the morning.' Similarly in Lk 19$^{11f.}$, to those who thought the coming of the Kingdom of God imminent Christ spoke the parable of the Talents, with the phrase 'Occupy till I come.' Cf. the parallel passage Mt 25^{19} 'after a long time the lord of those servants cometh.'[2] Again, the words to the high priest, ἀπ' ἄρτι ὄψεσθε (Mt 26^{64}), or simply ὄψεσθε (Mk 14^{62}), do not necessarily denote that he would see the coming of the Son of Man in his lifetime, but may mean after death, at the resurrection, when the unjust as well as the just would rise, according to a well-known opinion of Jewish Apocalyptic. Cf. *En.* 51^{1}, where at the coming of the Son of Man all Israel rises. It should be noted also that the parallel Lk 22^{69} says nothing of a coming of the Son of Man (cf. Ac 7^{56}). Thus the exhortation to watch for the unknown coming did not imply that it would be in the hearers' day, since Christ Himself did not know when it would be. It might be then, therefore they should be watchful. But the words are spoken also to future generations of disciples.

[1] In one of the sections of the *Apoc. Bar.* the fall of Jerusalem is antecedent to and preparatory for the Judgment (20^{2}).

[2] Cf. Mt 24$^{48.50}$ 'tarrieth,' 25^{5} 'tarried.'

In its present form the Kingdom fulfils the anticipations of the past, but these are generally spiritualized by Christ (cf. Dobschütz, 138 f.). Why, then, does He use the current ideas and language regarding the future catastrophic Parousia, without also clearly spiritualizing it? If He is correctly reported, His purpose may have been to show that the Son of Man would be the principal figure in the Kingdom, and to point to His own future justification as well as to the necessity of an ethical division before the establishment of the heavenly Kingdom—a division begun and ended by Himself. Although His disciples anticipated a literal fulfilment of these sayings in their own time, they also caught the spiritual sense, and their eschatological hopes did not interfere with their Christian life and conduct. In their discourses in Acts, though judgment is spoken of, the main stress is not eschatological. Indeed, though Christ used the language of His time as well as of past time, He did not necessarily mean that He would actually come on clouds, or that a great visible assize would take place. His hearers had no 'celestial language,' and perhaps to Him there was open only the inadequate language of His time—metaphor and pictorial imagery. It was the vehicle of His thought, and it expresses more than appears. Moreover, even the thoughts which lay in the depths of His personality, and which came into being through His deep consciousness of His relation to the Father, could perhaps only shape themselves as they rose to the surface from time to time, through the medium of His surface thoughts, while yet they always indicated their presence, or from time to time forced aside the refracting medium. Perhaps for this reason His eschatological conceptions bear the appearance of an imminent as well as of a catastrophic coming. Intense convictions loom large on the mental horizon and assume a nearness of fulfilment which is illusory. In times of intense thought we 'can crowd eternity into an hour.' This was true of many prophetic utterances,[1] and it was much more true of Apocalyptic convictions, which frequently speak of the nearness of the last things, as if they could not be otherwise conceived of (cf. *En.* 51^{2}, *Apoc. Bar.* 20^{4} 23^{7} 82^{2}). Yet combined with this is an uncertainty as to the time (*Apoc. Bar.* 24^{4} 4 Ezr 6^{59}, *Sib. Or.* iii. 55). Still, what is emphatic is less the thought of nearness than the absolute certainty of the reality of the things of the end.[2] For these reasons Christ's deeper knowledge and conviction of His position as Judge of men's thoughts and deeds took shape in His surface thoughts, mainly, though not always (see below), in intense eschatological convictions, which (if the nearness of the Parousia in His teaching is insisted on) then assumed the form of an imminent and catastrophic Parousia. We must, therefore, search for the rich meaning of which Christ's eschatology is full, and which its association with the past already connotes.

(1) Thus it is not necessary to assume that Christ taught absolutely an imminent Parousia. This overcomes the theory that such a prophecy was falsified, as well as the necessity of resorting to sophistical methods of explaining away the falsification.

(2) The literal acceptance of the Parousia teaching robs it of much of its meaning. Is there not rather here an impulse to moral conduct, because Christ comes as Judge not finally but always? So the sentence, 'Enter . . . joy . . . depart . . .,' suggests what is true in the course of human life. Those whose life is approved have a present joy, while the unrighteous already feel the self-imposed curse of separation from God. Present and future merge into one, and these conditions may be permanent if men choose to make them so. We may well see in Christ's eschatological language a picture of truth, not a reference to actual future events—a picture of His present and continuous judgment on mankind. Before Him, not at a 'Last Day,' but always, are gathered all nations; and in this, as in another sense, the saying is true, 'Lo, I am with you always.' The imagery of coming on the clouds of heaven is not too much for the splendour of this thought of a perennial and present judgment. OT prophecy was not fulfilled literally, but fulfilled far more effectively in the vindication of the eternal rule of righteousness, and its triumph over human pride and sin. This was pictured in concrete images, in elements drawn from the field of political, social, and cosmic life, forming one single and vast dramatic situation. Thus it gained in force. Isaiah recasts his details from time to time as new circumstances in history arise, but his main contention remains unchanged. So the dramatic action in Christ's picture of the last things is a representation of the continuous course of the Divine judgment. Hence, whether the language is His own or due to the additions of His reporters, such a line of interpretation is unaffected. It is also confirmed by the Gospel of St. John (see below), as well as by passages in the Synoptics (cf. Mk 2^{5}, Mt $10^{34f.}$ $11^{21f. 27}$ $23^{37f.}$).

In this connexion it should be noted that, while Christ is careful to preserve the prophetic and Apocalyptic ideas of the Kingdom, at the same time He spiritualizes them.

Thus the coming of the Kingdom is preceded by Elijah (John Baptist, Mt 11^{14} 17^{10-13}). Satan's (=Beliar's) power is destroyed (Mt $12^{27f.}$, Lk 10^{18}). Human ills are done away with—the blind, lame, deaf, healed; sinners brought to repentance. The conception of the Messianic banquet is not lost sight of: Mt 8^{11} (=Lk 13^{28} [Q]), Mk 14^{25}, Lk $22^{16. 30}$ (cf. Mt 22^{1-14} 26^{29}). But it is obvious that the latter passages are not to be taken literally; they are symbols of spiritual ecstasy and union (cf., for this, Rev 3^{20} 'will sup with him'), since elsewhere the sensuous conception of the Kingdom is excluded, the relations of sex are abolished, and men are as the angels (ἰσάγγελοι) (Mk $12^{24. 25}$).[1] We may compare the parables where the festival is used as a type of the Kingdom (Lk $14^{16f.}$), and also Christ's action in sitting down with publicans and sinners (Mk 2^{16}); cf. also Lk 14^{15}, description of the Kingdom as a marriage supper, though here it is the present Kingdom which is thus typified (v.[17]). The Kingdom is finally consummated in an entirely new order, the παλιγγενεσία (Mt 19^{28}). They who attain that æon are *τῆς ἀναστάσεως υἱοί* (Lk $20^{35. 36}$).

But it can hardly be doubted, as a comparison of parallel passages in the Synoptics abundantly suggests (cf. Dobschütz, 91 f.), that a great deal of eschatological colouring has been given to Christ's words by His reporters. In this connexion it is significant that Q contains less eschatological matter, and that coloured less highly (cf. Mk 8^{38} with Mt 10^{33}, Lk 12^{9}) than the others,[2] though still sufficient to show that Christ did speak in Apocalyptic language: Lk 22^{28-30} = Mt 19^{28}, a passage which bears evidence of a common original somewhat freely treated by the two writers ('continued with me,' 'followed me'; 'eat and drink' [Lk.]; 'in the regeneration . . .' [Mt.]). Mk. contains more, Mt. most of all. There is less in Lk., and least in Jn. (see B. H. Streeter, in *Oxford Studies in the Synoptic Problem*, 1911). Perhaps the destruction of Jerusalem deepened the colouring given to Christ's words in Mk. and Mt., if these Gospels date *c.* A.D. 70 (see Harnack, *Date of the Acts and the Synoptic Gospels*, 1911). Christ's reporters also more or less combined the idea of a coming of the Kingdom at a near date (destruction of Jerusalem, Pentecost) with the coming of the Son of Man at an unknown and remote date. This gave rise to the idea of a near Advent and Judgment, as we see it in the Epistles and in early Christian literature.[3] But this idea did not hinder the first followers from regarding the development of the Church as an historic process (cf. Inge, *Guardian*, 13 May 1910, p. 680, col. 3).

As has been seen, the conception of an immediate coming did not act upon the mind of Jesus. 'If we eliminate His eschatological ideas, His ethics remain unchanged' (Dobschütz, 13). There is no real evidence that the ethic of Jesus is an *Interimsethik*, as Schweitzer insists, but it is for all time, as is also the

[1] Cf. A. B. Davidson, *Old Test. Prophecy*, 1903, p. 353.

[2] Cf. Baldensperger, *Das Selbstbewusstsein Jesu*, Strassburg, 1888, p. 148.

[1] These ideas occur also in *En.* 62^{14} 'With that Son of man will they eat'; 51^{4} 'They will become angels in heaven'; cf. $104^{4. 6}$.

[2] Cf. Harnack, *Sayings of Jesus*, 1908, p. 250 f., 'The tendency to exaggerate the apocalyptic and eschatological elements in our Lord's message, and to subordinate to this the merely religious and ethical elements, will ever find its refutation in Q.'

[3] It is obvious that men who thought, after the Resurrection, that Christ would now restore the Kingdom to Israel (Ac 1^{6}) might err regarding the time of the Parousia.

ethic of St. Paul. The ethic of Jesus is an ethic of the Kingdom considered as a present reality, and its essence and influence still remain in the future heavenly Kingdom. The hopefulness of the early Christians, their belief that they were living in a new order, which would not be changed, but consummated, by the Parousia, gave them confidence to live on the ethical plane of this new state, with glad alacrity. (See F. G. Peabody, 'NT Eschatology and NT Ethics,' *Trans. 3rd Inter. Cong. Hist. Rel.*, Oxford, 1908, ii. 305 ff.)

That the actual sayings of Christ regarding both the destruction of Jerusalem and the Future Coming have been highly coloured by the Apocalyptic ideas of His reporters is seen (1) in the fact that in Jn. little allusion is anywhere made to the 'impending judicial calamities of the Judæo-Roman war, and the destruction of Jerusalem and of the temple' (Wendt, ii. 273); and (2) in the Johannine conception of judgment.

Christ knew what was in men (Jn 2^{25}); hence there is a present judgment, regarded as automatic and self-induced, which has results for the future (3^{36} 5^{24}). Unbelievers are judged already (3^{18}). But believers are not judged (3^{18} 5^{24}); the fact of their acceptance of the Light has freed them from judgment. Though the judgment is self-induced, and Christ in this sense does not judge (cf. 8^{15} $12^{47f.}$), yet, because He is the Light, He 'reproves' the dark deeds of men (3^{20}), while those who do the truth in presence of the Light have the Divine working in their deeds made manifest (3^{21}). Thus He, as the Light, does judge (cf. $5^{22. 24. 30}$ 9^{39} 12^{31}). But, throughout, judgment is a *present* process—no doubt with future results, but still working in the present. The judgment is not conceived as a future, catastrophic coming. That future judgment is simply a confirming of the continuous judgment of the present.

The passage, Jn $5^{28. 29}$, is so obviously interpolated that it has no bearing on this subject. The formula, 'at the last day,' which occurs in various connexions—resurrection ($6^{39f. 44. 54}$), judgment (12^{48})—is perhaps also an interpolation, as its omission rather adds to than takes from the force of the passages. (Note 12^{48} 'the word that I have spoken, the same shall judge him,' as parallel with the ideas of 3^{18-21} 5^{24}, when 'at the last day' is omitted.) Thus St. John gives us a closer approximation than the Synoptists, not only to the meaning but also to certain aspects of the form of Christ's Apocalyptic teaching. No doubt he looked forward to the near end of the age, preceded by antichrists (false teachers, 1 Jn $2^{18. 19. 22. 28}$ 4^{3}), and to the Parousia; but he usually describes it differently from the Synoptists (cf. 14^{3} 'I will come again, and receive you unto myself,' although the Parousia is also connected with judgment [1 Jn 2^{28} 4^{17}]).

The saying to St. John (21^{22}) does not necessarily show that Christ taught a near coming such as would be involved within the period of a human life. The words are purely conditional rather than affirmative, and are intended to check curiosity (cf. v.^{23}).

The authenticity of the Johannine conception of judgment and its roots in Christ's actual teaching are seen in this, that, while the Synoptics set forth the Final Parousia and Judgment—a conception which dominated the early Church—John gives such a different and more spiritual conception. This did not originate with him, unless we are to regard him as greater than Christ. On the other hand, just as God's judgment is shown in the Synoptics to be present and continuous (Mt $6^{4. 6. 14. 15. 16}$ 10^{40}) as well as future (Mt 10^{28} 18^{35}), they also show that this is true of Christ (Mt 9^{2} $10^{34ff.}$ $11^{20. 27}$), thus proving that dramatic eschatology was not the only aspect of Christ's teaching. The passage, Jn 5^{22} 'He hath committed all judgment unto the Son' (cf. *En.* 69^{27} 'The sum of judgment was committed unto him, the Son of Man'), shows how a simple statement of the connexion of the Son with judgment might be expressed either by Christ or His reporters in the form of an eschatological picture.

(*b*) *Christ as Judge.*—In the OT, Jahweh is Judge, as also in Apocalyptic books, save *En.* 37–70, where the Son of Man judges. But in the Gospels, while the Father is spoken of as Judge (Mt 10^{28} 18^{35}), Christ's influence at the Judgment is also spoken of (Mk 8^{38}), and more generally He Himself is Judge, and exercises this function on all men.

(*c*) *The Son of Man.*—It is noticeable how, in nearly all directly eschatological passages, this is the title used by Christ.[1]

See Mk 13^{26}=Mt 24^{30}=Lk 21^{27}; Mt 24^{27}=Lk 17^{24}; Mt $24^{37. 39}$=Lk 17^{26}, cf. ^{30}; Mt 24^{44}=Lk 12^{40}; Mt $25^{13. 31}$; Lk 21^{36}, cf. 12^{40}; Mk 14^{62}=Mt 26^{64}=Lk 22^{69}; Mt 10^{23}; Mk 8^{38}=Mt $16^{27. 28}$=Lk 9^{26}; Lk $12^{8. 9}$; Mt 19^{28}; Lk 18^{8}.

As has been seen, the phrase, 'one like unto a son of man,' occurs in Dn 7^{13}, and there sums up comprehensively the 'people of the saints of the Most High,' who are exalted in glory, and to whom judgment is given. There may also be a reference to one who represents the saints, and a Messianic meaning was given to the phrase by the Jews. We can hardly avoid the conclusion that Christ, in using 'the Son of Man,' refers back to Dn., and regards Himself as typifying the saints of the Most High (the people of His Kingdom), who are in Dn. first humiliated, then exalted. In two passages there is a strong suggestion of the origin of the title in Dn. (cf. Mt 24^{30} 26^{64} with Dn $7^{13f.}$). But, again, in *En.* 37–70 the title 'Son of Man' occurs with imagery similar to that which our Lord uses. This document may represent a larger literature in which the title also occurred, and it was probably understood by many of His hearers.[1] We can hardly avoid the conclusion that Christ deliberately transferred this title to Himself, giving it a richer and fuller meaning (cf. passages in which it suggests not glory, but humiliation, and see Charles, *Bk. of Enoch*, p. 315, for the reference of the latter to the Isaianic conception of the Servant of Jahweh).

The argument in favour of Christ's using a title from *Enoch* rests on the pre-Christian date of this section. (See Charles, pp. 107, 113; and, against, Hilgenfeld, *ZWT*, 1892, p. 445 f.; Drummond, *JThSt* ii. 545.) The title may have been a popular, not a Pharisaic, one, and its use in Christian circles would explain the fact that it is sparsely, if at all, found in Rabbinic writings. (See Dalman, *Die Worte Jesu*, 1898, i. 201 ff.; Sanday, *Exp.* 4th ser. iii. [1891] 27 f.) In Ps $8^{4. 6}$ the 'son of man' is crowned with glory and honour. This passage is thought by some to have also suggested Christ's use of the phrase (Bartlet, *Exp.* 4th ser. vi. [1892] 434 f.; Dalman, i. 218).

The use of the phrase, 'the Son of Man,' where the first person might be expected, is 'an exceedingly strange mode of speech,' and has given rise to the question whether Christ here meant Himself in all cases, especially in the reference to a future coming (Drummond, 566, 568). But in Mt 16^{13}, even if με is omitted, the disciples' answer shows that they had identified Christ with the Son of Man. Again, the fact that in some parallel passages 'I' takes the place of the corresponding 'Son of Man' shows that the two were regarded as identical, and that Christ used the phrase alternatively with 'I.' It is obvious that in Mt 26^{64} the high priest at once believed that Christ was speaking of Himself, while in Mt $25^{31f.}$ who could be referred to but Christ? (See v.$^{35ff.}$.) See, further, JESUS CHRIST.

The future coming of the Son of Man, as contrasted with the passages where it is said He has come, though it is never spoken of as a *second* coming, need present no difficulty, in spite of the fact that it has been asked, 'Can Jesus mean Himself in these passages?' (Drummond, 567). The usage is parallel with that which speaks of the Kingdom both as present and as future.

(*d*) *State of the dead.*—The parable of Dives and Lazarus points to the current popular Jewish view of different states in Sheol after death, better or worse. Paradise, as used in Lk 23^{43}, probably means the better part of Hades, for it is evidently not Heaven (cf. Jn 20^{17}, Ac 2^{31}).[2] Hades, or Sheol, is a temporary abode, for it is cast into the lake of fire after giving up the dead (Rev $20^{13. 14}$; cf. 1^{18}). Meanwhile, the righteous dead enjoy communion with God. After the Judgment, the righteous with their risen bodies go into life eternal in the Kingdom of the Father, and are as the angels, and shine forth like the sun. They will never die (Mt 13^{43} 22^{30} 25^{46}, Lk 20^{36}). Their felicity is spiritual, though this is set forth occasionally in more or less sensuous images (Mt 8^{11} 19^{28} $22^{2f.}$ 25^{10}). In Jn., eternal life as well as resurrection is a present possession of believers (5^{24} $6^{40. 47. 54}$ 11^{25} 17^{3}, 1 Jn 5^{11}); but the contradiction with the Synoptics is more apparent than real. The promised 'life' is bound up with the Kingdom of God, and, in so far as that is present, 'life' is also a present posses-

[1] For the arguments for and against the theory that Christ never used the title of Himself, see Drummond, *JThSt* ii. [1901] 545 f.

[1] The form of the question in Jn 12^{34} does not suggest ignorance of the title, but curiosity regarding a Son of Man who will be 'lifted up.'

[2] In 2 Co 12^{4} Paradise is in one of the heavens. Cf. *Secrets of Enoch* 8^{1}; Paradise in the third heaven is the final abode of the righteous.

sion. Whether Christ teaches a resurrection of the wicked has been questioned, but their fate is clearly set forth (Mt $5^{22. 29. 30}$ 8^{12} $13^{42. 50}$). Punishment will be proportionate (Mt $11^{21f.}$, Lk $12^{47f.}$). This and other passages (Mt 5^{26} 12^{32}), as well as the general drift of Christ's teaching regarding the love of the Father, raise the question whether these punishments are eternal in the sense of unending, or only in the sense of lasting till their work of purification is accomplished. It is not impossible that here, as elsewhere, our Lord was simply using the language and beliefs of His own time, to enforce moral truth; and probably His reporters have further coloured His sayings with their own beliefs. The parables of the Supper—'compel them to come in'—and of the Draw-net are suggestive, and we are also forced to view these problems in the light which Christianity as an ethical faith and a religion of progress supplies. We cannot limit our views of the future by the crude and material images of older beliefs from which Christianity has too often borrowed.

12. Eschatology of St. Paul.—St. Paul was imbued with ideas regarding the Apocalyptic coming derived from his Jewish training and from Christian tradition—especially the traditional form of Christ's eschatological discourses,[1] and he is concerned with three main events, (1) the Parousia, (2) the resurrection of the dead and transformation of the living, and (3) the Judgment. The emphasis on the first two varies in different epistles, and his teaching on each is called forth by varying circumstances.

(1) In 1 Th., St. Paul has to do with Christians who were anxious, regarding those who had died, with respect to Christ's Parousia, which they, with St. Paul, deemed to be close at hand. He answers that the Day of the Lord will come as a thief in the night, and that Christ will come suddenly from heaven with the voice of the archangel and with the trumpet. The dead in Christ shall rise; the faithful living shall be caught up to meet the Lord in the air ($4^{13ff.}$ $5^{1ff.}$). The whole passage is of a primitive character. In 2 Th. there is to be a revelation (ἀποκάλυψις) of Christ from heaven with His mighty angels. But the Day is not so near as the exaggerated anticipations of the Thessalonians expected. There will be first a great falling away (cf. Dn 8^{23-25} LXX, πληρουμένων τῶν ἁμαρτιῶν αὐτῶν), and the revelation (ἀποκαλυφθῇ) of the man of sin, who as God sits in the temple of God (cf. Dn 7^{6} 11^{36}, Mk 13^{14}, 2 Co 6^{16}), and who is at present hindered. But he will be destroyed by Christ at His Parousia ($2^{3ff.}$). St. Paul thus still expected the Parousia in his lifetime.

The Pauline Antichrist resembles in many points that of the Apocalypse, and goes back to the opposing power in Dn $7^{7f.}$ $11^{28f.}$, and Mk 13 (cf. *Apoc. Bar.* 41). But, while Antichrist in the Apocalypse is Rome, or Rome represented in its Emperor, the Pauline Antichrist has a much more ideal symbolism, and is non-political and probably Jewish (a pseudo-Messiah), though it recalls Caligula, who tried to set his statue in the temple. The restraining power (τὸ κατέχον), or the restrainer (ὁ κατέχων), is probably the Empire and its rule. This in itself sets the Parousia at some distance off.

In 1 Cor. there is little difference from the above account, save that there is no reference to Antichrist. The time is short; men are living at the ends of the ages (7^{29} 10^{11}). After short tribulations ($7^{26. 29}$), Christ will come with the sound of a trumpet. Meanwhile, during this short period before His Parousia, Christ reigns and strives with His enemies, the last of which, Death, shall be destroyed at His coming, through the resurrection of believers (cf. 2 Th $1^{8. 9}$ 2^{8}). His temporal, mediatorial Kingdom will then come to an end, and God will be all in all ($15^{24ff.}$).

While this temporal and short rule of Christ is not equivalent to a millennial reign of Christ on earth, following on the Parousia (coming between the ἔπειτα of v.[23] and the εἶτα of v.[24]), as some have maintained, probably the thought is here coloured by the Jewish idea of the temporal Messianic Kingdom, though the latter is enriched and spiritualized (cf. also 15^{25} with Mk 12^{36}). In later epistles, Christ is 'all in all,' and His Kingdom is one with that of God (Eph 1^{23} 5^{5}).

In Rom. and 2 Cor. the Parousia is still regarded as near (Ro 13^{11}), but the idea of a general apostasy preceding it gives place to that of the inclusion of the Gentiles in the Kingdom ($11^{25. 26}$). This anticipates a speedy conversion of the world. But St. Paul is no longer confident of living to see the Parousia (Ro 14^{8}, 2 Co $4^{14. 16}$ $5^{6f.}$, but see Ro $13^{11f.}$). At first he expected to be alive at the Parousia. But, as time went on, the stress of his teaching lay elsewhere, and now he only *hoped* to be alive. Finally, he regarded it as far better to die, though it was needful that he should live, not to see the Parousia, but to benefit his people (Ph $1^{23. 24}$, cf. 3^{11}). Yet he could still look for the coming from heaven (Ph 3^{20}). Its nearness was to him guaranteed by the extension of the Christian faith and the great spiritual awakening consequent upon that. For he follows the prophetic belief in spiritual outpouring as immediately preceding the Day of the Lord. Contrariwise, with the Prophets and later Apocalyptists he saw in the opposing increase of evil another herald of the nearness of the Day.

(2) At the Parousia the dead in Christ rise, and the living are caught up to meet the Lord in the air, or transformed (ἀλλαγησόμεθα, 1 Co 15^{51}). The dead rise with a σῶμα πνευματικόν bearing τὴν εἰκόνα τοῦ ἐπουρανίου ($15^{45ff.}$; cf. Ph 3^{21}: the body is to be changed into the likeness of τὸ σῶμα τῆς δόξης αὐτοῦ). Some have thought that St. Paul now came to regard the resurrection from another point of view, or that the latter was already latent in his mind in 1 Co 15. This view, based mainly on 2 Co $5^{1ff.}$, presupposes that he now taught that the soul *at death* receives in heaven a new body or organism (ἔχομεν; cf. Bousset, *ARW* iv. 144; so also Pfleiderer, Holtzmann, Reuss, Charles, etc.). In accordance with this view, not a resurrection but a manifestation of the already glorified righteous dead took place at the Parousia (Ro 8^{19}, Col 3^{4}).

This theory does not seem to be supported by 2 Co 4^{14}, where a future resurrection is in question. Nor need ἔχομεν imply immediate entrance into possession of the οἰκίαν ἀχειροποίητον. It is for the believer a sure inheritance, but it is not necessarily received at death. St. Paul almost certainly believed in an intermediate state (cf. Eph $4^{9. 10}$); but, since the Parousia was so near at hand, the experience of that state (being found naked [γυμνοί], disembodied spirits) could be but a short one. It would be better to survive to the Parousia and then not undergo the process of 'unclothing' (ἐκδύσασθαι), but that of being 'clothed upon' (ἐπενδύσασθαι), so that mortality might be swallowed up of life—the transforming of 1 Co 15.

(3) The Judgment, with Christ as Judge, is associated with the Parousia. In 1 Th. it is not directly mentioned (but see 1^{10} ἐκ τῆς ὀργῆς τῆς ἐρχομένης, 4^{6} 5^{2}), as it is not involved in the argument. In 2 Th., at the Parousia, Christ takes vengeance in flaming fire on the wicked, who are punished with ὄλεθρον αἰώνιον, and destroys Antichrist ($1^{8. 9}$ 2^{8}). In 1 Cor. there is a judgment on men's works and a revelation of the counsels of the hearts ($3^{13f.}$ 4^{4}). The saints shall judge the world, also angels ($6^{2f.}$). The universality of the Judgment and its reference to deeds are emphasized in Ro $2^{5f.}$ 14^{10}, 2 Co 5^{10}. There is, however, no condemnation (κατάκριμα) of those in Christ (Ro 8^{1}). This does not contradict the former view, and a mediant position is found in 1 Co $3^{12ff.}$, where a judgment according to spiritual capacity and results is taught.

13. Eschatology of other epistles.—Although the epistles of St. Peter, St. James, St. Jude, and St. John, and that to the Hebrews, differ in details, yet, as far as the broad outlines of eschatology are concerned, they may be grouped together. In

[1] Cf. 1 Co 6^{2} and Mt 19^{28}, 2 Co 5^{10} and Mt $25^{31. 32}$. See also Kennedy, *St. Paul's Conceptions of the Last Things*, 1904, pp. 167, 180.

general the old Jewish views prevail, but there is no doctrine of a temporal Kingdom.

Judgment and punishment have already befallen (1) angels (Jude ^{6}, 2 P 2^{4}), (2) the unrighteous (2 P 2^{9}), though 1 P 3^{10} suggests an intermediate state in which progress is possible. The end of all things and the Parousia are near at hand (1 P 4$^{5.7}$, Ja 5^{8}, He 10^{25}). It will be preceded by wickedness (Jude ^{18}), or by a fiery trial (1 P 4^{12}), or by the appearance of antichrists (unbelievers and false teachers, 1 Jn 2$^{18f.}$ 4^{3}). On the other hand, the day may be distant, since one day is with the Lord as a thousand years (2 P 3$^{8f.}$), but in any case it will be sudden and unexpected (3^{10}). At the Parousia the Judgment will take place either (1) by God (He 10^{31} 13^{4}), or (2) by Christ (1 P 4^{5}), who will come with thousands of His saints[1] (Jude ^{14}), to judge the living and the dead, but especially the ungodly, and also the angels who sinned (1 P 4^{5}, 2 P 2$^{4.9}$, Jude $^{6.14.15}$; cf., for the angels, 1 Co 6^{3}, Mt 8^{29}). The righteous will be rewarded in their risen bodies (He 11^{35}, cf. 1 Jn 3^{2}) with eternal life in the promised kingdom (Ja 2^{5}, Jude ^{21}), and with a crown of glory or of life (1 P 5^{4}, Ja 1^{12}). This Kingdom is in heaven (He 6$^{18.20}$ 11^{16}, 1 P 1^{4}). The wicked will be destroyed in a consuming fire (2 P 3^{7}, He 10$^{27.39}$). Heaven and earth will be shaken and removed, that those things which cannot be shaken may remain (He 12$^{26.27.28}$ cf. 1^{10}). The world will pass away (1 Jn 2^{17}), or it will be destroyed by fire (2 P 3$^{7.10.12}$, the only reference to this in the NT). There will be a new heaven and earth wherein dwelleth righteousness (2 P 3^{13}).

14. Eschatology of the Apocalypse.—The earlier chapters of this book describe in a series of visions, which are concurrent rather than successive, the woes which fall upon men, catastrophes on earth and convulsions of Nature, judgments upon Jews and Gentiles, and the preservation of the elect. The Parousia is said to be near at hand (3^{11} 16^{15}, cf. 22$^{7.12.20}$); the Messiah or one like the Son of Man will come with the clouds (1^{7} 14^{14}; cf. Dn 7^{13}, Mk 13^{26}); and the Judgment is described under different figures—(1) convulsions of Nature and terror of mankind at the approach of 'the great day of his wrath' (6$^{12-17}$); (2) reaping wheat by Christ—probably the gathering of the righteous (14$^{14-16}$); (3) gathering the clusters of grapes by an angel and treading them in the winepress of God's wrath (14$^{17-20}$, the judgment of the wicked by Christ; cf. 19^{15}). Judgment of the dead is mentioned (11^{18}).

In these the Lamb or one like the Son of Man is a prominent figure. But after each there are several interludes, followed by a vivid description of the judgment upon Rome (chs. 17. 18).

There now follows a connected but compressed account of the last things. The marriage of the Lamb and the Church, and the Banquet, are announced (19$^{6f.}$). Messiah comes from heaven as a judge and as a warrior with armies. He is withstood by Antichrist and his armies, who are defeated and destroyed. Antichrist and the False Prophet are cast into the lake of fire,[2] and Satan is bound in the abyss for a thousand years (19^{11}–20^{3}). During these thousand years the martyrs and such as had resisted Antichrist live and reign with Christ. This is the first resurrection, and the rest of the dead do not live until the end of the thousand years (20$^{4-6}$). Satan is now loosed and stirs up the nations, Gog and Magog (cf. Ezk 38^{2}), and these compass Jerusalem, the camp of the saints, but are destroyed by fire from heaven. The devil is cast into the lake of fire (20$^{7-10}$).

The idea of overcoming Antichrist and the binding of Satan goes back to mythic conceptions of the strife of Divine powers with evil chaotic powers. Traces of this are found in Is 24$^{21f.}$ 27$^{1f.}$, Dn 7^{11}, *Ps. Sol.* 2$^{29.30}$. In *En.* 10$^{4ff.}$ evil angels are fettered, and finally punished at the Day of Judgment (cf. *Jub.* 5^{10}, *Secrets of Enoch* 7^{1} 18). Death, or the angel of Death, and Hades are brought to an end at the end of the days (Is 25^{8}, cf. 4 Ezr 8^{53}, *Apoc. Bar.* 21^{23}, *Test. xii. Patr.* [Levi 18], Rev 20^{14}, 1 Co 15$^{25f.}$ ^{55}.[3] Death and the devil are brought into connexion (cf. 1 Co 5^{5}); the devil is the lord of death, just as the Greeks made the Persian Ahriman = Hades. We may also compare the idea of later Parsiism, that the dragon Azhi Dahak was overcome and bound by Thraêtaona and then loosed by Angra Mainyu to war against Ormazd. The Jews regarded the world-powers as under the rule of Beliar, and he, like Antichrist and the devil, is conquered at the end of the age (cf. *Test. xii. Patr.* [Levi 18^{12}, Dan 5$^{10.11}$, Sim. 6^{6}, Jud. 25^{4}]), evil spirits are overcome, and Beliar is bound and cast into the fire by Messiah (*Ass. Mos.* 10^{1}, the devil's rule comes to an end; *Jub.* 10^{8}, Mastema [Satan], overcome at Day of Judgment; *Sib. Or.* ii. 168, Beliar comes before the end; iii. 65 ff., he will be burned with a fiery blast from heaven). This conception of the strife with and destruction of supernatural powers of evil, as signifying the approach of the Kingdom, is also found in Mt 12^{28} = Lk 11^{20}, cf. 4^{13}; Jn 12^{31} 14^{30} 16^{11}. (For Antichrist, see *ERE* i. 578 f.; Bousset, *Antichrist*, also *Rel. des Jud.* 242 f.; Charles, *Ascension of Isaiah*, 1900, p. 51 f.)

In this account the new feature is the 1000 years' reign of the martyrs with Christ, perhaps already adumbrated in Rev 7^{9} 14$^{1f.}$ 15$^{2f.}$ This reign is not said to be on earth, nor is the first resurrection said to be a bodily one (cf. 20^{4} *souls*), and no *second* resurrection is mentioned, a *general* resurrection being inferred (20^{13}). If the martyrs restored to life are the saints dwelling in Jerusalem who are attacked by Gog and Magog, it is curious that Christ (with whom they reign) does not attack those enemies. Their destruction comes from heaven (20^{9}). Those saints are the righteous now freed from Satan's power, and the nations are subject to them. This, rather than the martyrs' reign of 1000 years, is the equivalent of the temporal Messianic Kingdom of Jewish Apocalyptic (e.g. *En.* 91 ff.). Possibly, by the conception of the martyrs living and reigning with Christ for 1000 years, while the rest of the dead do not 'live' until the general resurrection at the close of this period, the writer anticipates the view of Tertullian (*de An.* 55, *de Res. Carn.* 43) and Irenæus (I. 31. 2) that martyrs at death went to Paradise, all others to Hades. But, whether this or 'the duration of the triumph of Christianity' (Swete, *Apoc.* 1906, p. 263) is intended, the conception lent itself as a *point d'appui* to the Chiliastic ideas brought over from Judaism into Christianity—the idea of a temporal Kingdom on earth to which some of the dead rise (4 Ezra), and which lasts 1000 years (*Secrets of Enoch*).[1]

Now follow the resurrection, and the Judgment of each and all by God, who sits on a great white throne (20$^{11f.}$, cf. 4$^{2.9}$ etc.). The judgment is according to works and the record of these in the books. The wicked, whose names are not in the Book of Life, are cast into the lake of fire and endure the second death (20^{14} 21^{8}). Hades and Death are also cast into it. The first heaven and earth as well as the sea (cf. *Ass. Mos.* 10^{6}; *Sib. Or.* v. 158 f., 447) having passed away, there is a new heaven and earth, which, with the New Jerusalem which descends from heaven, becomes the abode of the blessed (21. 22, cf. 3^{12}). The city is characterized by holiness (τὴν ἁγίαν 21^{2}).

An ideal or a re-built Jerusalem is a characteristic of OT prophecy and of some Apocalypses (Is 54. 60, Ezk 40. 48, Hag 2$^{7-9}$; *Sib. Or.* iii. 290). This gave place to the Apocalyptic idea of a New Jerusalem[2] to be set up by God (*En.* 90^{29}; cf. *Jub.* 1^{29}), or a heavenly Jerusalem revealed by Him (*Apoc. Bar.* 4$^{3f.}$ 32^{2}, 4 Ezr 7^{26} 10$^{27f.}$ 13^{36}) or built by the Messiah (*Sib. Or.* v. 420 ff.). These ideas recur in He 11^{10} 12^{23} 13^{14}, Gal 4^{26}, and are the familiar theme of Rabbinic theology (Gfrörer, ii. 245 f.; Weber, 373, 404).

15. Eschatology of the Church; the Millennium.—The prevalent beliefs of the early centuries may be summarized as follows. At death the soul was carried by angels into the presence of God, who, by a temporary judgment, assigned it a place in an intermediate state according to its condition.[3] In several writers these intermediate states were different parts of Hades (Tertullian, Irenæus). But another view prevailed—in part the result of the release of souls by Christ's Descent to Hades—to the effect that now righteous souls passed to Heaven or a heavenly region called Paradise (this is sometimes on earth, the Paradise of Adam).[4] This is already found in Ignatius and in the *Ascension of Isaiah* (ix. 7 f.), and Cyprian appears to have shared it (cf. *adv. Demetr.*; *de Mortal. passim*), while it had many adherents, for it is vigorously combated by Justin (*Dial.* 80, 93), Irenæus, and Tertullian. Tertullian maintained

[1] This is a citation from *En.* 1^{9} 'He comes with ten thousands of His holy ones [=angels] to execute judgment upon them'; cf. Dn 7^{10}.

[2] Cf. *En.* 90$^{24.25}$ (stars and shepherd angels cast into a fiery abyss).

[3] Death, also personified, is a species of lord in Hades; cf. Ps 49^{14}.

[1] Possibly a temporary Messianic Kingdom is taught in Ac 3$^{19f.}$

[2] The 'New Jerusalem' is first mentioned by name in *Test. xii. Patr.* [Dan 5].

[3] This was already a Jewish notion (Weber[2], 339; *Test. Abraham*, § 20), but it is met with mainly in popular Christian writings (see Conybeare, *Monuments of Early Christianity*, 1894, p. 311 f.; Coptic documents in *TS* iv. 2; *Visio Pauli*, § 12 f.; cf. Justin, *Dial.* 105; Hippolytus, *Discourse against the Greeks*; *Hom. of S. Macarius*, in Gallandius, *Bib. Vet. Patr.*, Venice, 1765–81, iii. 237; *Passio Perpetuæ*, § 11; cf. *TS* ii. 2. 127).

[4] This would then be revealed at the millennial coming of Christ and the dissolution of the earth (*Apoc. Pauli*, § 21).

that none bnt martyrs passed at once to Paradise (*de An.* 55; *de Res. Carn.* 43)—a belief perhaps shared by Irenæus (iv. 38. 9) and Justin (cf. *Mar. of the Holy Martyrs*, 4). Besides the conception of a firo through which all pass either after death or at the Judgment (see § 17), the idea of repentance and of purification after death, aided by prayer or sacrament, is found sporadically.[1] But anything approaching the later doctrine of Purgatory is not found, apart from Augustine's conjecture that some of the faithful might have to be purified, as by fire, from sinful affections (*de Civ. Dei*, xxi. 26; *Enchir.* 69), until Pope Gregory's time (see his *Dial.* iv. 30, and *passim*—a purgatorial fire for lighter faults).[2]

In the Early Church there was a general belief in the approaching end of the world and the Parousia. This would be preceded by great troubles and by the revelation of Antichrist (*Didache*, xvi. 4; *Ep. Barn.* 15; Iren. v. 25 f.; Hipp. *de Christo et Antichristo*; Lactant. vii. 17 f.). But at Christ's advent Antichrist and the wicked would be destroyed. The chronology adopted by most of the writers of this, and indeed of later periods, was that of the six periods of a thousand years (=six days of creation [*Ep. Barn.* 15, followed by Irenæus, Hippolytus, Lactantius, etc.]). Christ had come in the last thousand-year period, and His second coming would be at its close; hence calculations were made to discover its exact time. According to Hippolytns, the world had still 250 years to run; according to Lactantius, 200. Another common idea, based on the expected duration of the Roman Empire (Ῥώμη=948), was that the end would come in A.D. 195 (*Sib. Or.* viii. 148). The end of the 6000 years and the second coming wonld inaugurate the seventh period of 1000, the Millennium, to enjoy which the righteous dead wonld be raised (the first Resurrection). In spite of the fact that, save in the Apocalypse, the NT did not speak of the Millennium, and that Christ does not connect the Parousia with the establishment of an earthly Kingdom, this belief had an extraordinary hold on the minds of Christians. Doubtless a misunderstanding of the Apocalypse gave the belief a certain authority, but it is rather from its Jewish antecedents that its popularity and the elaboration of its details are to be explained.[3]

The general picture of the millennial Kingdom on earth, 'the day of the supper of 1000 years' ('Bohairic Death of Joseph' [*TS* iv. 2. 142]), includes such features as that the earth would he renewed and Jerusalem re-built and glorified. Men would be perfectly righteous and happy, and would have numerous offspring. There would be no sorrow and no labour. The earth wonld produce abundantly, and a table would always be spread with food. A passage of Papias, cited by Irenæus (*adv. Hær.* v. 33), derives a picture of this fruitfulness from Christ Himself, though it is now known to have been copied from a document (perhaps a midrash on Gn 27^{28} [Harris, *Exp.*, 1895, p. 448; *AJTh*, 1900, p. 499]), used also in *Apoc. Bar.* $29^{5f.}$, and in *En.* 10^{19} (see Charles, *Ap. of Baruch*, 54). The moon would have the brilliance of the sun, and the sun would be seven times brighter than the moon. Some of the wicked would be left on earth, subjected to perpetual slavery.

This sensuous aspect of the Kingdom is directly taken over from Jndaism. Tertullian tried to spiritnalize it, but he still used many sensuous metaphors in describing it; and it is probable that with most of those who taught it the more sensnons view prevailed, since it was held that the saints reigned in the flesh. The doctrine is found clearly stated in *Ep. Barn.* (4, 15), Hermas, *Didache* (10, 16), Justin (*Dial.* 80, 81), Irenæus (v. 32 f.), Tertullian (*adv. Marcion.* iii. 24), Hippolytus (Overbeck, *Quæst. Hipp.* 70), Lactantius (vii. 20 ff.), Methodius (*Conviv.* ix. 1. 5), Commodian (*Carm. Apol.* v. 979 ff.).

It was, of course, contrary to the Gnostio scheme of eschatology, and as such was upheld against them, *e.g.* hy Irenæus (v. 33); but Cerinthus, who admitted the real humanity of Christ and the resurrection, is alleged to have taught that, after the latter, Christ's Kingdom would be an earthly one of an extremely sensuous and carnal kind (Caius, *ap.* Eus. *HE* iii. 28).

The Ebionites (Jerome, *Com. on Is.* 66^{20}) and Montanists also cherished millennial views of an unspiritual kind. With the latter, Christ was speedily to come and found an earthly Kingdom of the saints in the New Jerusalem, which would descend visibly out of heaven and be established at Pepuza in Phrygia. This would be the sign of Christ's coming. Montanus wished to separate believers from all worldly affairs, and so prepare them for the Kingdom, by gathering them together in the region where Christ would have His seat (see Eus. *HE* v. 16; Tert. *adv. Marc.* iii. 24; Epiph. xlix. 1; *Oracle of Prisca*).

Yet there was a strong opposition to this belief from comparatively early times: Justin (*Dial.* 80) says that many, otherwise orthodox, were opposed to it; and this statement seems to be supported by Irenæus (v. 31. 1). The doctrine is not mentioned in Clement, Ignatius, or Polycarp, or in many of the Apologists; but we can hardly argue from their silence that they disbelieved it, while, in the case of the Apologists, policy may have dictated silence. The Alogi also attacked the doctrine, while denying the Johannine authorship of the Apocalypse and attributing it to Cerinthus (Epiph. xxxii., xxxiii., li.). The excesses of Montanism helped to discredit the doctrine in the East, and to stamp it as Jewish rather than Christian.

Caius at Rome opposed the Montanist Proclus, and maintained that Cerinthus had invented the Millennium (Eus. *HE* ii. 25). For his views on Cerinthus and the Apocalypse, see Eus. vii. 25; Gwynn, *Hermathena*, vi. 397 f.

But it was largely the influence of Alexandrian philosophical ideas, and especially those of Clement (*Strom.* vii. 12. 74) and Origen (*de Princ.* ii. 11 f.; *c. Cels.* viii. 30), which gave the death-blow to chiliastic views in the East. This teaching was followed up by Dionysius of Alexandria, who has left us an interesting picture of his success in combating the chiliastic views of Egyptian Christians, probably of the rural districts, who had been much influenced by a writing of Nepos of Arsinoë (Ἔλεγχος τῶν ἀλληγοριστῶν), teaching a Millennium of bodily enjoyment. A schism was threatened in the Egyptian Church, but Dionysius, by wise arguments and instruction, averted this, and his opponents, headed by Coracion, gave up their views (A.D. 225; Eus. *HE* vii. 24). Chiliasm was still defended by Methodius of Tyre (*Conviv.* IX. i. 5) and by Apollinaris (Basil, *Ep.* cclxiii. 4, cclxv. 2; Greg. Naz. *Ep.* cii. 4), and accepted by Egyptian monks (Harnack, *Hist. of Dogma*, ii. 300, note).

In the West, chiliastic views prevailed until the time of Augustine, who had himself once cherished them in a spiritual rather than a sensuous form, but who now attacked them and formulated an interpretation of Rev $20^{4ff.}$ which was accepted by the Church for many centuries. Millenarianism now became a heresy.

Augustine holds that the 1000 years = the duration of the Church on earth; the reign of the Saints = the reign of the Kingdom of Heaven; the First Resurrection = the spiritual share which the baptized have in Christ's Resurrection (*de Civ. Dei*, xx. 6 f.). His theory regarding the duration of the Church, literally interpreted, gave rise to the view that the end would come in A.D. 1000.

[1] *Shepherd of Hermas*, Sim. ix. 16; *Acta Pauli et Theclæ*, § 28; *Pass. Perp.* § 7; *Test. Abrah.* § 14; Tertullian, *de An.* 35, 58, *de Monog.* 10, *de Cor. Mil.* 3.

[2] For the doctrine of the sleep of the soul (ψυχοπαννυχία), see Tatian, who held that it died with the body (*ad Græc.* 13) and (Arabians) Eusebius (*HE* vi. 37).

[3] A preliminary judgment at the First Resurrection of those who had known God is taught by Lactantius (vii. 20). Those whose evil deeds outweighed their good deeds would be condemned. A judgment by fire would burn those whose sins exceeded in number and weight, but would not be felt by the righteous. The former would then have their place with the wicked who do not arise to this judgment (Ps 1^5). Tertullian appears to teach that the pure would rise at once, but those who had contracted some guilt would rise later, or perhaps not till the Second Resurrection, when the wicked rise (see *de An.* 35, 55, 58; *adv. Marc.* iii. 24).

The comparative ease with which millenarianism disappeared shows that, generally speaking, it had never interfered with the ethical and spiritual life of Christianity, or with the life of the Christian as a citizen. Men were content to wait, and thus the notion passed insensibly from their minds, as its baselessness and the extravagance of some who held it became apparent.[1] Expectations of the Millennium were revived in the Middle Ages by mystical sects; and after the Reformation, mainly among Anabaptists. Millennial views, varying in their expectations of a more sensuous or more spiritual Kingdom, have been revived from time to time since then, and owe their great modern development to Bengel. Many distinguished theologians have held millenarian views, but it is mainly in America that the doctrine has given rise to separate sects (Seventh Day Adventists, Second Adventists, etc.). These, as well as the millenarians of the Early Church, believe that, at the close of the 1000 years, Satan will be unbound, and that he will make war against the Saints, only to be destroyed.

The close of the world-drama was described in similar terms by both Chiliasts and non-Chiliasts, and the description probably is cherished in a literal sense by many Christians still—Roman Catholic, Anglican, and Protestant. The main features are the second coming of Christ in majesty as Judge of all mankind, the resurrection of all (or of the wicked, the Second Resurrection of the Chiliasts), the Judgment (to take place, as some thought, in the Valley of Jehoshaphat), the doom pronounced—eternal punishment in hell for the wicked, and eternal bliss for the righteous in heaven or in the new heaven and earth.[2] Connected with these views was that of the passing away of heaven and earth, their destruction or their transformation, and the appearance of a new universe of which the Heavenly Jerusalem would be the centre.

Clement of Alexandria taught a probation which ceased at the Last Judgment (*Strom.* vii. 2. 12). With Origen the Judgment—of which he says nothing as to its immanence (the Gospel prophecy is not to be taken in its literal sense [in *Matt. Com.* sec. 49])—is hardly a final act; rather is it a 'moment' in an age-long process, in which the wicked, including demons, will be restored by a remedial process of punishment, though there will be various degrees of blessedness, and the sinner's soul can never again be what it was. This is the doctrine of the ἀποκατάστασις, in which he is followed by many Greek Fathers, especially by Gregory of Nyssa, Theodore of Mopsuestia, and—less emphatically—Gregory Nazianzen. The monasteries of Egypt and Palestine also supported this doctrine for long after, and it is more or less followed by many modern theologians.

The doctrine of Conditional Immortality (*q.v.*) and the annihilation (*q.v.*) of the wicked after the Judgment, already found in Arnobius, was stated by Hobbes and Locke, and, since the teaching of White (*Life in Christ*, 1846), has obtained a large following.

In the Gnostic systems the conception of the final consummation does not include the idea of Divine Judgment. The judgment is automatic, according to the inherent nature of souls—a species of conditional immortality. Those who were neither πνευματικοί nor ψυχικοί simply perished, and, as the æon Christ had passed to the Pleroma, there could be no second coming. The consummation results from the complete restoration of all the sparks of light to that high region whence they came. The created universe, deprived of them, must wax old and decay, and will be destroyed by fire (§ 16).

A Last Judgment and hell-pains are taught in *Pistis Sophia*—an unusual aspect of Gnosticism. In Marcion's system the good God does not judge or punish, except in so far as He keeps the evil at a distance from Him. The wicked are punished in the fire of the Demiurge. There are only two issues—the heaven of the good God, and the hell of the Demiurge. 'Either Marcion assumed with Paul that no one can keep the law, or he was silent about the end of the "righteous" because he had no interest in it' (Harnack, i. 273, note 2).

16. The new heaven and earth.—A belief in the catastrophic end and renewal of the world and the universe has already been found among some savages, the Mexicans, Norsemen, Hindus, Buddhists, Parsis, Stoics, and Muhammadans. We shall now trace this belief as it is developed among the Jews and in Christian eschatology. In the Prophetic books the way is prepared for such a doctrine by the account (1) of convulsions in Nature accompanying the judgments of the Day of the Lord, while the earth even returns to its former condition of chaos (Jer 4^{23}); and (2) of the exuberant fertility and beauty of the heaven and earth afterwards (Hab 3^{5}, Am 9^{5}, Mic 1^{4}, Is 51^{8} 34^{4}). At the same time, the stability of the earth was sometimes referred to (Ps 93^{1} 104^{5}). The doctrine of the new heaven and earth—the final corresponding to the former state—appears for the first time in Is $65^{17f.}$ 66^{22}, cf. 51^{16}; but whether it is there an intrusion on the context or not is difficult to decide (cf. 66^{22b} with 65^{20}).[1] A similar idea is found in Ps $102^{25f.}$, which perhaps dates from Maccabæan times. Passing outside the limits of the OT, we next find this doctrine in *En.* $45^{4f.}$, where a transformation of heaven and earth is taught. The new earth becomes the scene of the Messianic Kingdom, and sinners have no place in it. In $91^{14f.}$, after the end of the earthly Kingdom the world is 'written down for destruction,' and the heaven gives place to a new heaven after the Judgment. Into this the righteous pass (104^{2}), but nothing is said of a new earth. Cf. 72^{1} 'till the new creation is accomplished, which endureth till eternity.' In *Jub.* (4^{26}) the heavens and earth are to be renewed, and a sanctuary will be made in Jerusalem. The earth and all in it will be sanctified, and men will live 1000 years. Such a renewal had already occurred twice—at the Deluge (5^{12}), and with Jacob and his seed (19^{25}). In *Apoc. Bar.* the world returns to its nature of aforetime (3^{7}), is renewed at the Final Judgment, and becomes everlasting, incorruptible, and invisible (32^{6} 44^{12} 48^{50} 51^{8} 57^{2}). In 4 Ezr $7^{30f.}$ the world is turned to the 'old silence' for seven days, and is then 'raised up.'

Similar teaching is found in the Rabbinic and Talmudic writings. The new heaven and earth are the abode of the righteous, and from them all pain, sorrow, sin, and evil beings are banished (Gfrörer, ii. 273 f.; Wünsche, *Der bab. Talmud*, 1889, ii. 3. 194).

In the NT a similar conception is found. There will be a παλιγγενεσία (Mt 19^{28}), or an ἀποκατάστασις πάντων (Ac 3^{21}).[2] Heaven and earth will be shaken or removed, but what is permanent will remain (He $12^{26f.}$, cf. 1^{10}). In 2 P $3^{5f.}$ the destruction of the world by water in the past is referred to, and a future destruction of heaven and earth by fire is foretold—the only reference to such a destruction in the NT (cf. Jos. *Ant.* I. ii. 3 [water, fire]). This doctrine is already found in Bab. belief (see AGES OF THE WORLD [Bab.], vol. i. p. 183^{b}). Then a new heaven and earth, in which dwelleth righteousness, will appear.

This resembles the Stoic doctrine of the ἐκπύρωσις (§ 5), and there may have been a borrowing from it. But already in the OT the idea of fire destroying the earth is found (Dt 32^{22}), and that in connexion with God's judgment—a fire which burns up the wicked (Ps 97^{3}, Zec 13^{9}, Jer 15^{14}, Zeph 1^{18}, Mal 4^{1}; cf. Ps 50^{3}, Hab 3^{5}). In Dn 7^{10} a fiery stream issues below the throne; so

[1] There were some in Syria and Pontus who, like Montanus, thought they should cut themselves off from all ties and go forth to meet the Lord, or sell all their goods and cease from work because He was near at hand (see Bratke, *Das neu entdeckte vierte Buch des Daniel-Comm. von Hippolytus*, Bonn, 1891, p. 15; Conybeare, *op. cit.* 21 f.).

[2] One of the earliest descriptions is found in the *Apoc. of Peter* (see the citation from Macarius Magnes in James and Robinson's ed., 1892, p. 71).

[1] Charles (p. 123) regarded these verses as an interpolation, because they do not agree with the context; but, in his edition of *Jubilees*, p. 9, he thinks them original, because they point not to a catastrophic, but to a gradual, change, conditioned by man's ethical conduct, as in *Jub.* 1^{29} 4^{26} $23^{26f.}$

[2] Cf. 2 Co 5^{17}, Gal 6^{15} καινὴ κτίσις.

En. 14^{19} 71^{2}. In 4 Ezr $13^{2f.}$ a fiery stream issues from the mouth of the 'man from the sea,' and burns his enemies. Cf. *Jub.* 36^{10}, *Asc. Is.* 4^{18}. The idea of judgment by fire is continued in the NT (Mt 3^{12}, He 10^{27} 12^{29}, 1 Co 3^{13}, 2 Th 1^{8}).

Again, in the Apocalypse, at the Last Judgment earth and heaven flee away (cf. Mk 13^{31}), or they pass away along with the sea, and give place to a new heaven and earth, the seat of the blessed (Rev 20^{11} 21^{1b}; cf. 6^{14} and § 14). In Ro $8^{19f.}$ a new creation is suggested; cf. 1 Co 7^{31} παράγει γὰρ τὸ σχῆμα τοῦ κόσμου τούτου.

From these sources the idea passed over into Patristic theology. The present universe will be annihilated, or its external order will be changed, and give place to a more glorious structure.[1] Following 2 P $3^{8f.}$, Justin (*Apol.* ii. 7), Tatian (ch. 25), and Minucius Felix (ch. 34) teach the destruction of the world by fire. Hippolytus describes the river of fire which will consume the earth, while heaven is rolled together like a scroll. After this there is a new heaven and earth (*Discourse*, § 37; cf. Tert. *de An.* 55, *de Spect.* 30). Origen also refers to this (*c. Cels.* v. 15), but elsewhere he speaks of a transformation and renewal of the material world (*de Princ.* i. 6. 4; cf. ii. 1. 3). He also speaks of the blessed passing beyond the planetary spheres to the true heaven and earth (ii. 3. 7, iii. 6. 8). Methodius also speaks of a renewal of the world by fire, and Lactantius speaks of fire burning up the world and the wicked. Meanwhile the righteous are hid in caves, and then come forth. The heavens will be folded together, and the earth changed (vii. 26). These ideas occupy a prominent place in the *Sibylline Oracles*. At the Judgment, a stream or cataract of fire flows from heaven and consumes earth, sea, and sky; but all things come out purified, or God takes out that which tends to purity. This (or another) stream issues from a pillar by God's throne, and all pass through it after the Resurrection (ii. 196 ff.; cf. iii. 79 ff., iv. 161 ff., v. 158 ff., vii. 28 f., viii. 217 ff.). The whole conception in the Sibyllines, whether Jewish or Christian, is strongly reminiscent of Parsi eschatology (see Bousset, *Der Antichrist*, 163 f.).

Irenæus (v. 36. 1), in opposition to Valentinus, does not believe in the annihilation of the world by fire, but in its transformation. Augustine taught that what is perishable in the world will be destroyed by fire; then will appear a new world, the fit dwelling of a renewed humanity (*de Civ. Dei*, xx. 16).

According to the Valentinian doctrine, fire lies hidden in the world, and at the end will blaze forth and destroy all matter, being extinguished itself along with it (Iren. i. 7. 1). This was probably borrowed from the Stoics. The Simonians taught the dissolution of the world (Iren. i. 23. 3; cf. the Basilidean system [Hipp. x. 10]), and it is also hinted at in the Peratic system—'the formal world' is to perish (Hipp. v. 7). Here, of course, there was no renewal. In *Pistis Sophia* occurs also the doctrine of a Last Judgment and a world-conflagration (Schmidt, *Kopt. Gnost. Schr.*, 1905, p. 48). In the Manichæan system, fire which endures for 1468 years burns up the world—a doctrine, doubtless, borrowed from Parsiism. The Gnostic doctrine, on the other hand, has rather Heraclitean and Stoic affinities.

17. The final fire.—In Patristic writings, before the doctrine of Purgatory was fully established, various ideas regarding fire are found. Setting aside the conception of this fire—material or symbolic, according to the writer's point of view—as purifying certain persons between death and judgment (see Origen, *de Princ.* ii. 10. 6; Cyprian, *Ep.* 60; Greg. Nyssa, *Orat. Catech.* 26, 35, πῦρ καθάρσιον; Aug. *Enchir.* 69, *de Civ. Dei*, xxi. 26),[1] there are two other prevalent conceptions of it.

(1) At death, souls pass through a river or sea of fire. It does not harm, but only purifies, the righteous and penitent. All others suffer in it (Coptic documents, *TS* iv. 2; cf. *Hist. of Joseph*, *Acts of John*). In *Test. of Abraham* (§ 12), at the preliminary judgment after death, souls are tried by fire by the angel Puriel. If their works are consumed, they are carried to the place of sinners; but, if the fire approve their works, they pass to the place of the just.[2] (2) The same conception of a river of fire is brought into connexion with the Final Judgment, as in the Parsi doctrine (§ 8). This is found in the Sibyllines (see above). Origen occasionally regards the purifying fire as that which will consume the whole world. To it all must come, but it causes no pain to the pure. Lactantius (vii. 20) teaches that at the pre-millennial coming of Christ there will be a judgment by fire, which will burn those whose sins exceed in number or weight, but it will not be felt by the righteous. Ambrose (*Serm.* iii. 14, xx. 12; *in Ps.* xxxvi. 26) taught that fire would prove souls at the Last Judgment, purifying and refreshing the righteous, but eternally torturing the wicked. A purifying fire for sinners after the Judgment is found in the teaching of Ambrosiaster (*in Ep. i. ad Cor.* xv. 53; *in Ep. ad Rom.* v. 14).

The idea of the fire through which all pass is connected by most of these writers with the fire of 1 Co 3^{13}, but there are many passages in OT and NT where the fire at Judgment is spoken of (see above). Probably the classical conception of Pyriphlegethon, the Egyptian idea of a fiery lake in Amenti (Budge, *Book of the Dead*, 288 f.), and the Parsi myth of the world-fire, which is to the righteous as warm milk, to sinners as molten metal (§ 8)—have all helped to shape this Patristic notion.[3]

18. Psychostasia.—In connexion with the idea of Judgment, that of the *psychostasia*, or weighing of souls or of their deeds, is found in many eschatologies. We have already met with it in Egyptian, Indian (cf. *Śat. Brāh.* xi. 7; Weber, *Ind. Streifen*, Berlin, 1868, i. 21. 2), Persian, and Muhammadan eschatologies. It is also found among the Mandæans, as a loan from Parsiism (Brandt, *Die mand. Rel.*, Leipzig, 1889, pp. 76, 195). Among the Hebrews, the idea of weighing in a balance by God is at first confined to this life (Job 31^{6}, Pr 16^{2} 21^{2} 24^{12}, Ps 62^{9}, Dn 5^{27}, 4 Ezr 3^{34}, *Ps. Sol.* 5^{4}), and is generally spiritualized (cf. *Il.* viii. 69 f., xxii. 204 f.). In Apocalyptic literature the conception is transferred to the future Judgment, when the actions of men will be weighed in a balance by the Elect One (*En.* 41^{1} 45^{3} 61^{8}; cf. *Apoc. Bar.* 41^{6})—a conception found in a very materialized form in the Talmud (Weber, 269 f.). The first reference to this idea in Christian literature is found in *Test. Abr.* (§ 12), where, at the preliminary Judgment after death, the angel Dokiel weighs souls. Their fate is in accordance with this and other tests, but a soul with equal sin and righteousness is set apart,[4] to await the Final Judgment. This idea of the weighing of souls by Michael, whose function has been suggested by that of Hermes, weigher of the fates of men, became a popular one in early and later mediæval Visions of the Other-world; and, in iconography, frequently Satan or a demon tries to depress the scale, and so to win the soul (see

[1] Cf., e.g., *Ep. Barn.* 15; Hipp. *de Christo et Antichr.*; Iren. v. 35 f.; Aug. *Enchir.* 85 f., *de Civ. Dei*, xxii.; Ambrose, *Sermo* iii. 14 f., xx. 12 f.

[1] This conception is found in Rabbinic theology (cf. Gfrörer, ii. 78 f.).

[2] Cf. *Test. of Isaac* [*TS* ii. 2. 146 f.]: the fiery river has intelligence not to hurt the righteous, only sinners. Cf. the πῦρ φρόνιμον of Clement, *Pæd.* iii. 8; Origen, *Strom.* vii. 6; Min. Felix, 35, 'sapiens ignis.' This idea is found in Heraclitus and the Stoics.

[3] The natives of Santa Cruz believe that ghosts go to a certain volcano, and are there burned and renewed (Codrington, *Melanesians*, Oxford, 1891, p. 264).

[4] This idea is probably of Egyptian provenance. It is found in an Egyptian story of a visit to Amenti (Griffith, *Stories of the High Priests of Memphis*, 1900, p. 45 f.).

Maury, *RA*, 1844, i., ii.; Wiegand, *Der Erzengel Michael*, Stuttgart, 1886, p. 38 ff.; Landau, *Hölle und Fegfeuer*, p. 114 f.).

A sign or mark set on a person distinguishes him as doomed to, or saved from, a dread judgment (Ezk 9^{4}; *Ps. Sol.* 15$^{8.}$ 10^{8} 'the mark of the Lord is on the righteous, to their salvation,' 'the mark of destruction is upon their forehead'; Gal 6^{17}, Rev 7^{3} 9^{4} 14^{1}; this may be suggested by Ex 12^{13}, Gn 4^{15}). In Rabbinic literature, circumcision is the mark which saves from Gehenna (*JE* iv. 93). These ideas are reproduced in the Gnostic conception of the ascent of the soul through the spheres, and its free passage because it bears certain marks, or is baptized or sealed, or knows magic formulæ. Similar conceptions have already been met with in savage eschatology (§ 1). Cf. also the idea of Baptism as a test or mark. Sins make marks on the sinner, and by these he is recognized in the Other-world (Plato, *Gorgias*, 523; Lucian, *Katapl.* 23; cf. Origen, hom. *in Jer.* 16).

19. **Books of Fate and Judgment.**—In Bab. belief, Marduk had a scribe who wrote down, at his dictation, the fate of the living, and the decrees of the ruler of Hades were also written down by a scribe (Jastrow, *Rel. of Bab.*, Boston, 1898, p. 587). In the OT a Book of Life or of Remembrance contains the names of those who belong to Jahweh's people, and from it their names may be blotted out (Ex 32^{32}, Ps 69^{28}, Is 4^{3}, Ezk 13^{9}, Mal 3^{16}; cf. Ps 139^{16}, Jer 22^{30}, Is 48^{10}). This, then, becomes the book of those who are admitted to the future blessedness (Dn 12^{1})—an idea found fully in the NT (Lk 10^{20}, Ph 4^{3}, He 12^{23}, Rev 3^{5} 13^{8} 17^{8} 20$^{12.\,15}$ 21^{27}). Books in which good and evil deeds are recorded are also referred to (Mal 3^{16}, Is 65^{6}), and they are opened at the Judgment (Dn 7^{10}, Rev 20^{12}). These ideas recur in Apocalyptic literature. Books of the living exist (*Jub.* 36^{10} 30^{22}), and are opened at the Judgment (*En.* 47^{3}; cf. 104^{1}). There are also books wherein the deeds of men are recorded, and these also are used in the Judgment (*En.* 81^{4} 90^{20} 98$^{7.\,8}$ 104^{7}, *Jub.* 30$^{20f.}$ 36^{10}, 4 Ezr 6^{20}, *Apoc. Bar.* 24^{1}). Enoch is said to be the scribe who records the deeds (*Jub.* 4^{23} 10^{17}; cf. *Secrets of Enoch*, 40^{13} 53^{2} 64^{5}); elsewhere it is an archangel (*En.* 89^{61}; Michael, *Asc. Is.* 9^{21}). In *Test. Abr.* (§ 12) two angels or Enoch record the deeds and the judgment passed on souls. Similar ideas are found in early Christian literature (Book of Life or of Righteous [*Apoc. Petri*; Hermas, *Vis.* i. 3, *Mand.* viii. 6, *Sim.* ii. 9; cf. *PG* xxviii. 589]), and in Visions of the Other-world, early and later (*Apoc. Petri*; *Apoc. Pauli*; Bede, *Eccl. Hist.* v. 13), and are a matter of popular belief. The recorders are very frequently angels—a conception already found in the Greek belief regarding demons (Hes. *Op.* 251 f.) or shadows (Lucian, *Menip.* 13). Similar ideas regarding books or registers which decide the future fates of men are found in some of the higher ethnic religions—Hindu, Buddhist, and Muhammadan (§§ 6, 7, 9; cf. § 2, for the scribe Thōth). See Scherman, *Materialien zur Gesch. der indisch. Visionslitt.*, Leipzig, 1892, p. 89; Landau, *Hölle und Fegfeuer*, 114 ff.; cf. also artt. BOOK OF LIFE, and FATE.

CONCLUSION.—The ideas regarding the end of the world which are found in most eschatologies may be regarded as mythical speculations prompted by knowledge of actual catastrophes in Nature and of its phenomena. The world, as science teaches, and as the speculations of men suggested, must have an end; but they pictured that end in lurid colours, while generally anticipating after it a new order. But only in a few eschatologies is the conception of a great Final Judgment found (Parsi, Jewish, Christian, Muhammadan); and this is joined to the doctrine of the world-end, the final catastrophe being the prelude to, or even a part of, the action of judgment. Moral and natural events were thus connected, because it seemed fitting to men that the time when their final fates were being decided should synchronize with the close of the world-order. Christianity, and, if we accept Christ's eschatological teaching literally (though, as has been seen, it is not necessary to do so), Christ Himself, taught this view; but the tendency is now more and more to seek the more spiritual conception of judgment, and for men to concern themselves less and less with the close of the world-order as an event to which has been attached, more or less mechanically, the idea of a Last Judgment. The manifestation of God's judgment in the soul of man is regarded as of more importance than the lurid phenomena which have so long been believed to accompany a Final Judgment, and which can have no relation to the soul or the organism with which it is clothed in a future state.

J. A. MACCULLOCH.

ESKIMOS.—1. **Ethnology.**—The Eskimos form, with the Aleuts (*q.v.*), a distinct linguistic stock of N. Amer. aborigines, and, as far as all evidence goes, have inhabited their present territory at least from the time when they were first visited by the whites. This habitat extends along the coasts and islands of Arctic America, from eastern Greenland and the north end of Newfoundland to

the westernmost Aleutian islands; and a small section, the Yuit, have even crossed, apparently at no very distant time, to the Asiatic coast, where they are settled about Indian Point, Cape Chukotsky, Cape Ulakhpen, and on St. Lawrence Island. Of their migrations little is known, but 'it is supposed that their original home was the district around Hudson's Bay (Boas) or the southern part of Alaska (Rink), and that from these regions they migrated eastward and westward, arriving in Greenland a thousand years ago, and in Asia barely three centuries ago' (Deniker, *Races of Man*, London, 1900, p. 520).

The evidence for the early presence of Eskimos in Greenland is afforded by the discovery there, by Eric the Red (*c.* 980), of ruins of buildings, remains of boats, and stone implements, which the Norsemen ascribed to *skrællingar* ('little folk,' 'weaklings'), who are probably to be identified with the Eskimos. It is even possible that in 1004 they were found by Thorvald about Kjalarnes, which has been held to be the same as Cape Cod (Keane, *Man Past and Present*, Cambridge, 1900, p. 370).

It is clear, from remains found in Smith Sound, that Eskimo bands formerly wintered as far north as lat. 79°, and that they had summer camps up to 82°. They have, however, receded from their extreme northern range, and have also abandoned, in the south, the northern shores of the Gulf of St. Lawrence, the northern end of Newfoundland, James Bay, and the southern shores of Hudson's Bay, while in Alaska one tribe, the Ugalakmiut, has become practically Tlingit through intermarriage.

The Eskimos may be divided into nine fairly well-marked ethnological groups, as follows (Boas, *ap.* Henshaw and Swanton, art. 'Eskimo' in *Handbook of Amer. Ind.* i. 435 f.):

'i. The Greenland Eskimo, subdivided into the East Greenlanders, West Greenlanders, and Ita Eskimo—the last transitional between the Greenland Eskimo proper and the next group.

ii. The Eskimo of South Baffin Land and Labrador, embracing the following divisions: Akudnirmiut, Akuliarmiut, Itivimiut, Kaumauangmiut, Kigiktagmiut, Nugumiut, Okomiut, Padlimiut, Sikosuilarmiut, Suhinimiut, Tahagmiut.

iii. The Eskimo of Melville Peninsula, North Devon, North Baffin Land, and the north-west shore of Hudson's Bay, embracing the Agomiut, Aivilirmiut, Amitormiut, Iglulirmiut, Inuissuitmiut, Kinipetu, Koungmiut, Pilingmiut, Sauniktumiut.

iv. The Sagdlirmiut of Southampton Island, now extinct.

v. The Eskimo of Boothia Felix, King William Land, and the neighbouring mainland. These include the Netchilirmiut, Sinimiut, Ugjulirmiut, Ukusiksalirmiut.

vi. The Eskimo of Victoria Land and Coronation Gulf, including the Kangormiut and Kidnelik, which may, perhaps, be one tribe.

vii. The Eskimo between Cape Bathurst and Herschel Island, including the mouth of Mackenzie River. Provisionally they may be divided into the Kitegareut at Cape Bathurst and on Anderson River, the Nageuktormiut at the mouth of Coppermine River, and the Kopagmiut of Mackenzie River. This group approximates the next very closely.

viii. The Alaskan Eskimo, embracing all those within the American territory. This group includes the Aglemiut, Chingigmiut, Chnagmiut, Chugachigmiut, Ikogmiut, Imaklimiut, Ingukilmiut, Kaialigmiut, Kangmaligmiut, Kaniagmiut, Kaviagmiut, Kevalingamiut, Kiatagmiut, Kinugumiut, Kowagmiut, Kukpaurungmiut, Kunmiut, Kuskwogmiut, Magemiut, Malemiut, Nunatogmiut, Nunivagmiut, Nuwukmiut, Nushagagmiut, Selawigmiut, Sidarumiut, Tikeramiut, Togiagmiut, Ugalakmiut, Unaligmiut, Utukamiut, and Utkiavimiut.

ix. The Yuit of Siberia.' (These have four linguistic groups: Noökalit of East Cape; Aiwanat of Indian Point; Wuteëlit of Cape Ulakhpen; and Eiwhuelit of St. Lawrence Island [*Handbook*, ii. 1007 f.].)

2. Designation.—Like so many primitive peoples, the Eskimos name themselves *Innuit*, 'people,' 'men.' Their usual appellation, *Eskimo*, seems first to have been given them by the Jesuit Father Biard in 1611, under the form *Excomminquois*, which appears to be taken from their Abenaki designation, *Eskimantzik* (or the Chippewa equivalent, *Ashkimeq*), 'eaters of raw flesh.' Two other interesting names applied to them are the Kutchin *Ta-Kutchi*, 'ocean people,' and the Seneca *Tciĕck-rúnĕn*, 'seal people,' while the Hudson's Bay jargon, *Husky*, is simply a corruption of their familiar designation. (For a complete list of appellations applied to the Eskimos, see *Handbook*, i. 436 f.) The entire Eskimo population is estimated at some 27,700, of whom about 10,900 are in Greenland, 15,600 in North America, and 1200 in Asia.

3. Physical characteristics.—Of the physical characteristics of the Eskimos, Deniker writes as follows (p. 520 f.):

'Physically, the pure Eskimo—that is to say, those of the northern coast of America, and perhaps of the eastern coast of Greenland—may form a special race, allied with the American races, but exhibiting some characteristics of the Ugrian race (short stature, dolichocephaly, shape of the eyes, etc.). They are above average stature (1 m. 62), whilst the Eskimo of Labrador and Greenland are shorter, and those of southern Alaska a little taller (1 m. 66), in consequence perhaps of interminglings, which would also explain their cranial configuration (ceph. ind. on the living subject, 79 in Alaska, against 76·8 in Greenland), which is less elongated than among the northern tribes (average cephalic index of the skull, 70 and 72). Their complexion is yellow, their eyes straight, and black (except among certain Greenland half-breeds); their cheek-bones are projecting, the nose is somewhat prominent, the face round, and the mouth rather thick-lipped.' To this may be added, from Henshaw and Swanton (p. 434), that the Eskimos 'possess uncommon strength and endurance; their skin is light brownish yellow with a ruddy tint on the exposed parts; their hands and feet are small and well formed. . . . They are characterized by very broad faces and narrow, high noses; their heads are also exceptionally high.' Their hair is straight and black; the beard is at best scanty, and often is entirely lacking. They are not long-lived, seldom living much beyond sixty. The most common cause of death is inflammatory rheumatism. In this connexion it should be stated, in addition to the theories of their origin already noted, that Chamberlain (*Internat. Encyc.* vi. [New York, 1903] 858), following Dall, Olivier, Nordquist, Krause, and others, is inclined to think that 'the Eskimo were derived directly from peoples of the Asiatic polar regions, some of whom came to America across the narrow Bering Strait. The Koriak and Chukchi, who inhabit the extreme eastern portion of the peninsula of Siberia, are regarded as an Asiatic branch of the Eskimo race.' The latter statement is, however, extremely doubtful (see Keane, 299).

4. Language.—The Eskimo language belongs to the general type of American languages usually, but not very accurately, termed polysynthetic or incorporating. Naturally, in its long history, this language has split up into a number of dialects, rather, it would appear, through phonetic and semasiological changes than through the influence of other tongues.

'The dialectic differences are important, although not so extensive as to obscure the identity of the Eskimo languages of Alaska and of Greenland. We even find dialectic deviations from fiord to fiord. Nowadays an East Greenlander does not understand a West Greenlander until both have become accustomed to each other's speech; and the Greenlander has to learn the peculiarities of the dialect of the Baffin-land Eskimo to carry on conversation with him. The dialects of western Alaska differ fundamentally from the Greenland dialects, about as much as English and German or English and French differ from each other' (Thalbitzer, *Handbook of Amer. Ind. Languages*, i. 971).

5. Material culture, occupations, organization.—The Eskimos have always occupied a special place in the study of American aboriginal tribes. As the most northerly tribe in the world, their habitat itself has attracted to them more than usual attention; yet it is not to this accidental fact that the interest manifested in them is due, but rather to the fact that ethnologists and sociologists saw in them what appeared to be a classical example of the adaptation of a people to a special, unfavourable environment. They have found, corresponding to the vast, uniform, and monotonous Nature around them, a remarkable uniformity in the customs, culture, and language of all the tribes scattered over the enormous area of the Arctic archipelago and the mainland; they have discovered in the ingenious devices for catching their prey, in the specialized *kayak*, in the snow houses, and in the sledge with the dogs trained for drawing it, convincing proof that here was a perfect adaptation of man to his environment. There can, indeed, be no doubt that in the domain of material culture the adaptation of man to his environ-

ment is remarkable, especially if we regard it from a broad point of view. But even here, as soon as we look at details, the adaptation does not appear so perfect, and the play of individual variation and the conservative force of customs, in no way connected with the adaptation of man to any special environment, are apparent at every point. What relation is there between adaptation to environment and the religious custom which compels a man to destroy all that he owns, objects whose loss, in winter, for instance, might mean starvation and death, if his father dies in the house where they are deposited? What is unquestionably true is that the special climatic conditions of the Eskimo habitat demanded, perhaps, more than a 'working adaptation' to environment; but when this was once secured—and it was secured long ago—it permitted the play of forces that in themselves had no relation to the problem of adaptation, but were the direct result of the individual and social cultural potentialities of the Eskimos, no matter what part the physical environment may have played in shaping and upbuilding them.

The material culture of the Eskimos has been described many times, so that it will here be sufficient to quote the admirable summary of Rink, in his introduction to his *Tales and Traditions of the Eskimo* (London, 1875):

The Eskimo are entirely dependent upon seals and cetaceous animals for food, and the peculiar hunting contrivances used in securing them are the following: (1) *kayaks*, boats which consist of a framework of wood joined together principally by strings, and provided with a cover of skins impenetrable to the water. (2) The adjustment of the *kayak* itself and the *kayak*-coverings, with a view to provide an entire shelter for the *kayaker* or seal-hunter, with exception only of the face, to protect him against the water. Only a small number of Eskimos have *kayaks* fitted for more than a single man; and still more exceptionally, in the farthest north, some are found who have no *kayak* at all, because the sea is almost continually frozen. (3) Adaptation of a bladder filled with air to the harpoons or javelins, in order, by retarding the animals, to prevent them from escaping after being struck, and to prevent the harpoon from sinking should the hunter miss his aim (cf. Mason, *Rep. U.S. Nat. Mus.*, 1900 [Washington, 1902], p. 236 ff.). (4) The ingenious way in which the points of the weapons and of the spears with which the animals are finally killed are fitted into the shaft, so that, having penetrated the skin of the animal, the point is bent out of the shaft, which is either entirely loosened while only the point with the line and the bladder remains attached to the animal, or keeps hanging to the point. Without this precaution, the animal in its struggle would break the shaft or make the barb slip out of its body again. (5) The sledge with the dogs trained for drawing it (cf. Mason, *ib.* 1894 [Washington, 1896], p. 552 ff.).

It should also be noted that, besides bows made of drift-wood and strengthened with sinew (see Murdoch, *RSI*, 1883–84, ii. 307 ff.), the Eskimos are acquainted with a number of forms of the trap, including cage-, door-, and pit-traps, and dead falls for foxes, etc., whalebone nooses for waterfowl, and nets of sinew, rawhide, or baleen for fish (Mason, *RSI*, 1901, p. 467 ff.). Nor would any account of the material culture of the Eskimos be complete without some allusion to their lamps, made chiefly of soapstone (or some other sort of stone), less usually of earthenware, clay, bone, or wood. The Eskimos were the only Americans who possessed the lamp, and with them it assumes the duties not merely of illumination, but also of the cooking stove, besides heating the *igloos*, melting water, drying clothing, bending wood, and the like. Each house-wife possesses her own lamp, and 'a woman without a lamp' is an Eskimo synonym for the most wretched and destitute of beings. It has even been suggested that the architecture of the Eskimo *igloo* has been influenced by the use of the lamp (see on the whole subject, Hough, 'The Lamp of the Eskimo,' *Rep. U.S. Nat. Mus.*, 1896 [Washington, 1898], pp. 1025–1056).

There are two general types of habitation, the summer and the winter type, of which the latter contains a number of subdivisions that serve as rooms. In summer, when travelling, the Eskimos occupy tents of deer- or seal-skins stretched across poles. The winter houses are varied in structure. They are generally built of stones and turf, the roof-spars and the pillars which support the middle of the roof being of wood. Only the Eskimos of the middle regions have vaults of snow for their habitations, whilst the western Eskimos build their houses chiefly of planks covered on the outside with green turf. Some of the far northern divisions are obliged to use bones or stone instead of wood (cf. also *ERE* i. 684^b).

The normal occupations of the men are hunting and fishing and the care and manufacture of their hunting gear, especially the *kayak*; the women are busied with the usual household tasks; the duty of skin-dressing devolves among some tribes on the men, and among others on the women. The clothing is of skins, with little variation for the two sexes. Personal adornment is rare, although in most tribes the women tatu their faces, and some of the Alaskan tribes wear small labrets under the corners of their mouths.

The social organization is extremely loose, the village being the largest unit. There is no real chief, although there is in each settlement some advisory head, who has, however, no power to enforce his opinion.

The standard of sexual morality is low, except where Christianity prevails; but, on the other hand, the Eskimos are peaceable, honest, truthful, and faithful; they are, moreover, generous and hospitable, kind to the stranger, the infirm, and the aged, cheerful and light-hearted. They are fond of singing and of music, although, except where they have come into contact with the whites, their sole musical instrument is a sort of little tambourine made of membrane stretched over an oval frame. They are also exceedingly fond of games.

The Eskimo games are described and discussed by Culin (*24 RBEW* [1907]). They are: ball juggling (p. 712), buzz (751 f.), cat's cradle (767 f.), dice (102 ff.), football (699 ff.), hoop-and-pole (472 ff.), ring-and-pin (544 ff.), tops (736 ff.)—these common to all. The Labrador Eskimos alone have the hand game, the object of which is to guess, like our 'hot and cold,' what object is concealed in the hand (283); peculiar to the Central Eskimos are ball-tossing (709), running after hoops on the ice (783), playing sealing (783), and a sort of roulette (783); and to the Western Eskimos arrow-tossing (386 ff.), hand-and-foot ball (706 f.), jackstraws (729 f.), quoits (723 f.), running races (805), and shinny (629).

The Eskimos, as is well known, are masters of realistic design on bone, one specimen, for instance, given by Deniker (*Races of Man*, p. 138) from Alaska being a series of 12 figures on an ivory whip, recording the fact that the owner paddled to an island with a single hut, where he slept one night, then went to another inhabited island and there spent two nights, and, after sealing and hunting with a bow, paddled back with a comrade to his own hut.

6. Religion.—Until the publication of Knud Rasmussen's *People of the Polar North* (Lond. 1908), Eskimo mythology occupied a peculiar place in the religious systems of the American aborigines, in that it was supposed to deal exclusively with human heroes and human activities. Indeed, it might be said that the 'myth' had been almost entirely displaced by the 'tale,' the latter connoting any plot that, from the Eskimo point of view, falls within the domain of earthly happenings, while 'myth' stands for a plot that does not. It was believed, previous to Rasmussen's work, that the animal played no part whatever in Eskimo mythology, and it assuredly does not do so in the areas not described by him; yet there can be no doubt that for the northern areas, with which the first part of his book deals, animal myths are found; and this fact lifts Eskimo mythology out

of the position which it had long occupied in relation to the mythologies of other American tribes.

It is extremely difficult to describe even the essentials of Eskimo religious belief in the present state of our knowledge; for, with the exception of Rink, Boas, and Rasmussen, no observers have spent enough time among any given band really to get at the bottom of their religious system—or lack of it. Rink was under the disadvantage of having to rely on interpreters all the time and of not getting his material from texts; and this, combined with his tendency towards over-systematization, renders his accounts of Eskimo religious beliefs unsatisfactory in many respects. Rasmussen, on the other hand, although he obtained everything from texts and approached his subject with the utmost sympathy, suffers at times from the tendency to look at his subject too exclusively from the literary point of view, and from his failure to differentiate clearly between the esoteric point of view, as embodied by the shamans, and the exoteric, as represented by the laymen.

Briefly put, the Eskimos believe in spirits inhabiting both animals and what we should term inanimate objects. Their chief 'deity' is called *Tornassuk*, and he rules over all the helping and guardian spirits, or *tornat*, of all of whom he disposes at will. His figure and power are not, however, definitely marked. The chief deity in connexion with the food supply is an old woman who resides in the ocean, and is called *Sedna* among the Central Eskimos, and *Arnaknagsak* among the other divisions. She causes storms or withholds seals or other marine animals, if any of her tabus are infringed, her power over these animals arising from the fact that they are sections of her fingers cut off by her father at the time when she first took up her abode in the sea. It is the chief duty of the shaman, or *angakok*, to discover who has infringed the tabus and thus brought down the wrath of the supernatural beings; and it is likewise his duty to compel the offender to make atonement by public confession to him. Among the Central Eskimos it is believed that two spirits reside in a man's body, one of whom stays with it when it dies and may temporarily enter the body of some child, who is then named after the departed; while the other goes to one of the several lands of the souls, some of which lie above, and some below, the surface of the earth.

According to the statements of Rink, the whole visible world is ruled by supernatural powers, each of whom holds sway within certain limits, and is called *inua* ('man,' 'owner').

'Strictly speaking, scarcely any object existing either in a physical or spiritual point of view may not be conceived to have its *inua*. Generally speaking, however, the notion of an *inua* is limited to a locality, or to the human qualities and passions, *e.g.* the *inua* of certain mountains or lakes, of strength, of eating,' etc.

Perhaps the best idea of Eskimo religious beliefs can be obtained from Rasmussen's work mentioned above.

'We do not all understand the hidden things,' one old man told him, 'but we believe the people who say they do. We believe our *angakok*, and we believe them because we . . . do not want to expose ourselves to the danger of famine and starvation. We believe, in order to make our lives and our food secure. If we did not believe the magicians, the animals we hunt would make themselves invisible to us; if we did not follow their advice, we should fall ill and die. . . . We observe our old customs, in order to hold the world up, for the powers must not be offended. . . . We are afraid of the great Evil. Men are so helpless in the face of illness. The people here do penance, because the dead are strong in their vital sap, and boundless in their might' (p. 123 f.).

Here is a magician's description of how he obtained his power: 'I wanted to become a magician, and went up to the hills and slept up there. There I saw two hill-spirits as tall as a tent. They sang drum-songs. I kept silent. I was ashamed. The day after I went home and I was a little of a magician; but to the many I said nothing of it, for I was still very little of a magician. Another time I started for the hill and lay down to sleep, and, as I lay, I heard again the song of the hill-spirits. One now began to speak to me, and asked me for a ladle of wood. When I returned to men, I still did not speak about it, but carved a ladle of wood for the spirit. The third time I saw the hill-spirits it was in my own house, and a great dog was running after them; it, too, became my helping spirit. It was only when many people fell sick that I revealed myself as a magician. . . . My helping spirits know my thoughts and my will, and they help me when I give commands. Once I was very ill, and then I lost a great deal of my magic power. My helping spirits began to despise me. Now I am again a great magician. Even my wife can hear the spirits when they come to me, and I know when people are going to fall ill, and I know when they can recover' (cf. Rasmussen, p. 147 f.).

Rasmussen himself thus sums up their religion:

'Their religious opinions do not lead them to any sort of worship of the supernatural, but consist—if they are to be formulated in a creed—of a list of commandments and rules of conduct controlling their relations with unknown forces hostile to man' (p. 125). 'Their religion does not centre round any divinity who is worshipped, but vents itself in a belief in evil, in a dim perception of certain mystical powers who are easily offended and whose anger is dangerous. Man would be overwhelmed by the consideration he has to pay to the forces of Nature and by the rules governing his relations with these forces, were it not that he has the power, by forethought, to be the stronger, and, despite all, to control dangers. And this he does by himself taking the dreaded forces into his service. For the magicians, who are the leaders of the people, can, by their arts and skill, make the powers who are masters of life and death subject to them, not by prayer but by command. . . . Every man is at his birth endowed with a certain supply of vital force which is to be used up on earth. When this supply is exhausted, the person grows old and, by death, passes over into another existence. In such a case no magician endeavours to retain life in the invalid, for he is "worn out," and it is better that he should die' (p. 126 f.).

From these beliefs those of the Eskimos of Ammassalik Fiord, East Greenland, differ in some noteworthy regards, as is detailed by Thalbitzer ('The Heathen Priests of East Greenland,' in *XVI. Internat. Amerikanisten-Kongress*, Vienna, 1910, ii. 447–464):

'The Eskimo religion knows two supreme divinities: the moon, Aningáhk, which is regarded as a man, a hunter, who catches sea-animals, who has his house, his hunting grounds, and his implements of the chase in the sky; and the old nameless woman of the sea [the Sedna or Arnaknagsak of the other Eskimos], whose house lies far away at the bottom of the ocean, and who rules over the marine seals, whales, and polar bears. Finally, the people of Ammassalik speak of a third power in the sky, an old woman of the name of *Asiak*, who procures rain by shaking a skin drenched in urine down upon the earth, so that a shower of drops is sprinkled upon it.' Besides the *angakoks*, the Greenland Eskimos have an inferior and less esteemed class of shamans, the *qilalik*, the most of whom are women. The mystic language in which the *angakok* holds converse with the spirits is 'not sheer abracadabra, but obsolete or metaphorically used Eskimo words, a kind of inherited art language, which contributes in a high degree to the solemn and mystical character of the spiritual gathering. The religious forms or expressions themselves are made no secret of: only the way in which the disciple receives his training is wrapped in mystery.' During his questioning of the spirits, the soul of the *angakok* is believed to sink below the earth (or sometimes to go to the moon), his body being meanwhile occupied by his *taartaat* (apparently 'successor'). He is aided by his spirit monsters, or the manlike animals belonging to the sacred ritual, which enter the hut while the *angakok's* soul is still in his body, these being *Timerseet*, living in the interior of the country; *Eajuätsaat*, dwelling under the ground close to men's huts; and *Innertiwin*, living on the beach under the rocks of the coast. Besides these there comes from the sea the 'consulted one,' *Apergit*, who serves as the intermediary between the *angakok* and *Toornartik*, a sea-monster which guides him to the woman of the sea, and informs the *Apergit* (who then tells the *angakok*) as to what souls have abandoned the sick man on whose behalf the consultation is made, and where they may be found; whereupon the attendant spirits are to search for and bring back the deserting souls. 'For, according to Eskimo notions, all disease is nothing but loss of a soul; in every part of the human body (particularly in every joint, as, for instance, in each finger-joint) there resides a little soul, and, if a part of the man's body is sick, it is because the little soul has abandoned that part. In most cases the loss of the soul is regarded as due to one of the following causes: either that evilly disposed persons have driven it out by means of magic, or that higher powers, the moon, for instance, have removed it as a punishment for men's sins (some sacrilege, breach of tabu, or other).'

There can be no doubt that the native religion of the Eskimos is gradually becoming extinct, and in Western Greenland (as also in East Greenland) the Danish missionaries have practically extinguished it. The same thing is true of Labrador, where Moravian missionaries have long been

active; and in Alaska the Russians have laboured for more than a century, with good success, for the Christianization of the Eskimos, their work being assisted by missionaries of other communions. Among the central groups, on the other hand, the native religion has remained practically untouched by missionary endeavour.

Taken all in all, Eskimo culture, despite a remarkable specialization in certain aspects of material civilization, shows sufficient fundamental similarities in all other aspects to warrant its inclusion in the cultural areas of North America.

LITERATURE.—The older records are summarized in Waitz, *Anthropol. der Naturvölker*, Leipzig, 1862, iii. 300 ff. Besides the works mentioned in the text, reference should be made to Boas, 'Central Eskimo' (*6 RBEW* [1888]), and 'Eskimo of Baffin Land and Hudson Bay' (*Bull. Amer. Mus. Nat. Hist.* xv. pt. i. [1901]); Dall, 'Tribes of the Extreme Northwest' (*Contrib. to N. Amer. Ethnol.* i. [1877]); Nelson, 'Eskimo about Bering Strait' (*18 RBEW*, pt. i. [1899]); Murdoch, 'Ethnolog. Results of the Point Barrow Expedition' (*9 RBEW* [1892]); Kroeber, 'Eskimo of Smith Sound' (*Bull. Amer. Mus. Nat. Hist.* xii. [1899]); Turner, 'Ethnol. of the Ungava District' (*11 RBEW* [1894]); Holm, 'Ethnologisk Skizzen af Angamagsalikerne' (*Meddelelser om Grönland*, x. [1887]); Rink, 'Eskimo Tribes' (*ib.* xi. [1887]); Nansen, *Eskimo Life*[2], London, 1894; Bolles, 'Cat. of Eskimo Collection' (*Rep. U.S. Nat. Mus.*, 1887); Pilling, 'Bibliog. of the Eskimo Language' (*1 Bull. BE* [1887], to be supplemented by the list of Thalbitzer, 'Eskimo,' in *Handbook of Amer. Ind. Lang.* (*40 Bull. BE* [1911]) i. 969 ff.; D. MacRitchie, 'Eskimos of Davis Straits in 1656' (*Scottish Geographical Magazine*, xxviii. [1912] 281–294.

PAUL RADIN and LOUIS H. GRAY.

ESSENCE.—All human striving seeks the essential. Cognitive energy, from its first instinctive stirrings to its most highly developed and clearly conscious forms, is a process of selection impelled by deep-lying vital necessities. The senses are organs of selection, reacting characteristically upon the multitudinous stimuli of the physical world. On the selected material they present, the mind carries out a further process of sifting and combination, in accordance with its immanent norms and ends. The whole discriminative and elaborative activity is vital self-expression of the mind. In biological terms, cognition may be described as a mode of the mind's vital adjustment to environment—an adjustment which utters the nature and at the same time subserves the realization and conservation of the self. In other words, cognition so far satisfies the primal need of personal life, namely, to assert and maintain itself (cf. art. EPISTEMOLOGY). Thus, thinking and human activity in general are purposive through and through. Behind it all is the will to live, to be a self. In illustration, it may be pointed out that the very ideas of truth and reality are possible only in relation to an interest or purpose. Apart from an informing aim to attain the true or to grasp the real, thinking or intellection could have no intelligible relation to truth or reality.

As Stout puts it (in *Personal Idealism*, ed. Sturt, 1902, p. 10), 'a person cannot be right or wrong without reference to some interest or purpose.' Similarly, Royce asserts that an idea appears in consciousness as having the significance of an act of will, and that the inner purpose is the primary and essential feature of an idea (*The World and the Individual*, 1st ser., New York, 1900, Introd., *passim*).

Thus, the objective world furnishes the occasion and material for the progressive self-fulfilment of the Ego; or, to put it otherwise, it is the correlate of man's self-activity; and the essential is what is specially relevant to a particular interest or purpose of the mind at work on the organization of experience.

'The essence of a thing is that one of its properties which is so important for my interests that in comparison with it I may neglect the rest' (W. James, *Text-Book of Psychology*, 1892, p. 357). Or, 'it is merely such aspects of the whole behaviour of the thing as are selected from among the rest, by reason either of their relative permanence or of their importance for our purposes' (F. C. S. Schiller, *Humanism*, 1903, p. 225).

This fairly represents our ordinary work-a-day attitude towards things. It does not follow, however, that the things of sense-experience are absolutely plastic material. On the contrary, they exercise a certain control. They may be variously conceived, but misconception is checked by its discovered unworkableness. In our practical intercourse with things we have to reckon with certain invariable modes of action and reaction; and these constitute for us their essential characteristics or nature (cf. G. Jacobi, *Pragmatismus*, 1909, p. 33). Science represents a systematized and critical form of the common-sense view of the world. Armed with its weapons of precision, it stands for enhanced mastery over Nature, for enlarged human efficiency. It is this quality of exactitude, expressed in measurement, that distinguishes scientific procedure most sharply from the rough and ready methods of common sense. The constant endeavour to attain the maximum of accuracy, order, connexion, consistency, and completeness in the different provinces of knowledge makes science necessarily critical of the looseness and incoherence of ordinary thinking, and is apt to beget the impression that the scientific attitude is antithetic to that of the practical man (see, *e.g.*, J. Arthur Thomson, *Introd. to Science*, London, 1911, p. 38 f.). Nevertheless, in spite of the undeniable contrast, science may best be described as a critical development of common sense. The further organization of experience is due to the working of the same organic impulse of self-realization, with its inherent selective interests, which makes the synthesis of knowledge possible at all. It is very generally recognized that at all events the physical and natural sciences aim at 'the description of events by the aid of the fewest and simplest general formulæ' (*ib.* p. 47); they limit themselves to descriptive formulation in contradistinction to explanatory interpretation.

This phenomenalism of method is self-imposed in the interests of the special disciplines and of science as a whole. In order to deal with the facts of experience in their immeasurable complexity, certain aspects must be mentally isolated and fixated, and the whole body of relative data envisaged from this point of view. Thus, the particular sciences carry through methodically the abstraction which is the other side of all intellectual concentration. They are methods of intellectually attacking and mastering an otherwise unmanageable mass of experiential material. The same group of facts may be worked over by many sciences from their own distinctive view-points, yielding to each its special concepts, classification, and laws. Merz, in his monumental *History of European Thought in the Nineteenth Century* (1896–1903), regards the various lines of scientific advance as characteristic modes of viewing Nature, and classifies them accordingly as the astronomical, the atomic, the mechanical or kinetic, the physical, the morphological, the genetic, the vitalistic, the psycho-physical, and the statistical views of Nature.

Clearly, then, it is not the business of the sciences to determine the real essence of their subject-matter. The very notion lies outside their purview. For that reason it is grossly fallacious to construe this methodological ignorance as metaphysical negation. It is impossible to negate what is not considered; it is impossible to answer a question which is never raised. Empirical science is no more anti-metaphysical because it ignores the metaphysical than geometry is anti-biological because it does not concern itself with the phenomena of life. On the other hand, the empirical sciences contribute valuable and indispensable material for the solution of the strictly philosophical problems.

Science does not, in point of fact, satisfy the

irrepressible demand for real explanation. A pure scientist has never lived. Philosophy recognizes that the questions regarding ultimate explanations and meanings, final causes, and eternal values must be faced. It recognizes, further, the inherent limitations and instrumental character of scientific method, and perceives that it is but a partial expression and satisfaction of the cognitive impulse, and but one phase in the total life of the human spirit. Philosophy represents a resolute endeavour after completeness in thought. It seeks to take cognizance of all the facts and factors that enter into human experience, and hence does not limit itself to facts amenable to ordinary scientific treatment, or assume as ultimate and finally valid the working principles and underlying assumptions of the sciences. The particular sciences and science as a whole form part of its total datum, which embraces the whole range of human culture, both as result and as process. This huge aggregate —as it at first sight appears—must somehow be conceived as a whole, and to this end the facts must be graded according to their causative efficiency and explanatory value. The result is an ultimate synthesis, on the basis of a thoroughgoing resolution, of the phenomenal complex into its constituent factors and ends. Not, of course, that the philosopher is bound to consider his view of the world as an adequate intellectual formulation of ultimate reality; the fact that the life which energizes in the thinker is in continuous movement and development should be enough to hold him back from the presumption of absolutist gnosticism. Yet this admission does not carry with it adhesion to relativism. The philosopher cannot help believing that, though he has not grasped and cannot grasp the whole truth, he has, nevertheless, reached essential truth, that permanent validity attaches to the substance at least of his central affirmations, and that his efforts will make for a fuller apprehension of the truth by future generations. To claim less than this would mean an intellectual self-renunciation tantamount to suicide. In its metaphysical insistence philosophy expresses the outreaching in one direction of the spiritual life—a reality wider and deeper than mere thought—towards self-fulfilment. The essential is an ideal to be realized; it is also a substantial reality, impelling and attractive; or it would not be sought. Only that which is in some sort our own moves us. Essence in its large signification is the all-comprehensive problem of humanity, alike theoretical and practical. Its solution will not be furnished by the subtlest reflexions of the theoretical reason, but by the forward movement of life as a whole, by the active realization and explication of a truth of humanity which is vastly more than any theory (see R. Eucken, *Geistige Strömungen d. Gegenwart*,[4] 1909, p. 36 f.). The problems are internal and vital, and are progressively resolved by the self-unfolding of the vital process, which they have challenged and stimulated.

See also artt. ACCIDENT, BEING, EPISTEMOLOGY, ONTOLOGY, PHILOSOPHY, SUBSTANCE.

LITERATURE.—On the part the term and concept have played in the history of philosophy, see Eisler, *Wörterbuch der philos. Begriffe*[2], 1904, art. 'Wesen.' For Greek philosophy, see the Histories of Philosophy by Zeller, Erdmann, and Überweg-Heinze. Good accounts of Scholastic usage are given in T. Harper, *The Metaphysics of the School*, 1879–84, vol. i. bk. ii., and the *English Manuals of Catholic Philosophy*, Stonyhurst series, esp. those on Logic (Clarke), First Principles (John Rickaby), General Metaphysics (do.). For modern times, besides the works already referred to, the following may be consulted: Locke, *Essay on Human Understanding*, bk. iii.; J. McCosh, *Intuitions of the Mind*, 1860; A. Bain, *Mental and Moral Science*[3], 1884; J. F. Ferrier, *Institutes of Metaphysic*, 1854, p. 249 f.; Hegel, *Encyklopädie*, 1845, 'Lehre vom Wesen' (cf. W. Wallace, *Logic of Hegel*[2], 1894, p. 177 f.); Lotze, *Metaphysics*, Eng. tr. 1884, *passim*, and *Microcosmus*, Eng. tr. 1885, vol. ii. bk. ix.; B. P. Bowne, *Metaphysics*, 1882, ch. ii.; G. T. Ladd, *Theory of Reality*, 1899; W. Windelband, *Hist. of Philos.*, 1893. A novel and strikingly suggestive development of the idea of essence is given by R. Eucken, in his philosophy of the Spiritual Life set forth in many vols., e.g. *Grundlinien einer neuen Lebensanschauung*, 1907, pp. 174 f. and 259 f. (cf. J. Goldstein, *Wandlungen in der Philosophie der Gegenwart*, 1911). A lucid discussion of real kinds or 'essence' is given by Mellone, *Introd. Text-Book of Logic*[2], 1905.

F. W. DUNLOP.

ESSENES.—The *Epulones* of Artemis at Ephesus were called 'Essenes' (Paus. viii. 13. 1: τοὺς τῇ Ἀρτέμιδι ἱστιάτορας τῇ Ἐφεσίᾳ γινομένους, καλουμένους δὲ ὑπὸ τῶν πολιτῶν Ἐσσῆνας), or 'king bees'; but the name is specially applied to a remarkable pre-Christian order of Jewish monks, whom Josephus calls Ἐσσηνοί or Ἐσσαῖοι. Philo adheres to the latter name, which, as more Semitic, was probably the original formation of their title.

1. Sources of information.—Neither the Bible nor the Rabbinical literature mentions the Essenes, but their mode of life is described by (*a*) Jewish, (*b*) Christian, and (*c*) pagan writers.

(*a*) Philo and Josephus devote unusual attention to their customs; and as the former was a contemporary, while the latter spent three years in their neighbourhood and had other opportunities of gaining acquaintance with individual Essenes, the narratives of both writers, although liable to qualifying criticism on the score of tendency, furnish indispensable materials for an estimate of the order.

(i.) Two Philonic statements are extant. The first and longer occurs in the treatise, *Quod omnis probus liber* (§§ 12–13), a youthful work, perhaps written when Philo was studying in Alexandria. He has just been proving that the world is not wholly destitute of virtuous people; after pointing to the Persian Magi and the Indian gymnosophists, he proceeds to quote a salient example from his own countrymen:

§ 12. 'Nor are Palestine and[1] Syria barren of moral excellence (καλοκἀγαθία)—countries inhabited by a large portion of that most populous race, the Jews. There are among them people called Essenes, numbering over 4000, and in my judgment so called from their piety (ὁσιότητος)—though the derivation is not strictly Greek—since they are pre-eminently worshipping servants of God (θεραπευταὶ θεοῦ); they do not sacrifice animals, but study to keep their minds in a saintly frame (ἱεροπρεπεῖς). In the first place, they reside in villages, shunning town-life on account of the lawless manners of townsfolk, since they are well aware that such associations are as able to infect their souls with incurable disorder as tainted air is to infect their bodies with deadly disease. Some of them till the ground. Others practise such arts and crafts as are consonant (συνεργάτιδες) with peace, and thereby benefit themselves and their neighbours. They do not treasure up silver and gold, nor do they acquire large tracts of land in an eager desire for income, but only make provision for the absolute necessities of life. They are almost the only people who remain destitute of money and possessions, by use and wont rather than by any lack of prosperity; yet they are esteemed wealthy, for they consider that to be frugal and contented is, as indeed it is, ample abundance. You would not discover among them any maker of arrows, spears, swords, helmets, corselets, or shields, any maker of arms or war-engines, any one busied in the slightest with military avocations or even with those which, during peace, slip easily over into mischief; they are totally ignorant of trade and commerce and sea-faring, abhorring, as they do, all inducements to covetous gain.[2] There is not a single slave among them; all are free and exchange kind offices with each other. They condemn the position of master, not only as unjust, being a breach of equality, but as impious, since it violates the order of Mother Nature, which gives birth to all alike and rears them as genuine brothers, not as nominal, whereas crafty covetousness disorganizes this natural kinship by its desire to outshine others, it engenders hostility instead of affection, and enmity instead of friendship.

Logic is a department of philosophy which they leave to word-catchers, as unnecessary for the acquiring of virtue; physical science they regard as too lofty for human nature, and so they

[1] Schürer, omitting καί, confines the Essenes to Palestinian Syria. They were, at any rate, local, as the Therapeutæ were not. No trace of Essenic propaganda is to be found in Asia Minor or Italy.

[2] Hippolytus (*Hær.* ix. 21) adds that some carried their religious objection to idolatry so far that they refused to use coins, and even to enter cities in case they passed below statues at the gate (cf. *ERE* iv. 849).

leave that to high-flying theorists,[1] except as it includes the study of God's existence and the formation of the universe. It is Ethics to which they devote all their strength, under the guidance of their ancestral laws, which no human soul could have devised apart from Divine inspiration. In these laws they are instructed, particularly on the seventh day, as well as at other times. For the seventh day is held sacred; on it they cease all work,[2] and repair to sacred places called synagogues,[3] where they sit arranged according to age—the young below the older persons—and listen with due order and attention. One reads aloud the sacred books, whereupon another of their most experienced members comes forward to explain whatever is not clear; for the greater part of their lore is conveyed figuratively[4] (διὰ συμβόλων) after their time-honoured fashion. They are taught piety, holiness, justice, the management of affairs (οἰκονομίαν), citizenship, the knowledge of what is truly good or bad or indifferent, how to choose the right and how to shun the contrary; and in all this they employ three rules and standards, namely, the love of God, the love of virtue, and the love of man. Thus they furnish thousands of examples of the meaning of love to God, by a close and continuous purity maintained throughout life, by abstinence from oaths and falsehood, and by regarding the Deity as the cause of all good but of no evil. As for the love of virtue, they point us to freedom from the love of money (ἀφιλοχρήματον),[5] fame, and pleasure, to self-control, to endurance, and also to contentment (ὀλιγοδείαν), simplicity, good humour, modesty, regard for the laws, firmness of character, and such-like qualities. As for the love of man, they give proofs of goodwill, impartiality, and an indescribable bond of fellowship. About this last it will not be amiss to say a few words. First of all, no one has a house of his own, which does not belong to all; in addition to residing together in companies, they keep open house for associates who arrive from other quarters. Then, they have a common treasury, and share all expenses; they also share their clothes, and their meals are common, as they mess together. Among no other people would you find that community of residence, life, and food is more of a reality. This is perhaps only natural, for they put their daily wage into a common fund, instead of keeping it for themselves, and thus provide for any who want help. Their sick members are not neglected because they can contribute nothing, for their ample funds enable them to make lavish provision for all such. Their seniors are treated with respect and honour and attention, as parents are by their own children; their old age is cherished bountifully by the toil and endless thought of the younger members.

§ 13. Such are the masters of virtue (ἀθλητὰς ἀρετῆς) turned out by a philosophic system which has nothing to do with research into Greek terms, but which essays to train them by means of laudable actions as the basis of a freedom which is not to be subdued. Here is a proof of this. From time to time their country has been seized by many rulers, men of varied characters and aims; some of them have tried unceasingly to outdo wild beasts in their ferocity, exhausting every form of savagery, massacring hordes of their subjects, and even cutting them up limb from limb when they were alive, like very butchers, until at last they suffered the same doom at the hands of the justice which supervises human life. Others put their frenzy into a fresh form of malice; unspeakably venomous was their device. Their words were smooth, but the gentle tones they adopted only revealed their bitterness of mind; they would fawn upon men like treacherous dogs, and yet prove the authors of fatal evils. They have left monuments of their impiety and hatred of men in the ever-memorable disasters suffered by their victims in the cities. Yet none of these bloodthirsty creatures, none of these treacherous and cunning tyrants, was able to lay any charge against the company of the Essenes, or "holy men" (ἢ ὁσίων). Their moral excellence triumphed, and everybody treated them as independent and free by nature, praising their common meals and their indescribable good-fellowship—the clearest proof of a life which is perfect and exceedingly happy.'

The second Philonic passage is from the author's lost *Apology for the Jews* (ὑπὲρ Ἰουδαίων ἀπολογία), excerpted in Eus. *Præp. Ev.* viii. 11 (ed. E. H. Gifford, 1903):

'Our Lawgiver has trained to community of living many thousands of disciples, who are called Essenes, because of their holiness, I believe. They dwell in many cities of Judæa and many villages, and in large and populous societies. Their sect is formed not on family descent, for descent is not reckoned among matters of choice, but on zeal for virtue and philanthropy. Accordingly, there is among the Essenes no mere child, or even a scarce-bearded lad, or young man; since of such as these the moral dispositions are unstable and apt to change in accordance with their imperfect age; they are all full-grown men, already verging upon old age, as being no longer swept away by the flood of bodily impulses, or led by

[1] The term (μετεωρολέσχαις) is used in a depreciatory sense by Plato (*Rep.* 489 C) and Lucian (*Icar.* 5).

[2] Hippolytus (*Hær.* ix. 20) adds that some stayed in bed all the Sabbath, to avoid the temptation of work.

[3] Diettrich (*Die Oden Salomos*, 1911, p. 9) detects a reference to these places of worship in the fourth Ode of Solomon (vv. 1–4: 'No one, O my God, changeth thy holy place . . . for thy sanctuary thou hast established before thou didst make other places; the older shall not be put below the younger').

[4] *I.e.* allegorically. This feature attracted Philo.

[5] Cf. He 13[5] and *ERE* iv. 87.

their passions, but in the enjoyment of the genuine and only real liberty.

And their mode of life is an evidence of this liberty; none ventures to acquire any private property at all, no house, or slave,[1] or farm, or cattle, or any of the other things which procure or minister to wealth; but they deposit them all in public together, and enjoy the benefit of all in common. And they dwell together in one place, forming clubs and messes in companies (κατὰ θιάσους, ἑταιρίας καὶ συσσίτια), and they pass their whole time in managing every kind of business for the common good. But different members have different occupations, to which they strenuously devote themselves, and toil on with unwearied patience, making no excuses of cold or heat or any change of weather; before the sun is up they turn to their usual employments, and hardly give up at its setting, delighting in work no less than those who are being trained in gymnastic contests. For, whatever occupation they follow, they imagine that these exercises are more beneficial to life, and more pleasant to soul and body, and more permanent than athletics, because they do not become unseasonable as the vigour of the body declines. Some of them labour in the fields, being skilled in matters relating to sowing and tillage, and others are herdsmen, being masters of all kinds of cattle; and some attend to swarms of bees. Others, again, are craftsmen in various arts, who, in order to avoid any of the sufferings which the want of the necessaries of life imposes, reject none of the innocent ways of gaining a livelihood.

Of the men, then, who thus differ in occupation, every one on receiving his wages gives them to one person who is the appointed steward; and he, on receiving them, immediately purchases the necessary provisions, and supplies abundance of food, and all other things of which man's life is in need. And they who live together and share the same table are content with the same things every day, being lovers of frugality, and abhorring prodigality as a disease of soul and body. Not only have they a common table, but also common raiment; for there are set out in winter thick cloaks, and in summer cheap tunics, so that any one who will may easily take whichever he likes, since what belongs to one is considered to belong to all, and the property of all to be, on the other hand, the property of each one.

Moreover, if any of them should fall sick, he is medically treated out of the common resources, and attended by the care and concern of all. And so the old men, even if they happen to be childless, are wont to end their life in a very happy and bright old age, inasmuch as they are blest with sons both many and good, being held worthy of attention and honour by so many, who from free good will rather than from any bond of natural birth feel it right to cherish them.

Further, then, as they saw with keen discernment the thing which alone, or most of all, was likely to dissolve their community, they repudiated marriage and also practised continence in an eminent degree. For no Essene takes to himself a wife, because woman is immoderately selfish and jealous, and terribly clever in decoying a man's moral inclinations, and bringing them into subjection by continual cajoleries.[2] For when, by practising flattering speeches and the other arts, as of an actress on the stage, she has deluded eyes and ears, then, as having thoroughly deceived the servants, she proceeds to cajole the master mind. And, should she have children, she is filled with pride and boldness of speech, and what she formerly used to hint under the disguise of irony, all this she now speaks out with greater audacity, and shamelessly compels him to practices, every one of which is hostile to community of life. For the man who is either ensnared by the charms of a wife,[3] or induced by natural affection to make his children his first care, is no longer the same towards others, but has unconsciously become changed from a free man to a slave.

So enviable, then, is the life of these Essenes that not only private persons, but also great kings, are filled with admiration and amazement at the men, and make their venerable character still more venerable by marks of approbation and honour.'

(ii.) The principal passage in Josephus occurs in *BJ* II. viii. 2 ff. He opens by noting the reputation of the Essenes for moral earnestness (ὃ δὴ καὶ δοκεῖ σεμνότητα ἀσκεῖν) and brotherliness (φιλάλληλοι), in both of which qualities[4] they compare favourably with the Pharisees and the Sadducees.

§ 2. 'They eschew pleasures[5] as vicious, and regard continence (ἐγκράτειαν) and mastery over the passions as virtue. Marriage they despise; they select other people's children, when their characters are still fresh enough to be indoctrinated, adopt them,[6] and mould them after their own tenets, since,

[1] The context seems to imply that the Essenes had slaves in common, whereas elsewhere (see above) Philo asserts that they had no slaves at all; but the phraseology is loose, and the discrepancy is too slight to serve as a ground for suspecting the authenticity of either passage.

[2] D. Plooij (*De Bronnen voor onze kennis van de Essenen*, 1902, p. 96 f.) regards this misogynism as Eusebian rather than Philonic.

[3] Cf. 1 Co 7[33], Rev 14[4].

[4] This comparison is upset if καὶ τῶν ἄλλων πλέον is taken with what follows (so Lat., Holwerda), instead of with what precedes.

[5] Cf. *ERE* iii. 272[a], 486 f.

[6] A non-Jewish trait (see *ERE* i. 115). No information is given as to how these children were procured.

although they do not repudiate marriage with its function of carrying on the race, they shun the licentiousness of women, and are convinced that no woman keeps faith with a man.

§ 3. They despise wealth,[1] and their socialism is remarkable; you cannot find any of them who has more than his fellows. The rule is that all who enter the sect must divide their property among the common body, so that there is not a trace among them of abject poverty or of excessive wealth; the distribution of every one's possessions creates, as it were, a common stock for all the brotherhood. Oil they regard as defiling, and, if any one is involuntarily smeared, he wipes his body clean; to be unanointed (αὐχμεῖν),[2] and always to wear white, are highly esteemed by them. They also elect managers of their common property, whose sole business it is to look after the wants of all and sundry.

§ 4. They have no single city, but large numbers of them inhabit every city; they freely put whatever they have at the disposal of any fellow-members who may arrive, and the latter enter the houses of people they have never seen before, just as if they were on the closest terms of intimacy. Consequently, although they travel armed in case of robbers, they never carry anything with them on a journey. In every city a special relieving officer is told off for strangers, to provide them with clothing and supplies. As regards their dress and person, they act like boys in terror of their tutors (τοῖς μετὰ φόβου παιδαγωγουμένοις παισίν). They never change their clothes or shoes till they are quite torn to pieces or worn out. They never buy or sell amongst themselves; each gives what he has to any one who is in need (τῷ χρήζοντι διδούς),[3] getting from him in return what he himself requires; they are free to take what they want from any one they choose, apart from any question of paying back (χωρὶς τῆς ἀντιδόσεως).

§ 5. Yet they are peculiarly scrupulous in matters of piety. Before sunrise they never speak a word about profane affairs, but offer some ancestral prayers, as if[4] they besought the sun to rise. After this they are dismissed by the managers to the tasks in which they are respectively proficient, working assiduously till the fifth hour, when they once more gather in one spot, and, clothing themselves in linen veils, take a cold bath;[5] after this act of purification they assemble in an apartment of their own, from which all outsiders are excluded; they enter the dining-room pure (καθαροί) as they would enter a sacred precinct, and take their seats quietly. Then the baker puts loaves before them in order (ἐν τάξει), while the cook sets before each a plate containing one kind of food.[6] But no one is allowed to taste it until the priest offers a prayer, and after they have breakfasted [reading with Porphyry ἀριστοποιησαμένοις] he prays again. At the beginning and at the end of the meal they do honour to God as the supplier of life (ὡς χορηγὸν τῆς ζωῆς, *v.l.* τροφῆς).[7] After this they lay aside their garments as sacred, and resume their tasks till evening, when they return home to sup in similar fashion, sitting down with any strangers who may be present. No brawling or uproar ever defiles their house; they let every one speak in turn (ἐν τάξει, as above). To outsiders, indeed, the silence of the inmates seems full of awe and mystery, but it is due to their unbroken sobriety, and to the fact that food and drink are measured out for them to satisfy their needs, and no more.[8]

§ 6. While in all else they act only at the bidding of the managers, two things are left to their own initiative, namely, succour and charity. They are free to help any deserving cases and to give food to the starving, but they are not allowed to share anything with one another except by the permission of their superintendents. Just in the exercise of anger, they keep a check upon all passion; they are champions of trustworthiness (πίστεως) and promoters of peace. A word of theirs is stronger than an oath; they shun swearing, which they consider worse than perjury, since, they argue, what needs a Divine oath to accredit it is condemned already (ἤδη κατεγνῶσθαι).[9] They also take exceptional pains to select from the writings of the ancients (τὰ τῶν παλαιῶν συντάγματα) what is good for soul and body, which leads them to discover medicinal roots and stones which have the property of curing ailments (cf. *ERE* iv. 757).

§ 7. If any one is eager to join their sect, he is not admitted at once. He is given a spud, a girdle [omitting, with Porphyry, τὸ προειρημένον], and a white robe, and ordered to practise their mode of life for a whole year, remaining still an outsider. After thus giving proof of his continence, he gets closer to their way of living, and shares their baths of purification,[1] though still excluded from their common fellowship. This evidence of endurance[2] is followed by a further period of probation, lasting two years, after which, if he seems worthy, he is enrolled in their band. But, before touching their common food, he takes fearful oaths: first of all to be pious to the Deity; then to practise justice towards men; never to injure any one either of his own accord or under compulsion; always to hate the wicked and to side with the just; at all times to show fidelity to all men, and particularly to those in authority, since no one acquires power apart from God; never, if he is in power himself, to vaunt his authority or to outshine his subordinates in dress or finery; always to love the truth and denounce liars; to keep his hands clean from theft and his soul from unhallowed gain; never to keep any secret from his fellow-members or to betray any of their secrets to other people—no, not even under threats of death. He swears, moreover, to communicate their principles precisely as he himself has received them, to abstain from brigandage, and to preserve with like care the sacred books of the society and the names of the angels. Such are the oaths by which they make sure of their adherents.

§ 8. They expel any members found guilty of heinous sins, and the expelled person often perishes miserably; for by the bond of his oaths and habits he is prevented from receiving food at the hands of other people, so that, reduced to eating herbs, he languishes under starvation and perishes. Hence, out of compassion, they take many a man back when he is at his last gasp, considering that he has been sufficiently punished for his sins by being thus brought to the verge of death.

§ 9. They are extremely strict and just in the matter of inflicting penalties; no sentence is passed by a court numbering less than a hundred; but such a decision is irrevocable. Next to God the name of their legislator is highly reverenced, and the punishment for any blasphemy of him is death. They obey their elders (τοῖς πρεσβυτέροις) and a majority of their society [reading, with Destinon, κοινῷ for καλῷ]; thus, when ten are in session, no one would speak if the other nine objected. They eschew spitting[3] in front of them or on the right side, and avoid work on the seventh day more strictly than any other Jews. Not only do they prepare their food on the previous day, to avoid lighting fires on the seventh day, but they do not even venture to move a vessel or to evacuate. On other days[4] they dig holes a foot deep with the spud—a sort of spade given to all who enter the society,—cover themselves with a cloak, to avoid offending the rays of God, and ease themselves into the hole, after which they put back the earth they had dug out. Even for this they choose out-of-the-way spots; and although the voiding of excrements is a natural process, they make a practice of washing afterwards, as if it defiled them.

§ 10. They are divided into four classes, according to the length of their service, and the juniors are so inferior to the seniors that, should the latter be touched by the former, they wash themselves as if they had been sullied by contact with a foreigner.[5] They are long-lived, many of them reaching the age of a hundred—thanks, I suppose, to their simple diet and regular habits; but they despise the ills of life. Their spirit enables them to rise superior to pain; and death, encountered with glory, is preferred to length of days (ἀθανασίας ἀμείνονα). The Roman war[6] showed what great souls they all had; for, though racked and twisted, burnt and mutilated, and subjected to every instrument of torture, to make them blaspheme their legislator or eat forbidden food, they stoutly refused to do either; not for a moment would they cringe to their tormentors or shed a tear, but, smiling through their anguish, they scornfully laughed at the torturers and cheerfully gave up their souls, to receive them once again.

§ 11. For it is their firm opinion that, while the body is corruptible, and its substance transient, the soul is permanent and immortal; that the soul comes from the thinnest air by a sort of natural spell to be imprisoned, as it were, within the body; and that, on being released from the fetters of the flesh,[7] it joyfully soars away into freedom from the long bondage (μακρᾶς δουλείας). They believe, like the sons of the Greeks,

---

1 Possibly this was an anticipation of the Gnostic repugnance to money as part and parcel of the evil material principle.

2 In spite of Bousset, this aversion to oil is most naturally taken as an ascetic trait, rather than as a note of the Essenes' antipathy to the Jewish priesthood or to an oil-sacrament.

3 Cf. Lk 6^{30}; ct. the Pharisaic *Pirqe Aboth* v. 16.

4 The phrase (ὥσπερ ἱκετεύοντες) does not mean sun-worship (see on this, E. A. Abbott, *Notes on NT Criticism*, 1907, pp. 188–192); at most it is *invocatio*, not *adoratio*.

5 Cf. *ERE* iii. 489b.

6 Cf. Lk 10^{42}.

7 It is not quite clear that these meals were sacramental in the strict sense of the term, or equivalent to the θυσίαι, which the Essenes regarded as superior to the temple-sacrifices.

8 Jerome (*adv. Jovin.* ii. 14) misquotes Josephus, as if he declared that the Essenes abstained from flesh and wine. Josephus merely says they ate and drank in moderation; his point is that their glory lay in their temperance, not in total abstinence.

9 Like some of the Pharisees, they enjoyed exemption from the oath of loyalty, as a special mark of Herod's favour (*Ant.* xv. x. 4).

---

1 That is, from the defilement of sin, more searching (καθαρωτέρων) than the cold baths of § 5. Cf. Bousset, *Hauptprobleme der Gnosis*, Göttingen, 1907, p. 283.

2 Cf. *ERE* ii. 228 f.

3 'Every hidden thing' in Ec 12^{14} was interpreted by R. Samuel (3rd cent. A.D.) as referring to a man spitting in the presence of his neighbour so as to disgust him (*Hagig.* 5a).

4 Cf. Conybeare's ed. of the *de Vita Contemplativa*, Oxford, 1895, p. 198 f.

5 This is one of the practices which suggest the influence of the Indian caste-system. 'So an Indian Brahman is polluted by the touch and even the sight of a low-caste native' (F. C. Conybeare, *HDB* i. 769).

6 In this some Essenes, like John (*BJ* II. xx. 4), took an active part, although their peaceful principles forbade warfare. For an analogous instance of patriotism overbearing such principles, Holtzmann (*Neutest. Theologie*, Freiburg, 1896–97, i. 109) quotes the action of the Mennonites and some Quakers in the American War.

7 For the conception of immortality apart from the resurrection of the body in Hellenistic Judaism, see Wis 3^{1-4} 4^{8-10}, 4 Mac $9^{8f.}$ etc. Hippolytus (*Hær.* ix. 22) erroneously attributes to the Essenes the Pharisaic doctrine of the body's resurrection.

that good souls dwell beyond the Ocean, in a land unvexed by rain or snow or oppressive heat (καύμασι), but refreshed by the gentle breath of the West wind blowing steadily from the Ocean; to bad souls they allot a gloomy, stormy den, full of punishments unending. The Greeks, in my judgment, hold the same view, when they assign the Isles of the Blest [1] to their braves, whom they call heroes and demi-gods, and consign the souls of the wicked to the abode of the impious in Hades, where people like Sisyphus, Tantalus, Ixion, and Tityus are being punished, according to their mythology; the idea is, in the first place, that souls are eternal,[2] and, in the second place, that people may be dissuaded from vice and prompted to virtue. For the good are supposed to behave better if they can hope for reward even after death, while the impulses of the vicious are checked by the dread anticipation of suffering everlasting punishment after their decease, even if they escape notice in the present life. Such is the Essenes' theology of the soul, and it exercises an irresistible fascination over those who have once tasted their philosophy (τοῖς ἅπαξ γευσαμένοις τῆς σοφίας αὐτῶν) of life.

§ 12. Some of them also undertake to predict the future, by perusing sacred books, by performing various acts of purification (ἁγνείαις), and by digesting prophetic oracles. Rarely, if ever, are their forecasts wrong (cf. *ERE* iv. 806 f.).[3]

§ 13. There is also another order of Essenes, who share the life, habits, and customs of the others, but take a different view of marriage. They argue that celibates excise the main function of life,[4] which is to perpetuate the race, and that, if everybody declined to marry, the race would soon cease to exist [reading, with Destinon, μέλλειν for μᾶλλον]. They take wives; only, they put them on probation [5] for three years, and marry them when, by menstruating three times, they have attested their power to conceive. These Essenes have no intercourse with their wives during pregnancy, showing that they marry for the sake of offspring and not for pleasure. In the bath the women wear gowns, and the men drawers. Such are the customs of this order.'

In *Ant.* XVIII. i. 5 also Josephus gives a brief outline of the doctrine of the Essenes, which has only three distinctive items: (1) the remark that, in sending their ἀναθήματα to the temple at Jerusalem, they do not offer the usual sacrifices, since, in their opinion, they have superior lustrations (διαφορότητι ἁγνειῶν), and that this refusal excludes them from the common court (τοῦ κοινοῦ τεμενίσματος) of the Temple, as ceremonially defiled persons;[6] (2) the description of their relieving officers as 'good priests';[7] and (3) the comparison of them to 'the Dacæ who are called Polistæ' (Πολίσται, cf. Strabo, vii. 33).

(*b*) The Christian references are all later, and, for the most part, of little independent value. Epiphanius (*Hær.* xix. 1–2, xx. 3, xxx. 3, etc.), who appears to name them 'Ossenes,' describes what he calls a surviving remnant of them in the Sampsæans, or sun-worshippers, a sect among the infusoria of Eastern Christianity, who occupied the shores of the Dead Sea and honoured the book of Elkesai. Hippolytus preserves one or two more credible items of information (*Hær.* ix. 14–23), particularly the fact (which is, on other grounds, probable) that some Essenes identified themselves with the active methods of the Zealots and the Sicarii. But both Hippolytus and Porphyry (*de Abstin.* iv. 11–13) go back, in the main, to the former account of Josephus.

(*c*) A solitary notice occurs in Latin literature, which is interesting rather than important. Pliny (*HN* v. 17), after describing the Dead Sea, continues:

'On the West side the Essenes avoid the baleful shoreline. They are a race by themselves, more remarkable than any other in the wide world; they have no women, they abjure sexual love, they have no money, and they live among palm-trees. Still their membership (*turba convenarum*) is steadily recruited from the large number of people who resort to their mode of existence because they are wearied of life's struggle with the waves of adversity. In this way the race has lasted (strange to say) for thousands of ages, though no one is born within it; so fruitful for them is the dissatisfaction with life (*vitæ pœnitentia*)[1] which others feel. Below them lay the town of Engedi, once second only to Jerusalem in fertility and palm-groves, now simply a second sepulchre. Then comes the rock-fort of Masada, which also is not far from the Dead Sea.'

2. Characteristics.—The above sources, upon the whole, confirm and supplement one another. Repeated attempts have been made to discredit one or both of the Philonic passages (*e.g.* by Ausfeld, Ohle, and Hilgenfeld), but their authenticity may be considered to be established (cf. Treplin's special essay in *SK*, 1900, pp. 28–91, and the argument of Plooij, in *Theol. Studiën*, 1905, p. 205 f.).[2] When De Quincey first read the narrative of Josephus, he leant back in his chair and denounced the tale as 'a lie, a fraudulent lie, a malicious lie' (*Works*, vi. 275). Others before him and after him, with better reason, have suspected the Essenic paragraphs of the Jewish historian (notably Ohle, in *JPTh*, 1888, pp. 221 f., 336 f.); but their suspicions have failed to make any serious impression. The sources may be accepted as coming from Philo and Josephus. It is another question, however, whether they are trustworthy in every detail. Eusebius may colour his quotation from Philo, but Philo's predilections probably have led him to arrange the figure of the Essenes for his picture in the *Quod omnis probus liber*, just as Josephus is likely to have read into the beliefs and customs of the order slightly more than was actually present. Thus it is noticeable that Philo, for example, omits any reference to the presence of Essenes in the cities of Palestine; his aim is to bring out their semi-monastic existence. The ordinary impression of the Essenes is, indeed, that they were a community of celibate recluses; Newman's lines,

'Now truant in untimely rest,
The mood of an Essene' (*Lyra Apostolica*, clxix.),

indicate the popular estimate of these Jewish monks. But, while the sources corroborate this general verdict, they also attest, as we have already seen, the existence and activity of certain Essenes outside the pale of the strict settlements. Josephus, who assigns their rise to the 2nd cent. B.C. (*Ant.* XIII. v. 8–9),[3] tells an anecdote which proves incidentally that in the beginning of the next century there were Essenes who did not eschew city-life and did not reside permanently in retired, monastic communities. It is a twice-told tale (*BJ* I. iii. 5=*Ant.* XIII. xi. 2) of how the murder of Antigonus was foretold by Judas the Essene,

'who had never made a mistake or been deceived hitherto in his predictions. He saw Antigonus passing through the temple (διὰ τοῦ ἱεροῦ) and called out to his friends, a number of whom were sitting beside him to receive instruction (μανθανόντων): "Ah! I had better die now, since truth has died before me, and a prediction of mine has proved false. Here is Antigonus alive when he should have been dead to-day; he was fated to be killed at Straton's tower, six hundred furlongs from this. It is now the fourth hour of the day, so the time has played havoc with my prophecy." These were the words of the old man; his spirits were down-cast and remained so. Shortly afterwards, however, word came that Antigonus had perished in a subterranean place, which, like Cæsarea on the coast, was called Straton's tower. It was this identity of names which disconcerted the seer.'

In Jerusalem,[4] therefore, as well as in the other townships of Palestine, Essenes were to be found, no doubt preserving their close brotherhood, but still not wholly detached from the interests of the larger world. Another Essene, called Menahem, exercised his prophetic gifts in a more auspicious fashion, by saluting a schoolboy as king of the

[1] Cf. *ERE* ii. 696 f.

[2] The pre-existence of souls is taught in Wis $8^{19f.}$, Slav. En. $23^{4f.}$ etc.; but cf. F. C. Porter in *AJTh* xii. 53–115.

[3] Josephus himself records several cases; *e.g.* Simon's Joseph-like interpretation of the dream of Archelaus (*BJ* II. vii. 3), Menahem's prediction to Herod (*Ant.* xv. x. 5), and the forecast of Judas (see next col.).

[4] The school of Shammai quoted Is 45^{18} to prove that 'the world was created only that men might be fruitful and multiply' (*Hagig.* 2*b*).

[5] Experimental cohabitation (cf. *ERE* iii. 32, 815ᵃ).

[6] At an earlier period (cf. *BJ* I. iii. 5) the regulation was not quite so strict.

[7] When a comma is put after ἀγαθούς, however, the following ἱερεῖς τε may refer to the function of preparing their meals (διὰ ποίησιν σίτου τε καὶ βρωμάτων)—another reminiscence of the caste-system.

[1] Cf. *ERE* iii. 778ᵃ.

[2] With Wendland's special essay on the authenticity of the *Quod omnis probus liber*, in *AGPh* i. [1888] 509 f., *ib.* [1892] 225 f.

[3] Pliny's 'per millia saeculorum' is, of course, an exaggeration.

[4] There was a Gate of the Essenes (*BJ* v. iv. 2).

Jews, and predicting his royal career. When the schoolboy succeeded to the throne as Herod the Great, he remembered Menahem, and for his sake honoured the order of the Essenes (*Ant.* XV. x. 5). Later on, some Essenes helped to make history as well as to foretell its course. The Jewish war saw at least one Essene heading the rebels, and others in the ardent ranks of the Sicarii and the Zealots. Still, the independent action of individuals must have been restrained by the *disciplina arcani* and the close socialistic union which bound an Essene for life to his fellows. Banus, the anchorite with whom Josephus spent three years, lived in the vicinity of the Essenes, but the Essenes were not lonely anchorites. Even in the cities they hung together. A closely knit system of mutual support prevented them from becoming exposed to the temptations of trade, on the one hand, and of a solitary recluse existence, on the other.

The probability is, therefore, that the Essenes were a set of small, communistic, religious groups on the shores of the Dead Sea. While their nucleus was decidedly monastic in character, both beyond and even within their membership there were grades—not simply novices and initiates, priests and lay brothers, but even some who practised marriage in a fashion, and others who dwelt abroad, in cities where the agricultural life was impossible. It is evident that some Essenes were in the habit of travelling within certain limits, and we can only conjecture the object of their journeys; as it could hardly be trade, it probably was connected with the business of the order—possibly with the promulgation of their tenets and propaganda in a mild way, in order to recruit their ranks. It is chronologically impossible and psychologically unnecessary to assume that Essenism passed from a looser to a closer bond, or *vice versa*. Both phases existed simultaneously, and their relative importance depended upon the special conditions of the age. We cannot speak either of a gradual withdrawal from society or of a gradual expansion of interest, on the part of some Essenes, in the world beyond their farms and settlements.

A perusal of the sources will give a more vivid idea of the general characteristics of the Essenes than any summary. Through the windows of Philo and Josephus and Pliny—for they are not too much coloured to be fairly transparent—we can look down upon this little Jewish order of over 4000 souls, a league of virtue, with their agricultural settlements, their quaint, semi-ascetic practices, their strict novitiate, their silent meals, their white robes, their baths, their prayers, their simple but stringent socialism, their sacerdotal puritanism, their soothsaying, their passion for the mystical world of angels, their indifference to Messianic and nationalistic hopes, their esoteric beliefs, and their approximation to sacramental religion. If the modern student only knew their genesis and exodus as well as he does their numbers, he would be satisfied; but they appear and disappear in a mist, leaving barely a clue to their existence. None of their sacred books has survived[1]—that is, if these included, as they probably did, more than the books of Moses. We do not even know whether they were written in Greek or Aramaic. By the time that the Rabbinic and the Christian literature arose, the literature, and almost the very name,[2] of the Essenes had vanished from the Eastern world. It is thus impossible to approach them with any clearness through the Christian tradition. De Quincey, indeed, once wrote an essay to prove that the Essenes were Christians organized in a secret society for the purpose of self-preservation; but his essay belongs to English literature, not to historical criticism. At one time ingenious attempts were made to trace the affinities of the Essenes with the early Christians, and to discover the influence of the former in the ascetic tendencies, the incipient communism, the eschewing of oaths, and the common meals of the primitive Churches. But the day for such labours of criticism is over; it is no longer necessary to prove that Jesus was not an Essene, and that early Christianity was not Essenic. Even in the errors combated in the Epistle to the Colossians it is hardly possible (cf. Hort, *Judaistic Christianity*, 1894, p. 128) to detect any specifically Essenic features. It is only through later and inferior traditions that we can surmise the existence of Essenic survivors among the medley of the sects who swarmed within the pale of Eastern Christianity after the fall of Jerusalem.[1] They become less obscure as they are approached not from the Rabbinical literature so much as from their sources in contemporary Judaism.

[1] Unless apocalyptic collections like Enoch and the Sibylline Oracles contain fragments of them.

[2] Hegesippus mentioned them (Eus. *HE* iv. 22. 7) along with Galilæans, Hemerobaptists, etc., among the pre-Christian γνῶμαι διάφοροι of Judaism. The so-called 'Essenic' traits in his description of James, the Lord's brother, are not specifically Essenic.

The Essenes have been called 'the great enigma of Hebrew history,' and the enigma begins with their very name. It is not derived from the founder, or from the locality, of the order. The choice lies open between 'the holy ones' (ὅσιοι [so Philo fancifully]), 'the silent ones' (חשאים), 'the pious ones' (Syr. *ḥasyā*), and 'the healers' (אסיא = 'physician'). The second, advocated by Lightfoot, C. Taylor (*Sayings of the Jewish Fathers*[2], 1897, p. 79), and E. Mittwoch (in *ZA* xvii. [1903] 75 f.), is more probable than the first, just as the third (favoured, *e.g.*, by Lucius, Ermoni, and Schürer) is more likely than the fourth (Baur, Derenbourg, Keim, etc.), which would single out an isolated trait as distinctive of the order. In any case they were a τάγμα of Judaism. Even their loose relation to the Temple-cultus does not invalidate this primary fact. But, if they are an enigma of Hebrew history, they are an insoluble enigma, unless we look beyond the confines of Judaism. The Jewish traits of the Essenes, especially their rigorous care for purity, their reverence for the Mosaic law, and their strict sabbatarianism, certainly ally them with the Pharisees rather than with the Sadducees. Their passion for an ascetic, simple life, in contrast to the dangerous comforts of Greek civilization in the cities, might seem to stamp them as descendants or revivers of a movement like that of the Rechabites (cf. *ERE* ii. 63[b], 66[a]); but against this we must set their avoidance of marriage, their tolerance of wine and agriculture, and their unnomadic attitude to fixed dwellings. Essenism was not hereditary. It was a γένος, in the sense of a gild or corporation, not in the sense of the older Rechabite clan. Its ranks were recruited from without, like a monastic brotherhood, and its ascetic practices were different from those of the Rechabites. Although parallels with many separate details of Essenic belief and praxis can be found in Rabbinic literature,[2] the synthesis of these on Jewish soil is a phenomenon by itself, and—in spite of the efforts made by Jewish and Christian (*e.g.* Ritschl and Lucius) scholars—it contains elements which point to a Palestinian syncretism enriched from some foreign and possibly Oriental sources.

The Essenes, as Josephus admits, were ἑτερόδοξοι within Judaism; they took their own way of life and worship. They were more than ultra-Phari-

[1] Cf. Hilgenfeld, *Ketzergesch. des Urchristenthums*, Leipzig, 1884, p. 87 f.; and Lightfoot, *Galatians*[6], 1880, p. 322 f.

[2] Cf. Lehmann, 'Les Sectes juives mentionnées dans la Mischna' (*REJ*, 1895, pp. 187–203), and M. Simon in *Jewish Rev.*, 1912, p. 527 f.

saic, or Hasidæan (Kohler, Weinstein, etc.), for the latter were not organized in separate communities (*ERE* ii. 98[a]). Their election of their own priests, their avoidance of marriage, their turning to the sun, their practice of adopting children, and the distrust of matter which appears in their dualistic anthropology ('To be set free from matter was the grand problem of Essenism' [Keim]), are among the plainest indications that we have to do with influences which were originally non-Jewish. It was only natural that the remark of Josephus (*Ant.* XV. x. 4) about the Essenes practising the same customs of life as the Pythagoreans should be developed by those who, like Zeller especially (cf. *ZWT*, 1899, p. 195 f., 'Zur Vorgeschichte des Christenthums: Essener und Orphiker'), fix attention upon their invocation of the sun, their prohibition of oaths, their doctrine of the soul, their communism, their aversion to animal sacrifices, and similar features, which recall Pythagorean and Orphic traits. But some of these were not distinctively Pythagorean, and the Essenes lacked other features (*e.g.* vegetarianism, and a belief in the journey of the soul after death) which were characteristic of the Pythagorean and Orphic faith. The origin of Essenism cannot be wholly derived from the infiltration of the Pythagorean and Orphic spirit, much less from Zoroastrianism (Lightfoot, Cheyne; cf. *ERE* ii. 110 f.), for asceticism at any rate does not belong to the *Vendīdād*, and none of the alleged parallels is particularly striking by itself (cf. Moulton, in *HDB* iv. 992). Hellenistic influence may be sought in other directions (cf. Herzfeld, Friedländer, Pfleiderer, Hoennicke, Conybeare); for, although Philo and Josephus presented practical and speculative Essenism in semi-Hellenistic colours, they were probably doing no more than deepen features of an Egyptian Hellenism which was already present in the order. At the same time, it is not improbable that some weight should be assigned also to the conjecture (which Hilgenfeld eventually abandoned, but which is being revived at the present day in several quarters) that Buddhistic tendencies helped to shape some of the Essenic characteristics as well as some of those in 2nd cent. Gnosticism. The discussion of this hypothesis, however, must be reserved for art. THERAPEUTÆ.

LITERATURE.—In addition to what has been cited already in the course of this article, the following may be noted as including most of the more recent or important studies: Z. Frankel, 'Die Essäer nach talmud. Quellen,' in *MGWJ* ii. 1853] 80 ff., 61 ff.; A. Ritschl, *Entstehung der altkathol. Kirche*[2], Bonn, 1857, p. 179 f.; L. Herzfeld, *GVI*, Nordhausen, 1847-57, ii. 368 ff., 388 ff., 509 ff.; H. Grätz, *Gesch. der Juden*[4], iii. (Leipzig, 1888) 91 f., 697 f.; G. H. A. v. JAMES MOFFATT.

ETERNITY.—I. **Meaning of the conception.**—There are three main senses in which 'eternity' may be understood: (1) as an unending extent of time; (2) as that which is entirely timeless; (3) as that which includes time, but somehow also transcends it.

The first of these is the popular meaning of the term. In ordinary discourse, when people speak of passing from time to eternity, they appear, in general, to imply nothing more than the transition from a state in which special objects of interest (such as human personalities) have only a limited duration to a state in which they may be supposed to persist for ever. This sense of the term is also to be found sometimes in philosophical writings. The eternal process, for instance, which Kant conceives to be necessary for the realization of the moral ideal is primarily to be thought of as a process that is to be carried on without end.

It is generally recognized in philosophy that such a conception has no positive significance. Kant, for instance, acknowledges that his way of thinking of the realization of the moral ideal contains no real solution of the difficulties involved in the conception of that realization; and he accordingly supplements it by the idea of a Divine point of view, from which the unending process appears as a timeless attainment of the end to which it points. But he does not show how this idea is to be reconciled with the conception of an endless process. On the whole, however, it may be fairly stated that the conception of eternity which has prevailed throughout the history of philosophy is not that of an unending process, but that of a state of existence which is completely independent of temporal conditions. Such a conception is that to which the mind is most naturally driven as soon as the difficulties involved in the idea of an unending process have been fully brought home to it; and it is a conception that is strongly supported by the apparent timelessness of those 'laws' and other general statements with which science and philosophy are largely concerned. The fact (or apparent fact) that there is such a thing as timeless truth leads very naturally to the view that there may also be such a thing as timeless existence. It soon appears, however, that all the existences known to us in our ordinary experience are subject to temporal conditions; and a little reflexion is enough to convince most people that no timeless existence is even conceivable under the ordinary conditions of our conscious experience. Hence the conception of timeless existence leads inevitably to some such distinction as that of Kant between phenomena and noumena, appearance and reality, the sensible and the intelligible world, or however else the antithesis may be expressed. But the history of philosophy shows quite conclusively that, if any such antithesis is pressed, it becomes impossible to understand any connexion between the two modes of being that are thus opposed; so that, in the end, the opposition comes to be one not simply between the intelligible and the sensible, but between the intelligible and the unintelligible, or rather between two terms which are in truth both alike unintelligible.

If we are to avoid such a result as this, it seems necessary to interpret 'eternity' in the third of the three senses to which we have referred, *i.e.* to regard it not as the mere negation of time con-

ditions, but as containing those conditions within itself, though in a form in which their limitations are transcended. It will be our object in this article to indicate briefly how such a conception of eternity is possible. But we must first give a glance at some of the chief difficulties that have been brought out, in connexion with this problem, in the course of the development of philosophy.

2. **Difficulties connected with the conception, and attempts to solve them.**—Kant is undoubtedly the writer who did more than any other to make the difficulties in connexion with the ideas of time and eternity prominent and clear; and it is accordingly to his views that we intend chiefly to refer. But the significance of his work cannot be properly understood without reference to at least a few of his precursors, among whom Parmenides, Plato, and Spinoza seem specially important in connexion with this particular problem. Valuable contributions have been made to the subject by some of the recent followers of Hegel, among whom T. H. Green, F. H. Bradley, Josiah Royce, and J. M. E. McTaggart are perhaps especially deserving of attention. From a different point of view, the work of Henri Bergson contains valuable suggestions. After noticing what has been done by these writers, it will be possible to sum up the conclusions to which the discussion of the subject seems to point.

Of **Parmenides** it is not necessary to say much. He is important only as showing how the difficulties of the problem present themselves at the beginnings of speculative inquiry. Unfortunately, there is still the possibility of considerable difference of view with regard to the exact meaning of his most important utterances; but there cannot be much disagreement as to the general nature of his influence on the development of philosophic thought. It seems clear, at least, that he affirmed the eternal and unchangeable reality of being, as it is conceived by pure thought (or reached by the 'Way of Truth'), as against the uncertain and fluctuating appearance of that which is the subject-matter of opinion. Zeno appears to have further emphasized this aspect of the teaching of Parmenides, by urging the self-contradictions into which we fall when we try to think definitely of change as a motion from point to point in space, taking place from moment to moment in time. Melissus, the other chief follower of Parmenides, would seem to have brought out still more explicitly the eternity of that which really exists, turning the poetry of Parmenides into plain prose, but perhaps, in so doing, approaching somewhat more nearly to the conception of eternity as an endless duration, rather than as that which is in its essence timeless. There is no evidence, however, that any of these members of the Eleatic school made any real attempt to explain the apparent changes in the world of our ordinary experience, on the supposition that ultimate reality is unalterable and free from time conditions. Like most of the early Greek thinkers, they were content to set the real in opposition to the apparent, the object of clear thought in opposition to the deceptiveness of the senses, without reflecting that even what only appears to us must have some kind of reality, or at least without adequately recognizing that it was any part of their problem to explain the precise relation between the absolutely real and this specious appearance.

It was **Plato**, as we believe, who first definitely recognized that some account has to be given of appearance as well as of the ultimately real. His conception of the ultimately real, like that of Parmenides (by whom he was undoubtedly very greatly influenced), is the conception of that which exists eternally. More definitely than in the case of Parmenides, this conception is based primarily upon the eternity of universal truths, such as those of geometry or ethics. But what is specially noticeable here is the attempt that is made by Plato to give a place in his system to the changing as well as the eternal. He does this by the recognition of a certain reality in becoming as well as being—in short, by the recognition of the relative truth of the view of the universe set forth by Heraclitus, as well as that set forth by Parmenides. It can hardly be maintained, however, that Plato is really successful in making clear the relation between these two sides of his philosophy. There is too much force in the complaint of Aristotle that it is only by a sort of poetic metaphor—the metaphor of the world-architect and his imperfect material—that Plato is able to give any kind of plausibility to the view that he wishes to convey. It would seem that he thought that the world of appearance had too little reality to be really grasped and explained by thought. 'Alles Vergängliche ist nur ein Gleichnis'; it is, after all, only a shadow of the eternal reality; and it is in accordance with this conception that Plato characterizes time itself as 'the moving image of eternity.' Why there should be such an image at all, and why it should move, seems in the end to be quite unexplained. If, in accordance with the magnificent imagery of Shelley,

'Life, like a dome of many-coloured glass,
Stains the white radiance of Eternity' (*Adonais*, stanza 52),

it is hard to see why the brightness of eternity should submit to such defilement.

In the philosophy that followed Plato, and especially in the Neo-Platonic school, there are perhaps some hints of a possible solution. But we pass over these, as being hardly sufficiently definite for our present purpose. Nor does there appear to be in the writings of Aristotle and his commentators anything sufficiently illuminating on this subject to deserve special attention. Among more modern writers, it is chiefly with **Spinoza** that the conception of eternity gains once more a position of preeminent importance. Spinoza's point of view, indeed, bears a very obvious resemblance to that of Parmenides, at least as modified by Plato, of whose general theory of knowledge that of Spinoza is a fairly direct adaptation. Nor can it well be maintained that Spinoza is much more successful than Parmenides and Plato in escaping from the difficulties that are involved in this position. He thinks of eternity as meaning the essential and permanent nature of reality, as distinguished from its varying modes. All real existences, to be truly known, must be viewed *sub specie quadam æternitatis.* It is the deceptiveness of the imagination, as contrasted with the clear light of thought, that tends to separate off the special modes from their intrinsic place within the infinite whole. But it is in this apparent separation that the chief difficulty in Spinoza's system lies. The deceptiveness of imagination in the theory of Spinoza seems to require explanation quite as much as the vagaries of opinion in that of Parmenides. We may, no doubt, find hints in Spinoza's writings of some possible explanation of this—some suggestion of the view that the eternal reality has to express its completeness through changing modes; and that a certain deceptiveness must, from the nature of the case, appear in these changing modes. But there is certainly nothing more than a hint of this; and it is fairly clear that the development of any such suggestion would transform the whole nature of the Spinozistic system.

To a certain extent it may be said that **Kant** is to Spinoza what Zeno was to Parmenides. The positive idea of eternal reality underlying the system of Kant—so far as it can be held that there

is any such positive idea at all—is in its essence Spinozistic. It is the idea of a reality undetermined by any of the limitations of our ordinary experience, and hence, in particular, undetermined by any conditions of time. But the strength of Kant, like that of Zeno, lies not in the unfolding of any positive conception of such reality,—which, indeed, he believes to be quite impossible,—but in the thoroughness with which he brings out the difficulties involved in the thought of any kind of reality that is subject to change in time. In order to realize the significance of his work, it is necessary to notice exactly the essential points in his contention, though they must be stated here with the utmost possible brevity. In stating these points, the present writer will express them in his own language, though endeavouring to include nothing that is not really contained in Kant's argument.

The first point that seems essential in Kant's argument is the contention that Time is simply the form of change, not anything that can be regarded as in itself substantial. Kant has a somewhat peculiar way of expressing this, which it is not necessary for us to consider here. He calls Time the form of the inner sense, and urges that it is of the nature of perception rather than of conception. All this is extremely questionable, and does not seem to affect the central part of his argument. The essential thing is that Time is to be regarded as a certain order—an order which may be most simply characterized as being of such a kind that its antecedent parts pass out of being as the succeeding parts come into being.

The next important point is that such an order as this cannot be regarded as ultimately real. Here, again, Kant's argument is somewhat complicated by modes of statement that are open to question. What is essential seems to be the contention that the order involved in time presupposes either a first member in the series of events or an unending extent in the antecedent members of that series. Neither of these suppositions, it is urged, is really conceivable. A first member in the series of events would have nothing before it to determine its place, and consequently would not really have a place in the time-order at all. It could only be thought of as being preceded by empty time, which is nothing at all. On the other hand, a series of events that never began would simply be a series that never existed at all. It may be possible to think of a series as going on without end, but not as having gone on without beginning, since this implies that an endless series has been completed.

The only escape from these difficulties, Kant contends, is to be found in the recognition that the time-series is unreal. It is only a mode of our imperfect experience, and must not be ascribed as a condition to the ultimate reality that underlies our phenomenal world. Hence, as we have already noted, if immortality is found to be a postulate of the moral consciousness, this can only be interpreted as pointing to some kind of eternity of existence which is independent of time conditions. Such an existence is, however, for us completely incomprehensible.

It is with this ultimate incomprehensibility that the Kantian view of eternity ends. Now, in the opinion of the present writer, the Hegelian philosophy contains the suggestion of a possible solution of the difficulties that are here raised. The general nature of that solution is to be found in the conception of a real process in ultimate reality—a conception which is entirely subversive of the Parmenidean or Spinozistic theory of an Absolute at rest. If, however, the Absolute contains process, it would seem that this process must be thought of as eternal. There may be a real order in that which is ultimately real, but it can hardly be supposed to be an order of transient occurrences. The view, therefore, as we understand it, to which Hegel's theory points is that the order of time is real, but that its apparent transience is unreal. But Hegel himself did not definitely work out this conception. His own statements seem rather to favour the view that the eternal is to be conceived as timeless; and most of his followers have adopted this interpretation. It may be profitable to notice briefly the views of some of the most recent exponents of this position.

T. H. Green, who connects more immediately with Kant than with Hegel, endeavours to overcome the difficulties involved in a real temporal existence by the conception of an Eternal Being who reproduces Himself in the form of a world in time. Like Plato, he is led to this conception largely by the consideration of the timelessness of universal truths, such as those of geometry. But the idea of a reproduction in time is almost as obviously metaphorical as Plato's image of a world-architect; and, when we try to translate it from poetic imagery into exact science, it is very hard to see what its precise significance would be. How can anything be *re*produced when it has never been produced at all, and when the whole idea of production or reproduction is in contradiction with its timeless nature? Green himself quite frankly admits that the existence of a finite world is inexplicable on his theory; but it appears to be not only inexplicable, but even self-contradictory. Moreover, as the reproduction of the Eternal seems to be thought of by Green as a real process in time, and as connecting with a real time-development towards the goal of human perfection, the Kantian difficulty about the possibility of any real beginning of a time-series would appear still to stand in need of solution. It may be doubted whether, with regard to this particular problem, Green has really advanced much further than Parmenides, Plato, and Spinoza.

F. H. Bradley has, on the other hand, certainly advanced the subject a little by the emphasis which he has laid on degrees of truth and reality. This conception is by no means a new one in philosophy. It is perhaps implicit in the Parmenidean distinction between truth and opinion; it is already explicit in Plato's antithesis between being and becoming; it was a good deal emphasized by some of the Schoolmen, and is used both by Descartes and by Hegel. But Bradley has certainly done much to revive it, and has given it a special prominence as the means whereby an Absolute which is essentially timeless may yet be conceived as more or less adequately expressed in a process that appears in time. The value of this conception, however, as thus applied, would depend on the extent to which the elements of reality and unreality in a time-series could be discriminated; and Bradley—who is generally more successful in stating difficulties than in removing them—does not appear to have contributed much to the solution of this particular problem.

One of the most interesting attempts to carry the matter a step further is that which has recently been made by **J. M. E. McTaggart**. Few writers have been more emphatic than he in maintaining that absolute reality must be conceived as timeless. Yet he is also one of those who have been most insistent on the recognition of a certain independence in individual personalities, which have to be thought of as, in some sense, differentiations of the Absolute, and as persisting, in different phases of their development, throughout the whole extent of time. This apparent combination of absolute reality and absolute unreality

in the time-process has long been a stumbling-block to the readers of McTaggart's extremely attractive writings; but an explanation has recently been offered by him in two papers in *Mind*—'The Unreality of Time' (Oct. 1908) and 'The Relation of Time and Eternity' (July 1909). The essential points in his contention can be very briefly stated. The process of development in time, he urges, is to be regarded as leading up to an end that is timeless; in such fashion that each subsequent stage in the development is nearer to the nature of eternity than the antecedent stage; and so that, in fact, it is this progressive realization of the timeless reality that determines the position of each point in the time-series. Thus, the intelligence which is developing through a process in time does eventually become completely timeless in its nature; so that, in a sense, the eternal has a place at the end of the time-series.

In some respects we believe that the elements of a true solution are contained in the theory of McTaggart. Its chief defect lies in the fact that a process in time is still thought of as leading up to a result which—so far at least as this particular aspect of its being is concerned—is simply the negation of time altogether. There seems to be a contradiction in ascribing so much importance to a time-process, and yet excluding this process from the nature of ultimate reality. This defect could, however, be readily removed by recognizing frankly that the time-process is to be taken as an essential aspect of the eternal reality, which is not negated in the being of the eternal, though, in a sense, it is transcended. In short, while McTaggart maintains that eternity is in a certain sense in time, the present writer would seek to hold rather that time is in a certain sense in eternity. What we mean by this will, we hope, become more apparent in the sequel.

There are some other attempts to deal with this problem that have very considerable importance, especially the brilliant investigation of the general meaning of 'Infinity' contained in Josiah Royce's work on *The World and the Individual*, and since reproduced to some extent, though in a somewhat popular way, in the work of R. B. Haldane, and, with considerable modifications, in that of A. E. Taylor. Royce's main contention is that the world in time, regarded as a whole, is eternal; though, from the point of view of its parts, it is a series that can never be completed. This view is extremely helpful; but the antithesis between the whole and its parts presents difficulties that do not appear to be satisfactorily removed. It would be impossible, however, to discuss these difficulties without an examination of Royce's doctrine of infinity, of which his doctrine of eternity is a special application.[1] Hence it seems best to reserve what has to be said about this conception for the art. INFINITY.

The philosophy of Henri Bergson does not at first appear to throw any fresh light on the conception of eternity. It is a philosophy of change, and is apt to seem like a reaffirmation of the Heraclitean flux, against the eternal Being of Parmenides. But the conception of 'real duration' that is emphasized by Bergson involves the view that there is no actual transience in the time-process. The present, according to him, contains the past and anticipates the future. This certainly comes very near to the doctrine that time is eternal; but, if this implication were brought out, his philosophy would cease to be a philosophy of change. It would then have to be recognized that the whole within which change takes place does not itself change. A view of this kind, however, does not seem to be directly maintained by Bergson; and the consideration of his general theory of time is beyond the scope of this article.

3. A possible solution of the problem.—It may be well to state at the outset that the present writer fully accepts the presentation of the difficulties set forth by Kant, at least in the form in which they have already been summarized above. But he would urge at once that one of the difficulties is by no means so great as Kant makes it appear. A real beginning of a time-series is not strictly inconceivable. Such a beginning, no doubt, would not itself be in time: it would, in truth, be the beginning *of* time. But this is no real objection to it. As soon as we clearly recognize that time is simply the form of succession in a developing process, it becomes apparent that, if that process has a real beginning and a real end, time itself must have a real beginning and a real end. There is no time outside of the process. Hence the process as a whole might be said to be eternal, though every particular part in it has a place in time. The eternal, thus conceived, would not be the timeless, but rather that which includes the whole of time. Time would not be, as with Plato, 'the moving image of eternity,' but eternity itself.

Another way of putting this is to say that the order of time is real, but not its apparent transience. Order that does not involve transience is, of course, sufficiently familiar. The colours of the spectrum are arranged in a certain order, but the appearance of one does not involve the disappearance of the others. A locomotive engine usually goes before or after the carriages to which it is attached; but they all exist simultaneously and in the same sense. But there is one kind of order that appears inevitably to involve transience, viz. that in which what goes before is identical with what comes after. Two different states of the same identical object cannot exist simultaneously. The father and the child may exist together; but the child who is father of the man does not exist at the same time as the man of whom he is the father. Now, the world of our experience may be said to maintain its identity throughout the whole of time; but it is continually changing its states. Hence its successive stages are not merely in a certain order, but the order is such that the successive stages do not exist together. This would seem to be the general significance of the time-process as we commonly know it. But now we might raise the question, whether this mutual exclusiveness of successive stages in the time-series is a uniform and necessary characteristic of that series. A little reflexion might raise doubts on this point; and perhaps the following illustration may help us to give a more correct answer to the question thus suggested.

Taking the case of the relation between child and man, we may note that, while these different stages in the life of a single personality are mutually exclusive, they are not reciprocally exclusive in a quite equal degree. The child contains the anticipation of the life of the man, but contains it only implicitly: it is for the man that the anticipation is contained, rather than for the child itself. The man, on the other hand, contains in himself the unfolding of the child's potentialities, and is capable of an explicit recognition and appreciation of these potentialities. The child-life has passed away, yet it is still in a real sense present, and is capable of being made present to an almost indefinite extent. The man includes the child in a sense in which the child does not include the man. Now, if it is right to think of the whole universe of our experience as a developing

[1] For some criticisms on Royce's view, reference may be made to J. Ward, *The Realm of Ends*, 1911, and B. Bosanquet, *The Principle of Individuality and Value*, 1912.

system, proceeding from a definite beginning to a definite end, the illustration of child and man may be regarded as furnishing us with more than a mere analogy. Here, also, the beginning and the end are really distinct, and, in a sense, mutually exclusive; though, in another sense, each of them contains or implies the other. But the end contains the beginning in a sense in which the beginning does not contain the end. The present includes the past in a sense in which it does not include the future. The end might be said, as it were, to return upon the beginning like a 'serpent of eternity'; while yet the beginning and the end would, as thus conceived, retain a real distinction. The process from beginning to end would be a process in time, in which each stage (with the exception of the last) excludes the others. But this mutual exclusiveness of the successive parts would become progressively less as the process advances towards its end. And as the beginning and the end would both be real, and yet both, on their outer side, free from time determinations, the whole process would be an eternal one. There would be no time at which the process is not going on. The process, as a whole, when we thus conceive it, is not in time; rather time is in the process. Time is simply the aspect of successiveness which the eternal process contains.

This conception of an eternal process has not hitherto played much part in purely philosophical speculation, but it has long been familiar enough in theology. In the Christian doctrine of the Trinity, the Son is conceived as eternally begotten of the Father, and in the Fourth Gospel we find the declaration: 'Before Abraham was, I am' (Jn 8^{58}). And, if philosophy is to escape from those difficulties and self-contradictions which have been brought out in the course of its history, it must, we think, return to something more or less akin to this doctrine of the Trinity. There remain difficulties enough, it must be confessed, in the attempt to realize such a conception of the universe; but we believe, at least, that those fundamental difficulties which are summed up in the antinomies of Kant are completely removed by it. It enables us to think of the world as having a real beginning and end, and yet as being truly infinite; as a progress and a struggle towards a 'far-off Divine event,' and yet as the eternal realization of that for which it strives. But to pursue this further would carry us beyond the limits of our present subject, to the consideration of the being of God and His relation to the world.[1]

LITERATURE.—Almost every systematic treatise on Metaphysics contains, more or less explicitly, some theory of eternity. The following may be mentioned as some of the most important references: J. Burnet, *Early Greek Philosophy*², 1908, chs. iv. and viii.; Plato, *Timæus*, chs. x. and xi.; E. Caird, *Evolution of Theology in the Greek Philosophers*, 1904, esp. Lect. ix.; Augustine, *de Civ. Dei*, xi. 5; Aquinas, *Summa Theol.* i. 10; Spinoza, *Ethics*, esp. pt. i., def. 8, and pt. v.; H. H. Joachim, *A Study of the Ethics of Spinoza*, 1901, esp. bk. i. ch. i., bk. ii. Append., and bk. iii. ch. iv.; Kant, *Critique of Pure Reason*, esp. the statement of the antinomies in the 'Transcendental Dialectic,' also *Crit. of Prac. Reason*, 'Dialectic,' ch. ii. sect. 4; E. Caird, *Critical Philosophy of Kant*, 1889, vol. ii. bk. ii. ch. v.; Hegel, *Encycl.*, esp. 'Natur-Phil.,' i. i. B; Lotze, *Metaph.* 1884, bk. ii. ch. iii.; T. H. Green, *Prolegomena to Ethics*³, 1890, esp. bk. i.; F. H. Bradley, *Appearance and Reality*², 1897, chs. iv. and xviii.; J. Royce, *The World and the Individual*, 2nd series, 1901, esp. Lect. iii.; J. M. E. McTaggart, *Studies in Hegelian Dialectic*, 1896, ch. v., *Studies in Hegelian Cosmology*, 1901, ch. ii., and the articles referred to above; R. B. Haldane, *The Pathway to Reality*, 1903, vol. ii., Lects. ii. and iii.; A. E. Taylor, *Elements of Metaphysics*, 1903, bk. iii. ch. iv.; H. Bergson, *Time and Free Will*, Eng. tr. J. S. MACKENZIE.

[1] The view of eternity set forth in the above article seems to its author to be in its essence Hegelian; but the particular way in which it is conceived is one for which he is alone responsible. The general lines of its treatment have been previously indicated in a paper in *Mind* (July 1904) on 'The Infinite and the Perfect,' and somewhat more fully developed in a subsequent paper on 'The Problem of Time' (July 1912) and in the closing chapter of *Lectures on Humanism*, London, 1907.

ETHICAL DISCIPLINE.—1. History of the term.—'Discipline' is the English form of the Lat. *disciplina*—the abstract noun formed from *discere*, 'to learn,' whence also comes *discipulus*, 'a disciple.' Thus 'discipline' is properly instruction,—that which belongs to the *discipulus* or scholar,—and is antithetical to 'doctrine,'—that which pertains to the doctor or teacher. Hence, in the history of the words, 'doctrine' is more concerned with abstract theory, and 'discipline' with practice or exercise. In this sense Wyclif (1382) renders Pr 3^4 'Thou shalt find grace and good discipline (1388 'teching'; AV 'understanding') befor God and men'; and Chaucer has, 'Thanne shaltow understonde, that bodily peyne stant in disciplyne or techinge, by word or by wrytinge, or in ensample' (*The Persones Tale*, Skeat's Student's edition, p. 716). But under the influence of the Vulgate and the Church, 'discipline' came also to be used for 'chastisement,' and the term in this more restricted sense is early found in English, and sometimes in the same authors, in parallel use with the term in its classical signification. Thus Wyclif renders Pr 3^{11} 'The discipline (AV 'chastening') of the Lord, my sone, ne caste thou away'; and in Chaucer we find 'As it fareth by children in schoole, that for learning arne beaten when their lesson they foryeten, commonly after a good disciplining with a yerde, they kepe right well doctrine of their schoole' (*The Testament of Love*, fol. 306).

2. Theory of the idea.—(1) *Ethical inquiry recognizes the need of discipline in the formation of character, and points to self-discipline as the ideal form.*—The Socratic formula 'Virtue is knowledge' is found to be an inadequate explanation of the moral life of man. Knowledge of what is right is not coincident with doing it, for man, while knowing the right course, is found deliberately choosing the wrong one. Desire tends to run counter to the dictates of the reason; and the will, *i.e.* the whole personality, *qua* selective and active, perplexed by the difficulty of reconciling two such opposite demands, tends to choose the easier course and to follow the inclination rather than to endure the pain of refusing desire in obedience to the voice of reason. Hence mere intellectual instruction is not sufficient to ensure right doing. There arises the further need for 'chastisement,' or the straightening of the crooked will, in order to ensure its co-operation with reason in assenting to what she affirms to be right, and its refusal to give preference to desire or the irrational element in man's nature, when such desire runs counter to the rational principle.

This doctrine is clearly developed by Aristotle in his division of the faculties into rational and irrational:

> 'In the case of the continent and of the incontinent man alike,' he says, 'we praise the reason or the rational part, for it exhorts them rightly, and urges them to do what is best; but there is plainly present in them another principle besides the rational one, which fights and struggles against the reason. For, just as a paralyzed limb, when you will to move it to the right, moves on the contrary to the left, so is it with the soul; the incontinent man's impulses run counter to his reason' (*Nicom. Ethics*, Peters' tr., bk. i. 13 [15. 16]). Again, he speaks of 'the faculty of appetite or of desire in general, which partakes of reason in a manner—that is, in so far as it listens to reason and submits to its sway. . . . Further, all advice and all rebuke and exhortation testifies that the irrational part is in some way amenable to reason' (*ib.* bk. i. 13 [18]).

Moral virtue, for Aristotle, is a habit of choice or purpose, purpose being desire following upon deliberation. A right purpose then involves both true reasoning and right desire. Hence the final end of moral discipline is the reform, and not the suppression, of desire.

'Discipline' we may provisionally define as the systematic training of our faculties, through instruction and through exercise, in accordance with some settled principle of authority. It is with the discipline which is guided by intellectual and moral ideals that we are here more particularly concerned. In the early years of life the principle which guides the moral training takes the form of an external authority which the child obeys, at first altogether blindly, having no understanding of a principle *qua* principle, but seeing only the authority which represents it in the person of parent or teacher, who demands in its name and interest an unquestioning obedience.

'The imposition of commands, by exercising the child in self-restraint and by inducing a habit of obedience, is the great means by which the early training of the will is effected, and the foundation of moral habit and good character established' (see *Cyclopædia of Education*, *s.v.* 'Discipline').

Such discipline may meet with a voluntary submission, the parent or teacher receiving the spontaneous co-operation of the child, or it may, on the contrary, be necessary to enforce an obedience to the parent's commands when such commands meet with resistance. In either case the distinguishing mark which characterizes this external discipline or outward conformity to rule is the absence of all reasoned grasp, on the part of the child or other subject undergoing it, of the principle which inspires its application. That the ideal towards which the discipline is directed should not even be conceived by the child is an obvious limitation, and it is only when regarded as a prelude to a higher type of moral training that such discipline can justify its existence. The educator, who, through fear of the dangers besetting the yet untrodden path of personal liberty, unduly prolongs this early stage, pays the penalty of a dwarfed and enfeebled character in the child he desires to train.

We find a similar tendency in the history of the race illustrated by the systems of Communism and Casuistry (*qq.v.*)—notable attempts to systematize, and thus to render permanent, this stage of external authority. *Communism*, with a view to curtailing the liberty of the individual, relieves him as far as possible of any personal responsibility; and, the responsibility for his maintenance being vested in the State, all functions are performed through him and on his behalf, but none on his own initiative. In *Casuistry* we find 'an attempt to work out a body of authoritative moral precepts in detail, so as to show that every case of conduct, actual or possible, may consistently find its place under one or other of such precepts' (MacCunn, *Making of Character*, 1900, p. 153). The Casuists, as the moral advisers of the people, have been called the jurists of morality, to whom they need never turn in vain for the solution of a moral problem, however complex, since the casuistical teacher with his body of moral rules is always ready to work out their application in detail, and to show how the particular case in question falls under his scheme of life. It is unnecessary for our present purpose to pursue further these two systems of morality. Suffice it to say that they are both open to the objection of attempting to extend the first stage of morality far beyond its natural limits, and, by thus depriving the individual of personal responsibility, they directly thwart the development of the individual judgment.

The necessity for advancing from this early stage of moral training to the higher stage of *self*-discipline is based on nothing less than a fundamental demand of our nature as self-conscious beings.

'In proportion as self-consciousness develops,' says Sigwart, 'it strives for unity of the will, for subordination of all particular aims under one which is higher than all and embraces all, for the determination of every practical question by one supreme law' (*Logic*, Eng. tr., 1895, vol. ii. p. 13).

It is evident that such an ideal can never be realized as long as the moral training of the individual is enforced merely by an external authority to which he renders a more or less voluntary submission. It may be that in course of time he will come to see the reasonableness of certain duties thus imposed upon him, *e.g.* respect for private property; yet, as long as these duties remain isolated and detached from one another, and lack a unifying principle which may find expression in them all, so long will the higher needs of the moral nature remain unsatisfied, and the character stunted and undeveloped. Then the individual must bring these duties under an ideal which he has made his own, and be self-governed by the idea of the law which he thus adopts. It is further to be noted that moral habits are not formed by merely outward actions, and that no habit which can truly be considered moral will grow apart from voluntary effort, desire, and intelligent appreciation of its character, although the action on its physical side be repeated again and again. According to MacCunn,

'even faultless outward conformity to the noblest of social ideals would be a miserable substitute for the freely given admiration, and the spontaneous loyalty, which are at once root and fruit of the moral independence of the individual' (*op. cit.* p. 141).

It is, then, only in the voluntary discipline of the self that we find that true morality which is inspired by an indwelling principle expressing itself in all the details of conduct. Such discipline alone can lead to true self-control, which we may regard as its final end.

'Self-control,' says Stout, 'is control proceeding from the Self as a whole and determining the Self as a whole. The degree in which it exists depends upon the degree in which this or that special tendency can be brought into relation with the concept of the Self and the system of conative tendencies which it includes' (*Manual of Psychology*[2], 1901, p. 626). 'Self-control is greatest in the man whose life is dominated by ideals and general principles of conduct; but this involves a development of conceptual consciousness which is absent in children and savages' (*ib.* p. 628). And we have seen that it also involves a degree of moral discipline which is likewise absent in the earlier life of man and of the race.

(2) *Psychology demands that such discipline shall embrace the whole nature of man, in its threefold aspect of knowing, desiring, and willing.*—Bearing in mind this ideal of moral unity, we return once again to the Aristotelian conception of virtue, which we found to be 'a habit of choice or purpose, purpose being desire following upon deliberation.' This conception of virtue, as an expression of the whole self in its threefold aspect of knowing, desiring, and choosing, implicitly contains the idea of the unity of man's moral life—an idea rendered explicit by modern writers in their insistence that an adequate treatment of the moral life can be attained only by basing ethical theory on a concrete psychology, which shall take into account the whole nature of man.

This idea of moral unity, though implied in the teaching both of Plato and of Aristotle, was not rendered so explicit as to influence the schools of moral philosophy which immediately succeeded these fathers in ethical teaching. On the contrary, we find, in Aristotle as in Plato, the latent conception of moral unity so overshadowed by their insistence on a dualism of the moral life, answering to the rift in human nature between the rational and irrational elements, that their immediate successors can find no better way of unifying the life than by sacrificing the one element to the other. The Cynics, and the Stoics after them, make the Reason supreme, and entirely subordinate the life of feeling. The Cyrenaics and Epicureans, on the contrary, while exalting the sensibility, practically ignore the life of Reason. In both schools we find an unsatisfactory conception of the moral life of man, owing to the abstract, and consequently inadequate, psychology which underlies it. 'Man is not a merely sentient being,' says James Seth, 'nor is he pure reason energising. He is will; and his life is that activity of will in which both reason and sensibility are, as elements, contained, and by whose most subtle action they are inextricably interfused' (*Ethical Principles*[10], 1908, p. 40).

Such a conception of the moral life, based on a

concrete psychology, can alone give rise to a true conception of self-control, which we have found to be the final end of moral discipline. Hence the discipline which has this for its goal must be the discipline of the whole nature of man; and, while each element requires its specific training, the training must in no case be such as to detach the interests of one faculty from those of another.

Ethics, then, recognizes the need for a discipline of man's nature, which shall bring unity where there is schism, and so harmonize the opposing elements of his soul. Such discipline must be a discipline of the self proceeding from the self, for thus alone can it meet the demand of self-consciousness for its own inward unity. Moreover, a concrete psychology, as we have seen, shows the organic complexity of the nature, the ethical demands of which are to be met by moral discipline.

Without losing sight of the fact that knowing, feeling, and willing are inseparably blended in consciousness, we may now proceed briefly to examine the lines on which man must discipline himself in order to acquire the self-control which will enable him to know the Truth, to desire the Good, and to will the Right, and thus to realize Reality in its threefold aspect.

(*a*) *Discipline of the intellect.*—We find, in the case of the intellect, that the datum is already given in the sensational basis of knowledge. Out of this vague presentational *continuum* man must, by his own intellectual activity, construct a world for himself. The complete determination of this originally chaotic sphere, when reduced by the mind to the cosmos of intelligence, would be the Truth; and herein lies the intellectual ideal which all mental discipline must keep in view. According to Bosanquet,

'we must learn to regard our separate worlds of knowledge as something constructed by definite processes, and corresponding to each other in consequence of the common nature of these processes' (*The Essentials of Logic*, 1895, p. 17).

Now it is in the interest of this process of thought, by which the mind gradually constructs for itself a world of knowledge, that a definite training is required; since it is in the treatment of the fresh data constantly presented to consciousness that the difference between the disciplined and the undisciplined mind reveals itself. To the former only belongs that control which makes possible the reduction of these data to a world of unity and system, or, to use a technical expression, it is the trained mind alone which can be trusted to fulfil its normal function of 'apperception' (*q.v.*). This process Stout defines as that 'by which a mental system appropriates a new element, or otherwise receives a fresh determination' (*Analytic Psychology*, 1896, vol. ii. p. 112). The apperceptive process is essentially one of selection, and the man who by mental discipline has acquired control over his thought-activity will give evidence of the fact by the way in which, through processes of inhibition and attention (*q.v.*), he selects his data. By mental inhibition we mean the suspension of judgment with regard to any fresh fact, so as to allow time for the mind to grasp the true nature of the fact, to perceive its relation to an apperceptive system already at work, and, finally, to appropriate the new element, by allowing such a system to be modified by this fresh determination. Such a pause for deliberation, though a suspension of judgment, is by no means a suspension of mental activity. On the contrary, it is often a time of the sharpest conflict, arising from the apparently rival claims of the old mental group and the new element which confronts it—a conflict which is continued until their true relation is discovered. By attention or concentration we mean the power to develop any particular topic.

'What is called sustained voluntary attention,' says James, 'is a repetition of successive efforts which bring back the topic to the mind. . . . It is not an identical *object* in the psychological sense, but a succession of mutually related objects forming an identical *topic* only, upon which the attention is fixed' (*Principles of Psychology*, vol. i. [1907] p. 420 f.).

In striking contrast to this process of mental apperception stands the readiness of the undisciplined mind to pass hasty judgment upon the facts presented, before their import is fully understood, being either so blinded by prejudice that further evidence with regard to a particular topic appeals to it in vain, or so lacking in strength and vigour that it shirks the strenuous conflict which must often be faced before the new element can find its place within the system of knowledge already acquired. Against this mental prejudice we find scientific, ethical, and religious teachers of all ages directing their keenest shafts, regarding it as a deeply rooted evil which saps all mental life, and makes impossible an honest search for truth. Thus Bacon says:

'The human understanding, when any proposition has been laid down (either from general admission or belief, or from the pleasure it affords), forces everything else to add fresh support and confirmation; and although most cogent and abundant instances may exist to the contrary, yet either does not observe, or despises them, or gets rid of and rejects them by some destruction with violent and injurious prejudice, rather than sacrifice the authority of its first conclusions' (*Nov. Org.* Aph. 46).

Again, in the words of Locke: 'He must not be in love with any opinion, or wish it to be true, till he knows it to be so, and then he will not need to wish it; for nothing that is false can deserve our good wishes, nor a desire that it should have the place and force of truth; and yet nothing is more frequent than this' (*Conduct of the Understanding*, p. 32).

Finally, to quote from a theologian of our own day: 'We must all train ourselves in the very rare quality of submission to good evidence, when it runs contrary to our prejudices at any point' (Gore, *The Permanent Creed and the Christian Idea of Sin*, 1905, p. 17).

And yet again the mind reveals its lack of discipline in its proneness to mind-wandering or lack of concentrating power. We may state this in psychological terms by saying that, while the disciplined mind is governed by noetic synthesis—the essential characteristic of the apperceptive process—the undisciplined mind is governed by the mere association of ideas. In reference to the development of a train of thought, Stout remarks:

'In so far as it is determined by the special idea which has last emerged, the principle of association is operative; in so far as it is determined by the central idea of the whole topic, noetic synthesis is operative. . . . It is mere association, for instance, which would lead a man in a conversation about peace and war to begin to talk about Peace the murderer' (*Analytic Psychology*, vol. ii. p. 3).

(*b*) *Discipline of the will.*—Turning now to the sphere of the will, we find, as in the case of the intellect, that the datum of volition is already given in the impulsive tendencies or propensities to act. It is then the work of will, not to create fresh data, but so to direct and control these natural impulses as to bring unity and system into this originally chaotic motor *continuum* of vague desire, of which the complete determination and definition would constitute the Right. Now we find that the will, in thus organizing impulse, fulfils a function analogous to the intellectual activity of 'apperception.'

'We must "apperceive,"' says James Seth, 'the contemplated act, place it in the context of our life's purposes, and, directly or indirectly, with more or with less explicit consciousness, correlate it with the master-purpose of our life' (*Ethical Principles*[10], p. 48).

It is not the natural and unformed but the disciplined will which habitually performs this activity of moral apperception. Here again, as in the sphere of the intellect, moral training reveals itself in the power to select from among various possible lines of conduct, by means of the inhibition of impulsive tendencies, or the pause during which alternative activities are suspended, and by attention to the probable result of such activities in the light of the moral end. When a man has thus

learned to control his actions, he is no longer at the mercy of the dominant idea of the moment; he ceases to be the slave, and has become the master, of his impulses. Such mastery, however, is not the result of one day's effort. He who would have the self-control which will enable him to resist the wrong action to which he is most strongly impelled can acquire this power only by a daily self-discipline, in learning to refuse the demands of impulses, even though these be good in themselves. It is the need for such discipline which Westcott has in mind when he says:

'We yield to circumstances without the ennobling consciousness of self-sacrifice, or the invigorating exercise of will. We fail to test our powers betimes by voluntary coercion or effort, that so we may be supreme masters of ourselves when the hour of struggle comes' ('Disciplined Life,' in *Words of Faith and Hope*, 1902, p. 4).

Attention, too, plays a no less important part in our volitional than in our intellectual life. It is as we consider alternative ends of conduct in the context of our life's purposes that, on account of the appeal which it makes to the whole self, the one which has at first the least attractive force often becomes the stronger; while others, which had at first much compelling power, retreat into the background when considered in the light of our moral ideal. See ATTENTION.

(*c*) *Discipline of the emotions.*—On the emotional side of man's nature we find no less necessity for training, and no less demand for an acquirement of such control as will give the individual power over the passion which otherwise will master him, thus enabling him to make a choice, in the light of his moral ideal, from among the innumerable channels into which his emotional life may flow. To emphasize this point, we cannot do better than quote the words of Ruskin:

'As the true knowledge is disciplined and tested knowledge,—not the first thought that comes,—so the true passion is disciplined and tested passion,—not the first passion that comes. The first that come are the vain, the false, the treacherous; if you yield to them, they will lead you wildly and far, in vain pursuit, in hollow enthusiasm, till you have no true purpose and no true passion left. Not that any feeling possible to humanity is in itself wrong, but only wrong when undisciplined. Its nobility is in its force and justice; it is wrong when it is weak, and felt for paltry cause' (*Sesame and Lilies*, ed. 1882, p. 55).

It is hardly necessary to add that such dissipation, and also such redemption, of passion are possible, both through the world of fiction and in the world of fact.

'For the noble grief we should have borne with our fellows,' says Ruskin, 'and the pure tears we should have wept with them, we gloat over the pathos of the police court, and gather the night-dew of the grave' (*ib.* p. 89).

And with confidence we may say that they who have been truly moved by the sorrows of Antigone and the grief of Andromache are not likely to be affected by the tragedy of a second-rate novel, or to grieve much over the petty vexations of life.

We conclude, therefore, that, whether we regard man's nature in its emotional, its volitional, or its intellectual aspect, true moral discipline reveals itself, not in the annihilation of the natural forces, but in their subjugation to a unifying principle which controls the life. The duty of self-discipline has always a positive as well as a negative side. While, negatively, it is the refusal to permit any single tendency of our nature to act in isolation and to dominate the life, on the positive side we find not merely the conquest of natural impulsive energy, but its pressure into the service of the total purpose of the life. Then, the stronger the natural impulses, the stronger will be the purpose which they serve, when engaged in the pursuit of an end which can utilize them all. The search for Truth demands the force and passion of Socrates and Newton, while nothing less than the energy of Luther's nature can accomplish the task of Reformation.

ANNIE E. F. MACGREGOR.

ETHICAL IDEALISM.—**1.** Definition of the term.—The term 'ethical idealism' has two distinct meanings. It may signify a theory of reality as a whole, the fundamental principle of which is drawn from the nature of the moral life. Here morality supplies the clue to the meaning of reality. In this sense 'ethical idealism' designates a metaphysical theory based on a prior analysis of the moral life. On the other hand, 'ethical idealism' also signifies the theory of the moral life derived from an 'idealistic' conception of reality. In such a case an idealistic metaphysic is presupposed, and the metaphysical principle must be more general than, or at any rate of a different kind from, that obtained by an analysis of the moral life alone. Morality is a deduction from such a principle.

These two meanings are, therefore, logically quite distinct. In the first, metaphysics rests on morality; in the second, morality rests on metaphysics. Kant's metaphysical theory may be regarded as an illustration of the first; Aristotle's theory of ethics may be considered as typical of the second. No doubt the two meanings may approximate, as, for example, in Plato's *Republic*, where the moral good leads the way to the apprehension and interpretation of the metaphysical 'idea of the good,' which is shown to transcend the moral good and to include it as a particular manifestation of the supreme principle. But in general it is important to keep separate the two meanings of the term 'ethical idealism'; and for purposes of discussion it is essential to do so. In the present article we are concerned with 'ethical idealism' primarily in the second of these senses, *i.e.* with the moral life as interpreted in terms of idealism, 'idealism' being a specific metaphysical view of reality.

2. Meaning of Idealism.—To begin with, we have to consider the meaning of idealism. Idealism has taken different forms in the history of speculation; but there are certain features common to all. (*a*) *Negative.*—In the first place, idealism is negatively described by contrast with 'naturalism.' Naturalism is sometimes indistinguishable from materialism, and in that case designates a theory or point of view which seeks to explain all known events and facts, human experience included, in terms of the elements of physical Nature. It lays stress on the ultimate material origin of the world, and, again, on the mechanical necessity which holds sway throughout the processes of the world, however complex these processes are. Apparent differences in kind amongst phenomena, *e.g.*, inorganic and organic, chemical and conscious, are held to be resolvable into differences of complexity of manifestation of the same identical elements, matter and motion. Sometimes, however, naturalism is applied specifically to the reduction of all mental processes, more particularly the higher mental life of man, to organic elements and conditions, nothing being affirmed about a further reduction of the organic to inorganic material elements. In this case, it may even be said that such a further reduction is impossible, that organic Nature and purely physical Nature are in reality

heterogeneous. When naturalism is used in this sense, we have again explanation in terms of origin; but here the 'original elements' of the mental life are restricted to organic elements and processes; laws of the more complicated mental life are reducible to the fundamental laws of organic life in general, but these organic laws and elements are not reducible either to material elements and laws or to a substratum common to the two.

In both forms of naturalism we have the same general characteristics—explanation by the reduction of the complex to ultimate elements and their laws; the connexion of all events by the principle of the causal continuity of the temporal antecedent with the temporal consequent; and the absence of the use of any conception of end as a final principle of interpretation. The only 'ends' admitted are results, not pre-conditions; they are effects, not grounds. Idealism affirms the opposite of all this. It seeks to interpret the simple and primordial by reference to the more complex and later in time; it does not explain in terms of origin but in terms of completion; and it does not connect by causal sequence in time, but by controlling ends.

No doubt there is a sense in which the 'nature' of anything may be identified with the end rather than with the pre-conditions; in this case there can be no contrast between idealism and 'naturalism.'

(*b*) *Positive.*—Idealism on its positive side may in general terms be described as the theory which regards the ultimate principle of reality as one which operates by conscious reference to an end or system of ends. An unconscious end could not be the principle of idealism, even though it were admitted that the unconscious end might be quite distinct from a mechanical principle. For the conception of 'ideal' is essential to the meaning of idealism, and an 'ideal' is a *conscious* end of some sort. The conception of an ideal is subordinate to that of end, which is more general; and the differentia is found by reference to a consciousness. An end, more particularly a supreme end, when it as such becomes consciously sought and consciously operative, becomes an ideal. The various applications of the term 'ideal' will be found to bear out this interpretation, whether these applications are figurative, *e.g.*, an 'ideal rose,' or literal.

3. **Types of Idealism.**—It is clear from the above description that a metaphysical idealism may take different forms, according to the way in which the content of the end is present in consciousness, and according to the kind of consciousness to which the end is present. If the universe is interpreted idealistically, its principle of unity must be a supreme consciousness aware of a supreme final end, and aware of this as its own end. Since this principle cannot be subordinate to some further principle, in some sense this supreme end must be one with the supreme consciousness, not external to it. This is sometimes expressed by saying that the ultimate principle is a supreme self-consciousness, making itself its own end. In relation to the finite world, this end may be either transcendent of finitude, or immanent in finitude; and it has also been maintained that this end can be both transcendent and immanent. In any and every case, however, this supreme end covers all reality, finite and infinite alike.

Again, the supreme principle may be regarded as realized wholly and solely in every part and domain of reality. In this case the supreme self-consciousness is realized in a differentiated plurality of individual self-consciousnesses, and hence there would be as many self-consciousnesses as there are individuals. This is the view of idealistic 'plnralism.' On the other hand, the supreme principle may be regarded as single and unique, combining in itself all finite individuals not necessarily themselves self-conscious, and making all individuals contributory to the complete realization of its own end known only to and realized only by its own self. This is the view of idealistic 'singularism,' to use the term applied to this doctrine in a recent volume.[1]

4. **General nature of Ethical Idealism.**—Whatever be the form of idealism adopted, the conception of the moral life derived therefrom has the same general features and follows much the same lines in each case. The fundamental nature of the moral life on this view of reality is that it is the expression, in the case of man, of the supreme principle of the whole, and an integral indispensable moment in the realization of that principle. This may be put in various ways, but the same idea is involved. Whether the idea is presented in the vague and indefinite form that human purposes are 'rooted in the nature of things,' that the 'soul of the world is just'; or in the characteristically religious expressions 'the righteous shall be had in everlasting remembrance' (Ps 112⁶), man is 'God's fellow-worker' (1 Co 3⁹); or, again, in the systematic attempt to show that the moral order is an adumbration of the orderly unity of the world, and a specific realization of the ultimate 'reason' in the 'matter' of man's sense-life,—in all these ways and in various ethical theories the same thought is contained. Whenever we find the moral life regarded as working and leading in man's life towards the spiritual principle unifying all reality, or wherever the source and ground of the moral life are derived from such a principle, there we have an ethical idealism. The moral end, on this view, is one expression of the supreme end, not a *means* to that supreme end but a literal manifestation of it, one way in which the supreme spiritual principle is conscious of itself, or conscious of its *own* end. In so far as man's moral end is taken to be a fundamental constitutive element of man's being, man's conscious realization of his end is at once a consciousness of the supreme principle in himself and a condition of making his individuality an integral part of the supreme principle; and, in so far as man becomes conscious of the supreme principle in himself, his life becomes determined by the moral end, and set to moral issues. The two statements reciprocally involve each other: hence we have the constant oscillation, in this type of ethical theory, between the position that the moral end 'demands' or 'proves' the existence of a supreme spiritual principle and the position that a supreme spiritual principle has made man moral or 'wills' the moral end.

5. **Forms of Ethical Idealism.**—The development of this conception of the moral life varies in different systems. Perhaps one might say that the point of divergence between different systems turns on the interpretation of moral evil, and its place in such a theory. Where the existence of evil is regarded as incompatible with the content of the supreme principle, the idealistic theory of Ethics tends to assign only the fact of the moral law and moral end to the operation of the supreme principle, and to attribute the existence of moral evil to man's imperfect working out of the moral end; in other words, all the good in the moral life is placed to the account of the supreme self-consciousness, all the evil to finite self-consciousness. On this view the idealistic treatment of morality tends to be more or less abstract in character. The law is regarded as an abstract, formal, universal law of 'reason'; the end is one that transcends experience in the sense of never being completely

[1] J. Ward, *The Realm of Ends*, Cambridge, 1911.

realizable in man's life; the moral individual is an independent, or even isolated, being who is an 'end in himself,' isolated from Nature and only contingently related to other moral beings.

On the other hand, where evil is treated as springing from the same source as good itself, both having their common root in self-consciousness, the moral end grasps the human individual concretely; law and sensibility, moral ideal and Nature, are looked upon as forming an indissoluble whole; the moral consciousness is inseparable from Nature, and is essentially a social consciousness. The spiritual principle in man subsumes Nature into itself and is realized most fully in society with its laws and institutions; the supreme spiritual principle takes upon itself the whole burden of man's moral destiny; and, through moral failure, the human spirit can pass, in unbroken unity with itself, to moral completeness and reconciliation.

The first form of the idealistic treatment of Ethics is essentially dualistic in conception and in systematic development: the second is essentially monistic in form and substance. With certain qualifications in matters of detail, we might take, as historical examples of the former, Stoicism in ancient Ethics, and Kantianism in modern Ethics; and as examples of the latter, Plato or Aristotle in ancient Ethics, and Hegel or Neo-Hegelianism in modern Ethics.

It is important to note that in the treatment of Ethics from the idealistic point of view the essential identity of finite and supreme self-consciousness is in general all that is affirmed. The detail of the moral life is not deduced from the supreme principle. Any attempt at such a deduction could only result in the repetition of an abstract formula, which would either leave the specific diversity of content in the moral life unexplained or would blot out its diversity altogether. This is inevitable. For the principle of self-consciousness, as realized in man, is the only form of the principle that is directly relevant for the interpretation of man's moral life, and indeed is sufficient for the purpose. Any deduction of his moral nature and constitution from the absolute principle is, therefore, as unnecessary as it is impossible. This point is sometimes urged in the form that we cannot deduce the details of duty from the conception of a Divine 'perfection.' If by 'perfection' is meant the complete unity of the Divine or Absolute self-consciousness, such a statement may be admitted. With an 'absolute perfection' in the sense of the perfection of the Absolute we have in morality nothing to do. We are concerned in morality with human moral perfection only. From this, however, it may be possible to derive our specific duty, provided we know in what such perfection consists. Perfection is, no doubt, an attribute of the moral ideal; and from the moral ideal we must be able to explain the meaning and content of the moral life.

6. Value of Ethical Idealism.—It may be said that, if we must analyze the operations of human self-consciousness in order to interpret the nature of morality idealistically, there seems little or no value in connecting morality with an idealistic theory of reality. But this is not the case. The significance of the doctrine lies in the fact that, since the principle in finite and in Absolute self-consciousness is essentially the same, the detailed realization of what that principle contains in the case of man's moral life will, equally with the general principle itself, have its warrant and justification in the ultimate meaning of reality. Thus every moral act has a significance for the whole of reality as truly as the moral ideal itself. And this is both practically and theoretically of profound importance. For, on this view, not merely does the individual's moral life as a whole have a place in the supreme purpose of the universe, but every moral act becomes a contribution to the attainment of the plan of the Absolute. Morality and moral individuals have thus a supreme worth in themselves and for the Absolute; and the moral life becomes a factor in the constitution of religion —a fact which all 'ethical religions' have emphasized, whether they have regarded moral laws as 'Divine commands' or regarded the process of the moral life as the working out of a 'Divine will.'

7. Fundamental difficulty of Ethical Idealism.—This close identification of the moral life with the realization of the supreme spiritual principle has always created a difficulty for ethical idealism. For it is obvious that, the more the identification is emphasized, the more we tend to treat the contribution of the moral individual towards the fulfilment of the supreme purpose as the expression, through him, of the operation of that principle itself. The more we assimilate the moral life and the Divine Life, the greater the difficulty in distinguishing between what in a given act is the individual's doing and what is God's. If the distinction is denied, individual self-determination disappears, and with that the spiritual freedom, which is the very basis of the value of the individual to himself. If, on the other hand, the distinction is affirmed, it becomes difficult to consider the supreme purpose as carrying its own necessity within itself; for clearly a supreme purpose which depends for its attainment on the success or failure of individual finite wills is at the mercy of contingency.

8. Solutions of the difficulty.—This difficulty is a very real one, and is of far-reaching significance. It generally divides ethical idealists into two camps. There are those, *e.g.* Green, who seem to treat the finite consciousness as a kind of channel or medium through which in the moral life the spiritual principle realizes or objectifies itself. Assuming that in some sense such a principle is self-contained and self-determining, the individual is little more, if any more, than a self-conscious instrument, a mere manifestation or emanation of the Absolute self-consciousness. It seems impossible to deny that in everything but name such a view is indistinguishable from Spinozism. There is no difference between Spirit and Substance if they take the same method of realizing themselves in finite self-consciousness. A self-consciousness which 'supervenes' upon the material of sensibility and thereby makes the latter its own, may indeed be 'free' relatively to sensibility, in the sense that its operation implies detachment from sensibility, and self-direction in controlling and ordering sensibility. But this freedom is not an 'ultimate fact,' nor is it self-explanatory as long as it is assumed that the finite self-consciousness is itself a specific realization of a wider Absolute self-consciousness which is expressing itself under human limitations. On the contrary, it is thereby implied that the principle on which finite self-consciousness proceeds in asserting its freedom relatively to sensibility derives the laws and conditions of its procedure from, and is itself determined by, this more comprehensive and all-embracing self-consciousness. Freedom, in short, is, in such a case, but the delegated power to exercise, in reference to sensibility, the functions of a superior self-consciousness. It is freedom only *sub specie temporis*, but is necessity *sub specie æternitatis*. And, since the latter point of view is the more ultimate and therefore the more correct, the freedom of finite self-consciousness is barely distinguishable from illusion—which, indeed, Spinoza asserted it to be.

A second method of dealing with the problem is that which treats self-consciousness as a principle that is not so much an actuality in man's life from the start, but is gradually realized in the course of his activity. On this view, man does not begin his finite existence with a fully active organ or function of self-consciousness, by means of which he assimilates a quasi-alien environment to himself and himself to his environment, in the way described, *e.g.*, by Kant, and also to some extent by Green. The whole course and aim of his finite life consists in becoming self-conscious, not in being completely so to begin with. Thus there are grades of self-consciousness in man's life, and differences of degree of self-consciousness amongst mankind. The function of self-consciousness may be, indeed, abstractly the same in all men; but, actually and as a historical fact, it is realized in very varying degrees by individual men and types of mankind. The mistake of the previous view lay in confounding a formal similarity of function —a purely logical function in Kant's theory—with an actual identity of realization in all human individuals. But, if the attainment of self-consciousness is itself a matter of growth and development in the individual life, then, while all may attain it to a certain degree, imperfection of attainment is not inconsistent with individual success, or with the fulfilment of the final end of the supreme self-consciousness. Perfection of attainment is, indeed, a goal; but, if degrees of attainment be admitted to be consistent with the absolute principle, failure to attain perfectly in any individual case cannot imperil the security or validity of the final end. Moreover, on this view, the defects of individuality in one sphere are balanced or compensated in another. Thus, the imperfections of a given individual in his society do not destroy the stability and order of the general life of the community: his life is so supplemented by the lives of others that unity on the whole is maintained. Similarly, the one-sidedness of any given type of society or form of humanity is counterbalanced by another form of society with which it is connected in the general history of humanity; so that, just as a given society comes to the help of the individual's imperfections, the history of humanity as a whole qualifies or removes the imperfect realization of human life in any one form of society.

This view, again, modifies similarly the conception of individual freedom and the difficulties of reconciling the free action of individuals with an all-pervading and triumphant purpose. For freedom, like self-consciousness, is not a quality with which the individual's will is endowed from the outset; it is a result which he achieves for himself. Freedom is not a pre-condition of the moral life, but a state which he gradually attains; and, like self-consciousness, the attainment of it is a matter of degree. Freedom in that sense is the goal of the moral life, not an antecedent condition of it. The organic life of a community is a realization of moral freedom, and the history of humanity is the progress in attainment of its freedom.

In this way it is sought to harmonize the operation of the principle of self-consciousness under finite conditions with the actuality of the Absolute self-consciousness, without destroying the validity of the pursuit of finite ends or the finality of the Absolute end. This view is found in the ethical idealism of Hegel, and more recently of Bradley. The objection to it is the opposite of the objection to the previous view stated. For, on the second view, the realization of finite self-consciousness and of finite freedom is so completely identified with the course of human history that any degree of attainment of the principle is enough to satisfy the requirements of the supreme principle. The supreme principle cannot, on this view, fail to realize its end, no matter what degree of success attends the operations of finite self-consciousness. That being so, the attitude of the supreme principle is one of indifference to the achievements of finite individuals: its end is fulfilled, no matter what finite individuals do or fail to do. This reduces the position of the supreme self-consciousness to that of a spectator, and the position of the finite individual to that of a player: the moral life becomes a mere drama with the Absolute as witness. Or, again, the effect on the finite individual must necessarily be to make him equally indifferent to the accomplishment of his end; while the process of history taken as a whole is indistinguishable in ethical quality from the course of Nature. Ethical idealism in this shape thus closely resembles the position of pure naturalism.

9. Special features of Ethical Idealism.—The characteristic points on which ethical idealism lays stress in the constructive development of the theory are mainly three: (*a*) the logical priority of the conception of value in the moral life; (*b*) the objective independent reality of social institutions; (*c*) the essential unity of individual and social mind.

(*a*) In virtue of the first, ethical idealism insists that the consciousness of an ideal takes priority over all consideration of circumstances, nature, or history. Relatively to the ideal, circumstances, nature, and history provide merely the material of morality; they can never destroy the authority of the ideal or modify its validity. The ideal remains the same throughout all diversity of realization. It moulds its material in different ways, and thus the material becomes the means or condition of the objective expression of the ideal. Thereby the self 'finds itself' in Nature by making Nature the correlate and counterpart of Spirit. Thus the diversity of content presented is reduced to unity; and all the elements in individuality—heredity, historical situation, natural surroundings, etc.—become significant for the moral life, and contribute to the attainment of man's end. Sometimes this logical priority of the ideal is expressed in an extravagant form, as when Kant asserts that the moral law is absolutely binding for all under all circumstances, and duty remains duty whatever hindrances there are in the way of its realization; or again when Fichte seeks to 'deduce' Nature as simply the sphere of human freedom. But these are merely extreme expressions of the fundamental position on which ethical idealism takes its stand —the position that the operative consciousness of the moral ideal is the basis of all the moral worth of action or personality.

(*b*) Not less important is the second point. Institutions are not regarded by idealism as incidents in the moral life, created by and dependent on the wills of separate finite individuals. Institutions are embodiments of the social spirit, from which individuals themselves derive their moral sustenance and support. It is truer, on this view, to say that individuals are incidents in the life of institutions than that institutions are incidents in the life of individuals. The end for man is one, and by its very nature is common to all individuals; this follows from the constitution of the supreme principle which is realizing itself in man's life. Individuals, therefore, because realizing, each in his own case, the same human end, necessarily live a common life. The community of life is just as real in this process as the variety of ways in which all seek their several interests in the one common end. Institutions are the concrete forms in which this community of end as such finds expression. From this point of view

institutions are a more objective and permanent embodiment of the supreme principle in man's life than the actions or the life of a given individual; and conversely we see more fully in institutions what the final end of man is.

Ethical idealism has been singularly successful in developing this aspect of its theory of the moral life. The conception of a social will working itself out in the various forms of corporate social life, the family, the city, or again more abstract human institutions such as the Church; the conception of the 'general will' as the basis of the State and the source of its functions in framing, administering, and executing the decrees of government; the conception of property and of contract as fundamental forms of social mind, deriving their origin and ultimate sanction from the idea of the common good which a common will pursues—all these are direct consequences of the objectivity of social institutions as embodiments of the common human end.

(*c*) Finally, it is of the essence of ethical idealism to hold that the operations of the individual mind in realizing its own end, and the operations of the social mind in realizing a common end, proceed on the same plan. Whether we speak of the social mind as the individual mind 'writ large' or seek to interpret the social mind in psychological terms—terms applicable to the process of the individual mind—the same idea is involved. The similarity of operation is, indeed, very close. Thus we have in the individual the unity of his moral life summed up in the operations of his conscience, which is the outcome of his social consciousness, and the guiding principle of unity in his moral life; in the social mind we have the common spirit actuating a community, pervading all parts as an operative principle of homogeneous social action and of unity of social feeling and sentiment in individuals. In the individual we have the consciousness of moral laws, some vague, some clearly defined and steadily obeyed; the life of a community, again, is maintained by the vague sense of order, and also by the explicit formulation of, and obedience to, laws and decrees required to ensure the maintenance of an orderly unity of individuals. In the individual's moral life, habit and character are the conditions of moral security and continuity of effort; corresponding to this in the social life we have custom, routine, and social automatism. The inter-relation of ideas and purposes in the individual mind is of a piece with the inter-communication of personalities in the social mind. The sense of guilt and remorse in the individual has its parallel in social disapproval and punishment by the community: the moral disorder of the individual is regarded as identical in nature with social disorder in a community.

It is important to notice, in conclusion, that, on the view of ethical idealism, the moral life, while self-contained and determined by its own conditions, is not regarded as an exhaustive expression of man's spiritual life. On the contrary, by its very nature it points to a wider and completer realization of the supreme principle from which it derives its significance. This is put in various forms. It is said that morality 'points beyond itself to religion,' that 'religion transcends morality,' that 'the moral life is part of the wider life of universal history,' that 'the contemplative life is the crowning activity of the spiritual life.' In all these and similar ways the same point is emphasized—the finitude of the moral attitude as a phase of the realization of the one supreme principle. And this logically follows from regarding the moral end of man as an integral but single expression of the comprehensive end of an Absolute self-consciousness.

LITERATURE.—The literature on Ethical Idealism in the sense above discussed is very large. Most of the chief religions have treated Ethics from this point of view, however much they may have differed both in their religious conceptions and in the content they assign to the moral life. In the systematic discussion of ethical problems, which makes up the History of Ethics strictly so called, Ethical Idealism has been stated and developed in a great variety of ways. The most prominent may be said to be the following: (*a*) Greek Ethics: Xenophon, *Memorabilia of Socrates*; Plato, generally, but chiefly in the *Republic*; Aristotle, *Ethics*.—(*b*) Mediæval Ethics: Aquinas, *Summa contra Gentiles*, bk. iii. chs. 1–63 and 111–146.—(*c*) Modern Ethics: Cudworth, *Eternal and Immutable Morality*, 1731; Cumberland, *De legibus Naturæ*, 1672; Clarke, *Discourse on Natural Religion*, 1706; Butler, *Sermons*, 1726; Paley, *Principles of Moral and Political Philosophy*, 1785; Fichte, *Bestimmung des Menschen*, 1800, *Grundlage des Naturrechts*, 1796, *System der Sittenlehre*, 1798, *Staatslehre*, 1813; Hegel, *Philosophie des Rechts*, 1821, *Philosophie der Geschichte*, 1837; Vatke, *Die menschliche Freiheit*, 1841; Green, *Prolegomena to Ethics*[3], 1890; Bradley, *Appearance and Reality*[2], 1897.

J. B. BAILLIE.

ETHICAL MOVEMENT.—1. Origin and history.—The founder of the Ethical Movement was Felix Adler, afterwards Professor of Applied Ethics in Columbia University, New York. At the urgent request of a number of persons who had become acquainted with his point of view, which assigned the supreme place to right conduct and proclaimed that the good life is not necessarily dependent on theological beliefs, he inaugurated, in 1876, the New York Society for Ethical Culture, which soon counted considerably over a thousand members. 'Deed, not Creed' was his motto. He soon attracted a number of able men—W. M. Salter, Stanton Coit, Burns Weston, and W. L. Sheldon—and, as a consequence, Ethical Societies were established in Chicago, Philadelphia, and St. Louis. In 1886 the London Ethical Society was founded. This Society counted among its members Bernard Bosanquet, Sophie Bryant, Edward Caird, J. S. Mackenzie, J. H. Muirhead, J. Seeley, Leslie Stephen, H. Sidgwick, and G. F. Stout. Two years later Stanton Coit came to England as 'minister' of South Place Ethical Society. From that time onwards the Ethical Movement in England developed, until it counted some thirty Ethical Societies, a considerable number of them being in London. Most of these came to be federated in the English 'Union of Ethical Societies.' In 1892 the German Society for Ethical Culture came into being, and soon had some fifteen branches. Not long afterwards the Austrian Ethical Society, the Italian 'Unione Morale,' and two Societies in Switzerland were founded. Recently, a Society in Tokyo has cast in its lot with the Ethical Movement.

As early as 1893 the German Ethical Society organized a meeting at Eisenach, with a view to starting an International Ethical Union. This, however, proved only the precursor of the meeting at Zürich in 1896, when delegates from the various ethical centres were present and an International Ethical Union was founded. Ten years later the Second International Ethical Conference met at Eisenach, when a constitution was drawn up and a programme of work elaborated. In 1908, on the occasion of the very successful First International Moral Education Congress initiated by the Union and organized by its secretary, a further International Conference took place.

2. Work of the Ethical Societies.—In the United States and in England the Ethical Societies meet every Sunday, either morning or evening, or both. In the United States there is usually some kind of music and reading, besides the lecture, which generally deals with some current topic, or with some question of the inner life or of philosophy from the ethical point of view. In England the 'service' is more pronounced: congregational singing is universal, and other features, such as the reading of an Ethical Declaration, or of Closing

Words, are not uncommon. In Germany and Austria the meetings are held on weekdays, and the proceedings consist simply of an ethical lecture followed by discussion. The Ethical Lecture is one distinguishing feature of Ethical Societies, the other is the Ethical Classes for the Young. These are to be found, highly developed, in the American centres, and, less highly developed, in English centres. In Berlin and other places on the Continent such classes also exist. Moral instruction being a special concern of the Ethical Societies, it is natural that the Movement should have done much to promote it in schools. In America, Adler and Sheldon have written text-books on the subject, and the former has gradually built up his now widely famed New York Ethical Culture School. In England, the Union of Ethical Societies founded a Moral Instruction League, which has induced about a hundred Local Education authorities to make some provision for the teaching of morals. In Germany also a Moral Instruction League exists, which numbers about a thousand members; and the International Ethical Union is endeavouring to create such Leagues everywhere. See MORAL EDUCATION LEAGUE.

The practical activities of the Ethical Societies resemble to a large extent those of the Churches. Innumerable charitable and social activities are connected with the New York Ethical Society, and the other American Ethical Societies all engage seriously in similar work. In England, there is relatively little done in this direction, chiefly because so many of the members are individually absorbed in politics and philanthropy. The German Society has also busied itself much with reforms of various kinds. It was the first to establish public libraries and reading-rooms in Germany, and now such institutions are common there; it developed a scheme of cheap theatres, as a result of which there exist a number of *Schiller-Theater*, as they are called, in Germany. The same society has founded a Charity Organization Society in Berlin, which is doing extremely valuable work on an extensive scale; and it has done much to encourage high-class recreation evenings for the people.

3. Principles of the Ethical Movement.—At the International Conference at Eisenach (1906) a constitution was adopted, expressing the following general aim, which was unanimously agreed to by the delegates and has been accepted by all the national ethical centres:

'To assert the supreme importance of the ethical factor in all the relations of life—personal, social, national, and international, apart from theological and metaphysical considerations.'

The English Union of Ethical Societies in the same year determined upon a series of principles which conveniently sum up the distinguishing features of the Ethical Movement generally. They are here reproduced. Attention is specially drawn to the second principle, in which an attempt is made to state the basis of the ethics taught in Ethical Societies.

'(*a*) In all the relations of life—personal, social, and political—the moral factor should be the supreme consideration.

(*b*) The love of goodness and the love of one's fellows are the true motives for right conduct; and self-reliance and co-operation are the true sources of help.

(*c*) Knowledge of the Right has been evolving through the experience of the human race: therefore the moral obligations generally accepted by the most civilized communities should be taken as the starting-point in the advocacy of a progressive ideal of personal and social righteousness.

(*d*) For each individual, after due consideration of the convictions of others, the final authority as to the right or wrong of any opinion or action should be his own conscientious and reasoned judgment.

(*e*) The well-being of society requires such economic and other conditions as afford the largest scope for the moral development of all its members.

(*f*) The scientific method should be applied in studying the facts of the moral life.

(*g*) The moral life involves neither acceptance nor rejection of belief in any Deity, personal or impersonal, or in a life after death.

(*h*) The acceptance of any one ultimate criterion of right should not be made a condition of ethical fellowship.

(*i*) Ethical fellowships are the most powerful means of encouraging the knowledge and love of right principles of conduct, and of giving the strength of character necessary to realize them in action.'

4. The common programme.—The following manifesto, drawn up at the International Conference of 1896, will give a fair idea of the attitude of the Movement towards the great problems of our age:

'i. (*a*) Ethical Societies should declare their attitude towards the great social problems of the time, in the solution of which the highest significance belongs to moral forces. We recognize, accordingly, that the effort of the masses of the people to attain a human standard of existence contains in it a moral aim of the first rank, and we declare ourselves bound to support this effort to the utmost. But we believe there is here a question not only as to the needs of the poorer classes of the people, but in an equal degree as to the moral poverty of the members of the well-to-do classes, who are directly threatened in their moral being by the outward conditions of our modern economic life.

(*b*) We acknowledge that resistance to injustice and oppression is a sacred duty, and that under the existing circumstances the struggle for rights is an indispensable means of clearing up conceptions of justice and in the attainment of better conditions; but we demand that the struggle be kept within the limits prescribed by humanity, and that it be conducted in the interest of the community as a whole, and with continual reference to ultimate social peace.

(*c*) We maintain that in the solution of the so-called labour problem the question is one not only of the material necessities of the labourers, but of their social and legal status, and of their full participation in the highest results of civilization, science, and art.

(*d*) We recognize it as a task of the Ethical Union to assist in such intellectual equipment of the people as shall serve the cause of social progress; for example, scientific efforts which aim at examining the conflicting theories of Individualism and Socialism, with a view to the possibility of their being harmonized in some profounder view of life; further, to establish inquiries and institute research in moral statistics, which, based on well-authenticated facts, shall bring impressively before the eye the need of reforms in our conditions, and to help in the dissemination of the results so obtained, in order to bring the public conscience to bear as a force making for social justice and higher development.

(*e*) We leave it to the various Societies to apply the above tasks according to the circumstances of their own countries, and we call upon all the individual members of our Societies, by simplicity in their manner of life and by active sympathy, to advance the forward social movement.

ii. We regard the institution of pure monogamic marriage as a priceless good of humanity, which is indispensable for the moral development of the individual and for the permanent duration of moral civilization; but we insist that this institution should stamp itself upon sentiment and conduct with a thoroughness which as yet is absent in wide-reaching circles of society.

iii. (*a*) We demand for woman the possibility of the fullest development of her mental and moral personality, and we would strive to bring about in all departments of life an uncurtailed expression of the equal worth of her personality with that of man.

(*b*) Especially we regard the fate of working women in industry (whether in the factory or at home), and also in personal domestic service, as one of the most grievous evils of our time, and would strive to restore, throughout the whole people, the conditions of a healthy family life.

iv. We hold it to be a fundamental task of our age to give again to education its unity, which in great part has been lost, and, by establishing a universal ethical end in all education, to confer that kind of service which denominational religion once rendered to education in elementary and secondary schools.

v. We heartily approve efforts to establish universal peace among nations, and we would direct our share in these efforts towards overcoming militarism in public sentiment, towards checking the power which it exercises upon the imagination—especially of the young—and towards bringing out in some nobler way those morally significant elements which the life of the soldier contains; further, towards opposing national egoism and national passion, which are at least to-day as dangerous enemies to peace as are the prejudices and personal interests of rulers; and, finally, towards bringing about a reign of conscience and calm reason in times of excitement, and when partisan spirit fosters a blind hatred of enemies.'

5. Attitude towards religion.—Fundamentally the Ethical Movement must be regarded as a religious movement. Even such titles of books as *Ethical Religion* (W. M. Salter), *The Religion of Duty* (Felix Adler), *Die ethische Bewegung in der Religion* (Stanton Coit), and *Faith in Man* (Gustav Spiller) are a general proof of the sympathy with fundamental religion in the United States and in

England. Sheldon, speaking of America, says: 'Many a stranger attending the lectures would at first be a little at a loss to know whether or not he was present at the "services" of a church' (*An Ethical Movement*, p. x). This statement is more than borne out by the following passage taken from the Year-Book of the New York Society for Ethical Culture for 1904–05:

'The Society fills more and more the place of a church in the lives of its members. The leaders act as ministers of religion: consecrating marriages; officiating at funerals; consoling the suffering; advising the troubled and confused; dedicating childhood to the higher ends of life in the "name ceremony" [which takes the place of baptism]; teaching and supervising the training of the young in Sunday School, and clubs and classes for young men and women; and seeking to create and maintain an atmosphere of reverent attention to the high mysteries of life and to the sacredness of the obligation, imposed by man's moral nature, to follow without swerving the dictates of duty according to the best light that is in each individual.'

In England the Ethical Movement is almost invariably regarded by its adherents as a religious movement, and both the rather elaborate form and the spirit of the ethical meetings bear this out.

German ethicists, as a rule, strictly separate ethics from religion, and are averse to the Ethical Movement being looked upon as a religious movement. Yet one of the principles of the German Ethical Union is 'through combination to offer its adherents support and assurance, as well as stimulus and help for the inner life.'

Lastly, the *Union pour l'action morale* of Paris, in an official statement, affirms:

'We are bound together by a common principle: to establish a discipline of life in conformity with reason and outside all theology; to illuminate it by free and frank discussion; to animate it with love; to render it effective and progressive by mutual support; to teach it methodically; to realize it in customs and in laws; and, if justice require it, even by a revolution.'

In principle, then, the Ethical Societies all over the world seek to do for their members what the Christian Church, the Jewish Synagogue, and the Muhammadan Mosque endeavour to effect for theirs. The only difference is that those religions assume the existence of a Deity outside the universe, and that the Ethical Movement, as such, is, in substance, non-theological; or, rather, does not connect the right life with theology or metaphysics (see, however, the above-mentioned volumes by Adler, Salter, Coit, and Spiller). In confirmation of the above we shall quote from a lecture on the 'Aims of Ethical Societies,' by Leslie Stephen (*Ethics and Religion*, 1900, p. 260 f.):

'We believe that morality depends upon something deeper and more permanent than any of the dogmas that have hitherto been current in the Churches. It is a product of human nature, not of any of these transcendental speculations or faint survivals of traditional superstitions. Morality has grown up independently of, and often in spite of, theology. The creeds have been good so far as they have accepted or reflected the moral conviction; but it is an illusion to suppose that they have generated it. They represent the dialect and the imagery by which moral truths have been conveyed to minds at certain stages of thought; but it is a complete inversion of the truth to suppose that the morality sprang out of them. From this point of view we must of necessity treat the great ethical questions independently. We cannot form a real alliance with thinkers radically opposed to us. Divines tell us that we reject the one possible basis of morality. To us it appears that we are strengthening it, by severing it from a connection with doctrines arbitrary, incapable of proof, and incapable of retaining any consistent meaning.'

Eloquent passages might be cited from all the ethical leaders to illustrate the rejection of the belief in supernatural help. We content ourselves with a recent utterance by Adler (*The Religion of Duty*, p. 47 f.):

'In former times, when there was drought and famine in the land, men loaded the altars of the gods with gifts intended to placate their anger and to induce them to send the wished-for rain. To-day in famine-stricken India, what is it that the wisest rulers are intent upon? They are studying how to supply on a stupendous scale artificial irrigation, how to increase the facilities of transportation, how to uplift the ignorant peasantry by education, so that they may be able to employ more effective methods of agriculture. In former times, when the plague passed over Europe, mowing down its millions, the churches were thronged with multitudes of worshippers who besieged the Almighty to withdraw the fearful scourge. To-day, when an invasion of cholera threatens a country, the Kochs and Pasteurs are busy in their laboratories, seeking to discover the germs of disease; and rigorous sanitation is everywhere applied to deprive those germs of the congenial soil in which they flourish. This is a commonplace of modern thinking, and I need not enlarge upon it.

The conception of a Heavenly Father, interfering with the operations of nature, arose when the teachings of natural science were unknown. These teachings have been fruitful of substantial results. The progress of mankind has been kept back for centuries by the disposition to expect, of the love and kindness of Providence, the benefits which, if obtainable at all, must be obtained by human effort. The progress of mankind has been incalculably advanced by the appeal to self-help, by the conviction that "the gods help them who help themselves," which, after all, is synonymous with saying that, if we are to be saved, we must save one another.'

LITERATURE.—Felix Adler, *The Religion of Duty*, New York, 1905; W. M. Salter, *Ethical Religion*, Boston, 1891; Stanton Coit, *Die ethische Bewegung in der Religion*, Leipzig, 1890; Walter L. Sheldon, *An Ethical Movement*, St. Louis, 1903; Georg von Gizycki, *Moralphilosophie*, Leipzig, 1888; Gustav Spiller, *Faith in Man*, London, 1908; *Ethics and Religion* (Essays by John Seeley and others), London, 1900; Alfred Moulet, *Le Mouvement éthique*, Paris, 1899; Stanton Coit, *The Message of Man*, London, 1902; *Ethical Hymn Book*, London, 1905. GUSTAV SPILLER.

ETHICS.—I. *THE SCOPE OF ETHICS.*—1. **Fact and ideal.**—Everything may be looked at from two different points of view. We may take it simply as it is, seeking to discover how it came to be the thing it is, and how it is related to other things; or we may compare it with some ideal of what it ought to be. We may call a spade a spade, and seek to discover the material of which it is made, who was the maker of it, how it is related to other garden tools; or we may notice that it is of the wrong size, the wrong make, in its wrong place. Corresponding to these two aspects of things, which we may call respectively fact and ideal, we have two kinds of sciences—those which concern themselves with the description and explanation of things as they are, and those which concern themselves with our judgments upon them. The former class have sometimes been called 'natural,' the latter 'normative' or, as is better, 'critical' sciences.

Ethics is critical in the sense explained. Its subject-matter is human conduct and character, not as natural facts with a history and causal connexions with other facts, but as possessing value in view of a standard or ideal. This is sufficient to mark it out not only from natural sciences, but from other less universal disciplines of the same class as itself. It distinguishes Ethics, for example, from law and grammar, which are concerned with types and principles of a comparatively local and temporary interest, and again from therapeutics and musical harmony, which, though of universal application, are concerned with some particular department of life. As contrasted with these, Ethics, like Logic and Æsthetics, is not only of universal application, but refers to constant elements in human nature. This distinction, indeed, may be said to be a vanishing one; there are principles of law (*e.g.* relating to theft or treason) which may be said to be universal, as there are rules of grammar; but, just in proportion as law and grammar deal with what is thus universal, they tend to merge in Logic and Ethics.

2. **Relation of Ethics to Psychology.**—From what has been said in the previous paragraph the relation of Ethics to the closely allied sciences of Psychology and Sociology ought to be clear. The distinction between Ethics and Psychology does not consist, as has been maintained, in the fact that the one is a study of 'practical' life, while the other is a study of 'fact and theory,' aiming only at the attainment of truth in itself, and having no interest in its practical applications. The difference does not correspond to that between theory

and practice, but to that between origin and value, the natural antecedents of a thing and the value that belongs to it in view of the purpose which it serves or the whole of which it is a part. Psychology deals with ideas, feelings, volitions, from the former point of view. It seeks to analyze mental phenomena, and to find the connexions that subsist between the elements as part of the natural world no less than the elements of physics or chemistry. It has nothing to do with the judgments of value which we pass upon them, except in so far as they in turn may be described as natural facts.[1] The business of the psychologist 'is to understand, not to justify or condemn. He is concerned with appearance only. . . . It is not the world as it ought to appear, but the world as it does appear, which is the outcome of psychological development.'[2] Ethics, on the other hand, expressly concerns itself with our justifications and condemnations, considering them not as natural facts but as involving a criticism or standard of reference, which is not merely a natural fact either in the outer or in the inner world, but which, whatever its relation to natural facts, is primarily an ideal in the mind. While Ethics is thus clearly distinguished from Psychology, it stands in the closest relation to it. The leading error of writers who, like Spencer and Haeckel, approach the subject from the side of biology has been the failure consistently to realize that we are dealing here with psychical entities, and that no solid basis for the study can be laid except in a thoroughgoing analysis of the nature of volition, and of its relation to our ideas and emotions.

3. **Ethics and Sociology.**—The relation of Ethics to Sociology is more difficult to state. This is not wholly due to the indefiniteness of the newer science. For our present purpose it is sufficient to define Sociology as the science of the phenomena of mind and will in so far as they are modified by the social environment and exhibit themselves in changing social conditions—a definition wide enough to include Economics, the History of Societies and Institutions, Anthropology, and the Psychology of peoples. The individual here appears as subject to 'social control' through the accretions of law, custom, tradition, and religion. The chief difficulty arises from the fact that the name itself suggests just such an ideal as that which Ethics claims as its subject-matter. It is, therefore, not surprising to find the claim put forward that Ethics is merely a subordinate department of Sociology, which for the first time has given precision to its conceptions by its demonstration that 'a man's first and last duty is to see and do those things which the social organism of which he is a member calls upon him to do.'[3] The question whether Ethics is 'subordinate' to Sociology or Sociology to Ethics need not trouble us. Every science may be said to be subordinate to that from which it draws its data. On the other hand, a science may be said to be of higher rank in respect to another, in so far as it recognizes differences of value in the data it receives from it, and sets itself to discover the ground on which these differences rest. It is this that marks off Ethics from Sociology. Sociology treats social customs and institutions in the same spirit of impartiality as Psychology treats sentiments, beliefs, and volitions. Ethics, on the other hand, is concerned throughout with values. It considers social forms and institutions from the point of view of their completeness and coherence as expressions of human nature. It asks whether the social life is the best or the only life for a human soul. 'In what way through society, and in what characteristics of society, does the soul lay hold of its truest self, or become, in short, the most that it has in it to be? How does the social life at its best compare with the life of art, of knowledge, or of religion, and can the same principle be shown to be active in all of them?'[1]

Yet, when we have realized the distinction between what may be called the causal and the teleological points of view as the starting-points for different disciplines, it is no less a mistake to insist too pedantically on their separation. The rise of Sociology in modern times may to a large extent be traced to an ethical dissatisfaction with existing forms of political and social organization, and any attempt to exclude reference to distinctions of value as irrelevant to it in its later developments, or to confine it to naturalistic discussions of origin and growth, must be detrimental to the science, depriving it of its legitimate inspiration and hampering its usefulness. Perhaps the attempt to do so is the reason why the abstract study of Sociology has hitherto been in general so disappointing, and why its most conspicuous successes have been in fields in which, as in the study of Pauperism, Criminology, Eugenics, and Education, the practical interest has been dominant. Similarly, from the side of Ethics, the barrenness of many of its discussions and the abstractness of many of its theories are largely due to the neglect of sociological considerations. It is safe to say that there can be no true understanding of the nature and tendencies of forms of moral judgment and of social institution apart from the study of their origin and history. If all our ethical notions are at present on an expanding scale, if we are reaching forward to wider and clearer ideas as to the meaning of charity, temperance, and simplicity in life, commercial honesty, the objects and methods of punishment, the meaning and social value of religion, it is because of the stimulation we have received from sociological investigations into the effects of almsgiving, of luxury, of unregulated competition and speculation, of our present system of prison discipline, of the secularization of morality. If, on the other hand, our minds are still confused as to the demands of the cardinal principle of justice—some desiring to base it on desert, others on need, others on abstract equality—this is probably because we have hitherto, in our speculations upon it, made too little use of the idea, with which Sociology has familiarized us, of life as consisting in the organized efforts of differently endowed individuals towards the realization of a social ideal, and the ultimate claim of each individual to the opportunity of contributing to it according to his ability.

4. **Ethics and Metaphysics.**—In a time of reaction against metaphysical ideas it is not surprising to meet with a wide-spread suspicion of anything that would seem to make practical truth depend on speculative. This attitude of mind seems to arise from a mistaken view of the nature both of Ethics and of Metaphysics. Of the former we have already said enough. Metaphysics has been defined as only a particularly obstinate effort to think clearly. But the only way to think a thing out into clearness is to think it in its relations to other things, more particularly to the whole to which it belongs; and, seeing that no finite whole stands by itself, but each leads us out into some wider and more embracive system, till we reach the universe of created things, there is no knowledge completely clear except that which seeks to see things *sub specie Universi*. Philosophy, since the time of Plato, has been familiar with the conception of the universe as thus consisting of a hierarchy of systems related to one another in an order of greater or less comprehensiveness or 'concreteness,' and of the higher form of knowledge as metaphysical in the sense just explained. But, for common sense, which is concerned with objects of everyday experience in their relation to human wants, and even for science, which is concerned with the extension and organization of the knowledge necessary for the effective exploitation of material things, such a form of explanation may be said to be so remote as to be of quite negligible importance. The more particular and exclusive an object (*i.e.* the nearer to ordinary sense-perception and ordinary physical needs), the remoter it is from the all-comprehending Whole, and the less is there occasion to raise ultimate questions of its

[1] See recent developments on the 'assumptions' and feelings of value that underlie mental processes, *e.g.* in W. Urban's *Valuation, its Nature and Laws*, London, 1909.

place within it. Mind and will are clearly *not* such objects. They are high up in the scale of universality and comprehensiveness. So embracive a universe as that which they constitute might with some justice be itself regarded as the whole, in reference to which such particular objects and even such universals as art and science find their meaning.

It was an instinctive perception of this relation that led Mill and other philosophers of the middle of last century to use Psychology and Metaphysics interchangeably, and that forced so representative an experientialist as William James to admit, in the Preface to the Italian edition of his *Principles of Psychology*, that in the years which had passed since the publication of his book he had become more and more convinced of the difficulty of treating Psychology without introducing some true philosophy of his own.

If this be true of the psychological treatment of the facts of mind, it would seem to be so *a fortiori* of the ethical. The very definition of Ethics as a science of ends or ideals raises the question of the difference of the teleological from the causal point of view, and of their relation to one another. On the other hand, the claim of these ends or ideals to be universal and absolute for human life necessarily raises the metaphysical question of the place of human life itself in the whole scheme of things. This is the reason why the 'metaphysical basis' or (less ambiguously) the metaphysical implications of Ethics are a matter of concern not only to philosophers, but to the community at large, wherever it has begun to reflect on the nature and authority of moral imperatives, and why controversies, *e.g.* as to the educational value of religion, which to modern Gallios seem to be 'questions of words and names,' and to be disturbances of peaceful progress, are in reality indications of alertness to important practical differences.

Whether we shall express the relation here indicated as one of 'dependence' will again turn upon the meaning we assign to the word. If it be meant that Ethics is a deductive science like geometry, consisting of a series of constructions and demonstrations syllogistically derived from principles resting upon metaphysical proofs, nothing could be more foreign to modern notions. It seems doubtful whether there ever has been any serious attempt to treat Ethics in this way. Even Spinoza's classical *Ethica ordine geometrico demonstrata* fails to conceal the essentially inductive character of his operations, and may be said to have only preached Baconianism under the form of the syllogism. On the other hand, if we mean that, owing to the universality of the subject-matter, ethical discussion from the outset marches with metaphysical, and that there are points at which it is so difficult—or even impossible—to discover any scientific frontier between them that they may be said to merge in one another, there is sufficient truth in the statement. But it must be understood that it is meant in no other sense than that in which Mechanics may be said to depend on Physics, Economics on Sociology, or any other of the more 'abstract' sciences upon the more comprehensive and concrete with which it stands in immediate relation. And this sense, it should be further noticed, is the opposite of that which is commonly understood by dependence.

II. *THE SPECIAL PROBLEMS OF MODERN ETHICS.*—The preceding abstract statement will become clearer after a glance at the main stages in the development of ethical theory, with a view to indicating the special problems of modern Ethics and the directions in which it seeks for an answer to them.

The first sketch of a complete moral philosophy we owe to Plato and Aristotle. What distinguished their theories and gave them a permanent value was the perception that human goodness is not merely the expression by the individual will of the essential nature of social life—significant and conclusive though their demonstration of this was. To live the good life was not simply to be a citizen; it also expressed the true nature and purpose of the world in general, and thus united the human to the Divine. To Plato the highest form of human life could only be the outcome of a vision of the eternal Good; to Aristotle (herein out-Platoing Plato) it was itself that vision—a putting aside of our mortality that we may ourselves live in the Eternal.[1]

It is true that the dualism latent in all ancient philosophy led in the end to the separation between a human and a Divine order of virtue. Just as Cicero (*de Nat. Deor.* 53) tells us that the stars have two names—one from the appearances by which they are known to mortal men, another from the names of the immortals—so Plotinus (*Enn.* i. 2) distinguished between an earthly and a heavenly form of Temperance, Courage, Wisdom, and Justice. Yet the intention remained of seeking for the ultimate justification of moral goodness in an order which, while it includes humanity, is more than human.

With the development of the dualism between the individual and society on the one hand, and the temporal and the spiritual on the other, which may be said to have been the work of the succeeding period, there came the need to find some justification other than human nature itself for requirements which forced the claims of others in contrast to self, of the spirit in contrast to the flesh, upon the conscience. The main feature of mediæval and early modern Ethics may be said to have been the removal of the centre of moral energy from the vision of a perfected human nature, expressing the Divine upon earth, to that of perfected happiness in heaven. *Credo ut intelligam* had its ethical equivalent in *Credo ut agam*. Only when the spirit of Plato revived, as in the Florentine Platonists of the 16th cent., or in the Cambridge Idealists of the 17th, did the faith begin to be recovered that goodness means participation in the Divine order of Nature and human society. On the other hand, when, with the rationalizing spirit of the 18th cent., the attempt was made to find a natural basis for the moral life, it is not surprising that, in the spirit of the older dualism, moralists should have been driven to seek for it in the only principle other than revelation that seemed to be available—that of self-love.

It was Kant who first clearly struck the note of modern Ethics, in pointing to the idea of humanity, or of fully developed human nature, as the centre of the moral world. Not only is devotion to this the bond of all social union—the condition of realizing a 'kingdom of ends'—but in it is to be found the revelation to the individual soul of the ultimate meaning of things. This note had its most powerful echo in this country in the course of the 19th cent. in the writings of Thomas Carlyle, who taught that fidelity to duty is not only the one condition of inward peace, but the preserving principle of human society and the way of access into the Divine purpose of creation. This doctrine at once carried Kant and his great English interpreters beyond the naturalism of the positive and utilitarian Ethics on the one hand, and the supernaturalism of the orthodox theology of their time on the other. Unfortunately Kant inherited the psychology of his opponents, which reduced all motives to forms of pleasure-seeking, and he could escape its results only by setting up in its place the barren end of obedience to an abstract command of reason, while Carlyle had too great a contempt for the systematizing spirit of his time ever to seek a psychological foundation for truths which he regarded as sufficiently obvious to intuition.

The task to which modern Ethics has set itself may thus be said to be the justification of this transcendentalism in the light of what recent theory has to say (1) on the nature of volition, (2) on the standard of our judgments on voluntary acts, and (3) on the grounds that we have for conceiving of this standard as rooted in the nature of things. A condensed discussion of these three problems, under the headings of the Psychology, the Logic, and the Metaphysics of Ethics, is all that the present article can attempt.

III. *THE PSYCHOLOGY OF ETHICS.*—1. **General nature of volition.**[2]—The recognition of the element of seeking or 'conation' as fundamental to consciousness may be said to be the starting-point of modern Psychology. What gives unity and continuity to conscious life, binding its elements together as a magnetic field binds the particles of loose metal which come within it, is a purposeful tension, appearing under two forms—according as it is directed to change in the inner or in the outer world. Metaphysicians have spoken of this fundamental factor as 'will,' but Psychology is wise in marking the distinction between mere instinctive, involuntary striving, and self-direction towards a consciously conceived end, and in confining will or volition to the latter. It thus arrives at the definition of volition as the self-direction of a conscious subject through the idea of a change, whether in the contents of the mind itself or in the

[1] *Ethics*, x. vii. 8.

[2] The only adequate treatment of volition in English is the series of articles in *Mind*, new ser., vols. x.–xiii.

external world. In the form both of attention and of overt action, volition is closely related to feeling or interest, seeing that it is only on the basis of some intrinsic or acquired attractiveness in the object, some point of affinity between it and the psychical or psycho-physical structure, that desire can be initiated or sustained. There is no such thing as determination by 'pure reason.' Apparent cases, as in the preference of duty to inclination, are cases of determination by a deeper inclination, not of feelingless choice. At the other extreme, actions prompted by vivid ideas or temporary obsessions just cease to resemble volitions in proportion as the vividness comes from the accidental circumstances of the moment, instead of being, as it normally is, a function of a felt affinity between the object and the soul or psycho-physical organism. Whether we shall call the movement towards the source of this feeling in all cases 'desire,' or reserve that term for cases in which, owing to obstruction in the fulfilment of a conation, the object stands out as something merely possible in more or less painfully felt contrast to the present or actual, is a question of terminology. The essential point to notice is that objects attract, as Aristotle saw, *ὡς ἐρώμενα*, or not at all.

2. The development of volition.—The development of will is thus the development of interest. It follows the line of growing susceptibility to objects which are more remote from the mere physical stimulus, and which correspond to a wider and deeper internal organization. The growth of the power of attention (*q.v.*) is the most obvious illustration of this. In its earlier stages attention is controlled by the merely mechanical pressure of presentations and ideas—their vividness, persistence, novelty—or by their merely external connexions of coexistence or sequence, and their superficial resemblances. We have the beginning of self-direction when the succession of presentations passes under the control of some idea of what is wanted, as in purposeful observation or recall. At a higher stage still the process is freed from all immediate reference to an external world, and becomes in the proper sense self-sustained, as in imaginative constructions or trains of reasoning. Intellectual education means the development of the power of the free exercise of the attention in such self-sustaining activities, under the guidance of comparatively abstract and remote intellectual ends. This is rendered possible by the formation, in the mind, of an intellectual 'interest' or appercipient system which acts as a principle of selection and organization in the objects and ideas that come before the mind, and, as it gains strength, extends and deepens its influence over the flow of mental life. Such interests or dominant selective principles are not to be regarded as possessions of the mind, still less as forces acting from without upon it. They are what give character and individuality to a man's intellectual life, and enable us to speak of him in the proper sense as a mind at all.[1]

Precisely parallel with these stages in the development of the 'internal will' are those which are distinguishable in the development of the will in the ordinary sense. Corresponding to the semi-involuntary control of the attention by the external world or by insistent ideas is control by impulse, pressing appetite, or the fascination of isolated practical ideas. What is characteristic of this stage is the absence of any reference to the idea of the self as a whole. Inhibitions and hesitations occur, but they are caused by the conflict of impulses with one another, rather than by the conflict of an idea, with which the mind identifies itself, with any or all of them. Selection and control come with the power of identifying ourselves with remoter objects, and bringing nearer objects into a form which may harmonize with their attainment. It is a further stage when these objects in turn become subordinated to some idea of the self as a whole, which thenceforth becomes the subduing, organizing principle of a life. Such dominating ideas are not something merely possessed by a man. They possess the man, or rather they make him the man he is. They are his will and personality. It is only when they find expression in his actions that we account him fully himself. Where they fail, we set about seeking for some passing state, some accidental circumstance, outside the man himself, which, if it does not 'excuse' him, may give us the clue to the situation.

We have spoken of attention and overt volition as though they were two species of the same genus. But the connexion is much closer. They are rather to be regarded as the beginning and end of the same process. The condition of all action is attention to that which is to be enacted. It is for this reason that, different though ideo-motor action is from true volition, it has been taken as giving us the clue to its underlying nature. Ideo-motor action depends on the accidental occupation of attention by a passing motor suggestion owing to temporary absence of mind, though it ought not to be forgotten that even here the occupation of the attention depends in turn on the interest, instinctive or acquired, which attaches to the object either as an end desirable in itself, or as a means to some further end with which the agent has identified himself. Volition consists in the selective occupation of the attention by an idea owing to its perceived harmony with a permanent interest, and is essentially 'presence of mind.'

3. Will and character.—The analysis of volition thus carries us beyond the single act to the volitional dispositions on which it depends. The totality of these dispositions in the individual is his character, his 'will' in the substantial sense, in distinction from the volitions which go to form it and are the outcome of it. To the formation of will as thus defined a variety of factors contribute—inherited instincts, temperament or emotional disposition, circumstances both physical and social. But by far the most important are the reactions of the will itself to the suggestions which these supply, and the habits which thus become impressed upon it. Character has hence been defined as the habit of the will. It has seemed to thinkers such as Socrates and Rousseau that this definition is a contradiction in terms, seeing that character in any sense in which it is of value must involve freedom from the tyranny of habit. The difficulty is met, not, as by H. Bergson,[1] by drawing a hard and fast line between motor habits which are correlated with cerebral action, and the free life of mind, but by noting the distinction between narrower or mechanical and the wider or, as we might call them, adaptive habits whose office it is to control them in the interest of life as a whole. In this sense Rousseau spoke of the habit of acquiring no habit, and Aristotle defined virtue itself as the habit of aiming at the mean. The above analysis enables us to add that these habits are, in the last resort, habits of attention, and to understand how, by practice in adapting conduct to embracive ends, the habit of being controlled by these ends—in other words, a moral character—may be acquired.[2]

4. The social will.—In the older psychology, which conceived of pleasure or the avoidance of pain as the single ultimate motive, objects of social value could enter into the content of the will only in so far as they could be made to appear as a means to the furtherance of that end, or, through the principle of association, come to be mistaken for it. It was an advance on this individualistic psychology when it came to be seen

[1] See W. Mitchell, *Structure and Growth of the Mind*, London, 1907.

[1] *Matter and Memory*, Eng. tr. 1911, *passim*.
[2] See Stout, *op. cit.* i. 194.

that the experience of pleasure presupposes instinct and desire, and the social instincts were admitted to a place of at least equal importance with the self-preservative or self-assertive. It was a further advance still when it was recognized that the social instincts are merely vague tendencies, apart from the filling and the moulding which they receive from contact with the developed life of the society into which the individual is born. Just as mental development depends for stimulus and guidance on the social medium, and, more particularly, on the social institution of language, so the development of will depends on the assimilation of the purposes represented by social institutions and customs. There was then no longer any difficulty in understanding how corporate ends, *e.g.* family life, which satisfied deep-rooted instincts and claimed attention from the first, should pass into the structure of the mind and become objects of interest in the sense explained above of at least equal compelling power with that of the more personal. Moreover, it was no longer necessary to conceive of the individual and the social as lying outside of each other and requiring to be linked together by any artificial apparatus of 'association.' Their continuity and interdependence were a mere matter of ascertained fact. 'The individual self and the community are not centres of different circles; they may rather be said to be the two foci in relation to which we may describe the course of human activity.'[1]

So far the facts seemed plain. But, on the further questions of the precise description of the process of assimilation and the resulting content, 'social' psychologists were by no means so clear. With respect to the former question, it was probably the genius of G. Tarde which first effectively directed attention to the part played by imitation. Other psychologists, such as Baldwin, were not slow to follow and apply the principle to explain the appropriation of the purposes and the feelings of others and the development of the individual into a *socius*.[2] With respect to the second question, the current view of what is meant by a universal led to the interpretation of the result as a mere reproduction of the same content in an indefinite number of individuals. A closer analysis of what is meant by imitation seems to show that—except in the case of the children's game, or the savage's exaggerated respect for precedent, of which this is perhaps itself an imitation—imitation in the strict sense of the word plays but a small part in social life. Even where the suggestion comes from the action of another, and not from the requirements of a situation, there is adaptation and invention: the suggestion is what Stout calls 'relative.' Where, on the other hand, it is the situation that works, as in reefing a sail or felling a tree (and this is the typical 'social' case), what we have is co-operation and not imitation. Similarly, what is of value in the result of imitation, even where this is prominent, is not the seeing as another sees, or the feeling as he feels (out of this no *socius* could develop), but the formation, in the individual, of the conception of a whole to whose life he contributes, not by doing as another does, but by doing something which is suggested to his own inventive imagination by the situation in which he finds himself.

In what has just been said we have kept strictly within the limits of Psychology, but beyond the psychological problem of the origin of the social will in the individual is the philosophical one of the reality in society of a will which is not something entirely outside the individual will, and yet, as something more comprehensive, continuous and internally harmonious, is something also more substantial than it. If the doctrine of the reality of the social will was not expressly formulated by Plato and Aristotle, it lies very near the view they took of the State as the individual writ large and as 'prior to the family and the individual.' As has recently been clearly shown by Gierke,[1] it formed the assumption of the whole mediæval theory of the State. It was first clearly stated in modern times, though as a brilliant paradox, by Rousseau, and has found its way into modern political philosophy in divers not wholly compatible forms, through Comte, Hegel, Lotze, and Wundt. The statement of it in the last of these writers (*Ethics*, iii. 20), founded as it is on the best available psychological analysis, is of peculiar value at the present time. In our own country it was held in a somewhat mystical form by J. H. Newman, but has been expounded recently as an integral part of Idealistic philosophy by Bosanquet.

5. **The freedom of the will.**—It is unlikely that so important a transformation in psychological theory as that sketched above should be without bearing on the question of the freedom of the will. So long as the point of view of Psychology was identified with that of the physical sciences, we can understand how there must have appeared to be an *impasse* between Psychology and the assumption on which all judgments of merit and demerit and of moral and civic responsibility rested. So soon, on the other hand, as it was recognized that the central fact from which any true psychology must start is the idea of a progressively realized end, a breach was made in the older form of determinism, and the question was reopened whether it is possible to harmonize the findings of science and morality. Even from the point of view of Biology it ought not to be difficult, except for one who sets out with an invincible prejudice in favour of the exclusive validity of the categories of the inorganic sciences, to admit that to render the facts intelligible they must be seen with other eyes than those of the physicist or the chemist. Life depends on the storage of physical energy, it maintains itself in and through a system of mechanical strains and impacts; but these are taken up into a scheme that goes beyond them; and, in so far as this is so, the life of the humblest plant is free in a sense denied to the motions of the heavens. *A fortiori* all this is true of beings who not only live but can make their life an object—who to adjustment to environment and determination from within can add determination by the idea of the self. Self-conscious mind is still subject to the laws of inorganic matter and of mere life. In the instincts and appetites which it inherits, in the habits which it acquires, it carries about with it a system of forces which, while they stimulate and give stability to its life, constantly threaten its own peculiar nature. Yet, so long as it bears also about with it a spark of human purpose, it contains a principle that enables it to turn all these into means and to vindicate a new form of being, which is free in the still higher sense of having the power to set everything else, even its own freedom, over against itself, and to convert it into an instrument of self-development. Such freedom will be more or less complete, according as more or less of the insight which experience has brought as to the meaning of the life that calls for development is embodied in the action—in other words, according as a man lives more habitually and consistently in his deepest purposes and is more completely self-possessed.

What modern Psychology claims is that in this conception, which we might call that of 'degrees of freedom,' we have a point of view from which the old controversy between libertarian and determinist may cease. As against the old determinism we must admit that reason is free. In Logic this is not denied. In conception and inference the mind first asserts its freedom from the pressure of what is merely external, whether in the apparent connexions of the data or in the vividness and persistence of their presentation to the mind. Yet (as against any theory of mere indeterminism) we must maintain that it is free from these only to submit itself to its own law, and to be more completely under the constraint of logical connexion. In

[2] See esp. *Mental Development in the Child and the Race*, New York and London, 1895.

[1] *Political Theories of the Middle Age*, Cambridge, 1900. For an account of the various forms in which the reality of the general will has been conceived, see M. M. Davis, *Psychological Interpretations of Society*, Columbia University Publications, 1909.

saying, as he does, that he 'could not conclude otherwise,' the reasoner asserts not his bondage, but his freedom. It is only apparently different with conduct. True, there is commonly a wider gulf between seeing what is reasonable and giving effect to it in action than between seeing a logical consequence and admitting it. But this is only because living is a more complicated business than thinking. The principle is the same. The will asserts its freedom (1) in resisting mere impulse, (2) in collecting itself for rational decision, (3) in refusing to allow itself to be diverted from its resolution. At each of these points it is dependent upon forces of habit and suggestion over which it has no direct control. But at each point also it is more than any of these habits, and has the power of taking this something more as its guiding principle. Just in proportion, moreover, as it does so does it feel at the moment of action that it could not do other than it does. But it does not on that account excuse itself for the result; on the contrary, it is all the more ready to accept the issue as its own. Responsibility, in a word, grows, like freedom, with the extent to which our conduct has been forced upon us as the only true expression of what we desire to be. If the question is still pressed upon us whether in actual fact it could have been different, the answer is at once No and Yes—No, if it be meant that, the agent being what he was, his conduct could have been other; Yes, if it be meant that his character was no inevitable result of a history in which moral purpose, individual and social, has failed to enter as a controlling factor.

An unbiased consideration of the implications of our judgments of moral approval and disapproval and of the principles underlying punishment will be found to support these conclusions. It shows that in the case most favourable for moral judgment, viz. that of one's own actions, what gives remorse its sting is not so much that I have done the action as that I was of such a character as to be capable of doing it. If I could persuade myself that the action expressed no permanent features of my will, this conviction, instead of bringing an access of contrition, as it ought to do on the libertarian theory, would bring a feeling of relief analogous to that which I might experience if I discovered that I had done it in my sleep, or had not done it at all. Similarly with regard to punishment. Punishment is the reaction of society against the offences of the individual, and is justifiable only on the assumption, first, that there is a real connexion between action and character, and, second, that through reform or 'example' it makes for better character in the offender, in the community, or in both.

6. Hedonism.—Like the controversy as to free will, that as to the relation of pleasure to desire, if not actually an anachronism in the light of recent analysis, is on the fair way to become so. It follows, from what has been said of the dependence of all conscious processes on the pre-existence of dispositions with which presented objects are in felt harmony or discord, that without feeling there can be no volition. In this sense we might accept Mill's dictum,[1] that 'desiring a thing and finding it pleasant, aversion to it and thinking of it as painful, are phenomena entirely inseparable, or rather two parts of the same phenomenon' (though for 'as painful' we should have to substitute 'with pain'). But, since Mill wrote these words, the distinction between the idea of a thing and the idea of the pleasure to be derived from it has been frequently pointed out; and, seeing that these are clearly *different* phenomena, it seems obvious that to desire a thing, and to desire the pleasure we expect from it, are not one and the same phenomenon, but are entirely separable phenomena. The recognition of this distinction may be said to have rendered the older form of hedonism no longer a tenable account of the nature of will and desire. It can no longer be maintained that it is the pleasure-giving quality of things that makes them objects of desire.

Of the existence of the type of character known as the pleasure-seeking, there can, of course, be no question; but the pleasure-seeker gets his name not so much from his identifying himself with pleasure in the abstract as from his habitually identifying himself with objects which have so little claim to human significance that the pleasures and pains connected with them are their most striking attribute. He seeks satisfaction in the line of least resistance, and runs his life on the cheap. The normal man has acquired, through education, sufficient strength of mind to be able to combat casual impulses and desires by a reference to the concrete interests with which he habitually identifies himself, and to face the effort of attention involved in banishing contradictory suggestions. The mind of the pleasure-seeker, on the other hand, is like a sluice without a gate. Casual suggestions sweep unresisted through it, because of his inability to face the effort required to sustain an inhibiting idea in the centre of attention. His characteristic is, not that he seeks or finds the greatest pleasure in the things he chooses, but that he fails to find sufficient pleasure in anything else.

[1] *Utilitarianism*, p. 58.

This conclusion is confirmed by recent criticism of the second part of the ordinary doctrine of pleasure-seeking, viz. that pleasure operates as a motive in proportion to its anticipated amount, that 'to desire anything, except in proportion as the idea of it is pleasant, is a physical and metaphysical impossibility.'[1] It is a well-known law that feelings 'blunt themselves by repetition.' While this is a loss for feeling, it is a gain for practice. Objects operate as springs of action, in proportion not to the amount of emotional disturbance they cause, but to the influence they have acquired over us through our habits of thought and action, and the deposits of feeling that we call our sentiments in connexion with them. This is the reason why sense-gratifications are sought by the pleasure-seeker himself, under a law of continually diminishing emotional returns and yet of continually increasing motive pressure.

Recent hedonism has sought to accommodate itself to these criticisms by maintaining that they are irrelevant to the main contention, which is that it is their pleasure-giving quality, and not their felt relation to the will as a system of purposes, that gives value to things. But, while avoiding the difficulty of identifying the object of desire with pleasure, this reading of the doctrine comes into conflict with the recognition by recent Psychology that pleasure is a function of need, and not need of pleasure. The satisfaction of felt need necessarily is pleasant, but the degree or amount of the pleasure, while it may be a gauge of the momentary pressingness of the need, can never be the standard of its value for life as a whole. On the contrary, the worth of the pleasure must follow worth of the need, of whose satisfaction it is the sign.

7. Conscience.—The justification of the pressure which conscience (*q.v.*) exercises upon the will is a question of Ethics in the stricter sense of the word. The question of the precise nature and origin of the feeling of constraint which the word represents belongs to Psychology.

The will, we have seen, is identical with the disposition to be attracted by things which are in harmony with the dominant practical interests, and to be repelled from things which are in contradiction to them. From this it follows that these centres of practical interest, whatever they may be, must have the power, either separately or in conjunction, of exercising a certain pressure upon conduct in so far as there exists a consciousness of its general bearing in furthering or obstructing the purposes they represent. In reference to each of them there is a line of conduct which approves itself, another which disapproves itself. Wherever we have such a centre we have the conditions of such a feeling, the degree of pressure thus exercised varying in proportion to the depth and permanence of the interest concerned. The feeling of harmony or discord of conduct with a ruling interest is, in fact, a rudimentary conscience, and by a suggestive use of language is sometimes spoken of in this way. In this sense we hear of the craftsman's conscience and the student's conscience—even the miser's conscience, which makes the profitless expenditure of a sixpenny-piece a positive pain. What differentiates conscience, in the distinctly moral sense, from these consciences is merely the depth and the permanence of the interest in which it has its roots. If the reader is inclined to resent such an account as a cheapening of an element in human nature which he has been accustomed to regard as its highest manifestation, the reply is the same as that already given in regard to the will in general. In seeking to introduce intelligibility and continuity into the moral life by refusing to acknowledge any element without analogy elsewhere—any psychical Melchizedek without father or mother in human experience—we do not deny specific character to the experience we seek thus to understand. It is, therefore, quite consistent with the

[1] *Ib.*

recognition of a conscience *in sensu eminente* to endeavour to conceive of it as merely an extension, to a pre-eminent interest, of the pressure exercised upon conduct in general by any interest whatsoever.

The general nature and ground of this pre-eminence is, as we have seen, a question for Ethics proper. Psychology is concerned with the means and order of its development. It seeks to make it comprehensible how, appearing first as a vague instinctive pressure from within, and finding its counterpart in established custom without, the tribal self comes to dominate every other, moulding the individual into a homogeneous system of habits—*mores* or ἤθη. In its subsequent development this 'morality' follows in the track of developing self-consciousness in general. A definite stage is reached when the social spirit brings forth heroes and 'founders,' who not only embody in their own lives conspicuous forms of social excellence or 'virtue,'[1] but possess the insight of genius into the significance of virtue in general, and are able through individual prestige to give it firm roots in national life. These 'creative souls,' as Plato[2] calls them—'parents of virtue of every kind'—become thenceforth, through the force of suggestion, a living law or conscience to the nation to which they belong. It is another stage when the demand arises to have usage and inherited authority defined and restrained by written law. But it is not until, owing to the growth of reflexion, the social bearing of different types of moral character comes to be realized, and their goodness becomes transparent in the light of the social well-being they serve, that we reach the highest form of social conscience. Virtue is thenceforth knowledge, or at least implies knowledge. Actions and types of character at first approved because they have the stamp of authority, law, or custom come to be approved for their own sake. Yet the same principle works throughout: there is no real break anywhere. Just as Logic works obscurely in the process by which we accept our beliefs from ordinary sense-experience or common hearsay, so morality works obscurely in the earlier manifestations of social solidarity. Fear is the beginning of wisdom, because there is more in it than fear. And, just as the progress of belief is best represented as a continuous process by which the false is separated from the true, and casual *aperçus* and accidentally received opinions become purified in the light of organized science, so the progress of moral feeling is to be conceived of as a continuous development from unconscious acceptance of tribal custom to the enlightened citizenship or humanitarianism of the patriot or the philanthropist.

IV. *The Logic of Ethics.*—1. The idea of a logic of moral value, more than once appealed to in the preceding paragraphs, is contrary to two widely held but opposite ethical theories. On the one hand it is maintained that none is needed, on the other that none is possible.

(*a*) The development of morality, it is held, is the result of natural selection. Once understand how in the inter-tribal struggle for existence a form of character in individuals has been developed which favours survival, and you have an answer—the only answer needed—to the question of the ground of its authority. Character is good because it survives, it does not survive because it is good; *de facto* is *de jure*; its might is its right.

After what has already been said as to the development of will, we shall not be accused of under-estimating the value of the history of moral ideas. Conscience, like everything else, stands in relation to historical fact, but it is, in its essence, as we have seen, a form of self-consciousness, and, as such, claims the right to test the fact by its relation to the self. It is for this reason that the appeal to nature (as the name for what actually exists) must remain unconvincing. Unless it can be shown, apart from the actual course of development, that there exists some essential relation between social solidarity and the rational element in human nature, in other words, that will obeys a logic of its own which forbids it to find rest in anything merely individual, it is difficult to see on what foundations our judgments of value, and the feeling of obligation which depends on them, can rest.

Darwin himself noticed the difficulty of explaining, on the principles of natural evolution, the emotions that lead to philanthropic efforts to preserve the weak. More recently W. James[1] has called attention to the feeling of the inward dignity of certain spiritual attitudes—serenity, simplicity, etc.—as quite inexplicable except by an innate preference of the more ideal attitude for its own pure sake. To this it might be added that, as a matter of history, these attitudes seem first to have arisen in nations which had already been absorbed by conquest, and had long ceased to compete effectively for national existence, and to have commended themselves to the human soul not by any perceived utility as a condition of survival, but by their consonance with the general aspirations of mankind after spiritual unity. Psychology, indeed, seeks to make it comprehensible how, through the influence of habit, association, imitation, our admirations deepen and extend. In this way means are transformed into ends, qualities come to be admired for their own sake, and perfections to be sought after which have no immediate relation to practical utility. But these considerations, however useful in explaining the origin of these and similar sentiments, still fail to touch the main difficulty—the justification of the *right* they claim to be regarded as of superior order, and, as such, to control our conduct. Granted that they exercise that pressure on the coarser and more selfish instincts which we call the authority of conscience, by what right do they do so? What gave them that authority?

(*b*) An opposite line is taken by writers who, while insisting that actual fact can establish no right, maintain that we can have no ultimate standard other than that of immediate feeling. The experience of good, like that of blue or yellow, is an ultimate datum of which no definition is possible,[2] and none is needed. A theory like this is not, of course, to be met by denying the place of immediate experience in moral judgment. Where it errs is in taking immediate feeling as an ultimate instead of merely as a starting-point. It is true that our practical as well as our logical and æsthetic judgments are rooted in quite definite and unique experiences. But no one maintains, as regards our logical judgments, that the matter ends there. Even in the simplest case of sensory data, such as colour, there are the circumstances of light, distance, contrast, etc., to be taken account of before we can tell what it is that we experience. If it is, according to a popular way of thinking, different with regard to 'tastes,' this can be seriously maintained only on condition that we are prepared to deny all value to æsthetic criticism—ultimately all essential difference of value in forms of beauty. And, if it be true that there are standards of truth and beauty, it can only again be at the price of denying all unity to human nature that we deny a like standard in the case of moral goodness.

It is impossible, in an article like the present, to

[1] See Hegel's *Philosophy of Law*, sect. 150.
[2] *Symposium*, 209.

[1] See *Will to Believe*, 1902, p. 187 (1st ed. 1897).
[2] 'Good is a simple notion, just as yellow is a simple notion' (G. E. Moore, *Principia Ethica*, p. 7).

draw out this fundamental analogy with anything like the completeness which it deserves. It must suffice to take the leading points which emerge from a consideration of the underlying structure of our logical judgments.

1. The position to which, in the search for a criterion of truth, philosophy is constantly brought back is that this cannot consist in any mere correspondence of idea with an externally given fact (as common-sense theory holds), or in the mere psychical insistence of the idea itself (as Hume believed). The conditions to be fulfilled are: first, that the test shall lie within the world of our experience; second, that it shall lie somewhere beyond the fluctuating states of the individual mind. And the solution of this problem is found, as Kant was the first to see, in the recognition of the fact that knowledge from the outset is the organization of our ideas, so that they may have a consistent meaning. Where there is a question of the truth or falsity of a belief, no other test is available than the extent to which it is possible to establish continuity and coherence between it and the existing system of what we believe we mean and what we mean to believe. It is useless to appeal against such a statement, as Pragmatism does, to the test of working. For this must either mean working for some partial purpose, usually described as the 'anticipation of experience' in a special field, or working as a universally and necessarily recognized principle. In the former case it simply is not true that in such partial working we have a guarantee of truth: a false idea may work well enough for a particular purpose, as a false premiss may be made to support a true conclusion. In the latter case we have only another way of saying that the belief must be consistent with experience as a whole. Cf. art. ERROR AND TRUTH.

The ethical problem is set, *mutatis mutandis*, by the same conditions. The standard cannot be anything external to the will itself; good and bad, right and wrong, are distinctions that spring up within moral experience. On the other hand, it cannot be the mere fact of subjective satisfaction: the essence of moral judgment is distinction of value between different forms of momentary and individual satisfaction. And the answer is in principle the same as in the case of knowledge; the will or the self acts from the first in the face of casual appetites as organized experience acts amongst the data of sense-perception. In the semi-conscious morality of everyday life we are constantly submitting impulses and desires to the criticism of our larger purpose, as our thought submits the beliefs that come to it in ordinary apprehension to the criticism of its larger experience. The 'working' of a course of action may, again, be accepted as the test, if by working we mean harmony with moral experience as a whole. If, on the other hand, we mean working to secure some casually chosen purpose, we can say nothing of its goodness until we know the relation of this purpose itself to the organism of human purposes as a whole. As the criticism of beliefs becomes conscious, in the case of opposing theories of which the test is their relative power of bringing the facts into systematic connexion with one another, so criticism of our ends becomes conscious in the case of deliberation in which the search is for the course which shall bring the different interests concerned into the completest harmony with one another, and thus the will into completest harmony with itself.

2. The standard of truth as defined above has two sides. There is the side commonly emphasized in logical text-books—the necessity of submitting our theories or interpretations of meaning to the test of their inclusiveness: their power of taking in all the comparatively established meanings we call facts. On the other hand, meanings claiming to be facts have to submit to the criticism of accepted interpretations, the resistance which theories already in possession offer to reputed facts that refuse to fall into line with them.[1] That neither of these requirements—neither comprehension nor inner harmony—can ever be complete goes without saying. So long as there are elements outside the system already established, unrelated to it through their meanings, equilibrium is unstable. Contrariwise, wherever there is the feeling of instability, it is the sure sign that something lies outside whose meaning menaces the established order. In the progress of knowledge the two ideas of fullness and harmony tend to succeed one another, an age of investigation being followed by an age of systematization. But they are not two different standards, but different sides of the same.

Turning to practice, here, too, we have the same duality. The good, like the true, must be inclusive. In an age of expansion, like the present, this is not likely to be overlooked. 'There is but one unconditional commandment,' writes W. James,[2] 'which is that we should seek incessantly, with fear and trembling, so to vote and to act as to bring about the very largest total universe of good which we can see.' But it is easy here to go wrong. Good is no mere sum of satisfactions any more than truth is a sum of facts. Hence the necessity of emphasizing the consistency and systematic unity of goods without which there is no true self, but merely distraction and chaos. It is for this reason that we may prefer W. James's second definition as containing just this addition, and therefore less ambiguous: 'Vote always for the richer universe, for the good which seems most organizable, most fit to enter into complex combinations, most apt to be a member of a more inclusive whole.'[1]

3. These two sides of the ideal of knowledge are the starting-points for opposite forms of intellectual failure. We have the type of open-mindedness that means looseness to all unity of principle and ends in incoherence. On the other hand, we have the man who stands out for consistency of principle, and is usually wrong in detail because his principle is too narrow. There is the same defect in practice. We have the looseness that comes from mere unthinking acceptance of lines of conduct suggested from without: the true 'unprincipledness' which begins anywhere and ends nowhere. On the other hand, we have the man whose life is founded on a principle which ignores fundamental facts. Badness, in the ordinary sense, where it does not consist in the mere absence of all guidance, is only a special form of this defect. It means subjection to some isolated and necessarily exclusive passion, the identification of the self with an interest which is at war with the conditions of individual and social stability.

4. If we follow the argument one step further, we can see how the attempt to find the source of moral judgments in the fact of natural evolution has its analogy in the attempt to derive knowledge from sense-impressions. It is true that the moral ideal develops in the individual only through contact with the society around him, as knowledge can develop only under the stimulus of sense. But its true fountain-head, the source of its authority, is in the nature of the will itself. Of morality we might say, paraphrasing Patricius's aphorism as to knowledge, *a voluntate primam originem, a societate exordium habet primum*. The social structure, so far from furnishing an explanation of the ideal as it exists in individuals, can only be explained by it. Its origin is lost in the mists of the past, but its historical development is the result of the growing insight of individuals into the gaps and inconsistencies which render it an inadequate expression of human good. No account of the ethical ideal can therefore be adequate which ignores the soul's presentiment of what is involved in its own nature, or seeks to explain it in terms other than those of will and individuality itself. The force that gives this ideal driving power is conscience or moral sense, which may now be defined as the feeling of unrest caused by the pressure of the ideal upon the actual will, as logical sense is the pressure of the ideal upon the actual intelligence. It is abstractly possible to disown both of them. But, just as to disown the logical ideal is to turn reason against itself, and leave it a prey to stagnation or delusion, so to disown the practical ideal is to disown what is deepest in ourselves, the source of all that is of value in life.

2. Value of the idealist standard.—While there is a wide agreement among idealist writers as to the general theoretic validity of the above analogy, there is much hesitation as to the extent of its application and the practical value to be attached to it.

(*a*) From the former point of view it has been maintained that, while in the world of theory science more and more approximates to the ideal of deduction and the anticipation of new developments, it is wholly different in the world of practice. Such apparently is the view of W. James,[2] who, while insisting on the analogy of Ethics and Science, conceives of it as ending at the stage of inconclusive experiment. Others, like Höffding, admit that a logic is discernible within the limits of particular ideals, *e.g.* that of self-assertion or self-abnegation, or that of the family or the nation, 'so that a person who recognizes it, and is sufficiently acquainted with the actual conditions under which it holds good, could also be brought logically to grant whatever conclusion might be deduced from that standard.' But they deny that any inner logic is discernible between one such standard and another. Here, no such deduction is possible; we have to wait the judgment of history, 'the great voting-place for standards of value.'[3] (*b*) From the point of view of utility there are others, like McTaggart,[4] who, while they admit that of the Good in the abstract no other account than the above is possible, yet find the appeal to it of little or no value in dealing with the concrete situations of life, and are fain to invoke the discarded end of pleasure as the best criterion or working standard of conduct.

To the first of these criticisms it is sufficient to point out that in reality there does not seem to be any essential difference between the ideals of science

[1] Witness the hesitation we feel with regard to some of the reputed facts of the Society for Psychical Research. They seem well authenticated, but we have no theory to receive them.

[2] *Will to Believe*, p. 209.

and our moral ideals in the respect referred to. It is, of course, true in general that we have to wait the judgment of experience to confirm our appeal to the ideal: 'das Weltgeschichte ist das Weltgericht.' On the other hand, it becomes more and more possible, as sensitiveness to moral distinctions develops and the ethical consciousness becomes clearer, to perceive what is implied in acknowledged principles. Such anticipations have commonly been made by the great legislators and reformers of the human race, whose efforts have much more frequently been employed in developing the logic of principles already accepted than in establishing new ones. Nor is there here any difference between the movement within particular ideals and that which carries us from one to the other. Where, for instance, to take Höffding's own example, can any line be drawn between progress within the family ideal and progress from the ideal of a strong domestic to a strong political consciousness? What holds of different levels of the social ideal holds also of the spiritual or supra-social. There is no real discontinuity between the 'political' life and the life of science, art, and religion. Closely regarded, the latter come more and more to appear in the light of a continuation of the work which the commonwealth begins, 'fuller utterances of the same universal self which the general will reveals in more precarious forms, and in the same way implicit in the consciousness of all.'[1]

The second criticism, in like manner, seems to rest on a misunderstanding, of which the analogy of Logic again suggests the correction. The ideal in Logic, in general, is a world of completely coherent ideas; yet in any particular investigation we are concerned, not with this ideal in the abstract, but with carrying forward the mind's work of organization in response to the summons of a particular theoretic situation. The particular point on which attention is concentrated may be wholly insignificant in itself, bearing no obvious relation to truth as a whole, or even to the body of accepted truth in the particular department. Yet the concentration takes place on a general background of conviction that the problem itself is a rational one, and continuous with the general presuppositions of science, by which, in the last resort, the truth of the results must be tested. So in practice. The call for moral choice comes from particular circumstances, without obvious relation to wider ends, and may be met without consciousness of anything in particular that depends upon the choice. Yet what gives actual value to the choice is that it is rooted in the moral order, which it sustains in equilibrium, or that it carries us perhaps unconsciously to a higher plane. 'Pleasure' could be appealed to in conduct, as in belief, only where the issue is so insignificant that we may 'do as we like.'

3. **Other definitions.**—A reference to one or two of the classical definitions of the moral standard will serve to illustrate the somewhat abstract statement of it to which we have been led.

(*a*) *The mean.*—Aristotle's doctrine, that virtue or excellence is a mean, stands in express relation to the view that life is a developing system of harmonious activities. There is, indeed, an interpretation of the mean which suggests a compromise between opposing elements rather than the union of them in a harmonious whole. But that this is not the sense in which Aristotle intended the doctrine is evident, not only from the emphasis he lays on the 'relativity' of the mean, but from the analogy of the arts, which, in spite of his disclaimer, really underlies his whole discussion. What Aristotle has in view is the limitation imposed on the passions and desires, not by any artificial average or working compromise, but by the ideal form of individual life. As the artist works at the parts with his eye upon the whole, so it is the form of his own life as a whole that the individual must have in view in fixing the limits within which particular impulses and desires may find a place. The order, however, as the latter part of the definition indicates, can never be a merely individual one. The standard is not to be looked for in the broken outlines of the lives of ordinary people, but in the best type of humanity, the 'wise man,' who represents in the fullest manner the unbroken continuity of individual, social, and spiritual existence.[1]

(*b*) *Personality.*—While the harmonious adjustment of the elements in man's nature—material and spiritual, individual and social—is the keynote of classical Greek Ethics, the manifold obstructions to it, which to the next generation seemed to call for a withdrawal from what is irrelevant and for concentration on the relevant, tended to shift the emphasis from society to the individual, from citizenship to independent personality. True as this conception is when rightly interpreted, the ambiguity which surrounds it has proved a snare to the higher ethical thought almost to our own time. Personality (*q.v.*) may be taken as the merely formal aspect of the will—that in virtue of which it is distinguished, or may distinguish itself, not only from all that is external in the material world, but even from the qualities and capacities through which the will itself finds expression: 'I am what I am: all else is mere accident and limitation.' But only a formalism such as that which was the chief snare of the Stoics could seek for the moral standard in such an abstraction. To be a 'person' in this sense is to be the least that we can be without ceasing to be human: 'something,' as it has been called, 'contemptible in the very expression.' We reach a more concrete, though still a partial, view of personality when we conceive of it as the self which, in virtue of the material separation of the body and other forms of 'property,' has claims against other similar selves. It is the prominence assigned in modern times to the rights of personality in this (which is necessarily an exclusive) sense that has given rise to individualistic conceptions of the standard of ethical value. Hegel's motto, 'Be a person, and respect others as persons,' limited by him to the field of abstract or legal right, is taken by the individualist as equivalent to the highest expression of the moral consciousness. It is only when we come to a third sense of the word — which includes the other two while differing from them — that we can accept this equivalence. Giving meaning to the power we have of separating between ourselves and our conditions (including the various elements in our own nature), there is in every rational being the power of moulding them into a definite form for the furtherance of some concrete purpose or interest. Giving meaning also to the capacities of mind and body, and to the material objects which are their instrument, and justifying the claim the individual puts forward to freedom in the use of them, there is the capacity of permeating them with a life which is not merely individual to himself, but unites him with others who have a joint interest in their utilization. If we call this attitude of purposefulness 'personality,' we can see how it is realized, not in proportion to the extent to which concrete interests are excluded and the individual atomized, but in proportion as particular interests find their place in some

[1] Bosanquet *op. cit.* p. 333.

[1] See Bosanquet, *The Principle of Individuality and Value* London, 1912, App. ii.

universal and inclusive interest whereby the individual enters sympathetically into the spirit of the whole of which he is a part, and is thus raised above himself.

'Personality,' says W. Wallace,[1] 'presupposes *within* us a nature which is one and yet many, which has from the beginning a potency of unification of interests and principles, and which can, occasionally at least, raise that potency to an actual symmetry and solidarity. . . . *Without* us, it depends upon a system of society in which each has his place appointed, and therefore occupies a special restricted position; but still, in filling that place, his inner and moral personality must remain intact. He is no doubt a mere unit, but a unit which can embrace and reproduce in himself the whole society of which he forms a part.'

(*c*) *My station and its duties.*—In view of this statement of the full meaning of the principle of personality, we can understand how the latter element in it should have come in recent Ethics to be made the head of one corner. 'To be moral,' says Bradley,[2] 'I must will my station and its duties.' Though associated with a refined form of idealism in Bradley's writings, this takes us back to Plato's homely definition of virtue as τὰ ἑαυτοῦ πράττειν. There is, however, this difference between the ancient and the modern definition, that it is accepted by Plato only on the assumption that society has undergone a transformation which has eliminated the element of accident that plays so large a part in assigning their places to individuals. It was possible, indeed, for a former time to conceive of a man's station as assigned to him by a deeper Wisdom that knew man's needs. But, interpreted in the modern spirit, there is nothing to veil the element of naked accident to which most of us owe our station and function in life, and which makes all talk of a secret harmony, where it is not treason to a better order, in nine cases out of ten an obstructive form of cant. The difficulty can be met only by a return to the Platonic, which is also the modern democratic, point of view, and which conceives of the fullest life alike for individuals and society as attainable only by assigning to each the place which his own developed capacities best enable him to fill.

Even so the difficulty remains for us as for Plato,[3] that at its best the idea of a 'station' suggests fixity and exclusiveness, and in its very terms spells external pressure and spiritual impoverishment for the great mass, and particularly for the industrial part of society. Although no one is likely to claim that the practical difficulty which a period of mechanical industry like the present causes can be overcome by reference to abstract philosophical theory, it is yet important to realize that in principle there is no real contradiction between the ideal of fullness of life and concentration upon one or other of its particular purposes. The assumption that comprehensiveness is identical with multitude of interests and pursuits is a mistake parallel with that of assuming that fullness of intellectual life means universality of knowledge, and is open to the same correction. As it is the depth with which a man realizes the scientific spirit in a particular field, not the variety of his intellectual interests, that is the measure at once of his work and of his satisfaction in it, so it is the depth and intensity with which a man realizes his particular social obligations, not the multitude of the functions he performs or the area he covers, that gives meaning and fullness to his life.

V. *THE METAPHYSICS OF ETHICS.*—Tempting though it is to pursue the social applications of ethical principle suggested in the previous sections, it is here more important to follow the philosophy of our subject to the point where it connects with the problems of religion.

It was with a true instinct that Kant perceived that, however separable metaphysical problems might be from science, they were bound up with the very existence of morality. Like the corresponding problems in the theory of knowledge, they may be condensed into two. (1) As the recognition of the relativity of human knowledge raises the question of the grounds on which we claim that the world responds to the claims of our intelligence, in other words, is knowable at all, so the discovery of the relativity of ethical ideals to social wellbeing raises the question whether they are applicable beyond it, whether they find any support in the actual course of the world as a whole. (2) As behind the question of the knowledge of the world of reality there emerges that of the kind of reality we must assign to the world of knowledge, so behind the question of the goodness of the world there lies the question of the kind of reality we must assign to the world of goodness.

1. **Is the universe good?**—To make clear to ourselves the precise form in which the first of these problems faces us to-day, we may start from Kant himself. In answer to the question, What is the foundation of our faith in duty? Kant, as is well known, appealed to the reality of the supersensible source from which its imperatives issue. But, when it was asked, in turn, on what our belief in this reality rests, the only answer forthcoming was that a categorical imperative is inconceivable without it. To this it seemed sufficient to reply that the alternative to which Kant sought to shut up the believer in morality—*either* the reality of a supersensible goodness *or* the unreality of the categorical imperative—does not represent the situation. There is a third possibility. We may deny Kant's identification of morality with a system of absolute imperatives. It is, indeed, impossible, as Kant saw, to base morality on self-interest. But the imperative that overrides the maxims of self-interest carries us, it may be urged, to no absolute Being containing in himself the conditions of the union of Nature and human life, of happiness and virtue, but only to the relative being of human society. Like the world of science, which, on Kant's own showing, has a claim to no more than hypothetical truth, the moral world is founded on a hypothetical, not on an absolute, imperative: not 'Do this, though the heavens fall,' but 'Do this, as you would have social life upon earth.'

This may be said to be the criticism which, in the next generation, Comte passed upon Kant, the Positivism of France upon the Formalism of Prussia. Its effect was to sweep away the point of contact between the supersensible and the sensible, which Kant thought he had discovered in morality, and to carry into the moral sphere the break between the reality of things and the forms under which we know them, which he had sought to establish in logical theory. Man's life founded on the conception of a good which realizes itself in an organism of social activities appears as something rounded off into itself in a *milieu* which stands in no essential relation to its ideals, and contains no pledge of their fulfilment, but, on the contrary, so far as we can see, after engendering them dooms them to ultimate disappointment. With Positivism the main issue of modern Ethics came into view. An exhaustive criticism of the theory is here out of the question (see POSITIVISM). The question it raises is whether the logic which enables us to see that the individual owes all that he is to the unconscious co-operation of society ought not also to convince us that the being of society is rendered possible only through the co-operation of the universe as a whole. It is quite true that the work of civilization, or, as it is better called, of self-development, has been carried on in the face of apparently antagonistic forces of material Nature and human self-seeking. But it is equally true that it is in the conflict with outward and inward forces that all that is of most value in human life has been achieved. Philosophy is wrong when it seeks to minimize the evils of earthquake and pestilence, war and social injustice, as picturesque shading in the best of all possible worlds. It is within its right when it in-

[1] *Lectures and Essays*, p. 286. [2] *Ethical Studies*, p. 163.
[3] See *Rep.* iv. *ad init.*

sists that the good which we know and value is conceivable only in a world governed by just the laws of matter and mind which these disturbances illustrate. So obvious is this extension of the logic of Positivism, that we are not surprised to find the opposition of cosmic forces recognized by Comte himself as a necessary condition of human development. Without it, he tells us, 'man's feelings would become vague, his intelligence wanton, and his activity sterile. If this yoke were taken away, the problem of human life would remain insoluble, since altruism would never conquer egoism. But, assisted by the supreme fatality, universal love is able habitually to secure that personality shall be subordinated to sociality.'[1] The surprise is that, having established this relation between conditioning and conditioned, external Nature and the best in human life, Comte should still speak of the former as mere 'fatality,' of the latter as something 'subjective.' Whether, from the admission that there is a deeper relation than superficially appears between man's moral ideals and the course of Nature, we can advance to the conception of goodness as not only a revelation of the meaning of the forces actually operating in the world, but as the revelation of a conscious purpose latent in them—is a further question. The contention of the older Idealism was that, the general harmony of the world with our ideals being admitted, there is no logical standing-ground short of the conclusion that the universe is in its essence self-conscious Spirit, differing from our spirits only in that it realizes in its completeness and harmony the good which in our lives appears only fragmentarily and incoherently. But it is just this contention that has recently been subjected to penetrating criticism, and no account of the present state of critical thought on the metaphysics of Ethics would be complete which leaves this problem untouched.

2. Is there a higher in the universe than goodness?—In order to establish the supremacy of the Good, the appeal, we have seen, is to the standard of inner coherence. But, having established before this court its rights against its enemies, the bad and the imperfect, the Good has to face the tribunal on its own merits; and recent criticism has not been slow to point out the flaw in its own case.[2] In its efforts after self-expression the will seeks to include all the elements of life in one harmonious whole. The life which we judge to be truly good must, on the one hand, be all-inclusive, and to this end must ever be going outside of itself; on the other, it must bring its powers and possessions into harmonious relation with one another, and be at home with itself. But, however logically inseparable these two requirements may be, they manifest themselves in reality as two separate ideals: on the one hand, the ideal of self-sacrifice (whether this be to persons, as in altruism, or to impersonal objects, as in devotion to science or art); on the other, the ideal of self-realization. And these are, in the last resort, irreconcilable, and leave life broken and distracted between them. Moreover, the ideal of each side, taken by itself, is again self-contradictory. Good, as we have seen, can have no meaning outside the world of will, and will has its being in the conflict of the actual with the ideal. Grant complete fulfilment of need from either side, and goodness disappears. The conclusion seems inevitable that Good falls in the end into the same condemnation as bad: it is in discord with itself, and, even although it were not so, it would be in discord with the universe. Believe, as we may, that the universe is good, this it cannot be *qua* universe, for this would mean that it failed of inner harmony—in a word, was no universe at all. The same conclusion may be reached even more directly if we consider will and morality from the side not of the content of their ideal, but of the temporal form under which they appear. Of all the elements of our experience, time seems to have the slenderest hold upon reality. The very thought of it involves contradiction. It is to be, but is not yet; it is, and it is no longer; it has never been, and yet there is a past. If, therefore, as can easily be shown, all will depends just on the opposition between the 'now' and the 'not yet,' there seems no means of rescuing it from the unreality that infests this relation.

It is not surprising that consequences thus uncompromisingly deduced from idealist principles should have called forth energetic protest. Not only did they run counter to ordinary opinion as to the supremacy of morality; they seemed to threaten the very springs of action. If all we call good and bad is but a passing shadow on the screen of time of a reality in itself timeless and self-contained, human enterprise and effort seem to be doomed to fatuity. All aspiration after the freedom to plan and to achieve is faced by the sphinx-like calm of a universe already at peace with itself and secure against all innovation. The signal for the revolt against these apparent deductinns was given by W. James's *Will to Believe*, which for the brilliance and irresponsibility of its attack has no precise parallel in modern philosophy, except it be Jacobi's celebrated protest in favour of the heart against the deadening weight of Kantian formalism. It was followed by a wave of wide-spread reaction against the whole ideal of philosophy, which, under the names of Humanism, Personal Idealism, Pragmatism (*qq.v.*), is as yet far from exhausted. What is common to all who adopt these names is the attempt to restore flesh and blood to the ghostly make-believes which the older Idealism was supposed to have left to do duty for human purposes, and the insistence to that end upon movement and process as constituting the life of things, the openness of the universe to all kinds of untried interpretations, the hospitality it offers to all forms of creative enterprise.

It is not likely that so vigorous a movement springs wholly from ambiguity of words. Yet it is clear that no agreement is possible until the ambiguities which attach to such central ideas as 'appearance,' 'process,' 'purpose,' are removed. With regard to the first, the distinction between appearance and illusion is, of course, vital. Because a thing is not real in the full sense of the word, it does not follow that it is an illusion. In illusion we take something to be what it is not; an appearance is that which cannot be taken simply as it is. It is an illusion to take the sun's rising for an actual movement of the sun over the earth's brim; the rising itself is, on the other hand, an appearance which, before it can be taken for reality, has to be supplemented by other facts which in explaining transmute it. Without itself representing the whole truth, one concept may be nearer to it, *i.e.* include more of the facts and stand for a more harmonious combination of them, than another. From this it follows that to deny ultimate truth is compatible with recognizing a high coefficient of relative validity. This is the logical equivalent of the metaphysical doctrine sometimes known as that of degrees of reality, which might be better called degrees of relativity. It may be summed up in the propositions: everything which exists at all must have attained some measure of internal unity; short of itself being the whole, this unity, just for that reason, must at some point show itself to reflexion to be incomplete and break down in contradiction; this point is more remote according to the degree of inclusiveness and harmony which it represents; but ultimate failure does not affect relative validity, nor does it prove that the whole could be what it is without the relatively invalid part.

Returning, with this distinction in mind, to the case of willed action, it is true that will rests on the distinction of an actual and an ideal, a now and a not yet, and must partake of the unrest of that relation. So far as it does so, it falls short of the highest reality. On the other hand, will represents a high degree of concreteness and internal stability. In it, as we saw, the elements of the inner life find their unity. It faces and breaks down the opposition between the self and not-self, uniting itself with the external world in the works and institutions we call civilization, and in the long run yielding place to nothing that does not come forward as a deeper form of itself. As will may be said to be the reality of blind instinct and desire, so, we have seen, morality is the reality of the will. In morality will comes to its own, and is at one with itself. But it does so in a world which, being in the form of time, has no other reward for the faithful than the opening up of a further vista which dwarfs present achievement and dooms one to a renewal of the conflict at a higher level. This does not

[1] See E. Caird, *Social Philosophy of Comte*, Glasgow, 1885, p. 160.

[2] See, esp., F. H. Bradley, *Appearance and Reality*, London, 1897, ch. on 'Goodness.'

prove that morality is an illusion, or that it rests upon a make-believe. It merely proves that it is not the highest form of experience. Above it stands religion, itself born of the contradictions in which morality ends, and seeking to heal them with the conviction that the aspect the world presents to the good will is not the final and only reality. Yet we must again add that, though transformed, morality is not suppressed. It does not simply fade out of religious consciousness. It survives in religion as it survives in fine art, giving substance and significance to what otherwise would be a vague and meaningless mysticism, and, so far as it is the immediate basis of the form of consciousness that seems to be the most real of our experiences, itself partaking of that reality.

With this account there seems no reason why idealists of all types should not so far agree. Even pragmatic or 'personal idealism' might be willing to accept it as another way of putting its own contention that the real is that which serves a purpose. It enables us to understand how any particular form of human experience may be unsatisfactory without therefore being valueless, and how one may be of more value than another. On the other hand, we can understand how it may still seem to fail to render intelligible the relation of the whole system of relative reality, or, if it be preferred, relative experience, to the absolute reality or the absolute experience. It is here that the pragmatist sees his opportunity to press the question, 'Why hamper ourselves with an absolute at all, which serves only to stultify our previous results: Is the relative and the finite a necessary element in the absolute and the infinite? Then into the latter itself creeps an irreconcilable contradiction, a seed of unreality into the heart of our all-real. Is it, on the other hand, unnecessary? Then is the real altogether real, the whole together complete without it; movement and purpose are, after all, illusion.'

There is, we believe, no other way of meeting this difficulty than by insisting on a clearer statement of what is meant by process and creation. If it is an error to represent reality in terms of fixed entities, like the popular conception of the Platonic ideas, it is surely no less an error to represent it as mere change, though that be the change of a conscious will and intelligence. What gives value to life in general, and to the life of mind and will in particular, is not that it initiates change and novelty, but that in the change it maintains or furthers a system of organic relations, participation in which is the condition of its own self-maintenance. This means that there are differences of reality in purposes themselves, according as they embody more or less of the unity of the whole of which they are parts. But to recognize this is to recognize that all time-process gets its value from relation to a whole or ideal which cannot in any intelligible sense be said to be itself a mere series of events in time. Cf. art. ETERNITY.

In asking pragmatists to admit this, we are, in fact, merely asking them to realize more fully the meaning of their own contention for the abandonment of the Spinozistic notion of reality as substance, in favour of that of subject. This, which is the true Copernican revolution in philosophy, must carry with it a far more thorough attempt than is yet common, to substitute the idea of mind or spirit and its manifestations for the idea of things and their attributes. Thinkers of both camps may reasonably be asked to apply more courageously the notion of self-conscious life as governed by the idea not of process but of progress—of thought and will alike as finding their reality not in mere movement but in more fully organized, and thus more deeply established, forms of self-expression. So regarded, the truest conception of the Infinite may well be that of an ideal which represents in its completeness what the finite seeks to be—what it incompletely already is. As an ideal it is more than any of the finites or any aggregate of them, yet it depends upon the expression of itself by the finites in so far as actual reality is itself an element in that completeness. If it is an error in principle to conceive of the absolute reality as an 'already' actual, it is no less an error to conceive of the actual moment of time as possessing any value apart from the degree in which it expresses the absolute reality, and so partakes of eternity. Whether this involves a further advance—a return, it may be, from the notion of subject to an enriched notion of substance—is a question on which other articles may be expected to throw further light. In any case, ethical philosophy has nothing to lose but everything to gain by allying itself with the most thoroughgoing criticism of its ideals in the light of a sane monism.

J. H. MUIRHEAD.

ETHICS (Rudimentary). — The procedure adopted in the present article is as follows. (1) A broad characterization is attempted of the lower culture, as a concrete phase of life carrying with it a specific type of ethics. (2) The main determinants of this phase of life are briefly analyzed, with the object of showing how physical causes, on the one hand, and spiritual motives, on the other, combine to sway the course of human life; the sphere of moral evolution being identified with that of the spiritual activities in question. (3) The particular determinations to which these moralizing forces give rise are rapidly surveyed, and some of the salient features of savage conduct at its most intelligent are exhibited as the result of ethical or quasi-ethical sanctions.

1. The general type of conduct prevailing in rudimentary society.—It has been assumed that the lower culture is sufficiently homogeneous to lend itself to what might almost be described as the method of the composite photograph. Though it is by no means so clear that the higher culture admits of similar treatment, it is convenient here to figure it as likewise a single phase, for the simple purpose of bringing out the essential features of rudimentary society by way of a contrast with developed society. It is necessary to conceive of two phases of society (they are in no sense 'ages'), which may be severally distinguished as the *synnomic* and the *syntelic*. As the etymology of these terms implies, in the one phase customs form the bond of society; in the other, ends or ideals. The one is a reign of habit, the other a reign of reflexion. The one results from a subconscious, the other from a conscious, selection of ethical standards.

At once the most striking and the most significant of the characteristics of the synnomic life of savages is that it is public, in the sense that it admits of little or no privacy. Gregariousness, it has been said, is not association. A contiguity with others which is too close and constant hinders that development of personality and independent character upon which syntelic society depends. In synnomic society the normal individual has no chance of withdrawing into himself. Hence he does not reflect; he imitates. Now, when every one imitates every one else, it might seem that a vicious circle must be formed, and society must come to a standstill so far as any real progress goes. As a matter of fact this is not the case. For the most part, however, the successful readjustments are of the subconscious order. Tarde's explanation of them as due to a 'cross-fertilization of imitations' may be cited, if only to illustrate how obscure and hard to describe the process is. The nearest analogy, perhaps, which civilization provides is the progress, such as it is, that takes place in fashions of dress. In thus generalizing with regard to a total phase of society, one must not, of course, be taken to ignore the fact that, however far back human evolution is traced—and in a sense it is not very far—the germs of all our higher mental processes are to be discerned. Deliberate policy is not entirely unknown amongst the ruder savages. Thus Spencer-Gillen[a] (p. 11 f.) are quite ready to admit that 'the Australian native is bound hand and foot by custom.' Nevertheless, they argue that powerful individuals are not untruly credited by the native traditions with having brought about fundamental alterations in the marriage system, the mode of initiation, and so on:

> 'If one or two of the most powerful men settled upon the advisability of introducing some change, even an important one, it would be quite possible for this to be agreed upon and carried out.'

Or, again, at a somewhat higher level of savage society, we come upon the conscious and far-sighted innovator in such a man as Chaka, the famous head-chief of the Zulus. Yet these sporadic manifestations of nascent individuality hardly militate against the broad principle that the savage is a blind conservative content to play a part in life which his ancestors have composed for him beforehand.

What are the ethical implications of this fact? Lack of personal initiative, of the capacity for private judgment, is equivalent to a want of moral freedom. The moral sanction of savagery is external, not internal. This must not be misunderstood. All experiences are in a certain sense internal; but they may be regarded as relatively external so long as they consist in perceptions rather than in conceptions. The conduct of savages is best understood in the light of what is known as 'the psychology of the crowd'; though what is true of the civilized crowd as a temporary gathering merely affords a general analogy to what holds of the savage community, which is a permanent and organic association. In a typical crowd the public opinion exercised by the individual members on each other and, reactively, on themselves is not properly their own, since it does not proceed from a critical or intelligent self. A judgment of sense, not of reflexion, directs the flow of natural approbation or resentment. Each man looks outwards, taking his cue from his neighbours in their mass, or at most from the slightly more self-determined ringleader; for, given any amount of sheep-through-the-gapishness, as Lloyd Morgan calls it, there will always be one sheep at the head of the rest. He does not look inwards to principle. He has no standard, in the form of a conception or free idea, that he can transfer at will from the present situation to another. Thus his conduct is merely the expression of a mobbishly caused and received impression. His morality, such as it is, is a customary morality, custom being defined as the aggregate of the forces of social suggestion at work at any time in a given society.

On this primary law certain corollaries depend. Thus (*a*) it follows, from the sheer want amongst savages of the power of maintaining communications at a distance, that the condition of social and moral solidarity at the synnomic stage of society is the capacity to be physically in touch with each other—to keep together in a crowd. Westermarck is quite right in making local contiguity the all-important bond of primitive life, even such a tie as that of kinship being secondary thereto (*MI* ii. 198 f.). This may be termed the principle of *symbiosis*. (*b*) It follows that, since within a given society there is always a plurality of circles, not necessarily concentric, within which symbiosis takes place in varying degree, the true centre and radiating point of moral influence will always be that particular circle within which the closest and most permanent symbiosis occurs. This circle of most effective symbiosis may be termed the *social focus*. It will be for one type of community the family, for another the kin-group, for another the village, whilst more exceptionally and for particular classes it will be the men's house, the secret society, the military regiment, or what not. Even if it be not always easy to answer the question, it is at least worth asking in every case, Where, for these savage folk, is the nearest equivalent to our 'home'? For not only does charity begin at home, when society is at the synnomic stage, but it may almost be said to end there. (*c*) It follows that, corresponding with this social symbiosis, there is likewise what Lévy-Bruhl is justified in calling a *mental symbiosis* in regard to all that concerns the intellectual and ethical life (*Les Fonctions mentales dans les sociétés inférieures*, 94). Or, as Durkheim-Mauss put it ('De quelques Formes primitives de

classification,' *ASoc* vi. [1901–02] 70), the mental attitude is fundamentally *sociocentric*. The actual way in which the folk themselves are grouped together provides the notion of the way in which all the things in the universe are grouped together. Exactly the same scheme of sympathies and antipathies governs things in general as governs the men themselves. Certain animals, certain plants, a quarter of the heavens, certain colours, names, and so on, belong to my group and belong together, whereas your group owns another class of things, and the associations thus arising constitute the essential natures of the things themselves. The 'confusion of categories,' with which Hobhouse (*Morals in Evolution*, ii. 9) charges rudimentary thought, is merely a confusion of such categories as we have since obtained by a slowly-developed attention to the intrinsic relations holding between things in themselves. The savage does not confuse his own categories, but these are almost meaningless to us because strictly relative to the idiosyncrasies of his particular little society. If he is a member of the bear-totem, bear-meat is poison (unless taken homœopathically), whether bear-meat in itself injuriously affects the human stomach in itself or not; and so on. Now, whilst this attitude of mind severely limits his practical efficiency (for we conquer Nature only by obeying her), it positively extends, in a way that only the more religious amongst civilized men may faintly appreciate, the sphere of his ethical interests. His whole universe being socialized and anthropomorphized, it becomes for the savage a battle-ground of quasi-personal powers that are in league, or, more strictly, in literal symbiosis, either with him and his, or with other human beings who are more or less against him and his. Consequently, lacking our mechanical control over Nature, he has little or nothing but his ethics to depend upon—his ways of dealing with friend and foe. So far is the savage from being unmoral, as some have called him, that morality may truly be said to be his all-in-all; though doubtless it is a morality which in general and on the whole he does not think out, but rather lives out, feeling his way by sheer social tact with his human neighbours, and with that environing universe which is for him as but human society writ large.

2. The determinants of conduct in rudimentary society.—The synnomic phase of human society having been generally characterized, it becomes necessary in the next place to designate the general factors or determinants that combine to produce it. From an ethical point of view the main object must be to show how, like every other phase of human life, it is hung somewhere between the opposite poles of physical necessity and moral freedom. One set of determinants may be classed as *physical*, in the wide sense which includes the psycho-physical. They will be dealt with under the two broad headings of 'Heredity' and 'Environment.' The other set of determinants may be termed *moral*. They will be considered under the two heads of 'Social tradition' and 'Personal initiative.'

(1) *Heredity*.—That the laws of heredity (*q.v.*) apply to man admits of no doubt. The working of those laws, on the other hand, is at present only dimly understood. Now, it is only too easy to suppose that what science cannot for the moment grasp is not there at all. For another reason, too, Ethics is apt to ignore heredity, namely, because to admit that some men are born with a greater capacity for morality than others is, from the normative point of view, unedifying, at any rate at first sight. Nevertheless, it is important to allow fully for the congenital dispositions that form the *terminus a quo* of moral evolution. The effects of heredity, as it applies to man, are palpably manifested in those differences of physical type which are due to what is vaguely known as race, or the race-factor. Even here science has hitherto failed to establish criteria of a satisfactory kind—neither shape of head, type of hair, colour, nor any other physical feature proving a sufficient mark of descent. The fact remains, however, that certain outstanding varieties of physical type have been handed on, along more or less traceable lines, from the dawn of history, and seem likely to persist so long as sexual selection remains what it is amongst uncivilized and civilized peoples alike. Less palpably, but no less certainly, there is a steady elimination in process within any given human society in favour of those physical types that are relatively immune as regards certain recurrent forms of disease. For the student of Ethics, however, the interest lies chiefly in the mental rather than in the physical effects attributable to heredity. But a satisfactory criterion of these is even harder to find. The modern view of instinct (the term which best sums up the inheritable part of mind) treats it, not as a determinate mechanism, but rather as a disposition to which a certain measure of plasticity essentially belongs. Thus Hobhouse (i. 16) notes that 'instinct throughout the animal world is found to vary greatly in individuals, to be quite fallible, often imperfect and capable from an early stage of employing elementary reasoning in its service.' Again, McDougall, in his *Social Psychology*, seems to admit that instinct, owing to its intrinsic plasticity, passes over into intelligence without observable transition. Nevertheless, he makes the following reservation. Every instinct on its physical side, he maintains, consists of three parts—an afferent, a central, and an efferent or motor. Correspondingly, on its psychical side, cognitive, affective, and conative activities are manifested in the same order. The plasticity belonging to the instinct, however, shows itself mainly at the two ends of the process. To the central part, on the contrary, and hence corresponding with the affective manifestations, he believes a relatively high degree of constancy to attach. His criterion of instinct, therefore, is the presence of some specific emotion. But if this criterion be adopted—and at present no better one seems to be forthcoming—we reach a position which, from the ethical point of view, is almost paradoxical. On the one hand, our emotions become closely associated with the hereditable and predetermined side of our nature. Yet, on the other hand, emotion is a root-factor in morality, so much so that Westermarck's vast collection of facts (in *MI*) is held by him to show that the moral judgments of mankind have a source that is primarily and essentially emotional. Is, then, the moral man born, rather than made by education? And is morality largely a matter of race? If indeed it be so—and science as science must seek the truth, whether it seem at first sight edifying or not—the fact must be faced. If it be, as McDougall suggests, the function of intelligence simply to refine on a pre-existing fund of sound natural tendencies, by providing these with objects on the one hand and modes of realization on the other, whereby they are to be most fully satisfied, then how to breed sound natures becomes the all-absorbing interest of ethical science. The crux of heredity must be faced and solved, instead of blindly trusting to education to turn moral sows' ears into silk purses.

It remains to add that the popular view which ascribes a greater innate susceptibility to emotion to savages as compared with civilized men is in all probability false. The tests devised by experimental psychology, so far as they carry us, tend to show that savages are emotionally more sluggish

and obtuse (cf. the experiments on white and on black women [F. A. Kellor, *Experimental Sociology*, London, 1901, p. 77]). The source of the fallacy lies in the prominence given to emotional manifestations by the conditions of the social life of savages. It is the law of life in the crowd, and, analogously, of synnomic society, that emotions are intensified whilst ideas are neutralized; the reason being that the emotions are transferred by imitation of the movements that accompany and assist their outward expression, whereas ideas are not transferred under conditions prejudicial to reflexion. As Lévy-Bruhl (p. 426) puts it, we should speak not so much of the collective ideas of a savage group as of collective mental states of an extreme emotional intensity, wherein idea is as yet not differentiated from the movements and acts that embody it. Nevertheless, the civilized man is not deficient in emotion because his higher training enables him to keep cool. He cannot do without the physical basis, say, of courage, any more than the savage can, but, on the contrary, needs it all the more because an intelligent application of his impulsive tendency to the needs of the situation calls for a repression of those mere detonations of the nerves which are the by-products rather than the springs of intense activity.

(2) *Environment.*—The term 'environment' (*q.v.*) must be taken to cover all those influences, proceeding from the circumstances wherein human experience takes place, which appear to control the course of that experience rather than, conversely, to be themselves controlled thereby. The line between these opposite controls cannot be drawn exactly. Thus the mother's body constitutes an ante-natal environment which the child itself does not in any way control; yet the mother up to a certain point can do so. Or, again, geographical conditions, the distribution of land and water, climate, and so on, might seem at first sight beyond human sway altogether; yet such a work as that of Marsh, *The World as modified by Human Action* (London, 1874), makes it plain that intelligently, and more often unintelligently, man can affect his physical environment for better, or, still more easily, for worse. Once more, food-supply, as dependent on the local fauna and flora, does not absolutely condition human life, inasmuch as this reacts selectively upon it, so that the whole terrestrial globe is made to respond to the requirements of the civilized breakfast-table. Lastly, what may be termed the distribution-factor — covering both the pressure exerted on one area of population by another, with the resultant wars, emigrations, and so forth, and the pressure exerted within the same area of population by the various parts, whence arises such a phenomenon as the rush to the towns—constitutes an objective condition with an influence of its own. Yet, on the other hand, distribution of population, and its ultimate causes, namely, rate of fertility, mobility due to facility of communications, and the like, are within limits subject in their turn to human policy, not to say politics. In short, what is known as force of circumstances must be treated as a determinant of human conduct, even whilst the aspiration to rise above circumstances, that is, to make them rather than allow them to make us, may legitimately figure amongst the highest of our ethical motives.

Thus, there is considerable scope for the new department of science which its founder, Ratzel, names 'Anthropo-geography,' and for the kindred branch of study termed by Durkheim and his school 'Social Morphology.' There is at present a danger, however, lest this type of physical explanation be overdone. Man may be, as Ratzel says, 'a piece of the earth,' but he is not merely that, by any means. Indeed, it may be expected that it is especially at the stage of savagery, when man is far more dependent on his immediate environment, that the application of these methods is likely to prove fruitful. Thus, Mauss in a study of the environing conditions of Eskimo life ('Essai sur les variations saisonnières des sociétés Eskimos,' *ASoc* ix. [1904–05] 39 f.) shows it to be to no small extent a 'function' of the physical factors of climate, food-supply, and distribution of population taken together. On the other hand, when civilization is similarly treated, as in the case of the 'economic materialism' of Marx, there is a manifest failure to take account of 'imponderables,' or, in other words, of ideas and ideals. Even in regard to savagery, however, it must not be forgotten that man, as known to anthropology and pre-historic archæology, is always more or less the 'lord of creation,' the master of his environment; so much so, that even during the great Ice Age in Europe, when the environment on which they depended proved too much for so many animal species, man, thanks to the use of fire and other mechanical devices, managed to hold his ground and to cultivate a high type of fine art into the bargain. Indeed, man's very mastery over the non-human environment, as contrasted with his weakness in coping with the human environment, namely with rate and distribution of population, is perhaps the main source of his need for an effective Ethics. Even at the stage of savagery, and conspicuously under civilization, a leading problem of human life is how to keep pace ethically with the changes in the social economy that are due to material progress.

(3) *Social tradition.*—At this point it becomes necessary to pass to the consideration of another set of determinants, which are not physical, as are heredity and environment, but moral. Social tradition, of course, may readily be represented as a sort of environment or atmosphere whereby the individual is surrounded and conditioned *ab extra*. But it is safer to attend chiefly to the psychical elements, sentiments, ideas, and so on, with which this environment or atmosphere is, so to speak, charged. Another way of putting the same thing is to say that the influence exerted on a man by social tradition makes itself felt within him in a way quite different from that in which environment or even heredity makes itself felt. Social tradition makes itself felt within a man essentially, that is, most characteristically, as a *sanction*. A sanction may be defined as a judgment of validity or invalidity to which some degree of constraining awe is attached (*sanctio* in Roman law is that clause in a legislative enactment which invokes a curse on the offender). Arising as it does in a more or less spontaneous and unenforced imitation, the influence of social tradition soon ripens into a sense of 'ought,' representing the will of society, or, at any rate, of some power greater and wiser and older and more lasting than oneself. Such is the fact, however one may try to explain it. Social Psychology, which is mere science content with a limited type of explanation, unlike Metaphysics, which seeks the ultimate explanation, would account for the fact by postulating, as the complement to our imitative tendency, a tendency to stimulate and assist imitation in others, and especially in the young. Thus, whilst the chick imitates the hen, as we say, 'instinctively,' so likewise does the hen no less instinctively encourage the chick to imitate. In this tendency to encourage imitation we may discern various subordinate types of activity, notably three, namely the tendencies to impress, to punish, and to persuade. Correspondingly, the influences embodied in social tradition may be reduced, in the interests of a broad and drastic treatment of the subject, to three—religion, law, and education. These are the three main types of sanctions.

(*a*) *Religion.*—The function of religion, regarded

as a sanction, is to inculcate the Good by investing it with impressiveness. The religiously impressive is known as the *sacred*. The evolution of the idea of the sacred consists especially in the gradual differentiation of what is both sacred and good from what is or appears to be sacred, but is, nevertheless, at bottom bad. Amongst savages, the notion of *tabu* (a Polynesian term roughly equivalent to the Latin *sacer*, whence our word 'sacred') extends to all sorts of things—human beings, animals, plants, material objects, ghosts, ceremonies, stones, words, places, and times—which have the common quality of being mystically dangerous, or, as Codrington puts it, 'not to be lightly approached' (*The Melanesians*, p. 188). The positive reason in the background is that they are *mana* (another Polynesian term, embodying, like *tabu*, a wide-spread savage notion), *i.e.* mystically powerful. Now, to be dangerous, because powerful, in a mystic (*i.e.* mysterious or supernatural) way, is a quality that may attach to bad things as well as to good. Hence religion, which is concerned with the mystically good, has at first much in common with magic, which only in the long run is cut off from religion to become a synonym for all 'trafficking with the devil,' *i.e.* for all use of mystically impressive means to effect bad and anti-social ends. From the psychological point of view, sacredness corresponds with the sense of awe, as excited by the display of supernatural power. Awe is a complex emotion, which McDougall (*op. cit.* p. 131, cf. 305) plausibly resolves into a trinity of primary emotions, namely, a fear which drives away, a curiosity which attracts, and a submissiveness which disarms resistance. Awe, therefore, may vary, according as one or other ingredient prevails, from an abject and grovelling terror to an admiring respect tempered with humility. Correspondingly, in certain aspects the religion of savages, and even of more advanced peoples, may be a religion of almost pure fear. At its most typical, however, it is in all stages of its development so closely associated with the social tradition that embodies the vital aims of each and all that its appeal is sympathetic rather than minatory and purely coercive. Social tradition at the synnomic stage of society, namely under conditions of symbiosis, when mutual imitation of the outward expression of emotion helps to intensify men's feelings, is capable of exciting awe in several ways at once; and, so long as the congregational forms of religion are kept up, the same phenomena will recur under civilization. Thus, firstly, it is mysterious, abounding in strange prescriptions, the very oddity and uselessness of which invest the sound remainder with the majesty of twilight. Secondly, it is ancient, its origin being lost in the dreadful yet glorious past, and calling upon the myth-making faculty to consecrate it by stories about supernatural Creators, first parents, culture-heroes, totemic ancestors, and so forth. Thirdly, it is always more or less secret, its repositories and editors being a ruling and relatively educated class, which rarely if ever feels awe towards precisely the same objects as do the less enlightened, the women, the young, and, in a word, the uninitiated, but is nevertheless in normal conditions subject to a similar but more refined awe as it confronts some more ultimate secret. In these ways, then, and in others, religion consecrates the Good so far as it is embodied in the rule of life imparted by each generation to the next, and by rendering it impressive helps the rising generation to imitate and assimilate it.

(*b*) *Law.*—The function of law, as a sanction, is to punish transgressions against the Good as embodied in the social tradition. Its remote origin may be what Bagehot (*Physics and Politics*, London, 1873) calls the persecuting tendency, which visits with the common displeasure all departures from the strict imitation of the prevailing fashion. The same author, however, in referring to the 'wild spasms of wild justice' to which the lower savagery is liable, implies that some sense of a social Good to be maintained runs through these outbreaks of passion at first sight almost purposeless and automatic. Indeed, when public vengeance is exacted by the folk as a whole from the traitor, or, again, from the breaker of *tabu* or the person who practises black magic, the mere fact that all assist at the infliction of the sentence must make it an expression of the social will, to which meaning and purpose are felt to attach. It may not be so obvious at first sight how private vengeance incorporates and enforces the social tradition. Let it be noted, however, in the first place, that the juristic maxim applies here, 'What the sovereign permits he commands'; which is to say that in a society lacking a centralized authority the social will must perforce manifest itself in isolated repressions of crime carried out by self-constituted judges. In the second place, private law in savage society is the affair not of individuals but of kin-groups; and the communal responsibility acknowledged by the member of a clan is a socializing force of the first importance.

So much, then, for the purely legal sanction, which with the evolution of society becomes the right arm, and almost the incarnation, of the State, the legislative, judicial, and executive functions of which are mainly concerned with the framing, applying, or enforcing of its punitive enactments. At an earlier stage, however, State, Church, and Society are almost one. For instance, rudimentary law is largely concerned with the violator of *tabu*, who is typically the criminal at this stage, whilst, conversely, rudimentary religion supplies law with dreadful forms of procedure—ordeals, oaths, and so on; with special punishments, such as costly expiatory offerings; and—most effective sanctionary influence of all—with the notion of supernatural powers at the back of the law, such as a Divine legislator, supreme author of all precedents.

(*c*) *Education.*—Under this last head may be summed up all those homelier and gentler forces of persuasion which, without show of coercion, yet none the less effectively, lead the individual member of society to submit to its traditional injunctions. Education is not merely a matter of training children, but proceeds throughout a man's life so long as he is capable of being modified by fresh experiences. Thus, even amongst savages it is not uncommon to find that initiation, which is at least as much an educational as a religious institution, is not completed at the puberty rites, but carried on far into manhood in a series of fuller initiations opening up ever wider horizons of social duty. Education, amongst savages and civilized men alike, is distinguishable only up to a certain point from religion and law, being never on the one hand wholly confined to secular subjects, or on the other able wholly to dispense with punitive machinery. It must not be forgotten, however, that under this head must be included influences so kindly and intimate that the individual is hardly aware that they are the potters and he the clay. Language itself is the greatest of educators; and yet it is the primary source of self-consciousness and self-realization. Unconscious passes into conscious education, as language generates literature, even savages having their literature of folk-tales, proverbs, songs, and so forth. In early society, however, education comes more by way of outer sense than of inward thought, and synnomic life is a perpetual pageant of dances and shows; whereas civilization is essentially the attribute of a reading public. If a single differentia be sought to mark off civilization

from savagery, no better one is to be found than the invention of writing. Hereby human intelligence acquires a new dimension. The physical symbols largely make possible those mental symbols which we know as abstract ideas; and these rule our world. Ethics itself is often identified with the theory built upon certain highly abstract ideas, too abstract indeed to be generally understood, and so to exert much influence on society at large. From the historical and comparative point of view, however, Ethics is as wide as the theory of the moral influences which, in the course of man's concrete living no less than in that of his abstract thinking, point the way to the Good. Of these influences social tradition has now been summarily considered in its leading aspects. It remains to take note of another influence, too often overlooked, namely the initiative of the free and responsible individual.

(4) *Personal initiative.*—When full allowance has been made for the influences of a man's heredity, his environment, and his social tradition, is there anything left that could possibly influence him, or, indeed, that would be there to be influenced? Have we accounted for the man completely? Whatever the metaphysician may say for or against the reality of human freedom, it is necessary at the level of science to distinguish the effects of personal initiative as in their way unique. Without entering on the question whether, apart from the individual centres of activity, human society is, or is not, a soulless thing, we need here concern ourselves only with the individual activity that is manifested in so marked a degree as to appear decisively to exert a purposive control over the course of events. History is not merely the history of great men, but, on the other hand, the human drama conceived as the mere product of a complex of impersonal forces would be like the play of Hamlet with its leading character left out. To confine our attention to the moral genius, if Socrates, or Buddha, or Christ be withdrawn from the reckoning, the source of the truly revolutionary movements usually associated with their names is nowhere to be found. At the same time, the type of explanation which relies on social as contrasted with individual forces for its clues can and must delimit the province of personal initiative by showing what external conditions are able to help or hinder its exercise. Thus, the levelling influences of synnomic society prove normally, though not invariably, fatal to individuality, as has already been said. On the other hand, specialization of social functions encourages responsibility, though it does not necessarily produce it. The mere fact that the social system requires individuals to be sorted out and educated each for his special task, gives potential initiative the chance of maturing. For example, it is within the relatively specialized class of medicine-men that the social reformer is especially apt to arise; while in a lesser degree the specialization of sex functions and consequent limitation of the woman to domestic duties permits to the male as such a greater opportunity of realizing such originality as may be in him. It remains to add that, ethically, the selfhood which issues in a high degree of initiative involves a self-respect which is not inconsistent with self-sacrifice, but, on the contrary, tends to unite the two principles as aspects of one and the same real Good. Even the self-respect of savages, whilst it manifests itself in its lower forms as a love of self-decoration, or as boastfulness, or as the habit of retaliating on an affront, leads likewise to the self-devotion of the warrior and leader, and foreshadows the developed individuality which rises above individualism to the disinterested realization of the idea of Good for its own sake.

3. The determinations of conduct in rudimentary society.—That which the determinants of conduct discussed in the previous section combine together to produce may be correspondingly termed the determinations. Of such determinations, those that are reckoned by those concerned to make for the Good are usually known as types of virtuous conduct, or virtues. A classification of virtues so framed as to further the study of their historical evolution must be founded on a consideration of those relations in which the moral subject, the individual who seeks the Good, is involved by the conditions of human life throughout its whole development as presented in history. What, then, are these permanent relations? If we regard the moral subject for the moment as standing simply at the centre of a scheme of relations which are social in the sense that they are relations with other human beings, we perceive him to be ringed round, as it were, with three concentric circles. Firstly, he is the member of a home circle, that 'social focus' of which mention has already been made. Secondly, he is the member of a body politic. Thirdly, he is a member of the human race, and, as such, willingly or unwillingly brought into touch with men belonging to some body politic other than his own. At this point we might seem to have exhausted the categories expressive of his moral relations; but, at the risk of the appearance of a cross-division, two other categories must be added. Fourthly, a man's moral relations extend inwards as well as outwards. He has a duty to himself, and as a self-conscious being is necessarily committed to certain types of conduct that are primarily self-regarding, though they are never exclusively self-regarding, any more than his conduct towards his neighbours can ever be exclusively other-regarding, or altruistic. Fifthly and lastly, there are certain relations in which man seems to himself, by a sentiment which no reflexion can wholly gainsay, to be lifted right above the opposition between the claims of self and of others. These relations, then, appear to be with the Good itself, or, in the language of religion, with 'God.'

To this general scheme of man's moral relations, which is objective in the sense that Sociology and Psychology alike lend support to it, there corresponds a fivefold division of the virtues as follows: (1) the domestic; (2) the political; (3) the international; (4) the personal; (5) the transcendental. Whereas this classification applies to the moral development of man throughout its whole course as known to history, there is likewise sound reason as well as convenience to be pleaded in favour of its use in a study confined to rudimentary society. At heart, savage and civilized man are well-nigh one, despite appearances to the contrary. The same foundation, the same raw material of emotional tendencies, is there. Civilization, to recur to those principles laid down by McDougall in his *Social Psychology*, sharpens human nature at its ends. It gives a man an infinitely better hold on the facts of life, thus improving the afferent channels of his experience; and, correspondingly it affords him an infinitely better grasp of the means of life, thus improving to a like extent his efferent or motor activities. But the central part of his nature remains relatively unaffected by this gain in vital effectiveness. The general orientation of life, the direction of the quest for the real Good, does not seem to change greatly. The best proof of this is that education, that is to say, the mere substitution of one social tradition for another, can do wonders for the born savage; whilst, again, a whole race may shake off the sleep of centuries, as the Japanese have

done, and enrol themselves amongst the more highly civilized nations. We speak with Plato of 'conversion,' but the term is inexact; and it would be truer to say that human nature, being polarized towards virtue, needs merely to be relieved of its ignorance of the ways and means by which virtue is acquired. The problem for Eugenics is how to eliminate the unintelligent and unplastic rather than the bad at heart—to eliminate them, as noxious insects are eliminated, not by killing individuals (for such butchery but depraves those who kill), but, more radically and yet mercifully, by preventing them from being born at all.

(1) *The domestic virtues.*—Tylor has said: 'The basis of society is the family' (*CR* xxi. 711), thus endorsing the time-honoured dictum of Aristotle. One school of anthropologists, who favour what may be termed the 'horde-theory' of the origin of society, might be inclined to retort: 'First find your savage family.' Their hypotheses, however, concerning promiscuity, communal marriage, or what not, frankly refer to some remote past which, if it ever existed, lies at any rate quite beyond the range of scientific observation. At most they find amongst existing savages a few alleged survivals of a social condition when there was no marriage proper. Marriage, in a wide sense that extends to certain of the lower animals no less than to man, is defined by Westermarck (*Hist. of Hum. Marriage*[2], 1894, p. 537) as 'a more or less durable connection between male and female, lasting beyond the mere act of propagation till after the birth of the offspring.' Marriage proper, on the other hand, may be defined with Lord Avebury (*Marriage, Totemism, and Religion*, London, 1911, p. 2), as 'an exclusive relation of one or more men to one or more women, based on custom, recognized and supported by public opinion, and, where law exists, by law.' Now, it is a curious fact that marriage proper occurs amongst those savages who in most respects have the most rudimentary culture of all, such as the Andaman Islanders, Veddas, and Bushmen. Yet with societies of a slightly higher grade, notably such as have totemism in one or another form, it is often the case that the family is somewhat overshadowed by the kin-group ('clan' under mother-right, 'gens' under father-right). In other words, whereas the bond between husband and wife is relatively feeble, inasmuch as they belong to different kin-groups, mother and children or father and children are in intimate communion with each other as members of a kin-group which includes persons whose relationship in the actual matter of blood is distant or perhaps non-existent (though usually blood-relationship is imputed by means of the figment of a common ancestry). It remains true, however, that, whether it be represented by the family, or by some quasi-familial institution, the kin-group, the communal household, or what not, there is always for the savage a 'social focus,' a home-circle, where the virtues pertaining to social intercourse are fostered by mutual relations of special intimacy. These relations may be here briefly considered under three broad heads: (*a*) relations between the sexes, and, in particular, between husband and wife; (*b*) relations between young and old, and, in particular, between parents and children; (*c*) relations between kinsmen in general. See also artt. FAMILY.

(*a*) The adult savage woman is normally a wife and mother, and it is as such that she is primarily related to the community regarded as a moral whole. Thus her economic duties follow directly upon her conjugal and parental obligations. Her function is that of directly propagating and nurturing the race, whilst the function of the male is protective, that is to say, is indirectly race-preserving. If happiness consist in the exercise of unimpeded function, both sexes should be happy in the normal savage community, where there are no unmated females free or anxious to have a hand in the work of the men. Physically woman's is perhaps the harder lot. Child-bearing, indeed, is not so great a strain upon the daughter of nature as is the need of continually suckling her child until it is well into its second year. It is a great gain for her when life becomes relatively sedentary. For amongst hunting peoples not only must she carry her infant, but she is also bound to be carrier in general, that the men may be at liberty to use their weapons. When it is added that the sexual life begins early, namely as soon as puberty is reached, or occasionally before, it will not seem surprising that the savage female tends to age more rapidly than the male. The male, however, is far more liable to be cut off whilst still in his prime.

Passing on to note the influence of social tradition, we come at once to the institution which more than any other determines the relative status of male and female, and in particular of husband and wife, for better or worse. This is the custom of exogamy, or marrying outside the kin-group, though usually inside the wider circle of the tribe. A few of the lowest peoples, mostly miserable remnants whose endogamy or marrying-in may be a result of degeneration, are without this practice, but it is typical of rudimentary society as a whole. What exogamy means for the man and woman who marry is that one or other must exchange the home-circle for another. Now, the morality of savages being narrow rather than lacking in intensity, the consequence is that to break with intimates and dwell among strangers involves a sojourn in a moral wilderness for whichever of the two parties is the outsider. Thus, when mother-right takes the form of the woman remaining amongst her kin and the man playing the part of a visitor liable to *corvées*, there can be no doubt that the woman's is the happier lot. Indeed, all the forms of mother-right, the technical differentia of which is merely that the mother, not the father, hands on the family name, appear normally to involve greater consideration for the mother, if Steinmetz's (*Entwicklung der Strafe*) statistical method is to be trusted. As long as her kin-group formally owns her and her children, the husband has to fear their vengeance if he abuses his rights as consort. It remains only to add in this context that the origin of exogamy is quite obscure. There may be, as Westermarck thinks, a race-preserving instinct against in-breeding behind all. As it meets us in history, however, exogamy is a full-fledged institution at once legal and religious as regards its sanctions. See series of artt. under MARRIAGE.

Another world-wide element in the social tradition of savages that bears strongly, and on the whole very hardly, on the moral status of the woman and the wife, is the magico-religious notion concerning the sacredness of women and especially of woman's blood. Hence the long and weakening confinements at puberty and during pregnancy and child-birth. Hence the avoidance, on the part of the male, of what a woman has touched, lest the contagion of effeminacy be handed on. Hence, too, probably in no small part the very forms of the marriage ceremony, designed to neutralize the mystic evils likely to ensue from contact with one who is a woman and a stranger to boot. In the other scale weigh several clear advantages. Woman's dependence on male protection in combination with her sacro-sanctity tends to render her an object of what eventually ripens into

chivalry. Thus, amongst the Australians she is the ambassador between warring tribes, whose very body is able to cement a union of souls between them; or, again, many savages, notably such as are warriors, indulge in a strain of romantic love, the product of a kind of awe supervening on a basis of passion. Again, sexual purity develops into a virtue, of far-reaching influence on the character, out of various tabus on sexual intercourse, observed by the hunter, the warrior, the medicine-man, and so forth. Indeed, excessive sexuality, together with its perversions, is not a vice of the lower savages, despite appearances to the contrary (cf. art. CHASTITY), but rather an attribute of advanced societies, especially those that are polygamous, or, again, those in which marriage is deferred for many years past puberty. The so-called orgies of savages, or, again, the wife-lendings, and so on, have normally a ceremonial character, underlying which there is the notion of sexual intercourse as a means of mystic communion. On the other hand, what he considers to be sexual impurity is loathed and abominated by the savage, as when it takes the form of incest, that is, any violation of the exogamous rule that is not countenanced by some mystic requirement of even more primary importance (as, *e.g.*, occasionally in Australia). Incest regularly excites a 'wild spasm of wild justice,' and spells death for the guilty parties. On the other hand, adultery is, so to speak, a civil affair, an offence against property, being a cause of divorce for the most part under mother-right, though under father-right it often entails severer penalties on the erring wife and her lover (the settlement of the question in any case resting less with the individuals concerned than with their respective kins).

Finally, as regards personal initiative, it is in her mystic character rather than as wife and mother that woman occasionally becomes a leader of society, the old woman especially, with her witch-like qualities intensified by her appearance, exerting a sway over the popular imagination that may be for good or for evil. Meanwhile, the female sex as a sex is not without its share of influence in public affairs: partly because it is consolidated through having initiatory and other sacred and secret rites and attributes of its own, *e.g.* a sex totem in parts of Australia, and may thus come to dominate a whole province of social activity, as the Iroquois women did, thanks to their agricultural lore; partly because they possess and know how to wield what Mill has termed 'the shrewish sanction'; and partly because the desire to shine in the eyes of the women is a male weakness, responsible for much head-hunting and similar manifestations incidental to the pursuit of knightly glory.

(*b*) The relations of men and women have been dwelt on at length, because the woman's half of society will scarcely receive further mention here. As regards the relations between old and young, and those between parents and children, the former must be considered first, because primitive society is normally divided into fairly definite age-grades, and its customs tend to relate to these in their wholesale capacity. Thus, religion prescribes food-tabus and other restrictions upon the young as a class, and incidentally teaches them to control their appetites. Or, most conspicuous case of all, the young are subjected as a class to initiation, and their moral education is administered by the society as a whole in a form that is made impressive by solemn rites associated with the infliction of considerable pain. Parental education, on the other hand, tends amongst savages to be mild. They spare the rod, doubtless chiefly because of natural affection, but in some cases, as notably amongst the Indians of N. America, on the principle that a future warrior should brook a blow from no one. The mother tends to look after her daughter until the latter marries, and to impart to her the duties and lore of women. The son, on the other hand, is often taken away from the mother and sisters some time before puberty, and made to join the company of males who tend to live more or less segregated from the females in club-houses and so forth. Education, as imparted by either parent in the case of both girls and boys, is a mixture of technical and moral instruction, reminding us of the Persian system as reported by Herodotus (i. 136), 'to ride a horse, to shoot with a bow, and to tell the truth'; though it would seem that the deepest moral lessons are acquired in the course of public ceremonies such as the tribal initiation or the rites of the kin-group or of the secret society. The elders as a whole display the fullest concern in the rearing of the rising generation, and the dramatic character of the ceremonies embodies the intention to improve the youth in so palpable a form that these can hardly fail to catch the spirit of the effort made on their behalf, whilst they are likewise induced to embody that moral purpose in their lives by sheer faith in the efficacy of the ritual wherein it is enshrined.

So far the relations between old and young have been considered from one side only. We probably have to go back to instinct for an explanation of the fact that the solicitude of parents and elders for their youthful charges is perhaps reciprocated only in a relatively feeble and limited degree. Too much, however, must not be made of the sporadic occurrence of senicide. This, exactly like its converse, infanticide, is normally the direct result of very straitened circumstances, when a useless mouth or a drag on the mobility of the group is a handicap in the struggle for existence too heavy to be borne. The typical savage regards his elders, alive or dead, as the embodiments of a wisdom and power with something supernormal about it, and ancestor-worship (*q.v.*), a special type of cult which emerges from funeral rites which universally show awe and respect rather than mere fear of the dead, and especially of one's own dead, is but the consummation of a natural sentiment which associates the imitation of their elders by the young with the sort of love that develops into filial piety and gratitude. It has been true of man, since the times of the Ice Age, that the grave itself cannot make an end of family affection.

(*c*) With the subject of the relations between kinsmen in general we almost insensibly pass to that of the relations constituting the body politic as a whole. Kin-ly feeling is kindly feeling in the making. As has already been said, however, the development of kin sentiment is normally restricted, under the conditions of society in which the kin-group is paramount even as against the family, in a way that to the civilized mind seems extraordinary, artificial, and unnatural. The child belongs either to his mother's or to his father's kin, and as such participates in a moral system of rights and duties from which one or other parent is cut off by tabus as by a wall of brass, nay, from which he has as an outsider far more to lose than to gain, as, *e.g.*, in case of a conflict between groups, when parent and child may find themselves actually ranged against each other. On the other hand, so far as it extends, the consciousness of kin is a moral factor of the first importance, involving as it does the principle of corporate responsibility manifested in blood-revenge and the kindred developments of private law; whilst in a religious way it implicates the sense of a mystic brotherhood, as is seen notably in totemic ritual, and in

what is probably its lineal successor, the ritual of the secret society. When, however, the individual does not live among his kin, as, *e.g.*, when he inherits his kin from the mother but lives amongst his father's people, there is a conflict between the principles of kinship and of symbiosis, the tendency of which is to end in some modification of the system of kinship that allows locality and brotherly love to go together. Kinship of the one-sided sort is normal in those conditions of the social life in which the separate groups are wandering, or at any rate scattered. When the groups can settle down side by side, as especially in the agricultural village, the family on the one hand as the home circle, and the village on the other as the wider circle of group-mates, come each into their own, whether exogamy and kin-organization be retained or dropped. Such generalizations, however, are purely provisional, as the problems connected with the evolution of the social organization of savages are some of the most perplexing that confront the anthropologist.

(2) *The political virtues.*—Whilst the scope of political virtue, in the sense of the moral bond that unites those who are by reason of local contiguity in constant touch with each other, is narrow, because the area of symbiosis is necessarily a restricted one, its emotional quality on the other hand is normally considerable, nay, such as the civilized community, which keeps in touch over a vast area by means of ideas, can only envy in vain. What corresponds with the savage to the sentiment and idea of the body politic is something in which he 'lives and moves and has his being,' sensibly and not merely symbolically. The savage individual is lost in the crowd, by being absorbed heart and soul in its life and movement. Heredity, of course, produces the coward and loafer as occasional variations; but the conditions of a hard life give the pervert and parasite a short shrift. That the savage will normally answer to a call of duty in its sterner forms, as, for instance, when public danger impends, could be illustrated extensively from amongst the lower savages, though in their case the body politic is less often the tribe as a whole than some one of its constituent groups. Nowhere, however, is this more manifest than at that higher level of savagery at which the 'king' (an elastic term) appears, living personification as he tends to be of State and Church in one. Patriotism at this point becomes almost identical with loyalty; and this is absolute. The Fijian criminal stands unbound to be killed, 'for whatever the king says must be done'; and the native of Dahomey exclaims in a similar strain, 'My head belongs to the king; if he wishes to take it, I am ready to give it up.' The king himself, meanwhile, is inclined to play the autocrat in proportion as he is endowed with personal initiative for better or for worse. In most cases, however, he is himself tied hand and foot by the custom that he is there to enforce—witness Wallace's amusing tale of how the Rājā of Umbok took the census (*Malay Archipelago*, London, 1869, i. ch. 12).

Again, the kindlier side of political duty as manifested in friendliness and good-fellowship is well to the fore amongst unspoilt savages, their dances, games, festivals, and perpetual gatherings being possible solely on that condition. And not only are they in general friendly amongst themselves, but they are likewise polite, doubtless in virtue of their predilection for forms and ceremonies. There is, however, a supreme disturber of these amicable and considerate relations, namely inequality of property; on which, more than on any other condition, is based inequality of social degree, a class system. Amongst the lower savages there is wont to reign what is sometimes not unfairly described as a primitive form of communism or socialism. Thus, the rules about the distribution of the spoils of the chase are based on the principle of a fair share for all, almost regardless of the special claims of the actual slayer of the animals, whose meed is rather honour; and the distribution is even State-regulated in the sense that what custom decrees the elders enjoin and, if necessary, enforce. Such a practice of sharing the produce, as distinguished from the means of production, weapons, and so on, which tend to be owned individually, would seem, however, in most cases to be rigidly confined to the actual symbiotic group of food-mates. Outside this narrow circle there is room for generosity and hospitality, which in their international aspect will again be glanced at presently. It is to be noticed that with this socialistic free-handedness there goes, not indeed a want of industry (for the loafer is soon weeded out), but a want of the capacity to save as against a rainy day; so that an alternation of feasts and fasts is the general rule amongst the lower savages. As there is not much scope for generosity, so neither is there for honesty, within the symbiotic circle, both being virtues incidental to a more or less individualistic régime. Thus, stealing within the home-circle is no crime; though in the wider circle of the tribe it may produce complications between groups; whilst contrariwise, as practised against those who are outside that circle, namely strangers and enemies, it is rather a virtue, at any rate amongst peoples of a predatory type. And what is true of honesty holds in the main of veracity: intimates and comrades do not deceive each other; but in regard to outsiders, to lie is to be diplomatic. With the economic development of primitive society, however, and the growth of classes of unequal wealth, things are somewhat changed. Yet the old communistic spirit, assisted by the profuseness that accompanies improvidence, and by the love of the display of power, tends to survive in the obligation to keep more or less open house, and to be ready with gifts, which is laid upon chief and leading man. Indeed, the savage 'king's' duty of feeding his people is often so interpreted that, if the crops fail, his want of mystic control over the powers of Nature is set down either to inefficiency or to sheer ill-will—with the result that he is put out of the way.

Finally, the institution of slavery, which is unknown at the level of the lower savagery, introduces a class of persons without legal rights, who may indeed be war-captives, or a subject-race dominated by invaders, but may likewise be broken men and pawns of the same flesh and blood as their owners. It would seem that, on the whole, the slave receives a larger share of the milk of human kindness at the hands of a savage overlord than he would if exploited in the interests of a developed industrialism; but life, when it is not that of the nearest and dearest, is cheap amongst savages, and the constant association of a slave-owning system with bloody rites involving human sacrifice tells its own tale. Moreover, wherever a slave-trade is established, the attendant horrors are bound to have a demoralizing effect, Africa being the standing instance of a continent rotted to the core by such an institution (for the development of which civilization, however, is most to blame). Nevertheless, it must not be forgotten that slavery, though morally an abomination, is possibly one of the mainsprings of human evolution. 'Here,' says Tylor, 'is one of the great trains of causation in the history of the human race. War brings on slavery, slavery promotes agriculture, agriculture of all things favours and establishes settled institutions and peace' (*CR* xxii. 70).

(3) *The international virtues.*—The subject of slavery paves the way for a consideration of a topic which for the student of Rudimentary Ethics must necessarily prove somewhat meagre. Savage morality, it has all along been maintained, is primarily an affair of the home-circle. Within this, amity of a high emotional quality; and without it, enmity fierce and uncompromising—such is the general rule. But the actual area of symbiosis is ringed round with an intermediate circle. Mates, neighbours, and strangers are, socially and morally, as heart, rind, and husk in some hard-shelled but palatable fruit. We have already glanced at the inter-gentile relations, as they might be termed, which savagery respects, not without a great deal of internecine struggle tempered by a tendency to settle disputes by compromise and mutual arrangement. But inter-gentile relations pass into inter-tribal (or, as we have, with a view to human evolution as a whole, ventured to name them, inter-national) almost without a perceptible break. Thus, notably in Australia, the kin-groups and local groups are loosely combined in tribes, and these again in wider combinations known to ethnologists as 'nations.' Here it seems quite impossible to draw a line between the customs and formalities governing the intercourse of the smaller groups—the sending of messengers and ambassadors, the regulated combat, the lending or exchange of trade-articles and of sacred objects, ceremonies, and songs, the mutual understanding as to marriage, inter-sexual prohibitions and privileges, and so forth — and those that extend so much further afield that a native can, it appears, travel almost from one end of Australia to another without being treated as a complete stranger. Possibly, too, the stranger as such tends here, as among other savages, to be sacred, hospitality having thus a religious sanction, since the fear of the stranger's curse, as Westermarck has shown (*MI* i. 578 ff.), proves a not ineffective substitute for the stimulus of generosity. In Australia, then, where both race and culture are largely uniform, a certain measure of sympathy establishes itself, despite the difficulties set up by a natural suspicion of unknown men (as exemplified by the 'silent trade') or by the want of a common tongue (necessitating such a device as gesture-language).

It is not till a fuller control over the forces of Nature enables population to grow relatively dense that the struggle for room begins in a given area of characterization, and the predatory spirit is let loose. War has evolved like everything else, and the art of killing one's neighbour efficiently was not acquired all at once. In protected areas a mild type of savage flourishes to whom war is unknown. Thus the Todas of the Nīlgiris have literally no man-killing weapons at all. On the other hand, the fighting qualities would appear to go closely with the breed, and to be the result of a struggle for existence waged primarily within the kind, though a fauna that includes dangerous, man-slaying animals (such as are not to be found on the Australian continent) must be an intensifying condition. The accompaniments of primitive warfare are mainly what have given savagery its evil name, constituting precisely that aspect of the life of rudimentary society which is turned, not without good cause, towards the so-called pioneers of civilization; but, as regards themselves, war is often a transitory condition, though there are some definitely predatory peoples—Zulus, Masai, Apaches, and so forth. The characteristic quality of the savage brave is fierceness, an emotional rather than a calm and reasoned form of valour. As such, it sustains itself, partly by war-dances before the event, but partly also by wanton cruelty both during battle and afterwards in the torturing of prisoners, as amongst the American Indians, who thereby not merely satisfied their own feelings, but sought at the same time to 'blood the young whelps,' to wit, the future warriors of the tribe. Again, one form of cannibalism (*q.v.*) is directly associated with warfare. This revolting practice may consist in sheer 'anankophagy,' as usually amongst the lower savages, or in an 'endo-cannibalism,' or ceremonial eating of blood-relations to keep the spirit in the family, or for some similar reason, which is not without high moral value; but a warrior tribe will eat its enemies simply, as it were, to glut its rage. There can, moreover, be little doubt that the institution amounts to an asset in the struggle for existence, as the cannibalism inspires terror amongst the neighbouring peoples; so that a cannibal tribe, as, *e.g.*, the Niam-Niam of the Bahr al-Ghazal, may rank amongst the most vigorous and effective people of a given region. On the other hand, such a practice as the head-hunting of the Dayaks of Borneo or the Nāgās of Assam is to be regarded rather as a by-product of war, a sort of collector's mania that has supervened on a legitimate love of warlike trophies. For the rest, the moral effects of war on the group and the individual alike make scarcely if at all less markedly for good than they do for evil. Collectively, men are knit together by a common purpose that demands from them at once all that Bagehot's phrase 'the preliminary virtues' covers, namely, courage, loyalty, obedience, and a devotion maintained to the point of death. For the individual, again, war is a school of self-respect; and, though the swagger and boasting of the savage brave has its humorous side, his mastery over that lower self which bids him shun danger and live soft is reflected in a strength of character to which there is added, on the intellectual and ideal side, a sense of honour and of duty. This sentiment has probably counted for more in the history of the race than even the religious sense of tabu, inasmuch as 'Do' is more fruitful than 'Do not,' and defiance of a danger that is known more rational than the avoidance of a danger that is unknown and taken to be a danger for that very reason.

(4) *The personal virtues.* — Something has just been said in regard to the self-respect of the savage warrior, of whom the North American brave will serve as a type. On the whole, however, it must be declared that it is precisely in its reference to self, which is almost to say in its reflective aspect, that savage morality is especially weak. The moral subject looks outwards, not inwards, and reads his duty in the movements of his fellows, not in the movements of his own heart. He has his selfish inclinations, which have to be suppressed by social drill and education; but he is incapable of that misbegotten creation of civilized philosophy, a reasoned selfishness. Yet, conversely, he has but little of that moral individuality which enables a man to stand out for the right even against the opinions of his circle. He sees as one of the crowd, and at most applies his crowd-consciousness to himself as to one who is viewed from without. He can see himself cutting a fine or a humble figure, and is moved accordingly to try that it shall be the one rather than the other. But there his notion of self tends to stop. One might say that his most internal of moral sanctions is pride of appearance. His tendency to self-adornment, one that unfortunately does not always carry with it the virtue of personal cleanliness, illustrates this type of self-feeling on its lower side. Again, a desire to cultivate an honourable idleness, and to abstain from such work as may lower his dignity, is directly due to pride of self; indeed, the main reason why the civilized man fails to establish satisfactory relations with the savage is that he forgets, or is incapable

of appreciating, the fact that the savage is a 'gentleman' in all the mixed connotation of that term. On its higher side, the pride of the savage gives him an intense sense of his rights, and especially of his right to a good name; so that he must not brook an insult either to himself or to those who are intimately his. Further, the curious power that man alone of animals has of putting an end to his own life is the occasion amongst some savages of exalting suicide (*q.v.*) to a place amongst the virtues, to die with dignity being, as it were, the projection of the desire to live therewith.

It must not be supposed, however, that self-respect is entirely responsible for the many-sided virtue of a self-regarding type which goes by the general name of self-control. One of the most important spheres of the influence of tabu is the domain of sensual appetite. Thus, in sexual matters, together with the coyness that is but a means of attracting a mate, there goes a shyness, the natural accompaniment of a vitally critical act, which gradually ripens under the sway of tabu into genuine modesty and delicacy of feeling (cf. art. CHASTITY). Similarly, eating and drinking, no less than sexual intercourse, are normally surrounded, in virtue of their very importance in the vital economy, with a network of ceremonial prescriptions that reinforce the sense of crisis, and turn a mere opportunity of carnal enjoyment into a solemn rite. There is plenty of strong lustiness in the background, however, which the emotional type of savage experience is well calculated to foster; so that, though pent up by religion within strict limits, it discharges itself along lawful channels, in the shape of orgies and carnivals, with the force of a torrent. Nay, religion may directly minister to the stimulation of passions that seem for the time-being to set all self-control at naught, as, *e.g.*, when the use of drugs and intoxicants is encouraged as a means of obtaining inspiration, or when the gambler is led to stake his all on his own luck conceived more or less clearly as a supernatural power in him and behind him.

In conclusion, it must be pointed out that by means of this same conception of a grace that is in him, yet somehow above him, religion affords the inner life of the savage a great support for reflective self-development, the 'personal totem,' spirit-helper, and similar beliefs being, as it were, the man's own aspiration towards welfare in its more spiritual aspects seen in an enlarging mirror.

(5) *The transcendental virtues.*—It is a common mistake to suppose that the savage is capable of envisaging a material Good only. His whole religion, it is true, may be summed up in the formula, half spell and half prayer—'Let blessings come and evils depart.' But the blessings and evils alike are primarily spiritual. Nature and matter in the modern sense have at most a very restricted sense for the typical savage. His desire is to be in sympathetic relations of a pre-eminently social type with an environment conceived as an array of quasi-personal or personal beings, all mystically powerful and, as such, able to help or to hurt him and his. His universe is thus a moral order, and the savage is a savage just because he is too ready to cope with physical necessities merely by means of moral control or suasion. So much is he already in spirit, if not in effect, the lord of creation that he can imagine no part of creation that is purely unmoral and mechanical in its mode of operation. For him a strong will, a human will augmented by an indefinite *plus*, can directly influence the courses of the stars or the currents of the ocean. Thus the Good for him is always in some sense God, a power analogous to will-power which realizes itself within man himself no less than in the other beings of his environment, and can be good as friend, evil as enemy, like man or any other living being. Such a belief clothes itself in a variety of forms, some of which, *e.g.* the belief in a Supreme Being who makes the tribal laws, or, again, the cult of the dead, and in particular of ancestral heroes, can be seen to make for righteousness more clearly than can the animism or polydæmonism which is distracted by the desire to serve many and alien masters.

Whereas, however, religious beliefs vary infinitely amongst savages, their ceremonial customs, which are far more closely and directly related to their practice, embody much that is common. Thus tabu, starting as a ceremonial aversion, becomes almost universally moralized as a purity of heart, which is fortified by a custom of ceremonial purgation that develops into the confession of sins. Communion, again, is, at its lower end, little more than the crudest kind of sympathetic magic; nevertheless, at the upper end of the evolutionary scale, it expresses the realization of the Good perhaps better than any idea within the purview of religion or philosophy. Once more, sacrifice, as a ritual act, passes insensibly into self-sacrifice. Finally, the central notion of spiritual power or grace lends an orientation to human life which, though since enlarged and purified by continual reinterpretation, is essentially something that civilized men owe to their savage ancestors. To extend the area of human brotherhood by translating the natural feelings of simple folk, who cannot, so to speak, see far beyond the fire-circle of their own camp, into ideas that can unify men across the length and breadth of the world in a mutual understanding—such is the mission of civilization. Savagery, however, must be allowed to have perceived the Good even in its more transcendental aspects, though it be left to civilization to conceive these fully; and, in the meantime, the real Good exists neither for perception nor for conception as such, but for the whole spiritual and moral nature of developing mankind.

LITERATURE.—The subject of Rudimentary Ethics being in certain respects as wide as that of Social Anthropology, it is impossible to offer the reader a complete bibliography here; he must be referred generally to the classical works of Tylor, Frazer, Lang, Hartland, Jevons, etc., not to mention Continental writers. Of works that profess to treat of Ethics in particular, H. Spencer, *Principles of Ethics*, London, 1893, and C. S. Wake, *Evolution of Morality*[3], London, 1878, are both somewhat out of date as regards their anthropological data. Though the same is to some extent true of Waitz-Gerland, *Anthropologie der Naturvölker*, Leipzig, 1859–1872, the high philosophic quality of the treatment makes it still worth consulting. E. B. Tylor's papers in *CR* xxi. and xxii. (London, 1873) are, on the other hand, of almost as much value now as at the time when they were written. Of more recent writings in English, E. Westermarck, *MI*, London, 1906–08, and L. T. Hobhouse, *Morals in Evolution*, London, 1906, are easily the best, though both treatises attempt to cover the whole field of human morals—with the result that the one is relatively weak on the history of civilization and the other on the anthropological side. A. Sutherland, *The Origin and Growth of the Moral Instinct*, London, 1898, is suggestive, but shows gaps. For the social psychology which must form the background for all such studies, W. McDougall, *An Introd. to Social Psychology*, London, 1908, is indispensable; but, when allowance is made for the too exclusive insistence on the function of social tradition as a moralizing agency, L. Lévy-Bruhl, *Les Fonctions mentales dans les sociétés inférieures*, Paris, 1909, brings the reader into closer touch with the facts of Anthropology. For the influence of religion, and again for the bearing of social organization on the moral life of savages, the 11 volumes of *ASoc*, Paris, 1896–1908, should be consulted, and especially the contributions of E. Durkheim and his eminent collaborators M. Mauss and H. Hubert. F. Ratzel is the best authority for Anthropo-geography; see especially his *History of Mankind*, Eng. tr., London, 1896–98. On the side of law, the various works of A. H. Post on Comparative Jurisprudence (in German), and S. R. Steinmetz, *Ethnol. Studien zur ersten Entwicklung der Strafe*, Leyden, 1894, are invaluable. W. Wundt's *Ethik*, Stuttgart, 1886, and *Völkerpsychologie*, Leipzig, 1904 f., despite the fact that their author is among the greatest of psychologists, do not seem to the present writer to be as sound and well-founded on fact as they are incontestably brilliant. As regards the bearing of the anthropological study of Ethics on general philosophy, the present writer may refer to his own essay,

'Origin and Validity in Ethics,' in *Personal Idealism*, ed. H. Sturt, London, 1902, from which the classification of virtues followed in the text is taken over. A short sketch of his, *Anthropology* (Home University Library, London, 1912), covers much the same ground as the present article, in a rather more popular way. For the rest, there is an all too vast bibliography of the subject to be found at the end of Westermarck's work already cited.

R. R. MARETT.

ETHICS AND MORALITY.

ETHICS AND MORALITY (American).—The autochthones of North and South America present levels of culture as varied as their habitats. Moral elevations and depressions are as recurrent as changes in race and environment. It is obviously impossible to characterize the Botocudo and the Quichua, or the Huron and the Pueblo, in one breath. Nevertheless, for the purposes of a concise survey of the moral attainment of the Indian peoples, we may confine ourselves to three broadly distinguished levels. The lowest of these is presented by the great mass of the S. American tribes dwelling east of the Andes, and by sparser examples in the less favoured localities of the N. continent. The second level is typically that of the great forest and plains nations of N. America. Finally, following the western mountains, from Alaska to Chile, there occur a series of culture-centres marked by proficiencies in the arts—wood-, stone-, and metal-working, weaving, pottery, agriculture—and complexities in social organization which, in the culminating civilizations of Mexico and Peru, warrant our treating them as a distinct moral level.

1. The lowest levels.—Garcilasso de la Vega (*Royal Commentaries*, Fr. ed., Paris, 1830, or Markham's ed., Lond. 1869–71) has several passages portraying the moral state of some of the wild tribes with whom the Incas came in contact. Thus (VIII. iii.) the peoples of Huancapampa are described as

'without peace or amity, without lord or government or city; making war never for dominion, since they know not the meaning of rule, nor yet for plunder, since they have no possessions, and go, for the most part, quite naked; their most precious booty is the wives and daughters of the conquered; the men are captured, if possible, and inhumanly eaten; as for their religion, it is as absurd as their manners are fierce.'

In another passage (VII. xvii.) the Chirihuanas are given a yet worse character: the spies of the Incas report that

'they lead a life worse than the beasts, knowing no divinity, no law, no rulers, without towns or houses; they make war in order to obtain prisoners whose flesh they may eat and whose blood they may drink, and, not content with this, they eat their own dead relatives; they never cover their nudity, and have intercourse indifferently with all sorts of women, even their sisters, their daughters, their mothers.'

We recognize in these reports an exaggeration natural enough when the facts reported upon are seen through hostile eyes; yet the offences are of such a nature as to place their perpetrators among the lowest of mankind—and we have evidence enough of the reality of the offences.

The Paumari of Brazil have a 'Song of the Turtle'—'I wander, always wander, and when I get where I want to go, I shall not stop, but still go on'—which, says J. B. Steere (*U.S. Nat. Mus. Rep.* 1901), reflects their own mode of life, passed in roaming from sand-bar to sand-bar of the Brazilian rivers in search of food. This lack of orientation in the physical realm has its intellectual counterpart, shown, *e.g.*, in the utterly rudimentary number-systems of many S. American tribes (cf. Tylor, *Prim. Cult.*[4], London, 1903, ch. vii.; Conant, *The Number Concept*, 1896, p. 22 f.). It is only to be expected that the moral level will be equally low; and this we find to be the fact in wide-spread cannibalism and low sexual standards.

Nevertheless, when Dobrizhoffer, in the very words of Garcilasso, affirms that 'the wild Abipones live like wild beasts,' we should bear in mind that he is speaking with their ignorance of agriculture foremost in mind. As a matter of fact, he shows them to possess not only very respectable arts, but some very stalwart virtues (see *Account of the Abipones*, London, 1822, esp. II. xiii.). To be sure, the equestrian tribes of the pampas have long been superior to the tribes of the tropical forests; but, even with the latter, ferocity and vice are not the dominant characteristics.

Mode of approach has much to do with the impression derived; it is significant that those who have known the lower peoples the most intimately find most in them worthy of regard. Thus, von den Steinen (*Unter den Naturvölkern Zentral-Brasiliens*, Berlin, 1894, p. 59) describes his solitary stay in a village of the Bakairi near the head-waters of the Xingú, in a chapter entitled 'Bakaïri-Idylle,' and he can say of this episode:

'After accompanying the two brave fellows to the landing-place, and seeing them disappear at the first bend of the river, I turned back to my new friends and soon felt so much at my ease in their midst that I regard those idyllic days as unquestionably the happiest that I have ever experienced.'

He found the Indians of this region docile, gay, companionable, trustworthy—mother-naked, but paradisaically innocent of shame. It is incredible that all the difference between such a picture and those drawn by earlier and less unprejudiced pens can represent merely an amelioration due to a casual white influence.

H. H. Prichard is vigorous in his praise of the Tehuelches (*Through the Heart of Patagonia*, London, 1902, esp. ch. vi.):

'a kind-hearted, docile, and lazy race . . . invariably courteous,' whose 'women make excellent mothers, and the father is inordinately proud of his offspring, especially of his sons.' 'The morality of the Tehuelches is, on the whole, admirable. Unfaithfulness in the wife is rare and is not often bitterly revenged.' 'Polygamy is allowed, but not much practised.'

It will be remembered that continence and chastity are virtues which Dobrizhoffer (II. vii., xix.) found especially praiseworthy among the Abipones (*q.v.*), contrasting them with the licentious and degenerate neighbouring tribes; while their over-indulgent fondness for their children was also noted.

Prichard likens the Tehuelches to the Eskimos, at the other extremity of the Americas: 'Both races are eminently sluggish and peaceable. . . . And of both little evil can be said.' The testimony of a recent sojourner among the latter is in point:

'In many things we are the superiors of the Eskimo, in a few we are his inferiors. . . . He has developed individual equality farther than we; he is less selfish, more helpful to his fellow,

kinder to his wife, gentler to his child, more reticent about the faults of his neighbour, than any but the rarest and best of our race. As a guest who could not pay for my keep, as a stranger whose purpose among them no one knew, I learnt these things in a winter that, for all its darkness, was one of the pleasantest of my life' (Vilhjálmr Stefánsson, *Harper's Monthly*, vol. 117, p. 721).

Of course not all peoples on the lower levels betray such characters. McGee (*17 RBEW*, pt. i. [1898]) is only the latest among a long series of observers who have found the Seri Indians of Tiburon and the adjacent mainland 'the most primitive and the most bloodthirsty and treacherous of the Indians of North America' (p. 119). 'Their highest virtue is the shedding of alien blood . . . their blackest crime the transmission of their own blood into alien channels' (p. 154). In these traits McGee finds the sources of a character which places the Seri, in spite of physical excellence, very near the bottom of the moral scale. Even animal gratitude is absent:

'The 1894 party was fortunate in successfully treating a sick wife of sub-chief Mashém, and subsequently spent days in the rancheria, distributing gifts to old and young in a manner unprecedented in their experience . . .; yet, with a single possible exception, they succeeded in bringing no more human expression to any Seri face or eye than curiosity, avidity for food, studied indifference, and shrouded or snarling disgust. Among themselves they were fairly cheerful, and the families were unobtrusively affectionate; yet the cheerfulness was always chilled and often banished by the approach of an alien' (p. 132).

2. Typical levels.—The presence of an obvious moral sense, as expressed either in custom or in conscious reflexion upon moral problems, is the fair criterion of the beginnings of moral elevation. Such a sense is the indubitable possession of the great body of N. American Indians, with many of whom it develops conduct of the highest order. We are justified, too, in regarding the morality of the forest and plains tribes of the northern continent as the typical Indian morality; for we find it already inchoate in many of the inferior peoples, while it is the foundation for our understanding of the conceptions of the more civilized groups.

(1) *Social organization.*—With most observers the first impression of Indian societies is of their lack of organization. 'They love justice and hate violence and robbery, a thing really remarkable in men who have neither laws nor magistrates; for among them each man is his own master and his own protector,' writes Père Biard in 1612 of the Canadians (*Jesuit Relations*, ed. Thwaites, Cleveland, 1896–1901, ii. 73). That the Indians have no law is a characteristic judgment; and, understanding law in a constitutional or statutory sense, it is, of course, the general truth; yet it is safe to affirm that no Indian group is so primitive as not to possess its body of customs, to be violated only on peril of outlawry.

As a rule the ostensible authority is vested in the tribal elders, certain of whom have the prestige which we denominate chieftainship. This office may best be defined by characterization:

'The system of authority which prevails in Indian societies is very simple. Each family . . . is ruled over by the father, whose authority is great. As long as he lives, or at least while he is strong and active, his wives, his daughters and their husbands, and his sons, until they marry and thus pass from their own family under the rule of a new house-father, are almost completely under his sway. . . . But the father of each, while retaining his authority over his own family, is to some extent under the authority—that is, under the fear and influence—of the peaiman; and, where several families live in one place, he is also under the authority of the headman of the settlement. The authority of the peaiman . . . depends on the power which the man is supposed to exercise over spirits of all kinds, and, as all diseases are supposed to be the work of spirits, over diseases, and . . . consequently over the bodies of his fellows. The headman, on the other hand, is generally the most successful hunter, who, without having any formal authority, yet because he organizes the fishing and hunting parties, obtains a certain amount of deference from the other men of his village. He settles all disputes within the settlement, and in the not distant days when Indians were in the habit of waging war . . . he used . . . to determine on the commencement of hostilities (E. F. Im Thurn, *Indians of Guiana*, London, 1883, p. 211 f.).

Tribal headman, war-leader, 'medicine-man,' and the group of fathers or elders which forms the tribal council—these are the authorities of the Indian tribe in either continent. They are not always differentiated, however. In the description just cited the office of headman and war-leader is one; and it is, of course, the rule that a capable war-chief should assume an important rôle in civil affairs. Yet in the more advanced tribal organizations—as among the Iroquois, Sioux, Creeks, etc.—there is not only differentiation of military and civil chieftaincies, but well-marked hierarchies of the latter, chiefs and sub-chiefs, having at once legislative, executive, and judicial powers.

The civil chieftaincies are usually hereditary, in the maternal line, though the selection is seldom apart from merit, which with some peoples is apparently the sole criterion. Unquestionably, the ideal of merit, from the lowest to the highest tribes, is the ideal of social service. Stefánsson (*loc. cit.* p. 725 f.) gives an illuminating account of a conversation with an Eskimo chieftain touching the foundations of his office:

'One day, as Ovayuak and I sat in our snow blocks with backs to the wind, fishing, I asked him why he was not satisfied with the huge pile already stored away—more than our family of twenty-two could eat in two years. He then told me that he was a chief. And why, did I suppose, was he a chief? Or, now that he was chief, did I suppose he would continue being a chief if he were lazy? We had plenty fish for ourselves there at Tuktuyaktok, but who could tell if the people who had gone inland after reindeer might not return any day with empty sleds, or possibly with no sleds—carrying their children on their backs because the dogs were dead of starvation? And how about the people west of the Mackenzie at Shingle Point? True, they had caught plenty fish in summer, but they catch none in winter, and they are not sensible now as they formerly were, but will haul a big load of fish a long distance to sell to the traders at Herschel Island for a little tea, which tastes good but does not keep a man alive. And what of the people up the Mackenzie? They depend largely on rabbits. Some years there are plenty of these, and other years, for some reason, there are few or none. Might we not some day see many sleds coming from the southwest along the coast? And may not these sleds turn out to be empty because there are no rabbits in the willows? Did I suppose that if all these people came we would have too much fish? And why was he a chief, if not for the fact that people twenty days' journey away could always say when they became hungry, "We will go to Ovayuak, he will have plenty food"?'

An instance of a reverse order, yet illustrating the same general demand that the chieftain be a giver, is narrated by von den Steinen (p. 285):

'The power of the chiefs was not great. In all the larger villages there were several chiefs, who lived in different houses; our village was always represented by only one. "Representation" was the most important duty in time of peace. The chief was manager of the seedsmen's stores, and he ordered the *beijús* to be baked and the drinks to be prepared on all festive occasions and during visits of strangers. He was simply a householder on a larger scale; but he dared not be stingy if he wished to have the esteem of his fellow-villagers, much less his tribal neighbours. In this respect the chief of the first Batovy village was *kurápa*, 'bad' = 'greedy.' He allowed only a few *beijús* to be baked for the guests. Greediness was looked upon as the most offensive quality. But this method of ruling must have been difficult. Antonio told me about a certain João Cadete in the village of Paranatinga, whose turn it was to become chief, but who preferred to emigrate *com medo de tratar*, for fear that he would have to entertain people; so Felipe was appointed in his stead.'

But chieftaincy among the Indians is not always founded upon beneficence. The career of Tchatka, chief of the Assiniboins, as narrated by Father de Smet (*Life, Letters, and Travels*, 1905, VII. x.), is that of a medicine-man who by means of poison and pure criminality made himself feared and powerful among his people. And, in many other instances, supernatural powers—frequently exercised for good—have elevated the Indian prophet to a position of civil or military primacy (cf. Mooney, 'The Ghost-Dance Religion,' *14 RBEW*, pt. ii. [1896]). In the cases of the Aztec Emperor and the Peruvian Inca it is obvious that civil, military, and sacerdotal functions are united in the one officer, who thus, as it were, figures the whole sovereignty of the nation.

The power of the chieftain thus rests primarily upon some type of personal prestige. Père Biard

says of the Algonquian 'Sagamores': 'The Indians follow them through the persuasion of example, or of custom, or of ties of kindred and alliance; sometimes even through a certain authority of power, no doubt' (*Jes. Rel.*, ed. Thwaites, ii. 73). In better organized tribes the chief's authority is grounded in more definite sanctions, especially caste, property, and the religious sanction of his installation (cf. *ib.* xxvi. 155 f.).

In every case, the real source of power lay with the tribal council, comprising the men of quality and character. The council determined all movements of importance, as matters of war and peace, of the hunt, etc. Ability to speak persuasively was hence of much moment, and the orator a man of importance. Police duty fell to the younger and more vigorous warriors,—men of tried and sterling character,—not only in hunting and war parties, but also in the camp, and tribal festivals (cf. Eastman, *Indian Boyhood*, New York, 1902, pp. 40, 186). Quarrelsomeness and violence within the tribe seem to be rare; except when under the influence of liquor, the Indians of both continents appear to be peaceable in their domestic relations. This fact early impressed the Jesuit missionaries in Canada:

'Leaving out some evil-minded persons, such as one meets almost everywhere, they have a gentleness and affability almost incredible for Savages. They are not easily annoyed, and, if they have received a wrong from any one, they often conceal the resentment they feel—at least, one finds here very few who make a public display of anger and vengeance. They maintain themselves in this perfect harmony by frequent visits, by help they give one another in sickness, by feasts, and by alliances' (Thwaites, x. 213).

'They are very much attached to each other, and agree admirably. You do not see any disputes, quarrels, enmities, or reproaches among them. Men leave the arrangement of the household to the women, without interfering with them; they cut, and decide, and give away as they please, without making the husband angry. I have never seen my host ask a giddy young woman that he had with him what became of the provisions, although they were disappearing very fast. I have never heard the women complain because they were not invited to the feasts, because the men ate the good pieces, or because they had to work continually—going in search of the wood for the fire, making the houses, dressing the skins, and busying themselves in other very laborious work. Each one does her own little tasks, gently and peacefully, without any disputes' (vi. 233 ff.).

Crimes of violence, where they do occur, are punished by the injured person or family. In the more primitive societies murder is the occasion for blood-feud (cf., *e.g.*, Thwaites, iii. 93 f.). In more complexly organized groups it may be atoned for or compounded with the relatives of the slain (see EXPIATION AND ATONEMENT [American]). Outlawry—especially for an offence against a clansman—is a normal form of punishment, and is sometimes the prevailing punishment, as among the Seri (*17 RBEW*, pt. i. p. 273).

In the last resort it is the sanction of the community as a whole—at least among the typical tribes—which determines the punishment of the offender, as it upholds the power of the chieftain. Thus, in his chapter on 'The Polity of the Hurons and their Government' (Thwaites, x. 211 ff.), Père Brébeuf states:

'They punish murderers, thieves, traitors, and sorcerers; and, in regard to murderers, although they do not preserve the severity of their ancestors toward them, nevertheless the little disorder there is among them in this respect makes me conclude that their procedure is scarcely less efficacious than is the punishment of death elsewhere; for the relatives of the deceased pursue not only him who has committed the murder, but address themselves to the whole village, which must give satisfaction for it, and furnish, as soon as possible, for this purpose, as many as sixty presents. . . . For it is not here as it is in France and elsewhere, where the public and a whole city do not generally espouse the quarrel of an individual. Here you cannot insult any one of them without the whole country resenting it, and taking up the quarrel against you, and even against an entire village. Hence arise wars; and it is more than sufficient reason for taking arms against some village if it refuse to make satisfaction by the presents ordained.'

(2) *The family and sexual morality.*—Broadly divided, Indian families are of two general types: that in which descent is counted in the male line, with a relative subordination of the woman's social status, and that in which descent is counted through the mother, and marriage is only between members of clearly marked exogamous clans or gentes. In the former case the family authority rests directly with the father; in the latter it devolves upon the brothers of mothers, or even, in a sort of veritable matriarchy, upon the mothers themselves (cf. *17 RBEW*, pt. ii. pp. 269–274), and is merged into a group responsibility. There are numerous degrees of intermediacy between these extremes, as amongst the Guiana Indians, where paternal rule is accompanied by maternal descent and exogamous marriage (see Im Thurn, chs. vii. and x.). On the whole the marked exogamous clan is characteristic of the more advanced societies, with a tendency, in the better type of tribe, to emphasize the power of the father (as distinguished from that of the uncles). These units—family and clan—are the real possessors of the tribal sovereignty, so that in the majority of instances the tribe may be viewed as a federation—based on common language, customs, and convenience—made up of such units.

But the force of the family as a unit in a larger organism is a matter of social structure; the troth of husband and wife, on the other hand, is primarily an individual affair, and it is on this individuality of the sex relation that family morality primarily depends.

The Indian conception of chastity represents great variations, and is determined by many considerations. Most of the restrictions which appear grow directly out of the demand for purity of descent, and hence, as with other races, apply chiefly to the women. Yet there are numerous demands for continence on the part of the men, even within the marriage relation—as in the purifications preceding war excursions or during religious festivals. In S. America the custom is wide-spread for husband and wife to abstain from intercourse during the entire period, two or three years, in which a child is suckled. Dobrizhoffer recounts the consequences of this practice among the Abipones (II. x.):

'The mothers suckle their children for three years, during which time they have no conjugal intercourse with their husbands, who, tired of their long delay, often marry another wife. The women, therefore, kill their unborn babes through fear of repudiation, sometimes getting rid of them by violent arts, without waiting for their birth. Afraid of being widows in the lifetime of their husbands, they blush not to become more savage than tigresses.'

This is no doubt a not unusual consequence in S. America, where divorce is frequently a matter of the husband's whim.

Certainly the fact that white women captured by the Indians of N. America have, as a rule, been respected in the matter of their honour is fair evidence that the Indians are not as a race licentious. And, north and south, conjugal fidelity appears to be the prevailing condition—tempered, perhaps one should add, by facile divorce. 'Little is necessary to separate them,' says Le Jeune (Thwaites, v. 111), 'unless they have children, for then they do not leave each other so easily.' It is worth noting that he adds: 'A man who loved his (deceased) wife—or a wife who loved her husband—and who respects her relatives, will sometimes remain three years without remarriage, to show his love.' Testimony to the mutual affection of Indian couples is frequent, though, of course, the reverse is to be found. Polygamy is found among many tribes, but seldom on any considerable scale, plural wives falling to men of wealth or position, or, in some cases, resulting from the decimation of the male population in war, the survivors customarily taking to wife their wives' sisters.

Virginity in the bride is very differently esteemed in particular tribes. The Huron maidens were in bad repute with the Fathers, and among the northern tribes—Eskimo and Athapascan—the virginity of the bride appears to be of far less moment than her industrial value—skill in clothes-making, house-tending, and the like (see Morice, 'The Great Déné Race,' *Anthropos*, v. [1910] 979 ff.; Parkman, *Jesuits in North America*, Boston, 1871, pp. xxxiii–xxxv). On the other hand, the standard of maidenly morality is often upheld by important tribal sanctions. Eastman (*Indian Boyhood*, pp. 183–187, *The Soul of the Indian*, pp. 95–99) describes the Siouan 'Feast of the Virgins,' at which each girl in turn touched a rock-altar, prepared for the occasion, in token of her purity.

'Any man among the spectators might approach and challenge any young woman whom he knew to be unworthy; but if the accuser failed to prove his charge, the warriors were accustomed to punish him severely.' Furthermore, 'our maidens were ambitious to attend a number of these feasts before marriage, and it sometimes happened that a girl was compelled to give one on account of gossip about her conduct.' See art. CHASTITY (Introd.).

Prostitution among Indian women, where it exists, appears to be largely due to contact with degraded whites, although perhaps in some cases the frequency of temporary and adulterous relations constitutes an aboriginal equivalent of the institution. Unnatural vice occurs, particularly in S. America, where it roused the abhorrence of the Incas to such a degree that conquests were undertaken to eradicate it, and the offenders punished by burning (Garcilasso, VI. x., XIII. xiii.; see also, Westermarck, *MI*, ch. xliii.).

The real clue to the Indian conception of sexual morality and family purity is to be found in their devotion to their children, as vehicles of the tribe's perpetuity. When Père Lalemant rebuked a Montagnais for looseness, telling him he might not be sure of his own children, the Indian replied: 'You French people love only your own children; but we all love all the children of our tribe' (Thwaites, vi. 255). And in the Indian accounts of the battle of Wounded Knee, there is nothing more affecting, as there is no more stinging accusation of the whites, than the evidence of their dear regard for the children:

'. . . There was a woman with an infant in her arms who was killed as she almost touched the flag of truce, and the women and children, of course, were strewn all along the circular village until they were dispatched. Right near the flag of truce a mother was shot down with her infant; the child not knowing that its mother was dead was still nursing; and that especially was a very sad sight. The women as they were fleeing with their babies were killed together, shot right through, and the women who were heavy with child were killed also. . . . Of course it would have been all right if only the men were killed; we would feel almost grateful for it. But the fact of the killing of the women, and more especially the killing of the young boys and girls who are to go to make up the future strength of the Indian people, is the saddest part of tha whole affair, and we feel it very sorely' ('Narrative of American Horse,' *14 RBEW*, pt. ii. p. 885 f.).

See artt. CHILDREN (American), EDUCATION (American).

(3) *Property, industry, war.*—The Indian conception of property rights, if not exactly loose, is at least elastic. There is little development of the sense for possessions in so far as this stands for exclusive enjoyment. An 'Indian gift,' as the white man understands it, is a loan; and the Indian's communistic understanding of property, as distinguished from the white's individualism in such matters, is doubtless at the root of many racial conflicts.

Indian communism perhaps explains the great prevalence of the vice of gambling, as, in a better intention, it explains their fine hospitality—even the unwelcome stranger has a right to food, if he be hungry, while the coming of a friend is the occasion for a feast.

'They are very generous among themselves, and even make a show of not loving anything, of not being attached to the riches of the earth, so that they may not grieve if they lose them. Not long ago a dog tore a beautiful beaver robe belonging to one of the savages, and he was the first one to laugh about it. One of the greatest insults that can be offered to them is to say, "That man likes everything, he is stingy." If you refuse them anything, here is their reproach, "Thou lovest that, love it as much as thou wilt." They do not open the hand half-way when they give,—I mean among themselves, for they are as ungrateful as possible toward strangers. You will see them take care of their kindred, the children of their friends, widows, orphans, and old men, never reproaching them in the least, giving them abundantly, sometimes whole moose. This is truly the sign of a good heart and of a generous soul' (Le Jeune's *Relation*, 1634 [Thwaites, vi. 237 ff.]).

'The native American has been generally despised by his white conquerors for his poverty and simplicity. They forget, perhaps, that his religion forbade the accumulation of wealth and the enjoyment of luxury. To him, as to other single-minded men in every age and race, from Diogenes to the brothers of Saint Francis, from the Montanists to the Shakers, the love of possessions has appeared a snare, and the burdens of a complex society a source of needless peril and temptation. Furthermore, it was the rule of his life to share the fruits of his skill and success with his less fortunate brothers. Thus he kept his spirit free from the clog of pride, cupidity, or envy, and carried out, as he believed, the divine decree—a matter profoundly important to him' (Eastman, *Soul of the Indian*, p. 9 f.).

These are perhaps both idealistic representations, yet they do represent the ideal, if not always the attainment, of the great body of the Indian tribes. Where, as is often the case, we find the Indians denominated thieves, the thievery is usually a matter of inter-tribal or inter-racial conflict—in the Indian conception, justified plunder.

'Indians will occasionally steal small articles from one another; but, when questioned, they will say they were in want of them and could not get them any other way,' writes de Smet (p. 1073). 'When they rob whites, they think they are doing right. With them all whites are interlopers, getting rich from the labours of the Indians, and to take a portion of their goods is nothing more than their due long since in arrears.'

In the more primitive societies property is communal, under the control of the chief—even the game captured by the unmarried hunters is his (see, *e.g.*, Thwaites, iii. 87; von den Steinen, p. 285 f.). In more advanced groups, especially in the North-west, where slavery is important, the sense of personal possession becomes intensified. Yet it is significant that the peculiar Indian institution of the 'potlatch'—a feast at which the feast-maker gives away all his wealth—finds its characteristic development among these very tribes, remaining, as it were, an institutional protest against the conception of private property (*e.g.*, among the Tlingit; see *26 RBEW* [1908], pp. 428, 434 ff.). The custom even persists in so advanced a society as the Aztec, in connexion with the worship of Napatecutli. The giver of the feast, says Sahagun (*Hist. gén.*, Paris, 1880, I. xx.), dispenses all his possessions, saying: 'It matters not that I remain without resource, provided my god be satisfied with this feast; whether he return to me goods, whether he leave me in poverty, let his will be done.'

Industrial conditions among the Indians have been as difficult for the white mind to comprehend as is their conception of property. The usual first impression is that the women are the sole burden-bearers, the men altogether lazy.

'These poor women are real pack-mules, enduring all hardships,' writes Père Lalemant (Thwaites, iv. 205). 'When delivered of a child, they go to the woods two hours later to replenish the fire of the cabin. In the winter, when they break camp, the women drag the heaviest loads over the snow; in short, the men seem to have as their share only hunting, war, and trading.'

Yet the truth implies a very considerable modification of the notion that this distribution is one-sided. It is normally the Indian woman's duty to prepare the food and to manufacture such articles as are needed by the household in its home routine—basketry, pottery, clothing, etc. Agriculture is viewed as a feature of the food preparation, and so becomes woman's work; although, in tribes where it is important, the men usually do a fair share of this work. The dangerous occupations,

war and hunting, fall to the men, who usually manufacture the implements of chase and weapons of war, and often, also, their own clothing; and upon the men also falls that other occupation which leads abroad, barter—in primitive times itself a semi-military industry, as among the Mexicans (cf. Sahagun, bk. ix.), and one which was thoroughly developed long before the advent of white traders (see *Anthropos*, v. 643 f.).

Thus, in general, domestic and routine work devolves upon the women, foreign and adventurous duties upon the men. The judgment of Im Thurn (p. 215) with respect to the Indians of Guiana, that the work of the men 'is at least equal to, though accomplished more fitfully than, that of the women,' is, on the whole, true of the typical Indian society. What gives the impression of laziness in the Indian man is doubtless the fitfulness of his employments: 'the life of the Indian man is made up of alternate fits of energy and of comparative inactivity,' says Im Thurn (p. 269); and this follows from the nature of his work. Possibly also it is in part due to physical and nervous structure, following upon primitive modes of life, as McGee would explain in the case of the Seri, 'characterized by extreme alternations from the most intense functioning to complete quiescence—the periods of intensity being relatively short, and the intervals of quiescence notably long' (*17 RBEW*, pt. i. p. 156).

War with the Indian is only a more difficult form of the chase. For both employments the same qualities are demanded,—courage, endurance, craft,—and these may be regarded as essentially the masculine virtues in the eyes of the aborigine. Craft and endurance, involving the most painful and unrelenting pursuit of an enemy; fortitude, hardened to the point of stoical endurance of the most fiendish torments—for the cultivation of these traits the braves undergo rigorous fasts, and submit themselves to strenuous and terrible tortures, as in the famous Sun Dance of the Plains tribes (see 'Sun Dance,' *Handbook of American Indians*, ii. 649–652; cf. de Smet, 247 f., 255 f., etc.).

The Indian conception of war has resulted in the most varying notions of his courage. Thus even the same observer—Père Biard (*Relations*, 1616)—can pass such diverse judgments on the one people as:

'Their wars are nearly always . . . by deceit and treachery. . . . They never place themselves in line of battle. . . . And, in truth, they are by nature fearful and cowardly' (Thwaites' ed., p. 91); and: 'These savages are passionate, and give themselves up to death with desperation, if they are in hopes of killing, or doing any one an injury' (p. 69).

As a matter of fact, Indian warfare demanded a very high order of courage, sanctioning, as it did, the most terrible treatment of captives. It was waged, in fact, largely for the sake of making prisoners—thus preserving the character of a hunt —with a view to submitting them to torture.

'When they seize some of their enemies, they treat them with all the cruelty they can devise. Five or six days will sometimes pass in assuaging their wrath, and in burning them at a slow fire; and they are not satisfied with seeing their skins entirely roasted,—they open the legs, the thighs, the arms, and the most fleshy parts, and thrust therein glowing brands, or red-hot hatchets. Sometimes in the midst of these torments they compel them to sing; and those who have the courage do it, and hurl forth a thousand imprecations against those who torment them; on the day of their death they must even outdo this, if they have strength; and sometimes the kettle in which they are to be boiled will be on the fire, while these poor wretches are still singing as loudly as they can' (Thwaites, x. 227).

This is but one of a multitude of such descriptions to be found in the *Jesuit Relations* and elsewhere, illustrating an ingenious cruelty which marks the American Indians among the savages of the world, and is probably equalled only by the inquisitorial and judicial tortures devised by white men. For Indian cruelty is of an intellectual, one might say of a moral, type; it is not a callous incomprehension of suffering, or a brutal indifference to it, as is so often the case with savages; rather it is devilishly devised and inflicted for understanding enjoyment.

The primary motive seems to be to test the fortitude—the supreme virtue—of the sufferer, with whom it becomes a point of honour to make no sign of weakness, but rather to breathe defiance to the last breath: 'Those who dread your torments are cowards, they are lower than women' (de Smet, 249). If the prisoner dies bravely, his flesh, and especially the heart, is eaten, as a kind of sacrament, with the belief that the courage of the deceased will pass into the spirits of the partakers—a rite which becomes apotheosized with the Mexicans into a huge and terrible theanthropic worship (cf. art. INCARNATION [American]). Throughout the Americas we find this custom:

'They tear the heart from the breast, roast it upon the coals, and, if the prisoner has borne bravely the bitterness of the torture, give it, seasoned with blood, to the boys, to be greedily eaten, that the warlike youth may imbibe the heroic strength of the valiant man,' writes Jouvency (Thwaites, i. 263); and in South America, in similar case, Garcilasso states that the women lave their breasts in the blood of the sufferer, that their babes may drink it in with the mother's milk (*op. cit.* I. xi.).

Such a practice could not fail to lead to degradation, in many cases to cannibalism with no such moral purport. Reaction against it is not uncommon among the Indians themselves. Yet it was prevalent enough to be regarded as a racial trait, as it is also the chief ground for the bitter excoriations of Indian character by observers who so frequently have only admiration for the Red Man's domestic virtues.

3. Higher cultures.—The semi-civilizations of Mexico and Peru manifest that natural complication of moral problems and accentuation of moral consciousness which comes with advancing culture. At the same time, the quality of originality with which each is stamped is due to the dominance or emphasis of purely Indian traits.

In Mexico, and particularly among the Aztecs, warlike ferocity is elevated into a veritable religious consciousness, holding whole societies in pitiless grasp and colouring every conception of life. Indeed, Mexican religion so strongly countered the normal instincts of humanity that, in some cases at least, its devotees gave themselves to its practices only with 'tears and dolour of soul' (Sahagun, II. xx.); and it resulted in an attitude toward the world consistently and patiently pessimistic. When a child was born into the world, it was addressed:

'Thou art come into this world where thy parents endure troubles and fatigues, where there are burning heats, where there are winds and cold, where there is found neither pleasure nor content, since it is a place of labours, of torments, and of need.' And if a boy: 'Thy true fatherland is elsewhere; thou art promised to other places. Thou belongest to the shelterless fields where fall the combats; it is for them that thou hast been sent; thy profession and thy science is war; thy duty is to give unto the Sun the blood of thy enemies, that it may drink, and unto the Earth the bodies of thy foes, that it may devour them' (*ib.* VI. xxx., xxxi.).

Certainly the Mexicans had glimpses of a better order, as is shown in some of the myths of Quetzalcoatl, and as is evidenced perhaps by their deep conviction of sin and their readiness to do penance:

'There can be no doubt that the prayers, penances, and confessions described at length by Sahagun indicate a firm Mexican belief that even these strange deities "made for righteousness," loved good, and, in this world and the next, punished evil' (Lang, *Myth, Rit., and Rel.*[2], 1899, ii. 104).

Yet the inevitable impression of their civilization is of a fundamental conflict between brutalizing superstition and the instinct for moral growth, with the latter on the losing side.

Quite the reverse impression is made by the great S. American culture. The two characters that stand out in the Inca empire are communism, or paternalism, in the administration of material affairs, achieved on an immense scale,

along with a proselytizer's instinct for reform. The latter may often have been a somewhat hypocritical excuse for conquest, yet the conquest was not regarded as complete without the reform. The whole moral ideal of the Inca civilization may perhaps best be expressed in the words which Garcilasso gives as the address of the Sun to the parents of the Inca race :

'My children, when you have brought the peoples of these lands to our obedience, you should have care to maintain them therein by the laws of reason, of piety, of clemency, and equity; doing for them all which a good father is accustomed to do for the children whom he has brought into the world and tenderly loves. In this you will follow my example, for, as you know, I cease not from doing good to mortals, lighting them with my light and giving them the means of following their affairs; warming them when they are cold, making fertile their fields and their pastures, fructifying the trees, making the herds to multiply, and bringing rain or fair weather as their needs are. It is I who make the tour of the world once each day, in order to see of what the earth has need, to set it in order, to the easing of its inhabitants. I wish that you follow my example, as my well-beloved children sent into the world for the good and the instruction of those wretched men who yet live as the beasts. It is for this that I give you the title of kings, and I wish that your dominion extend to all peoples, that you may instruct them by good reason and good deed, but above all by your example and by your beneficent rule' (*Royal Commentaries*, I. xv.).

The degree in which this ideal was realized is indicated by the most recent writer on the Peruvian civilization, Sir Clements R. Markham (*The Incas of Peru*, 1910, p. 168 f.); and it exemplifies the greatest and most complex moral achievement of the American Indian race :

'The people were nourished and well cared for, and they multiplied exceedingly. In the wildest and most inaccessible valleys, in the lofty *punas* surrounded by snowy heights, in the dense forests, and in the sand-girt valleys of the coast, the eye of the central power was ever upon them, and the never-failing brain, beneficent though inexorable, provided for all their wants, gathered in their tribute, and selected their children for the various occupations required by the State, according to their several aptitudes. This was indeed socialism such as dreamers in past ages have conceived, and unpractical theorists now talk about. It existed once because the essential conditions were combined in a way which is never likely to occur again. These are an inexorable despotism, absolute exemption from outside interference of any kind, a very peculiar and remarkable people in an early stage of civilisation, and an extraordinary combination of skilful statesmanship.'

LITERATURE.—In addition to works cited in the text, see bibliographical materials under artt. AMERICA, ANDEANS, the artt. on Amer. Indian tribal names, COMMUNION WITH DEITY (American), etc. The moral customs and ideals of the Americans are cited in comparative treatments in L. T. Hobhouse, *Morals in Evolution*[2], London, 1908; A. Sutherland, *Origin and Growth of the Moral Instinct*, do. 1898; E. Westermarck, *MI*, 2 vols., do. 1906–8; C. S. Wake, *The Evolution of Morality*[2], do. 1878. Perhaps special mention should be made of C. Eastman's *The Soul of the Indian*, Boston, 1910 (an idealizing, but not unfair, characterization). Valuable guides to literature are the 'Handbook of American Indians,' *Bull. 30 BE*, 1907–10; W. I. Thomas, *Source Book for Social Origins*, London, 1909; and J. D. McGuire, 'Ethnology in the Jesuit Relations,' *Amer. Anthropol.*, new ser., vol. iii.—a guide to the materials in Thwaites' 73-vol. ed. of the *Relations and Allied Documents*.

H. B. ALEXANDER.

ETHICS AND MORALITY (Australian).—According to the earlier explorers and missionaries and the careless travellers of even recent years, the morality of the Australian aborigines was of a very low grade. Almost all such observers agreed in placing them in the very lowest stages of culture. They were described as bestial in habits, naked, lacking all sense of virtue; the men cruel to their children and wives. They were said to be addicted to infanticide and cannibalism, cruel in their disposition, shiftless, lazy, stupid, deceitful—in fact, possessed of all conceivable evil qualities, deaf to the lessons of religion and civilization, ready at theft, and with almost no regard for the value of human life. They were naturally, moreover, given up almost constantly to destructive inter-tribal wars. The investigations of more recent students of the natural races have thrown a somewhat different light upon the matter. It is now recognized that morality is not to be judged by relationship to some fixed and absolute standard, but rather that it is fundamentally related to the system of social control which prevails within the group. It must, moreover, be borne in mind that the 'higher race,' in its first contact with the lower, seldom sees it at its best. Without doubt the ignorance and brutality of many of the first white settlers and explorers of Australia were constantly provocative of retaliation on the part of the natives. The laziness of the latter may be attributed merely to their inability to fall in with the enterprises of the settlers, or to appreciate the objects of their endeavour or their interests. In activities of their own the natives showed the most surprising industry, *e.g.* in the collection of food (Henderson,[1] p. 125), and in the preparation for, and performance of, their elaborate ceremonials. The observations which follow should not, however, be taken as applying to the Australian race as a whole, but only to the sections directly observed; for there is no question that there is much diversity in the customs and characteristics of different tribes and groups.

As to personal virtues, the natives of Queensland were said to be generally honest in their dealings with one another. Apart from murder of a member of the same tribe, they knew only one crime, that of theft. If a native made a 'find' of any kind, such as a honey tree, and marked it, it was thereafter safe for him, as far as his own tribesmen were concerned, no matter how long he left it. The Australian native in general was and is possessed in a marked degree of fortitude in the endurance of suffering. There is abundant opportunity for the development of this quality of mind in the painful ordeals of initiation—a ceremony always accompanied by fasting and the infliction of bodily mutilations of various kinds, differing with the tribe and the locality. These mutilations include the knocking out of teeth, circumcision, sub-incision, and various scoriations of the trunk, face, and limbs. Among some of the tribes there are permanent food-restrictions imposed by custom upon different classes. There are also food-restrictions imposed upon the youth and younger men, and all of these are faithfully complied with, although they involve considerable personal hardship (see Howitt, p. 561; Fraser, p. 90).

The food-restrictions form such an important phase of aboriginal morality that they warrant further discussion. The following regulations of the Kurnai tribe are typical. A man of this tribe must give a certain part of his 'catch' of game, and that the best part, to his wife's father. Each able-bodied man is under definite obligation to supply certain others with food. There are also rules according to which game is divided among those hunting together. In the Mining tribe all those in a hunt share equally, both men and women. In all tribes certain varieties of food are forbidden to women, children, and uninitiated youths; there are also restrictions based upon the totem to which one belongs. The rules regarding the cutting up and cooking of food are as rigid as those regulating that food of which the individual may lawfully partake. Howitt says of these food-rules and other similar customs that they give us an entirely different impression of the aboriginal character from that usually held. Adherence to the rules of custom was a matter on which they were most conscientious. If forbidden food were eaten, even by chance, the offender has been known to pine away and shortly die. Contact with the whites has broken down much of this primitive tribal morality.

'The oft-repeated description of the blackfellow eating the white man's beef or mutton and throwing a bone to his wife

[1] Names of authors throughout this art. stand for works mentioned in the literature.

who sits behind him, in fear of a blow from his club, is partly the new order of things resulting from our civilisation breaking down the old rules' (Howitt, p. 777).

Under the influence of the food-rules, a certain generosity of character was fostered, and unquestionably it was present in the blacks to a marked degree. They were[1] accustomed to share their food and possessions, as far as they had any, with their fellows.

'It may be, of course, objected to this that in so doing he is only following an old-established custom, the breaking of which would expose him to harsh treatment and to being looked upon as a churlish fellow. It will, however, hardly be denied that, as this custom expresses the idea that in this particular matter every one is supposed to act in a kindly way towards certain individuals, the very existence of such a custom . . . shews that the native is alive to the fact that an action which benefits some one else is worthy of being performed' (Spencer-Gillen[a], p. 48).

The apparent absence of any excessive manifestations of appreciation or gratitude in the blackfellow has been interpreted by some adversely; but *giving*, as far as the natives were concerned, was such a fixed habit that gratitude did not seem to be expected. It does not necessarily follow that they could not feel gratitude because they did not show any sign of it to the white man when he bestowed upon them some paltry presents; for, as Spencer-Gillen point out, they might not feel that they had reason to be grateful to one who had encroached upon their water and game and yet did not concede to them a like hunting of his own cattle.

Although, as a rule, perfectly nude, the natives are said to have been modest before contact with the whites (Lumholtz, p. 345). Of the North Australians we are told that the women were never indecent in gesture, their attitude being rather one of unconsciousness (Creed, p. 94). The low regard for chastity, reported by some observers (*e.g.* Mackenzie, p. 131), may, in part, be explained by the failure of the outsider to understand the peculiar marriage customs, on account of which the relation of the sexes is to be judged by different criteria from our own.

Spencer-Gillen, the most recent and the most scientific of all who have studied this race, say of the Central tribes that chastity is a term to be applied to the relation of one group to another rather than to the relation of individuals. Thus, men of one group have more or less free access to all the women of a certain other group. Within the rules prescribed by custom, breach of marital relations was severely punished. No one would think of having sexual relations with one in a class forbidden to himself or to those of his own class. It would thus appear that, within the bounds of their own customs, they were extremely upright. When, under certain conditions, chiefly ceremonial, wives were loaned, it was always to those belonging to the group within which the woman might lawfully marry (see also Cameron, *JAI* xiv. 353). Among the natives of North Central Queensland a competent observer (Roth, p. 184) holds that there was no evidence of the practice of masturbation or of prostitution. The camp as a body punished incest and promiscuity. Howitt, writing of the natives of S.E. Australia, says that the complicated marriage restrictions expressed in a very definite way their sense of proper tribal morality. Here also looseness of sexual relations was punished, although at certain times it was proper to exchange wives, and at other times there was unrestricted licence among those who were permitted to marry.

Of the treatment of wives and children there are conflicting reports, the more recent investigators holding that there was less cruelty than was at first represented. There was, however, doubtless much difference in this respect in different tribes. One early observer (Earp, p. 127) affirms that wives were always secured by force, the girl being seized from ambush, beaten until senseless, and thus carried off by her 'lover.' Others, in like manner, emphasize the brutality of obtaining wives (Angas, p. 225), and Lumholtz says that stealing was and is the most common method. The researches of Spencer-Gillen do not confirm these statements as far as the natives of Central Australia are concerned; Roth refers to the commonness of the practice of stealing wives and eloping, among the North Central Queensland natives. According to Spencer-Gillen, wives may have been so secured, but such was assuredly not the customary method in Central Australia at least. They know of no instances of girls being beaten and dragged away by suitors. It is probable that cases of exceptional cruelty more easily came to the notice of the first travellers, and they inferred that these were characteristic. The last named authors affirm that the method of securing wives among these tribes was definitely fixed by tribal usage, and involved no cruel practices whatsoever. Howitt, the authority on the South-Eastern tribes, says that cruelty was often practised upon elopers; but this is manifestly because they had themselves been guilty of a breach of tribal morality. Looseness of sexual relations among these tribes originally met always with severe punishment.

As to treatment of wives among the Central tribes (Spencer-Gillen[a], p. 50), there were undoubtedly cases of cruelty, but they were the exception rather than the rule. The savage husband had a hasty temper, and in a passion might act harshly, while at other times he might be quite considerate of his wife. Among the aborigines of the Darling River, New South Wales, quarrels between husband and wife were said to be quite rare (Bonney, *JAI* xiii. 129); Brough Smyth says that love is not rare in Australian families; while another observer (Palmer, *JAI* xiii. 281) asserts that the life of the women is hard, and that they are much abused by their husbands. Dawson, who wrote expressly to show that the Australian blacks had been misrepresented, maintained that in Victoria, at least, there was no want of affection between members of a family (p. 37); Lumholtz (p. 161 ff.) holds that the Queensland husband felt little responsibility for his family, and that he was really selfish and hunted only for sport, often consuming the game as caught, and bringing nothing home. The same author refers to one case of a wife being terribly beaten because she refused, one cold night, to go out and get fuel for her husband. Over against this testimony, we have that of Spencer-Gillen, referred to above, that the husband was ordinarily by no means cruel. In hard seasons men and women suffer alike. A woman suspected of breach of marital relations was, indeed, treated with revolting severity. It is pointed out, however, that many things which to us seem harsh were by no means so in Australian eyes, and that the savage woman recovers easily from wounds that to a civilized woman would entail the greatest suffering. Treatment which we should naturally think cruel was to them merely rough and in conformity with the rest of their life. Howitt (p. 738) says that among the Kurnai tribe family duties were shared by husband and wife, each performing an allotted part towards the support of the family. The man's duty was to fight and hunt, the woman's to build the home, catch the fish and cook them, gather vegetable foods, and make baskets, bags, and nets.

With reference to children, much affection was usually shown, and this in spite of the fact that abortion and infanticide were practised in many localities (*e.g.* in N.W. Central Queensland [Roth, p. 183], and among the South-Eastern tribes [Howitt, p. 748 ff.]). In this connexion Howitt says:

'. . . they [the Mining tribe] are very fond of their offspring, and very indulgent to those they keep, rarely striking them, and a mother would give all the food she had to her children, going hungry herself.'

Infanticide was by no means so unrestricted, or so indicative of cruelty of nature and lack of parental affection, as is implied by Mackenzie, writing in the year 1852 (see *Ten Years in Aus-*

[1] As many of the accounts refer to tribes, or at least to customs, which are practically extinct, it seems best to use the past tense consistently throughout.

tralia, p. 130). Among the North Central tribes (Spencer-Gillen[b], p. 608) infanticide was practised, but only rarely except immediately after birth, and then only when the mother thought she was unable to care for the babe. The killing of the new-born child was thus an effort at kindness; it was certainly devoid of cruelty in the eyes of the perpetrators, since they believed that the spirit part went back to the spot whence it came, and was subsequently born again to the same woman. Twins were killed as unnatural—a practice to be explained in part by the natives' dread of everything uncommon or rare. On infrequent occasions a young child was killed, that an older but weaker child might eat it, and thus get its strength. Howitt mentions the same practice among the South-Eastern natives (p. 749). He also says that in some places infants were eaten in especially hard summers. Sometimes, also, after the family amounted to three or four, all additional children were killed, because they would make more work than the women could manage. Among the Kurnai, infanticide unquestionably arose through the difficulty of carrying a baby when there were other young children, some of whom might be unable to walk. Under these circumstances, new-born infants were simply left behind when the family were on the march, it not being regarded as killing to dispose of them in this way (Howitt, p. 750).

Palmer, writing of the natives of Queensland, says that the killing of a new-born child was lightly regarded, but not common. On the Lower Flinders River the fondness of the natives for their children was noted (Palmer, *loc. cit.* p. 280). According to Spencer-Gillen[a], p. 50 f., children were, with rare exceptions, kindly and considerately treated, the men and women alike sharing the care of them on the march, and seeing that they get their proper share of food. Howitt mentions the case of a mother watching a sick child, refusing all food, and being inconsolable when it died (p. 766). One woman carried about a deformed child on her back for nineteen years (Fraser; see Henderson, p. 121). Natural affection was certainly keen, and much grief was manifested over the loss of children.

In the aborigines' treatment of the old and infirm most observers depict them in quite a favourable light. Dawson, it is true, reports that the natives of Victoria killed them, but this is certainly not a widely prevalent custom. Lumholtz (p. 183) says that the Queenslanders were very considerate of all who were sick, old, or infirm, not killing them, as did some savage peoples (cf. Bonney, p. 135). In northern parts of Australia there were many blind, and they were always well cared for by the tribe, being often the best fed and nourished (Creed, p. 94). In the Central tribes the old and infirm were never allowed to starve. Each able-bodied adult was assigned certain of the older people to be provided with food, and the duty was in every case fulfilled cheerfully and ungrudgingly (Spencer-Gillen[b], p. 32). In some tribes the old and the sick were carried about on stretchers.

In the Dalebura tribe, a woman, a cripple from birth, was carried about by the tribes-people in turn, until her death at the age of sixty-six. On one occasion they rushed into a stream to save from drowning an old woman, whose death would have been a relief even to herself (Howitt, p. 766). Fraser emphasizes the respect in which old age is held by the aborigines of New South Wales, and the fact that they never desert the sick (see also Brough Smyth).

Cannibalism among the Australian blacks was by no means a promiscuous and regular practice, as was at first supposed. Lumholtz (p. 101), it is true, says that among those observed by him human flesh was regarded as a great delicacy (see also Bicknell, p. 104, who holds that it is quite common). Palmer, also, writing of Queensland, asserts that cannibalism was practised to a certain extent, the victims being those killed in fights, and often children who had died. An early writer reports that in South Australia bodies of deceased friends were eaten as a token of regard (Angas, p. 225), or as either a sign of regard or in ceremonial (Fraser, p. 56).

Spencer-Gillen found difficulty in gathering evidence of cannibalism being practised among the Central tribes. They were often told by one tribe that it was customary among others who lived farther on, and the latter in turn said the same thing of those beyond themselves. Spencer-Gillen think, in general, that human flesh was eaten as a matter of ceremony or at least for other than mere food reasons. They found much more evidence of it among the Northern tribes. Howitt says that the Dieri tribe practised cannibalism as a part of their burial ceremonies, and that it was a sign of sorrow for the dead. Other tribes ate only enemies slain on their raids; the Kurnai, for instance, would not eat one of their own tribe. Among still other tribes, if a man were killed at initiation ceremonies, he was eaten, as was also any one killed in one of the ceremonial fights; while others did not eat their enemies.

Howitt is positive that there is no such thing among any of the tribes hitherto observed as propitiatory human sacrifice; and he denies emphatically the statement, made current by some, that sometimes a fat *gin* (woman) was killed to appease their craving for flesh when they chanced to have been long upon a vegetable diet. He also says that at the tribal meetings of the Bunya, men, women, and children, killed in fights or by accident, were eaten, but that there is no evidence that women and children were killed for cannibalistic purposes.

The morality of the Australian native was, in a word, the morality of tribal custom, and, if fidelity to duties so imposed may be taken as a criterion, it was of no low order. Recent investigators unite in testifying that the blackfellow, especially before contact with Europeans, was most scrupulous in his obedience to the sacred duties imposed upon him by tribal usage.

Of the Queensland natives Roth declares (p. 139 ff.) that the life of the tribe as a whole seemed to be well regulated. Custom, with the old men as its exponents, was the only law. Where there were few old men, each individual, within limits, could do as he pleased. Howitt (p. 776) writes of the tribes studied by him that custom regulated the placing of huts in the camp, and even the proper position of individuals within the huts. In the Kaiabara tribe, single men and women lived on opposite sides of the camp. The old women kept an ever-watchful eye upon the young people to prevent improprieties. In another tribe the women were not allowed to come to the camp by the same path as the men, a violation of the rule being punishable by death.

The law of custom thus controlled almost every phase of the life of the individual, including many personal matters as well as conduct towards others; the intercourse of the sexes is or was most definitely limited and regulated; the women who were eligible to each man in marriage were also rigidly determined by custom, as well as the proprieties of conduct towards the wife's family. Reference has already been made to the severe restrictions entailed by the initiation and other ceremonies, and also to the minute regulations regarding the choice of food. In all cases these customs were enforced by severe penalties. In some tribes the local group or camp united to punish any member who was guilty of overstepping the bounds, or of complicity in more serious crimes, such as incest and murder, or the promiscuous use of fighting implements within the camp. Most customs were, however, probably obeyed from habit, the native being educated from infancy in the belief that infraction of custom would produce many evils, such as premature greyness, pestilences, and even cosmic catastrophes. In fact, among the tribes observed by Howitt, authority was generally impersonal, though not always, for the headmen were often men of great personal ability, and were greatly feared and respected by the rest of the tribe or group (Howitt, pp. 295–300).

Questions of right and wrong for the Australians seem to have centred chiefly in food restrictions, secrets relating to the tribal ceremonies, the sacred objects, and wives. Moral precepts probably originated in association with the purely selfish idea

of the older men, whereby they sought to keep all the best things for themselves (Spencer-Gillen[a], p. 48). In this way at least may be explained many of the regulations regarding what the younger men might eat. So also as to marriage, for, apart from restrictions as to totem and the class into which a man might marry, all the younger women were reserved by the old men, the less desirable ones alone being available to the young men. But, granting the selfish character of many of the rules, there was still a certain amount of morality which transcended anything of this sort.

'The old men, in their leisure time, instructed the younger ones in the laws of the tribe, impressing on them modesty of behaviour and propriety of conduct . . . and pointing out to them the heinousness of incest' (Howitt, p. 300).

The rigid duties of manhood centred especially in the ceremonies of the tribe. The obligations which these involved were regarded as extremely sacred and inviolable.

'As he [the youth] grows older he takes an increasing share in these [ceremonies], until finally this side of his life occupies by far the greater part of his thoughts' (Spencer-Gillen[b], p. 33).

He must continually show strength of character, ability to endure hardship, to keep secrets, and, in general, to break away from the frivolity of youth and all that savoured of femininity. There were, among the Central tribes, certain sacred things which were only gradually revealed by the older men, and, if a young man showed little self-restraint and was given to foolish chattering, it might be many years before he learned all that was in store for him.

It is interesting to see that under the traditional régime the Australian natives lived a harmonious and certainly far from unhappy life. Fraser says they were a merry race (p. 43). Howitt, who was instrumental in gathering together the Kurnai tribe for the revival of their initiation ceremonies some years ago, reports that the people lived for a week in the manner of their old lives, and that the time passed without a single quarrel or dispute (p. 777). In their wild state the Dalebura tribe were noted to have lived most peaceably: *e.g.*, a camp of three hundred is known to have continued for three months without a quarrel. Their method of settling disputes was usually by means of a fight between the parties who were at odds. When blood was drawn, the fighting ceased, and all were henceforth good friends (Dawson, p. 76). They were generous in fighting, taking no unfair advantage. They loved ease and were not quarrelsome, but were, nevertheless, ready to fight (Brough Smyth, i. 30). Mortal wounds in such conflicts were rare (Lumholtz, p. 127). According to Spencer-Gillen[b] also, among the Central tribes, whenever compensation in any form had been made by an offending party, the matter was supposed to be ended and no ill feelings were cherished (p. 31).

In some tribes, theft was regarded as the greatest crime next to the murder of a fellow-tribesman; but, as there was so little private property, crimes arising from this source were rare. The stealing of women is said to have been the most common cause of inter-tribal trouble (Lumholtz, p. 126; Spencer-Gillen[b], p. 32). There were no fights for superiority, no suppression of one tribe by another. Within the tribe there was, in large measure, absolute equality. There were no rich or poor, age being the only quality that gave pre-eminence (Semon, p. 225). The inter-tribal fights were certainly not so serious as some have represented. That they were constantly attacking and trying to exterminate one another is not confirmed by those who have known them best. Their fights were probably half ceremonial, or of a sportive character, and were usually stopped when blood flowed freely. They undoubtedly did fear strangers, and a man from a strange tribe, unless accredited as a sacred messenger, would be speared at once (Spencer-Gillen[b], p. 31). On the other hand, delegations from distant tribes were received and treated with the utmost kindness, if they came in the recognized way. They were even permitted to take a prominent part in the ceremonies of their hosts. The relations subsisting between members of the same tribe or group were, according to Spencer-Gillen, marked by consideration and kindness. There were occasional acts of cruelty, but most of them can be attributed to something else than a harshness of character. Thus, much cruelty resulted from their belief in magic (Spencer-Gillen[a], p. 50, [b] pp. 31–33). The revolting ceremonies practised at initiation were all matters of ancient tribal custom, and hence cast little light upon the real disposition of the native.

All things considered, we are obliged to say that the life of the Australian blacks was moral in a high degree, when judged by their own social standards; and not even according to our standards are they to be regarded as altogether wanting in the higher attributes of character. Dawson holds that, apart from their low regard for human life, they compared favourably with Europeans on all points of morality. Howitt (p. 639) says of the South-Eastern tribes:

'All those who have had to do with the native race in its primitive state will agree with me that there are men in the tribes who have tried to live up to the standard of tribal morality, and who were faithful friends and true to their word; in fact, men for whom, although savages, one must feel a kindly respect. Such men are not to be found in the later generation.'

IRVING KING.

ETHICS AND MORALITY (Babylonian).—

1. The predominating influence of religion.—The civilization of Babylonia was dominated throughout by religion. Every aspect of national and civic life and every phase of human intercourse were governed by a religious conception of the universe. The question as to the connexion between morality and religion was in Babylonia no question at all; for morality, like every other manifestation of mental life, was a part of religion. The commotions produced by political revolutions were always of brief duration. In the annals of Babylonia we meet again and again with the same historical phenomenon: the conquering peoples receive the intellectual, and thus also the religious and ethical, impress of Sumero-Babylonian culture.

In contemplating the ethico-religious conception of the universe which prevailed among the Babylonians, we are amazed at its sublimity. It comes before us as a complete system even in the oldest documents, which, while their literary form is the work of Semitic Babylonians, yet throw light upon Sumerian times. It is true that to a large extent

they are purely theoretical. We are unable to say whether the elevated morality presupposed by the injunctions of the priests was ever actually practised by any class of the people. The writers of the tablets idealize their heroes. As the august prologue and epilogue of the Code of Ḫammurabi give expression to religious and ethical ideas which find not the slightest echo in the actual legal provisions of the code, we may venture to assume that even in an earlier age there existed a similar discrepancy between theory and practice. Still, the theory is there; and it dominates the ritual texts even in periods of religious decadence. Lofty moral precepts in catechetic form are uttered by the very priest who will submit to the sorriest witch and the most paltry enchantments.

2. Morality and the cult of Ea, 'the Good.'—One of the oldest religious cities known to us is Eridu. At no period known to history was Eridu a political centre; not only the Code of Ḫammurabi but even the Sumerian inscriptions speak of it as an ancient and venerable city. It was situated 'at the mouth of the rivers,' *i.e.* at the place where formerly the Euphrates and the Tigris flowed separately into the sea. Eridu enjoyed the name of 'the city of the Good' (Uru-dug). The 'Good' is Ea, and his temple is 'the house of the ocean's depth,' or 'the house of wisdom.' Ea inscribes oracles with a 'sacred calamus'—probably beneath the sacred tree of Eridu which is sometimes referred to in the records. His wise counsels he imparts, *e.g.*, to Adapa, 'the seed of the human race,' upon whom he desires also to confer wisdom and immortality (the bread and the water of life). By his wise counsels, according to the Deluge narrative, he saves the Babylonian Noah from the flood. As the Deluge is taken to be a punishment of human wickedness, it would seem that the good Deity saved the man on account of the latter's acceptable behaviour.

The overwhelming majority of the texts that refer to Ea represent him as the god whose worship consists in the rites of ablution and incantation. He heals all manner of disease. Behind disease, however, stands the fact of sin. Although sin appears in the ritual texts as ceremonial transgression, as a conscious or unconscious revolt against ceremonial laws, yet behind this there must certainly be the idea of sin in a deeper sense—as rebellion against the Deity. The motive which prompts men to resort to the ritual worship of Ea is the desire to be cleansed from their sins.

3. Morality and the worship of Šamaš.—Besides Ea, the Good, the other Deity with whom moral ideas are specially connected is Babbar Šamaš, the god who manifests himself in the orb of day, and whose principal sanctuaries were Larsa in S. Babylonia, and Sippar in the northern portion (cf. A. Jeremias, art. 'Schamasch,' in Roscher). Šamaš is the god of retributive justice. All unrighteousness is brought to light by him, just as all darkness melts away when his beams illumine the world. His temple is called *É-D-kud-kalamma*, 'the house of the world's judge.' In a description of the New Year festival (cylinder B. 18) Gudea says: 'The sun caused righteousness to shine forth; Babbar caused righteousness to shine forth. Babbar trampled unrighteousness under foot; the city shines like the sun-god.' Ur-engur, king of Ur, who presided over the worship of the sun in that ancient city of the moon, says that in conformity with the just laws of Babbar he had caused righteousness to prevail. In the ritual texts the attendants of Babbar are Kettu and Mesharu, 'justice and righteousness' (cf. Ps 97[2] 89[14]). Thus moral ideas are here personified as Divine, just as in Egypt we find Maat as the protectress of righteousness.

The moral activities of Šamaš, who rewards the righteous judge and punishes the corrupt one, are set forth with great fullness in a hymn of some two hundred lines, which certainly emanated originally from Babylonia, but comes down to us in a transcript found in the library of Aššurbanipal. This hymn represents the effects of the sun's activity as a continuous mystery, by means of which all evil powers above and below are brought to naught.

'At thy rising the gods of the land assemble;
Thy terrible radiance overwhelms the land.
From all lands together resound as many tongues:
Thou knowest their designs; thou beholdest their footsteps,
Upon thee [look (?)] all men together.
Thou causest the evil-doer, who . . . not . . . to tremble;
Out of the depths (?) thou bringest those who perverted justice (?).
O Šamaš! by the just judgment which thou speakest [. . .],
Thy name is glorious, [. . .] is not changed.
Thou standest beside the traveller whose way is toilsome;
To the voyager who fears the flood thou givest [courage (?)].
On paths that were never explored thou [guidest (?)] the hunter;
He mounts [to heights (?)] rivalling the sun-god . . .
O Šamaš! from [thy] net [. . .];
From thy snare [escapes (?)] not . . .
He who, contrary to his oath [. . .];
To him who does not fear [. . .],
Outspread is thy wide [net . . .].
Whoso [lifts his eyes (?)] upon the wife of his companion,
On a day not pre-ordained for him, [. . . takes him away (?)];
For him is appointed (?) burning, the seed (?) . . . [. . .];
If thy weapon reaches him, [there is] no deliverer.
At his trial [his] father does not appear;
At the judgment of the judge, his brothers—they answer not for him;
In a brazen trap he is struck down without knowing it.
Whoso devises wickedness, his horn thou destroyest.
Whoso meditates oppression (?), his dwelling is overturned.
The wicked judge thou causest to see bonds;
Whoso takes a bribe, and does not judge righteously, on him thou inflictest punishment.
Whoso takes no bribe, but makes intercession for the weak,
Well-pleasing is this to Šamaš—he increaseth his life.
An upright judge, who renders righteous judgment,
Prepares for himself (?) a palace; a prince's house is his abode.
Whoso gives money for excessive interest (?), what does he increase?
He overreaches (?) himself for gain, empties his own purse.
Whoso gives money for just interest (?), who takes a shekel for [. . .],
Well-pleasing is this to Šamaš—he increaseth his own life.
Whoso keeps the balance (?) [. . .],
Whoso then changes the weights . . . [he] lowers . . .,
He overreaches (?) himself for gain, empties [his purse].
Of the honest man who keeps the balance, many are [. . .];
All possible things, much . . . [. . .].
He who keeps the measure, who practises . . . [. . .],
[. . .] in the meadow, who lets too much be paid,
[. . .], the curse of the people shall seize him.
[Whoso . . .] his [. . .], demands a tax,
[. . .] shall not possess his inheritance.
In the [. . .] his brothers, they shall not be surety.
The [. . .] who gives corn for [. . .], who furthers the good—
Well-pleasing is this to Šamaš—increaseth his life;
He enlarges his family, obtains possession of riches;
As waters of the deep, inexhaustible, so shall his seed be inex[haustible].
He who charges (?) an unwise man to give good succour,
He who oppresses (?) his inferiors (?), he is noted down (?) with the pen.
Those who work evil, their seed has not continuance;
Whose mouth, full of lying, avails not before thee.
Thou burnest their utterance, rendest it asunder, yea, thou . . .
Thou hearest the down-trodden, as thou movest over them; thou discoverest their right;
Each one, every one, is entrusted into thy hand.
Thou rulest over their judgments; what is bound, thou dost loose.
Thou hearest, O Šamaš, prayer, supplication, and homage,
Submission, kneeling, whispered prayer, and prostration.
From his deepest breast the needy crieth unto thee,
The feeble, the weak, the afflicted, the poor—
With a lament (?), a petition, he ever appeals to thee,
He whose family is far away, whose city is a great way off.
The shepherd, with the fruits of the field, appeals to thee.
The [. . .] . . . (?) in rebellion, the shepherd among the enemy,
O Šamaš, appeals to thee, as he walks on a way of terror.
The travelling merchant, the trader who carries the bag,
[. . .] appeals to thee; the fisher of the deep,

The hunter, the slaughterer, the keeper (?) of cattle,
The fowler in the . . . of the reed fence, appeals to thee.
The house-breaker, the thief—though an enemy of Šamaš—
The vagrant upon the way of the desert, appeals to thee.
The wandering dead one, the fleeting shadow,
O Šamaš, appealed to thee [. . .].
Thou hast not rejected those who appealed [to thee . . .];
Those who thus kneel, for them thou, loosing (them from evil), restorest their purity.
Those who thus render homage, their homage dost thou receive.
But they fear thee; they reverence thy name;
Before thy greatness men continually bow down.'

4. **The positive character of Bab. morality.**—The Bab. conception of the universe was permeated by the assumption that morality rests upon the commandments of Deity, and hence, should the excavations some day bring to light a Bab. narrative of the Fall, it would be no matter for surprise. According to Bab. ideas, not only wisdom, but also purity and happiness, existed at the beginning of things. The mythological Creation-story of the Babylonians closes with a significant passage telling how Marduk, the victor over Tiāmat, brings the laws of Ea to men, and how they are to be disseminated amongst men like a revelation of doctrine:

'Let them be held fast, and let the "First" teach them;
Let the wise man and the learned meditate upon them together.
The father shall hand them down; let him instruct his son therein.
Let him open the ears of the herdsman and the keeper (?),
That he may rejoice in Marduk, the lord of the gods;
That his land may prosper, and that it may go well with him.
Steadfast is his (Marduk's) word; his decree is not changed;
The word of his mouth is not altered by any (other) god.
If he frowns, he turns not again his neck (to grace);
If he is angry, if he is enraged, no god sets himself against him—
The magnanimous, the sagacious . . .
Against evil and sin . . .'
(Other five lines mutilated.)

The existence of tablets inscribed with Divine commandments is presupposed by the text K 7897, which survives in three distinct transcripts (*Cuneiform Texts*, xiii. 29 f.; cf. Macmillan, *Beiträge zur Assyriologie*, v. 5, no. 2 (Leipz. 1903); for tablet 5, cf. A. Jeremias, *The OT in the Light of the Ancient East*, Eng. tr. 1910, i. 222 f.)—

'Slander not, but speak kindness;
Speak not evil, but show good will;
Whoso slanders and speaks evil—
Unto him will Šamaš requite it by . . . his head.
Open not wide thy mouth, guard thy lips;
If thou art provoked, speak not at once;
If thou speakest hastily, thou shalt afterwards have to atone therefor;
Soothe (rather) thy spirit with silence.
Offer daily unto thy god
Sacrifice, prayer, the incense most meet (for the Deity):
Before thy god shalt thou have a heart of purity (?).
It is that which is due to the deity' (for continuation, see *ERE* iii. 747ᵃ f.).

5. **The identity of moral and ceremonial law.**—The relation between men and the Deity is determined by their qualities. It is only the wise man who is acceptable to the gods. Religion is essentially knowledge, and accordingly the intellectual interest enters largely into piety. The ideal first man is the 'keenly sagacious' Atraḫasis. The will of the Deity has to be searched out. Piety consists in a submissive and unflagging performance of the ritual. The afflicted king inquires whether his sufferings are the consequence of ceremonial dereliction or of actual evil-doing. Just as, in the conception of Deity, righteousness and capricious wrath are not discriminated, so we find no distinction between real sin and ritual error. Not only murder and theft, but spitting at the holy place, is regarded as a possible cause of disease, and atonement for transgression is effected by repentance and—closely associated therewith—the use of incantations. In either aspect the source of the disease is sin. For it is necessary that the man who offends against the Deity by transgression should receive evil, and that the devout man should receive good. The perplexities of such a theodicy make themselves felt, but they are not, as in Israel, brought to a solution. The Divine moral law is vitiated by the utilitarian principle. The idea of love to God remains without any ethical development.

The ritual texts composed with a view to the cure of disease enumerate with painful solicitude all possible forms of sin, but we can, nevertheless, trace the ethical ideal that underlies the formulæ. The incantation tablets of the Šurpu series exhibit the particular offences that come under the head of sin:

'Has he estranged father and son?
Has he estranged mother and daughter?
Has he estranged mother-in-law and daughter-in-law?
Has he estranged brother and brother?
Has he estranged friend and friend?
Has he failed to set a prisoner free,
Or not loosed one who was bound?
Is it outrage against his superior (?), hatred of his elder brother?
Has he despised father and mother, insulted his elder sister
By giving to the younger, and withholding from the elder?
To Nay has he said Yea?
To Yea has he said Nay?
Has he spoken impurity,
Spoken wickedness,
Used an unjust balance,
Taken base money?
Has he disinherited a legitimate son, installed an illegitimate?
Has he drawn false boundaries,
Deranged boundary, march, and precinct?
Has he intruded upon his neighbour's house,
Approached his neighbour's wife,
Shed his neighbour's blood,
Stolen his neighbour's garment?
Has he refused to let a man escape his power (?),
Driven an honest man from his family,
Broken up a well-cemented clan,
Revolted against a chief?
Was he honest with his mouth, while false in heart?
With his mouth was he full of Yea, in his heart full of Nay?
Is it because of the injustice that he meditated
In order to disperse the righteous, to destroy (them),
To wrong, to rob, to cause to be robbed,
To have dealings with evil?
Is his mouth unclean?
Are his lips froward?
Has he taught impurity, instilled unseemly things?
Has he concerned himself with sorcery and witchcraft?

Has he promised with heart and mouth, but not kept faith;
Dishonoured the name of his god by (withholding) a gift,
Dedicated something, but kept it back,
Given something (flesh for sacrifice) . . . but eaten it?
By whatsoever thing he is bewitched—let it be revealed!

(Be it revealed) whether he has eaten anything that made an abomination for his city;
Whether he has spread a calumny through his city;
Whether he has brought his city into evil repute;
Whether he has gone to meet an outlaw;
Whether he has had intercourse with an outlaw
(Slept in his bed, sat in his chair, drunk out of his cup).'

On the third tablet of Šurpu it is assumed that a person may have been bewitched

'Because he has helped some one to justice by bribery,
Uprooted plants in the field,
Cut cane in the thicket.
. . . .
(Because) for a day he was entreated for a conduit, and refused it;
For a day he was entreated for a cistern, and refused it;
(Because) he obstructed his neighbour's channel;
Instead of agreeing with his adversaries, he remained their enemy;
Polluted a river, or spat in a river.'

These questions involve the fundamental laws of morality, such as are essential to the very conception of an organized State. They imply that life and property are protected. In the 25th ordinance of the Code of Ḫammurabi it is enacted that, if one who has come to extinguish (a fire) allows himself to covet a possession of the master of the house, and appropriates the property of the master of the house, he shall be cast into the fire (*HDB*, vol. v. p. 600). Theft is a capital offence. Veracity is held in high honour. False witness and evil-speaking are severely punished. Legal cases are decided by oath. Falsehood in word or thought is accounted a base thing.

2. Basis and aim; metaphysics of the good.—The fundamental principle of Buddhist ethics and morality is expressly stated, in the very opening of the Buddha's first sermon, to consist in the Middle Path, which is, again, the way to the realization of the ultimate end—the extinction of the pains arising from egoism. Here the Middle Path is recommended, not merely because it lies in the middle between worldly pleasures and ascetic self-tortures, but because therein lies the right or perfect (*sammā*, Skr. *samyak*) way for realizing the ideal in accordance with truth. It is the solid (*khema*) way, in contrast with the crooked (*kumma*); the holy or noble (*ariya*), in contrast with the false (*micchā*) or base (*anariya*); and it leads to the perfect enlightenment (*sambodhigāmin*, *sambodhiparāyana*).[1] Here arises the question as to what is the content of that enlightenment. The answer is given mostly in a negative way, in the denial of the phenomenal, of human weakness, illusions, and passions—in short, in the teaching of non-ego (*anattā*), extinction (*nirodha*) of pains, and the well-known *nibbāna* (Skr. *nirvāṇa*). There are perplexing questions as to the real meaning of the term, and its negative aspect has led not only many European scholars, but a section of Buddhist thinkers, to a thoroughly negative view.[2] Not entering into these discussions, we shall content ourselves with noting that Buddhism here faced the same problem as Schopenhauer did as to the ultimate nature of his nothingness (*Nichts*), especially in its relation with the mystic experiences of the saints, both Buddhist and Christian.[3] But the difference between Buddha and Schopenhauer consists in this, that the former was not content with the merely theoretical attitude of the latter, but, having himself realized the experience of transcending the phenomenal and of entering into the height of mystic illumination, tried to lead his followers to the same attainment. This ideal of the same attainment is expressed in the term 'One Way' or 'Sole Road' (*eka-yāna*),[4] treading in which is the very essence of Buddhist morality, and the basis of which is found in the stability of truths (*dhamma-ṭṭhiti*).[5] In summarizing positively the highest aim of Buddhist morality, we might say that it consists in entering into the communion of all the Buddhas and Saints, through realizing the oneness and eternity of truths in one's own person. Not only insight and wisdom (*dassana*, *vijjā*), but morality and mental training are possible on the ground of this assumption, and all virtuous acts flow from this metaphysical source.

Thus, in the *Brahma-jāla*, one of the books which show most vividly the connexions between practical morality and philosophical speculations, the Buddha contrasts mere works, however good and excellent, with his attainments and purposes. Having heard his disciples talking of the others' praise and blame of Buddhist morality, he teaches them not to be anxious about these 'trifling matters, the minor details of mere morality (*sīla-mattaka*).' The reason is not because morality is a trifling matter in itself, but because it is vain unless founded upon profound knowledge and high attainments. He says:

'There are other things, profound, difficult to realize, hard to understand, tranquillizing, sweet, not to be grasped by mere logic, subtle, comprehensible only by the wise. These things the Tathāgata, having himself realized them and seen them face to face, hath set forth; and it is of them that they who would rightly praise the Tathāgata in accordance with the truth should speak.'[1]

Here we can see very clearly the close connexion between morality and enlightenment in Buddhism, and at the same time the basis of its liberal and broad spirit.

This characteristic of Buddhist morality is, again, closely related to its ideal of universal salvation, as shown in the missionary charge given to the first disciples and manifested in missionary works, even in the Buddha's time and afterwards under King Aśoka's patronage. This universal ideal is further expressed by the Mahāyānists in the oft-repeated saying that every being is a Buddha in his essential quality, and on this account the standard of a perfect Buddhist was transferred from an *arhat* to a *bodhisattva* (see below). After all, the foundation of Buddhist morality rests on the essential capacity of every person for Buddhahood; and the criterion of true morality lies in the tendency to *bodhi*, as attested by the one road (*eka-yāna*) trodden by all the *Tathāgatas* of the past as well as of the present and future. Abandon the false and base conduct of common men (*puthujjana*) and adopt the methods of a Buddha—that is the cardinal maxim of Buddhist morality. Though this expression may sound somewhat vague and self-evident, the latter, the good and holy life, is not to be merely talked about, but to be tested by personal touch, and realized in the exercise of the three methods of discipline as well as by the group of the four perfections. Suppose a traveller perishing of thirst found a well by the wayside; if he saw the water, but had no rope or bucket to fetch it, could he quench his thirst?[2] The answer is evident. The essential aim of any discipline or exercise is to touch the immortal region by the body (*kāyena amatam dhātum phassayitvā*),[3] *i.e.* by personal experience and actual realization. The guide to this end is found in the person of the Buddha; hence the important rôle which faith fills in Buddhist morality, as has been indicated above, and as we shall see later under the head of 'Virtues' (§ 3, below).

Here arise naturally the questions as to the nature and origin of sin and ills, and the opposition of man's moral nature to the good. Buddhist ethics is so anxious to prevent the arising of bad thoughts and actions that it surpasses almost all other ethical systems in enumerating human weaknesses and vices (see below). So manifold are these vices that they can fetter one's mind at any moment and on every possible occasion, just as demons were thought by mediæval Christians to do. Various classifications insist on the dreadfulness of human passions; the method of the four exertions (*padhāna*) supplies guidance for the checking of every germ of evil and the fostering of any good inclination; the doctrine of the source (*samudaya*) of pain tries to explain the origin and genesis of ills. But Buddhism has no story of Adam's fall, except a myth of man's gradual degeneration,[4] nor does it teach that sin is a transgression of Divine law in consequence of free will. The causation or genesis of ills is traced to the one root of thirst (*taṇhā*); and the source of all vices, however classified, is sought in passion and greed (*kāma* and *rāga*).[6] Though these may, again, be traced to, or associated with, ignorance (*avijjā*) or delusion (*moha*), the latter are, for their part, the outcome of the former; and the terms express nearly the same thing in different aspects, and, taken together,

[2] *Saṁy.* 12. 68 (*PTS* ed. ii. 118).
[3] *Itiv.* 51 (p. 46), 73 (p. 62).
[4] *Dīgha* 27, Aggañña.
[6] *Majjh.* 13, Dukkha-kkhandha (*PTS* ed. i. 85); 46, Dhamma-samādāna (*ib.* i. 309), etc.

amount to egoism. This is the original sin, so to speak, and the root of all evils (see, further, EGOISM [Buddhist]). In Buddhist ethics no distinction is made between sin and ills, and their sole origin is sought not in the objective world, but in our own mind and acts (*kamma*, Skr. *karma*).

Here again Buddhists faced the same problem as Schopenhauer as to the cause of the individuation of will. The conclusion is to the same effect as that of the German philosopher—that no reason could be sought in this domain. Or, we might say, the question is left theoretically unanswered, and the more emphasis is laid on the necessity and urgency of uprooting the present ills and actual vices.[1] Here we see reflected the very practical character of Buddhist ethics, but we note at the same time that this point gave rise to various speculations among later Buddhist thinkers. Aśvaghoṣa (*q.v.*) tried to answer the question by the idea of an abrupt upheaval of *avidyā* out of the *Tathatā*, nearly on the same line as Schelling's theory of a jump (*Absprung*) of the individual will out of the universal. Another solution tends, as in Leibniz's *Theodicée*, or still more in the Gnostic emanation theory, to explain ills as the imperfect reflexion of the one universal mind. The latter is the case with Vasubandhu and his followers. Whatever might have been tried, the fundamental trait of Buddhist ethics consisted in its practical nature, and it had a very vivid sense of the vices of *human nature* in its actual conditions, and of the ills arising from them, both of which are the irrevocable consequences (*vipāka*) of the *karma* without beginning. This feature appealed to the mind of the Hindus, yearning for emancipation; and also impressed deeply the peoples of the Far East, so that the change of sentiment worked out by Buddhistic influence in Japan, perhaps more than in any other country, is a very remarkable feature in the history of the religion.[2]

It may be said that the identification of sins and ills, the basis of which lies in the theory of *karma*,[3] has the effect of weakening the moral sense of responsibility which we find so strong in the Jewish and Christian religions; but we should not forget that here we have to deal with another sort of morality, whose sole aim is the abandoning of egoism and entering into the vast communion of the enlightened mind. Buddhist morality is, in its principles, completely free from nomistic elements; and the wide-reaching love for all beings, as expressed in the four aspects of the infinite mind (*appamāṇa-chetovimutti*), was possible only on this basis, apart from the love of and for the only Father in Heaven.

The full realization of the holy way (*ariya-magga*) and the attainment of enlightenment (*bodhi*) are necessarily associated with the final uprooting of fundamental vice. This condition is described in the oft-repeated expression '*arhat*-ship': birth is extinguished, purity is perfected, and all is done that is to be done, etc. And this, again, is what is called the footstep of the Tathāgata, the settlement of the Tathāgata, the impress of the Tathāgata.[4] Here an *arhat* is evidently identified with a Tathāgata, so far as the above-mentioned attainments are concerned.[5] At the same time, a distinction is made between the Tathāgata and a *bhikkhu* who has been released by wisdom; there the point lies in the difference between a *pachcheka-buddha* and a fully enlightened Buddha, the former being a self-content saint, and the latter the teacher and benefactor of all beings. Every Buddhist should aim at the attainment of *arahatta* (saintship); and the most significant type, or the only standard, of this attainment is found in the personality of the Buddha who is one of the *arhats*. In this respect we may say that the ideal of Buddhist morality consists in the imitation of the Buddha, and this is the reason why faith in the Master is so strongly insisted upon, for both moral and intellectual perfection. The Buddhists of earlier times never pretended to be themselves Buddhas; they were content to have as their Master the only Buddha who appeared in this world-period, yet their moral ideal was always directed towards the perfection of an *arhat*, who was nothing but a Buddha in his moral perfection. But this point gave rise to a division in moral ideals and, conjointly with that, to the schism of the Mahāyāna and the Hīnayāna.

A section of conservative Buddhists adhered more to the letter than to the spirit of the fundamental teachings, and found their satisfaction in self-culture. Their ideal consisted in the imitation of the Buddha, but they deemed themselves thoroughly unqualified for that perfection, and cherished the hope of being born in the good resort of the heavenly worlds, and of finishing their journey on the way of *bodhi* in the time of the future Buddha *Metteya* (Skr. *Maitreya*). This type of Buddhist ideal is prevalent among the Buddhists of Ceylon, Burma, and Siam. It is of very ancient origin, and exhibits a great tenacity through the whole history of Buddhism in the other countries as well. Against this stream of moral scrupulosity there arose a school, more broad-minded and daring, which emphasized the importance of following the Buddha's footsteps in spirit. The division may be traced to the schism of the Vajjian monks, ascribed to the second century after the Buddha's death. Whatever the date may have been, the difference resulted in the division of the Hīnayāna and Mahāyāna.

This division involved, *inter alia*, a rupture between the ideal of *arhat* and that of *Bodhisattva* (Pāli *Bodhisatta*). The latter was an appellation of the Buddha in his former births, preparing for his Buddhahood, and meant 'a being seeking for *bodhi*.' Now this was transferred to every Buddhist whose moral aim consisted in the same attainment and practice as that of the Bodhisattva, and this ideal was distinguished from that of the *arhat*, including the self-content *pachcheka-buddhas* and the conservative preservers of the Buddha's sermons (*sāvaka*, Skr. *śrāvaka*, *i.e.* 'hearers').[1] Though this changed notion of ideal saint contained nothing radically different from that of an *arhat*, it showed a departure in favour of a freer development of Buddhist moral ideals, and involved many important consequences for morals.

Reserving these practical bearings for a later section of the present article, we have here to deal with the Mahāyānist theory of the *bodhi-chitta*.[2] It means the primordial essence of our mind, which in itself consists in the supreme *bodhi*, i.e. the very essence of Buddha's enlightenment. This essence is present in every mind, but lies dormant or covered by the dust of ignorance and infatuation. When it is awakened and developed by due training, we may see in ourselves the eternal Buddhahood in its full illumination, and, in this way, the communion with all the Buddhas may be realized. Morality, associated with wisdom and mental training, is the way to this realization, and makes us tread the one and same way (*eka-yāna*) of the Buddhas. Indeed, morality is

[1] *Majjh.* 63, Māluṅkya (*PTS* ed. i. 426). See Oldenberg, 318; Warren, *Buddhism in Translations*, Cambridge, Mass., 1900, p. 117.

[2] This is the feature in the moral character of the Japanese people that is least known to the West, and, curiously enough, the modern Japanese themselves are unconscious of it. Some hints may be derived from the present writer's article, 'Le Sentiment religieux chez les Japonais,' in *La Revue du mois*, July, 1908.

[3] See Rhys Davids, *Hibbert Lecture*, 1881, and art. KARMA.

[4] *Majjh.* 27, Hatthipadopama (*PTS* ed. i. 181). Cf. below, the parallel in the *Saddharmapuṇḍarika*.

[5] This identification is confirmed by the description of a perfectly holy *bhikkhu* as a Tathāgata (*Majjh.* 22, Alagaddūpama [*PTS* ed. i. 139 f.]), and also by passages where the *arhats* are exalted as equal to Buddhas (*Saṁy.* 22. 76 [*PTS* ed. iii. 83–84]). Besides these, the training of the four *jhānas*, the four *appamāṇas*, etc., are described in innumerable passages in the same words, both in regard to Buddhas and to *arhats*.

[1] See *SBE* xxi. 35, 43, 80, and many other Mahāyāna texts.

[2] There are many Mahāyāna treatises on the subject; see, *e.g.*, Nanjio's *Catalogue*, nos. 1181, 1301, 1304, all of which are ascribed to Nāgārjuna.

possible only on this foundation of our essential fellowship with Buddhas and of the substantial identity of our mind with theirs. Morality is the actualized *bodhichitta*, which is, again, the *universalia ante res* of morality. In other words, the *bodhichitta* is the 'stability of truths' translated to the inner heart of man; it is the *bodhi* seen not as an attainment or acquisition, but as the original possession of man's mind. Viewed in this light, the contrast of good and bad, noble and base, amounts to the contrast between the primordial *bodhi* and the fundamental *avidyā*. Thus we see in Buddhist ethics the Jewish contrast of God and Satan transferred to the inner heart of our own mind, which at the same time is substantially identical with that of all beings, including Buddhas, Bodhisattvas, and common men, as well as animals and spirits in the purgatories.[1]

3. Virtues and rules of conduct; practical ethics.—Just as the contrast between the *bodhichitta* and *avidyā* is the ultimate point of theoretical ethics, the contradistinction of virtues and vices forms the fundamental subject of practical ethics. Buddhist teachers are so fond of enumerations and classifications that nearly every topic of thought or of doctrine is arranged in numerical groups. This answered not only the theoretical purpose of classification, but, at the same time—perhaps much more than the former—the practical purpose of extracting the materials according to need. This use is naively expressed, in the explanation of the seven divisions of *bodhi*, by a simile that robes and jewels stored in one case can be easily taken out.[2] The tables of virtues and vices are arranged in this way, partly for the sake of classification, and partly for the practical purpose of easily drawing their items out at any moment, when one of them is present while the associated ones are to be enticed or guarded against.[3]

The fundamental classification of Buddhist discipline is, as we have seen above, the three branches of the *sikkhā*; closely connected with this is the division of actions (*kamma*) or organs of works, *i.e.* body (*kāya*), speech (*vācha*), and mind (*manas*).[4] Among these the mental is the root of actions, but all the three have great influence upon one another, so that, both for repression of the bad and for acceleration of the good, the three are associated and help mutually.

Now we shall first consider the vices to be guarded against. As we have seen above, the radical vice of human nature consists in egoism, and it manifests itself in lust (*kāma*), desire (*chhanda*), and intention (*adhippāya*). These passions manifest themselves in greed (*rāga*), seeking for pleasure, hatred (*dosa*) of pain, stupidity (*moha*), and hopeless indifference. These are cardinal vices, and are called the three roots of the bad (*akusala-mūlāni*), depravities (*upakkilcsa*), etc.[5] They may further be divided into five or seven items. The five hindrances (*nīvaraṇa*), or, to express the same thing, covers (*āvaraṇa*), are: (1) sensual desire (*kāma-chchhanda*), (2) ill-will (*vyāpāda*), (3) stolidity and torpor (*ṭhīnamiddha*), (4) excitement or vanity (*uddhachchha*), and (5) perplexity (*vichikichchhā*). The seven fetters (*saññojana*), or incentives (*anusaya*), are: (1) fawning (*anumaya*) or sensual pleasure, (2) repugnance (*paṭigha*), (3) opinion (*diṭṭhi*), (4) perplexity (*vichikichchhā*), (5) pride (*māna*), (6) attachment to existence (*bhava-rāga*), and (7) ignorance (*avijjā*). The fetters are again developed to 10 or 16, 108, etc., and these groups are called depravities, attachments (*upādāna*), streams (*ogha*) of passions, fire, etc., with various nomenclatures, according to the points of view from which these vices fetter, afflict, or stir the human mind, and incite to bad actions. These classifications, as we can easily see, are in some cases cross-divisions, and they are not designed for a scientific purpose. Yet, when we compare them with the vices enumerated in the New Testament, we discover that the Buddhist classifications had psychological analysis more in view than the Christian, which are thoroughly practical. Herein, too, is seen the close relation between Buddhist morality and mental training. The same remark may be applied to the classifications of virtues which we now proceed to consider.

All the virtues and virtuous practices are arranged in seven groups,[1] which are sometimes called the divisions of the way (Skr. *mārgāṅga*), but four of them may better be described under the head of mental training, and the remaining three are groups of virtues combined with the methods of mental exercise. The virtues (*bala*) are also called organs (*indriya*) of moral practice, and their practice consists in the Eightfold Holy Way (*Ariyamagga*). The virtues or organs are: (1) faith (*saddhā*), (2) exertion (*viriya*), (3) mindfulness (*sati*), (4) contemplation (*samādhi*), (5) wisdom (*paññā*).[2] Among these, faith, contemplation, and wisdom are the three cardinal virtues of Buddhism, and are included in every other group of virtues; and, on the other hand, several others are added to the above five, such as shame (*hirī*) and fear of sinning (*ottappa*), or again, blamelessness or clear conscience (*anavajja*), sympathy or altruism (*saṅgaha*), deliberation (*saṅkhā*), etc., which, taken in various groups, make up the seven or nine virtues. The practice of sympathy, for instance, is divided into four: almsgiving or charity (*dāna*), kind word (*peyyavajja*), beneficial act (*atthachariyā*), and all-identification (*samānattatā*). These virtues, applied to practical life, make up the Eightfold Way, which consists in the perfection of (1) opinion (*diṭṭhi*), (2) decision (*saṅkappa*), (3) speech (*vācha*), (4) actions (*kammanta*), (5) livelihood (*ājīva*), (6) effort (*vāyāma*), (7) mindfulness (*sati*), and (8) contemplation (*samādhi*).[2] We see how in these classifications mental training plays a great part.

We shall not enter into the details of these items; suffice it to say that Buddhism lays more emphasis on the intellectual side than is done in Christianity, and in this respect these virtues may be compared with Greek or Confucian virtues.[3] Nevertheless, faith plays the central part, as in Christianity, and this point brings us to the religious or ecclesiastical side of Buddhist morality, as we shall presently see.

Lastly, as regards Buddhist virtues, we have to speak of the *pāramitās*, the virtues which bring us

[1] This point was systematized by the Chinese philosopher Chi'i (A.D. 531–597) of Tien-T'ai, on the authority of the *Saddharmapuṇḍarika*, and applied to ethics, among others, by Chi-Hsu (1599–1655) in his commentary on the Mahāyāna *Brahma-jāla*. The influence of this idea was far-reaching and deep in China, and even more so in Japan. A popular song of the 13th cent. says: 'The Buddha was once a common man, we shall be once finally Buddhas; sad and lamentable are the walls separating us from them (who are all one in essence, in the primordial Buddhahood).' Another popular saying, of the 18th cent., runs: 'See the puppet-player, he brings out of the box that hangs from his neck anything he pleases, a Buddha or a devil.'

[2] *Saṁy.* 46. 4 (*PTS* ed. v. 71).

[3] This practice of enumerating in incantation fashion may be witnessed among the Buddhist monks throughout the East. The tables serve not only to keep their contents in memory, but also for mental culture. Side by side with this advantage, its disadvantage is shown in its mechanical routine.

[4] *Majjh.* 56, Upāli (*PTS* ed. i. 372 f.); *Aṅg.* 3. 1–9 (*ib.* i. 101–105), etc.

[5] *Saṁy.* 36, Vedanā-saṁy., esp. 3, 5, etc.; *Aṅg.* 3. 33, 69 (*PTS* ed. i. 134 f., 201); *Itiv.* 50, etc.

[1] *SBE* xi. 61; Rhys Davids, *Dialogues of the Buddha*, ii. 129.

[2] See, further, *Saṁy.* 64. 4 (*PTS* ed. v. 6), where virtues are beautifully described by similes, which may be compared with St. Paul's utterance in Eph 6^{13-17}.

[3] The cardinal virtues of Confucianism are wisdom, love, and courage.

to perfection or to the other shore of *nirvāṇa*. As we have seen above, the aim of Buddhist morality is to bring us to the attainment of *arahatta* (saintship) or to Buddhahood, to the final goal of perfect enlightenment. So in this respect every virtue is a *pāramitā*, but in the Pāli books the term is applied exclusively to the moral acts of the Buddha in his innumerable lives in preparation for his Buddhahood. It is told in the introduction to the *Jātaka*[1] that the Brahman Sumedha, the future Buddha, made the promise to himself, as well as to his teacher, to exercise the virtues leading him to the attainment of Buddhahood (*buddhakāre dhamme*). They are enumerated as follows: (1) charity (*dāna*), (2) morality (*śīla*), (3) resignation (*nekkhamma*), (4) wisdom (*paññā*), (5) exertion (*viriya*), (6) forbearance (*khanti*), (7) truthfulness (*sacca*), (8) persistency (*adhiṭṭhāna*), (9) love (*mettā*), and (10) equanimity (*upekkhā*).[2] Now the transition to Mahāyāna morality brought these within the scope of all Buddhists, who must strive for perfect enlightenment; and in this ethical system the *pāramitās* fill a great rôle. Six of them are usually enumerated, viz. charity (*dāna*), morality (*śīla*), forbearance (*kṣānti*), exertion (*vīrya*), meditation (*dhyāna*), and wisdom (*prajñā*). Very often four are added to these, making ten in all, viz. tactfulness (*upāya*), earnest wish or vow (*praṇidhāna*), strength (*bala*), and knowledge (*jñāna*).[3] A résumé of these virtues is given in the Lotus of the True Law, and is regarded by the Mahāyānists as containing the three fundamental maxims of their morality. It runs:

'Any Bodhisattva, Mahāsattva, who, after the *parinirvāṇa* of the Tathāgata, shall set forth this *Dharma-paryāya* to the four classes of hearers, should do so after having entered the abode of the Tathāgata (*Tathāgata-layana*), after having put on the robe of the Tathāgata (*T.-chīvara*), and occupied the seat of the Tathāgata (*T.-āsana*).' The abode is explained to mean abiding in love to all beings (*sarva-sattva-maitrī-vihāra*); the robe, the delight in an immense forbearance (*mahākṣānti-sauratya*); and the seat, the entrance to the vacuity of all laws (*sarva-dharma-śūnyatā-praveśa*).[4] This is exactly the same idea as is expressed in the above-quoted expressions, 'the footstep of the Tathāgata,' etc., by transferring the *pāramitās* to the imitation of the Tathāgata.

We omit further comments on these classifications and their mutual relations, but we have to note that in the virtues of the Bodhisattvas more consideration is paid to those virtues that have regard to others, and that the essence of sympathy or love is more prominent than in the virtues above given. This was, indeed, a very important point in the departure of the Mahāyāna. The Mahāyānists are wont to call the Hīnayānists egoists, in contrast with their own altruism. Though this is not literally true, the characteristic difference between the two schools, or between the ideal *arhat* and *bodhisattva*, consists in this, that, while the former sees in self-culture the first requisite of morality, the latter insists on the necessity of altruistic actions and thoughts, even for the sake of self-culture, as in the case of the Buddha's former lives. In other words, the Mahāyānist moral ideal lays special stress on the realization of the *bodhichitta*, by entering into the communion of the saints through the exercise of altruistic virtues. This is, of course, an extension of the fundamental virtue of love or sympathy, but the emphasizing of this point gave rise to another important idea, that of the dedication (*pariṇāmanā*)[1] of all merits and works for the sake of others, in order to lead them to the same enlightenment. It makes it possible for all beings to help each other on the way to salvation and the realizing of the communion of spiritual fellowship. The practical results of this ideal were momentous, and we may say that Buddhist influence in China and Japan turned on this pivot, although unfortunately with its abuses as well.[2]

The consideration of the virtues and their values leads us to the methods by which, and the conditions under which, they could be worked out. The organization for the promotion of morality is established in the Order (*Saṅgha*), including monks and laymen, and the guidance of morality therein was laid down by the Buddha in the rules of obedience (*Vinaya*), including prohibitions and commandments, and also necessary rules of discipline for carrying them out. Leaving the details of these rules to the special art. VINAYA, we shall here examine their general characteristics. Though the vow of taking refuge (*saraṇa*) in the Three Treasures and the Five Commandments (*verāmaṇī*) are common to all members of the Order, a clear demarcation is drawn between the laic and the monastic disciples in regard to the other standards of life. In this respect Buddhism may be said to teach a twofold system of morality—one that of monks and nuns, which is beyond this world (*lokuttara*); and the other that of the laity, which is worldly.[3] A detailed description of worldly morality is given in the sermon to Siṅgālaka,[4] and the practice of filial piety, respect toward teachers, harmony between husbands and wives, etc., are recommended as the deeds which shall bear good fruit in one's being born in heavenly worlds. This, however, is not specially Buddhistic, but generally human. To be perfectly moral, according to the Buddhist ideal, all the conditions of the *śīla* should be fulfilled, for which monastic life or homeless life (*anāgāra*) is a necessary condition. It is evident that the Buddha recommended the life of an ascetic (*samaṇa*) as the fittest for perfect morality, but at the same time it should be noted that the household life (*sāgāra*) was not totally excluded from salvation. The Buddhist communion (*Saṅgha*) is made up of the four classes of members—monks and nuns, laymen and laywomen. These four are always described as making up one body and as equally praiseworthy, when they are well-disciplined.[5] Moreover, we hear a Brahman Vachchhagotta praise the Buddha's laws for their universal application to all his followers, without distinction of the conditions of life.[6] The Buddha is credited with having gone even so far as to say that no difference existed between a layman and a monk, when they had realized perfect purity.[7]

[1] *Jātaka*, ed. Fausböll, vol. i. pp. 19–28; Warren, *Buddhism in Translations*, pp. 23–29; Rhys Davids, *Buddhist Birth Stories*, 1880, i. 18–26.

[2] This may be compared with the ten dharmas for attaining the *paramām gatim* (highest resort), as stated in Manu, vi. 92–93.

[3] See art. BODHISATTVA; also Suzuki, *Outlines of Mahāyāna Buddhism*, London, 1907, pp. 277–330, 391–404. In the latter book the author is, in many points, too anxious to draw sharp distinctions between the Hīnayāna and Mahāyāna, and misses connecting links between these two forms of Buddhism.

[4] *SBE* xxi. 222; *Saddharmapuṇḍarīka*, ed. Kern and Nanjio, p. 234. (Kern's rendering of *āsanā* by 'pulpit' is right, but it parts company with Oriental associations.)

[1] This is stated in the *Aṣṭasāhasrikā* (Calcutta, 1888), and many other texts. Suzuki expresses this by the word *parivarta*, of which the source is not given.

[2] Anesaki, 'Buddhist Influences in Japan,' in the *Transactions of the Congress for the History of Religion*, Oxford, 1908, ii. 155 f.

[3] *Majjh.* 117, Chattārisaka.

[4] *Dīgha*, 31, Siṅgālaka.

[5] *Saṁy.* 55, Sotāpatti-saṁy. (*PTS* ed. v. 342 f.).

[6] *Majjh.* 73, Mahāvachchhagotta (*PTS* ed. i. 491 ff.).

[7] *Saṁy.* 55. 54 (*PTS* ed. v. 410). Oldenberg would see in this a later doctrine (*Buddha*[4], 370, note 1). But his suggestion may be controverted by adducing other texts called the Mirror of Truth (*Dhamma-ādāsa*, or *Giñjakā-vasatha*, *PTS* ed. v. 356–360), where several laymen and laywomen are described as having attained *arhat*-ship, and where the difference of the degrees in their attainment is evidently not due to their respective conditions of life, but to the differences of their emancipation from the fetters. Not a few lay disciples (*upāsakas*) are there said to have cut off the five fetters and to have entered perfect *parinibbāṇa*, equally with many *bhikkhus*. Moreover, when we consider that such *upāsakas* as Chitta of Machchhikasaṇḍa, Sura of Ambaṭṭha, and Mahānāma the Sākyan were in no way inferior to monks in their attainment and moral perfection, it cannot be denied that the Buddha allowed them the same

We may thus safely conclude that the Buddha did not make a fundamental distinction between these two classes of his disciples as to the qualification of their moral and spiritual perfection. Nevertheless, it is very evident that the moral ideal of Buddhism can be attained with less difficulty by many by means of the homeless life than by householders (on the same ground as St. Paul [1 Co 7] recommended celibacy to the followers of Christ); hence the pre-eminently monastic character of Buddhist morality, and hence the duty of the lay followers to pay a special respect to monks.

Similar remarks may be applied to the relations between the sexes. In general, women are regarded as less capable of perfect morality, because of their natural weakness and defects, and so female ascetics (*bhikkhunīs*) have to pay special respect to those of the male sex.[1] Buddha was never tired of describing the defects and vices of women and of warning the monks to guard against them. But this should not be ascribed merely to a despising of the weaker sex, for similar warnings are given to women as regards the wickedness of men.[2] Moreover, when we consider what an active part in sexual immorality is taken by men, we are justified in saying that the Buddha was so emphatic on this point for the sake of his male disciples.[3] On the other hand, we see how many excellent women filled their rôles among the Buddha's disciples;[4] and here, again, Vachchhagotta's utterance is justified.

This brings us to consider the exaltation of lay life and of the female sex among the Mahāyānists—a consequence of their conception of the Bodhisattva ethics. They take the former lives of Śākyamuni as the models of morality, which should be at the same time every one's preparation for Buddhahood; and so they find the life of nobles or householders in no way incompatible with the practice of the *pāramitās* and the attainments of *bodhi*. Thus, the Buddhist communion, in the conception of the Mahāyānists, consists of all kinds of beings, both human and angelic,[5] and among them there are various Bodhisattvas, side by side with monks and ascetics. We are not in a position to determine the first origin of this change of ideal, or to assign each Bodhisattva his nativity; but we see in the Gandhāra sculpture the Bodhisattva Maitreya represented exactly like a prince, with garlands and other decorations, as is found in Barhat and Sanchi.[6] Parallel with these plastic representations, literary testimonies to these changes are so abundant in the Mahāyānistic literature that we might say that nearly every Mahāyāna book contains exaltations of various Bodhisattvas and lay saints.

Most conspicuous among many books of the kind are two texts bearing the names of Vimālakirtī and Śrīmālā respectively. The former is said to have lived in Vaiśālī, contemporary with the Buddha, and the superiority of his moral perfection and dialectic power forms the subject of the whole book.[7] He was perfect in the practice of all the *pāramitās*, but he lived the life of a rich man, dressed in fine robes, and drove a fine carriage, etc. His philanthropy was well known throughout the country. He went about the town instructing in Buddhist morality the people whom he met and sought, whether in the palaces, or on the streets, or in gambling-houses, or in infamous places. He also exercised his influence over the politics of the town. Perfect practice of the *pāramitās* in the worldly life was his aim, for which he is said to have been highly praised by the Buddha, and on which account he is regarded as the model *upāsaka* among the Buddhists of the Far East, even to the present day.

Śrīmālā was the daughter of King Prasenajit (Pāli, Pasenadi) and his queen, Mallikā, so well known in the Pāli books, and was married to the king of Ayodhyā. An obedient daughter and faithful queen, she was imbued with the deep insight of Buddhist wisdom, and perfect in her moral practice of the Sole Road of the Bodhisattvas. Her great vows, stated in the presence of the Buddha, and the dialogues between her and the Buddha, serve to show the capacity of lay morality, when associated with true wisdom, to take up the essence of all the rules enjoined upon monks and nuns, and to elevate and broaden them to the all-embracing morality of the Mahāyāna.[1]

In short, for a Mahāyānist, the moral ideal consists in practising all the precepts of morality, in their essence and spirit, regardless of the circumstances and conditions of life.

'His mother,' it is said, 'is wisdom (*prajñā*), his father tactfulness (*upāya*), his kinsmen all beings, his dwelling the vacuity (*śūnyatā*), his wife joy (*prīti*), his daughter love (*maitrī*), his son truthfulness (*satya*), and yet his household life makes him not attached to existence.'[2]

These precepts should be observed both figuratively and literally; therein consists the compatibility of lay morality with the highest ideal of a Bodhisattva. A Mahāyāna text entitled *Brahma-jāla*[3] enumerates all Buddhist virtues and moral precepts, and explains them in higher senses and according to the spirit of the Mahāyāna, re-interpreting the prohibitions in their respective positive counterparts, and referring every rule and precept to the deepest basis and highest aim of the *bodhi*. This has become the standard of Buddhist Vinaya in China and Japan, and has exercised great influence upon the morality of both the nations.[4]

4. **Efficacy of moral practice; ecclesiastical side of ethics.**—The basis has been established, the aim shown, and the rules and precepts given. The next question is how these could be carried out. Here the *Saṅgha* plays the essential part. The Buddhist *Saṅgha* is neither a mere congregation nor a society of friends or pietists; it is a religious communion and churchly organization, furnished with the disciplines necessary for the realization of the ideals aimed at. It is a church in the full sense of the word, in spite of the dictum of certain scholars to the contrary. The word 'sacramental' cannot be applied to the Buddhist Church, if it were understood exclusively as founded on God's grace; yet the *kammas* (Skr. *karmas*), the religious and ecclesiastical acts, such as ordination (*upasampadā*), the acceptance of the precepts (*śīla-samādāna*), and confession (*pavāraṇā*),[5] were considered as not merely formal acts, but as furnished with religious, if not mysterious, significance. They were thought to have perpetual

honour as the monks. These are in agreement with Vachchhagotta's utterance above cited. See Rhys Davids, *Dialogues of the Buddha*, i. 63.

[1] These marks of respect are called the *gāravas*, for which see *Vinaya*, Chullav. 10. 1, and *Aṅg*. 8. 51.

[2] *Aṅg*. 8. 17–18 (*PTS* ed. iv. 196–197).

[3] This is illustrated by the simile of warriors (*yodhājīva*) (*Aṅg*. 5. 75–76 [*PTS* ed. iii. 89–100]).

[4] See Bode, 'Women Leaders of the Buddhist Reformation,' *JRAS*, 1893, p. 517 f.

[5] This conception, taken by itself, is not specially Mahāyānistic, but generally Buddhistic. See *Dīgha*, 20, Mahāsamaya, *Sn*. Ratana, etc.

[6] See Grünwedel-Burgess, *Buddhist Art in India* (London, 1901). The Mahāyānists explain this difference of dress on the part of *arhats* and *bodhisattvas* by saying that, while the former are concerned about themselves alone, and so are dressed in simple dull-coloured robes, the latter embellish their bodies in every way in order to please and attract others, and so to lead them to conversion and companionship.

[7] The *Vimālakīrti-nirdeśa*, one tr. by Ch' Chien in the 3rd cent. (Nanjio, no. 147), and another tr. by Kumārajīva in A.D. 406 (Nanjio, no. 146).

[1] The *Śrīmālā-siṁhanāda*, tr. by Guṇabhadra in the 5th cent. (Nanjio, no. 59). There are a great many texts of a similar tendency. We hear of Sumati, daughter of the rich Ugra; Ajitā, daughter of King Ajātaśatru; Vimāladattā, daughter of King Prasenajit, etc.

[2] Quoted in the commentary of great authority on the *Brahma-jāla*, below cited, by Tā-hsien, a Korean monk of the 8th (?) century. The words are taken from various Mahāyāna texts and works of Nāgārjuna, Vasubandhu, etc.

[3] Tr. by Kumārajīva (Nanjio, no. 1087). The title is evidently taken from the same name in the *Dīgha*, and is intended to expand its contents, by amplifying the Buddha's profound knowledge, as regards the foundation of morality, which has been cited above.

[4] In China the Mahāyānist morality inclined to quietism and mysticism, having been conjoined with Taoism, especially in the valley of the Yantsu, where Buddhism was most prevalent. In Japan, on the contrary, it entered into union with the warrior spirit of the nation, and exercised its influence in every department of life, down to the arts of fencing, swimming, and even to the spirit and method of the *harakiri*.

[5] For these acts, see art. VINAYA.

efficacy for morality through the whole of the present life, and for the future as well. This is the reason why the moral precepts enjoyed by the holy men (*ariyakantāni sīlāni*) are declared to be one of the four objects of the indefatigable faith or repose (*avechcha-ppasāda*), together with the Buddha, the *Dhamma*, and the *Saṅgha*. These precepts are described, in the formula stating the objects of faith, to be 'unbroken, intact, unspotted, unblemished,'[1] and those who have become imbued with this faith are assured that they have entered the stream of emancipation (*sotāpatta*). Naturally, the ceremonies alone have no such efficacy, yet any works and merits without the performance of the ceremony are worldly, and, therefore, not the morality practised and enjoyed by the Buddhist holy men. The authority to give assurance of its efficacy is in the hands of the *Saṅgha*, instituted by the Buddha. Thus, just as the faith in the *Saṅgha* and in morality does not come to stand, so the faith in the Master is incomplete without the faith in the efficacy of morality and the ceremony instituted for the purpose of effectuating and assuring its practice. The *sīla*, together with its inauguration act, is an indivisible whole, as the one instituted by the perfectly Enlightened, and observed faithfully by the whole communion of the *Saṅgha*. It is also untainted and unblemished, not being defeasible by contrary powers. Therefore it is said:

> 'The holy disciples, furnished with these four things, enter into the stream, become unruinable (*avinīta-dhamma*), and turn to the destiny of the perfect enlightenment.'

The four things mean the faith in the Three Treasures and the *sīla*. The life of such men is, indeed, inexhaustible (*amogham jīvitam*).[2] To the Mahāyānistic explanation of this source of morality we shall return below.

Here we have arrived at the point where we must speak of the authority of the *Saṅgha*. Quite naturally, the Buddha was, during his lifetime, the sole authority and leader of morality. After his death, a kind of apostolic succession, though not unified as claimed by the Christian Church, was kept up by a series of ordaining teachers (*upajjhāya*, Skr. *upadhyāya*); and every Buddhist could trace the lineage of his ordination through the series up to the Buddha.[3] This practice of receiving the precepts from an *upajjhāya* was observed, both by monks and by laymen, even in the Buddha's lifetime; and parallel with this a kind of diocese was inaugurated, and is continued to this day. It is called the *Sīmā* (Skr. *Sīmā*), *i.e.* the circle within which the wandering monks and nuns, as well as resident laymen, had to attend regular meetings and ceremonies, conducted by the elders, during the rainy seasons. This practice was extended, in the countries outside of India, beyond the rainy seasons, and its conception developed into that of a diocese, and at last became that of a catholic church.[4]

The emphasis laid on the efficacy (if not sacramental) of the acts for the acceptance of the *sīla* and the respect for the authority performing them gave rise later to disputes as to whether mind alone or body also is influenced by these acts and thereby continues their efficacy.[1] Without entering into the details of these disputes, we here note the close connexion of this point with the teaching of the Bodhisattva morality. The precepts and the religious acts of receiving them are observed, of course with modifications, by the Mahāyānists, but they consider these acts rather vain, unless accompanied by an eager decision for the attainment of the full *bodhi*, and consequently consummated in the deep impression of the will upon the inner kernel of the mind. What is, therefore, more essential for them than any act is the awakening of the radical good, the fundamental nature, we might say the matrix, from which these acts and moral practice derive their source. This is called the *bodhichitta*. Though the value of morality consists in its practice, the latter should be well founded on sound principle, which again should be in accordance with the ultimate matrix. The religious acts for the entrance to moral life awaken the manifestation of the radical good; and the continual efficacy of faith and sacraments causes the *bodhichitta* to manifest itself more and more, and leads finally to its full realization—the enlightenment. Thus, when the *bodhichitta* is once awakened, its essence (*prakṛti*) is manifested in life, and, because the essence in itself is unmade, is of non-action (*akṛti*), the moral life of the initiated needs less and less exertion, and so much the more partakes in the communion of the saints. Morality, in this condition, consists in actions—bodily, oral, and mental—but they are no *opera operata* but *inoperata*, so to speak. In the descriptions of the four *jhānas*, *appamāna-chetovimutti*, so often repeated in the Pāli Canon and not less in the Mahāyāna books, we can see this sense of unexerted morality, and the formula of the *sīla* in the four *pasādas* shows this bearing, at least implicitly. The theory of the matrix of morality played a great part in the Mahāyāna ethics and became the source of various speculations as well as of practical influences. Chi-Hsu, in his commentary on the *Brahma-jāla*, expresses this point as follows:

> 'The entity (of *sīla*, i.e. the *chitta*) manifests itself as the essence (*bodhi*), and the principles (good and bad) manifest themselves in practice; the realization of the essence is induced by practice, and the perfection of practice is derived from the essence, these two being in reality one.'

This is a piece of scholastic analysis of Mahāyāna morality, and may sound very abstract, but it is intended to explain the efficiency of morality on the basis of the *bodhichitta*, which is identical in all beings, and thereby to lay a foundation for the practice of sympathetic acts in the essential quality of the *bodhichitta*. This philosophy, in conjunction with the teaching of the *pāramitās* and dedication, had actual influence over the Far East converted to Buddhism, and made its morality capable of being applied to various conditions of life. It broadened the people's moral ideal so as to admit all beings to their spiritual communion, and to extend their sympathy toward even animals and plants.[2]

5. Mental training and spiritual attainments.—We now come to our last subject—a peculiarity of Buddhist morality, viz. its close connexion with the methods of spiritual exercises. Though, as we have seen above, morality is enumerated side by side with wisdom and contemplation, in the three

[1] *Saṁy.* 55, Sotāpatti-saṁy. (*PTS* ed. v. 342 f.); also *SBE* xl. 27.

[2] *Saṁy.* 55. 51 (*PTS* ed. v. 404 f.). The same thing is told in *Saṁy.* 11. 2, 4 (*ib.* i. 232), and *Aṅg.* 4. 52 (*ib.* ii. 57), 5. 47 (*ib.* iii. 54), etc. Here the faith is described as the virtues of faith (*saddhā*), morality (*sīla*), repose (*pasāda*), and insight into knowledge (*dassana*).

[3] It is to this observance that we owe the tables of the Elders (*Thera*, Skr. *Sthāvira*), who were heads of their respective branches of Buddhism. Whether these tables are credible or not is another question. Cf. art. ELDER (Buddhist).

[4] We hear of a central seat of the *sīmā* at Nālandā, mentioned in a Chinese record of the 8th century. In China it was for the first time instituted by an Indian, Guṇabhadra, in 430, under the auspices of the Emperor, and after that many *sīmās* were started, each of them having a certain right of jurisdiction. In Japan the *sīmā* was established in 754, and some others after that. Nichiren (1222–1282) prophesied the establishment of the sole seat of the *sīmā* over the whole world.

[1] These are found in the *Mahāvibhāṣya*, ascribed to the reign of King Kaniṣka. A parallel may be found in the differences between transubstantiation and consubstantiation.

[2] It is in this way that Buddhist morality in China, and still more in Japan, has become connected with poetry and plastic arts. Æsthetic sense among them is derived from the source of mental training, and is manifested in their daily life. An art for art's sake used to be an inconceivable thing among them. See the present writer's article in the *Revue du mois*, cited above, and Okakura, *The Book of Tea*, New York, 1906.

branches of discipline they form one whole, and morality dissociated from the other two ends in merely outward works, while these mental exercises are without wisdom, an empty thing; and wisdom is imperfect apart from moral practice. We have stated above that four—a majority—of the seven groups of virtues (or training) are the methods of contemplation, and that even the rest contain in them what we now should call not virtues but rather spiritual exercises. These will be seen from the items that make up these groups. We do not here enter into them in detail (see art. DHYĀNA), but their general bearings upon moral training are not to be overlooked. The cardinal vice of human nature lies in egoism, which manifests itself most conspicuously in the attachment to sensual pleasures, and in the fetters which bind our mind to various impressions and thoughts. The fourfold fixation of mind (*sati-paṭṭhāna*) aims at the extirpation of egoism. Therefore the mind is fixed on the body (*kāya*); and its foulness, instability, etc., are thought of. The next step is to think of the senses (*vedanā*) and of the pains and pleasures arising from them. Further, the mind (*chitta*) itself is closely examined; and, finally, the ultimate nature of things (*dhamma*). In like manner, in the exercise of the right exertion or control (*sammāppadhāna*) the aim is to prevent sinful conditions arising (*saṁvara*), to put them away when they have arisen (*pahāna*), to protect and cherish good conditions as they arise (*anurakkha*), and, lastly, to retain and develop good conditions in existence (*bhāvana*). These qualities are the same in substance as the seven divisions of *bodhi* (*bojjhaṅga*), which are arranged as follows: (1) mindfulness (*sati*)[1] of all that is morally desirable, (2) discrimination of things (*dhamma-vichaya*) good and bad, (3) exertion (*viriya*), (4) joy (*pīti*) in what one has attained, (5) satisfaction (*pasaddhi*), (6) contemplation (*samādhi*), and (7) equanimity (*upekkhā*). Nearly the same thing is expressed in the eight kinds of the great man's thoughts (*mahāpurisa-vitakka*). A similar kind of meditation, or release of the mind, is extended to all beings, in order, firstly, to prepare in mind, and then to practise, the virtues of love (*mettā*), compassion (*karuṇā*), joy (*muditā*), and equanimity (*upekkhā*).[2]

The close association of these spiritual exercises and moral actions is shown in the personal example of the Buddha himself. He was a mystic visionary, but he lived nearly fifty years of his ministry in constant activities. He passed sometimes whole nights under forest trees, conversing with spirits or angels, as it is told; he lived often in complete seclusion among the woods of Ichchhānaṅgala or elsewhere for weeks and months. But more significant were his activities as the teacher and benefactor of mankind. Visiting of sick people, itinerating in the regions attacked by pestilence, mediation between two combatants, consolation of mothers afflicted by loss of children—these and other things are frequently told in the Pāli books. His care for health caused him to instruct his disciples in the number of meals to be taken, or in the method of bathing, and even in the minutiæ of using the toothpick. Though he himself did not go outside India, some of his disciples emulated his missionary spirit and went to the west and north-west, beyond the Indus. Thus, the two sides of training—self-culture and actions—found a perfect union in the person of the Buddha, but it was inevitable that there should exist differences in the character and tendency among his disciples, as described in the *Aṅguttara* and shown in the

[1] Ten kinds of mindfulness are again enumerated, of religious and moral virtues; see *Aṅg.* (*PTS* ed. i. 42).

[2] These are the *appamāṇa-cheto-vimutti*; see Rhys Davids, *Dialogues of the Buddha*, i. 313; K. E. Neumann, *Gotamo Buddho's Reden*, Leipzig, 1896–1902, *passim*.

poems ascribed to them.[1] The consequence is easy to see. It resulted in the division of the *Saṅgha* into the conservative and liberal sections, and finally in the contrast between the ideals of *arhat*-ship and *bodhisattva*-ship. Though these divisions were not precisely the direct results of the different characters, we may roughly say that the former represents the tendency to self-seclusion, while the latter is daring enough to emphasize the sanctity of lay morality. Further, a similar difference arose among the Mahāyānists themselves, the more quietistic morality being represented by the adorers of the *Prajñā-pāramitā*, and the activities for the salvation of all fellow-beings being represented by the followers of the *Saddharmapuṇḍarīka*.[2]

LITERATURE.—This is fully given in the footnotes.

M. ANESAKI.

ETHICS AND MORALITY (Celtic).

—I. *GAULS*.—Among the classical authors there is a great divergence of opinion regarding the moral status of the Celts; and, inasmuch as their qualities and defects have been recorded by their enemies, the Romans, whose sympathies were naturally alienated from them, one must be careful not to attach too much importance to naive generalizations founded frequently on superficial observation. Thus, while Cæsar (*de Bell. Gall.* VI. xvi. 1) and Livy (V. xlvi. 3) regard the religious note as the dominant feature of the character of the Celts, Cicero (*pro Fonteio*, xii.) asserts that they lacked all sentiment of piety and justice; and, though most authors attribute to them a simple and frank nature, Polybius (ii. 7) calls them perfidious. Nevertheless, from the points in which the classical writers concur, we can arrive at some idea of the moral character of the primitive Celts. In general the portrait is far from attractive (Dottin, *Manuel pour servir à l'étude de l'antiquité celtique*, Paris, 1906, p. 117), and some modern authors contend that this is due to their religion, which, according to them, had very little influence in regulating moral conduct (Joyce, *Soc. Hist. of Anc. Ireland*, London, 1903, i. 220). While this may be true to a certain degree, it is nevertheless a fact that their firm belief in a hereafter had a marked influence on their moral nature, inspiring them to acts of rare bravery in which their scorn for death is manifest (Cæsar, VI. xiv. 5; Mela, III. ii. 19). Coupled with this, an aptitude for work and a cleanliness exceptional among barbarous peoples tended to elevate them above the level at which one would naturally be inclined to place them.

A few traits of the character of the Celts may be indicated by way of preface, before going into detail.

Though they were easy to be convinced, and often suffered thereby at the hands of ambitious individuals (Strabo, II. iv. 2; Cæsar, VII. xxx. 3, IV. v. 3: 'incertis rumoribus serviant'), they did not lack the power of reasoning, or refuse to listen to the language of prudence (Cæsar, VII. xiv.; Tac. *Hist.* iv. 69; Strabo, *loc. cit.* and IV. i. 5). They were eager to learn, and sought information concerning other nations (Strabo, *loc. cit.*). Turbulent in spirit, and having a marked aversion for order and regularity, they loved war for its own sake, the state of war being so permanent among them that scarcely a year passed without some injury being washed away in blood (Cæsar, VI. xv. 1). Inconstant, they readily abandoned their ideas, morals, customs, all except their character, and became so thoroughly Romanized that the emperor Claudius, in supporting their claim to be represented in the senate, was able to state that they were 'iam moribus, artibus, affinitatibus nostris mixti' (Tac. *Ann.* xi. 24). In appearance they were usually tall (Diod. v. xxviii. 1; Strabo, IV. iv. 3; Ammian. XV. xii. 1), with soft white skin

[2] Very noteworthy are the descriptions in this book of a Sage (or a group of teachers), to appear in the latter days to bring salvation, and of the persecutions he would endure; it contains also the assurance given by the Buddha as to his mission and its effect (*SBE* xxi. chs. xii., xiv., xix., xx.). On the last point there are deviations from the present Skr. text in Kumārajīva's tr., which led to important consequences in China and Japan.

(Diod. *loc. cit.*; Ammian. *loc. cit.*: 'candidi paene omnes') and blond hair (Diod. *loc. cit.*; Ammian. *loc. cit.*: 'rutili'), and possessed a fierce look (Diod. v. xxxi. 1; Ammian. *loc. cit.* 'luminum torvitate terribiles'). They loved beautiful men, which explains in part the sway that Vercingetorix exerted over them. Even their enemies are obliged to testify to the simplicity and frankness of their character, free from all malice (Strabo, IV. iv. 2; *de Bell. Afric.* lxxiii.). Upright and incapable of evil, deception and trickery were repugnant to them (Strabo, *loc. cit.*). Their superabundance of life, love of novelty, and adventurous humour explain that continual state of agitation and excitement in which they lived (Cæsar, III. x. 3). They disputed and fought on the slightest provocation at repasts. In a word, theirs was a country of duels and civil wars (Diod. v. xxviii. 5; Ammian. XV. xii. 1: 'avidi iurgiorum et sublatius insolescentes'). As a natural consequence of this, they were easily discouraged and dejected, and it was usually more advantageous to arouse them by illusions than by appealing to the sentiment of duty (Cæsar, VII. xx., esp. 12; Strabo, IV. iv. 5), although they were quick to recover from any state of demoralization into which they might have fallen (Livy, XXII. ii.). Among the Romans they were celebrated for their love of revolutions, rapid decisions, and continual changes (Cæsar, III. viii. 3, IV. v. 3, VII. xx. 1, etc.; Strabo, IV. iv. 2). In addition to the art of war, according to Cato (*Orig.* ii.), they cultivated with great talent the art of speaking readily, and they had a natural gift for eloquence (Polyb. II. xvii.; Diod. v. xxxi.). Though Cæsar states (VII. xxii. 1) that the Gauls possessed to a high degree the power of imitation, they stubbornly refused to profit by the experience of their defeats. They were proud even in defeat, and showed no inclination to change their manner of fighting (Strabo, IV. iv. 5; Cæsar, I. xlii. 3, etc., xiv. 7). Finally, they gave special attention to the care of the body (Ammian. XV. xii.). According to Pliny (*HN* XII. xxvi. 45, XXVIII. li.), soap made of tallow or ashes was an invention of the Gauls; while certain tribes, such as the Valeriana Celtica, were in the habit of using a kind of perfume. Various classical authors call attention to the fact that the Celto-Iberians preserved urine in reservoirs for washing their bodies and cleansing their teeth (Diod. v. xxxiii.; Strabo III. iv. 16; Catullus, xxxix. 17–19), and Pliny (XXII. lxxxii.) notes also that the Celtic women used beer-foam as a cosmetic. The men usually wore long moustaches (Diod. v. xxviii. 3), and were fastidious in the care of the hair (Ammian. XV. xii. 2). They were often reproached for their love of ornaments, exhibiting a particular preference for purple or golden garments, necklaces and bracelets of bright colours (Diod. v. xxx. 1; Strabo, IV. v. 5; Appian, *Celtica*, 12; Propert. v. x. 40; Florus, I. xx. 2); and Vergil (*Aen.* viii. 659–661) traces a portrait—very poetical, it is unnecessary to state—of 'the golden-haired Celt, wearing a golden tunic, covered with a mantle with stripes of a thousand colours, a necklace of gold surrounding a neck of milky whiteness.'

With this insight into their character, we can, with the aid of the Irish texts, arrive at some definite idea of the condition of their morals.

1. Marriage and immorality.—In regard to marriage, it suffices to say that the bride was purchased by her future husband. As women were usually married only once, the purchase-price (Old Ir. *coibche*) was received in entirety by the father (*Anc. Laws of Ireland*, Rolls Series, London, 1869–73, iii. 314), and in subsequent marriages (until the twenty-first) the *coibche* was divided between the father and the daughter (*ib.* ii. 346). Apparently the *jus primæ noctis* existed among the early Celts, if we may infer that the right exercised by Conchobar, king of Ulster, is an indication of the prevalence of that custom in early times.

In the *Book of Leinster* (p. 106, col. 2) we read that 'in Ulster, every man who had a daughter to marry took her to pass the first night with Conchobar, in order that she might have that king as a husband (*cech fer di Ultaib doberad ingin macdacht a-feiss la Conchobar in-chét aidchi, com-bad he a-cétmunter*)'; and the despotic king does not hesitate to exercise this right over Emer, the bride of Cúchulainn (Windisch, *Ir. Texte*, Leipzig, 1880, i. 590; d'Arbois de Jubainville, *Famille celtique*, Paris, 1905, p. 125, etc.). That this custom was in vogue in Scotland, we shall see later.

As for the marriage itself, the contract was not binding, and later on Irish canonical law protested in vain against the ease with which marriages were dissolved (Wasserschleben, *Die ir. Kanonensammlung*[2], Leipzig, 1885, p. 185 f.). That divorce was far from being unusual among the Celts is obvious from the fact that the Ancient Laws of Ireland permitted divorce by mutual consent even when the woman was a legitimate wife (*cétmuinter* [ii. 362, line 21 f.]), for which the technical expression is *im toga scartha*, or 'by choice of separation.' Though the *cétmuinter* was considered the *selb*, or property, of her husband, this did not prevent her from having certain very important rights, such, for example, as that of seizing the property intended to be used by her husband towards the purchase of another woman. The *Senchus Mór* is very explicit in that respect:

'If he gives the purchase-price for another woman,' state the Laws, 'even though it should be from his own property, that purchase-price is the property of his legitimate wife, if she acquits herself of her conjugal duties' (ii. 382).

But, with these exceptions, adultery was otherwise unrestrained; for, besides his legitimate wife, the husband was permitted by law to keep in the domicile one or several concubines, so that Diarmaid mac Fergusa, supreme king of Ireland, had four wives, two of whom had the rank of queens (d'Arbois de Jubainville, *Cours de litt. celt.*, Paris, 1883–1902, vii. 210 ff.). That this institution existed from early times among the Celts is obvious from the statement of Cæsar (VI. xix. 3) that after the death of an important personage, if his wives (*uxores*) were suspected of having brought it about, they were put to torture and finally burned. These were without doubt his concubines, for the relatives of his legitimate wife, who was invariably of high birth, would have avenged her death (d'Arbois de Jubainville, *Famille celt.* 104).

In Ireland the concubine was the rival of the legitimate wife, and was called *adaltrach*; she must not be confused with the *cétmuinter ar muin araile* ('wife on the neck of the other'), or second legitimate wife, whom the husband was permitted to take if it chanced that the first legitimate wife was afflicted with an incurable disease (*cró-lige*, *i.e.* on her death-bed). In that case the husband could send his sick wife back to her relatives; but, if she had none, he was obliged to keep her in his home (*Anc. Laws*, v. 144). However, the condition of a legitimate wife having another legitimate wife as a rival was naturally rare, while that of having a concubine as a rival was most frequent. With the latter the husband usually contracted an annual marriage, lasting from the 1st of May to the 1st of May (*ib.* ii. 390). The concubine was of a stage of society much lower in rank than that of her husband, usually a slave.

An example of such a marriage is that of Derdriu and Conchobar, after the murder of the sons of Usnech (Windisch, *Ir. Texte*, i. 81 f.). St. Bridget was the daughter of Dubthach and his *cumal*, or slave, Broicsech (Stokes, *Three Middle Irish Homilies*, Calcutta, 1877, p. 52).

That the legitimate wife had superior rights over the concubine is evident from the honour-price (*enechlann* or *lóg eneich*) assessed in case of moral injury, that of the *cétmuinter* being twice as great as that of the *adaltrach* (*Anc. Laws*, ii. 404). Furthermore, the law permitted her to strike the concubine until blood flowed, without the latter being entitled to demand any reparation for the injury (*ib.* v. 142). This explains why Mugain, the legitimate wife of Conchobar, makes no protest against the presence of Derdriu; while Emer, the wife of the hero Cúchulainn, while tolerating his relations with his concubine, Ethne Ingube, refuses to submit to the presence of his *cétmuinter ar muin araile*, the goddess Fand (Windisch, i. 206 f., 222 ff.). The attitude of the legitimate wife in these cases may have been influenced somewhat by the fact that the husband had the right of life and death over his wives, as well as his concubines (Dottin, 136; see also *ERE* iii. 813[b]).

2. Adultery, incest, polyandry, etc.—Strabo says (IV. v. 4) that it was considered quite natural in Ireland for men to have relations with wives of others, with their mothers or sisters, while St. Jerome goes so far as to state that in Ireland the institution of marriage was entirely unknown:

'Scotorum natio uxores proprias non habet; nulla apud eos coniux propria est, sed, ut cuique libitum fuerit, pecudum more lasciviunt' (*adv. Iovin.* ii. 7 [*PL* xxiii. 309]).

In this, of course, we see a reference to the

system of polygamy or concubinage discussed above. While adultery on the part of the man was very common, there are very few examples of legitimate wives failing to observe fidelity to their husbands. We have, to be sure, the legend of Medb, queen of Connaught, and the celebrated hero Fergus—an account that was known without doubt by Strabo (*Leabhar na hUidhre*, 65). Notwithstanding this, the Celtic women were famed among the ancients for their fidelity (d'Arbois de Jubainville, 'La Légende et les femmes,' etc., in *RCel* vii. [1886] 129–144).

Polybius (XXII. xxi.) relates the story of Chiomara, the wife of the Celtic king Ortiagon, who brought to her husband the head of the Roman centurion who had violated her. When the king said to her, 'Woman, fidelity is a beautiful thing,' she answered, 'Yes, but there is something still more beautiful; it is that there is only one man alive to whom I have belonged.' Derdriu kills herself when the king of Ulster, after having passed a year with her, wishes to give her up to the murderer of her husband. For the beautiful story of Camma, wife of the Tetrarch Sinatos, see Plutarch, *Amor.* xxii.

As for incest, we have in Ireland the example of Clothru, the daughter of a king, who, after having been the wife of her three brothers, marries her own son, Lugaid, supreme king of Ireland (*Book of Leinster*, 23, col. 2). It is permissible to conclude from a statement of Cæsar that, at an early date in Ireland, it was not uncommon for brothers to have wives in common—'uxores habent deni duodenique inter se communes et maxime fratres cum fratribus' (V. xiv. 4); and this custom existed also in Caledonia (Dio Cass. lxxvi. 12; cf. lxii. 6). The accusation of pæderasty, borne against the Gauls by several classical authors whose testimony is worthy of very serious consideration, is apparently without foundation (Aristotle, *Pol.* II. vi.; Diod. V. xxxii.; Strabo, IV. iv. 6; Athenæus, xiii. 80; cf. also d'Arbois de Jubainville, *op. cit.* 187–199).

3. Prostitution.—In spite of the ease with which the marriage vows could be violated or broken, prostitution did not fail to flourish. The name given by the *Senchus Mór* to the prostitute is *baitsech* (*Anc. Laws*, i. 190, 236), or *merdrech* (*meretrix*), or 'female of grove and bush' (*Anc. Laws of Wales*, London, 1841, p. 42). A curious fact in ancient Irish law is that the head of the family, to whom the purchase-price of the wife was paid, had also a right to a share in the earnings of the prostitute (*cuit in apthaib baitsaide* [*Anc. Laws of Ireland*, iii. 314]; *cuit a n-abad baidside* [iv. 62]). If she had any children, she and her family were obliged to support them (*do fastad cirt ocus dligid* [v. 452]). If she attempted to force any man to assume charge of the child through obligation of paternity, the *Senchus Mór* gave him the power to refuse (i. 192).

If the minute distinctions made in the Ancient Laws in regard to rape are any criterion, we must conclude that this form of seizure was not infrequently practised in ancient Ireland. The *Senchus Mór* distinguishes three kinds of irregular union between man and woman. The first is called *lánamnas foxail*, or 'union by elopement,' an open and violent seizure done with the consent of the woman against the wishes of the family. The woman in this case is called *ben fuataig*, or 'woman of elopement' (*Anc. Laws*, ii. 356, 400, 402). The second, entitled *lánamnas tothla i tdide*, is a secret union formed with the assent of the woman but unknown to her family. She is then called *ben tdide*, or 'woman of theft' (ii. 356, 404, iii. 38). And, finally, a union by violence without the consent of the woman or family is called *lánamnas éicne no sleithe*, i.e. 'union by force,' in which case she bears the name of *ben forcuir*, or 'woman of violence' (ii. 356, 404).

4. Status of women.—From what we can glean from the different authorities, the condition of women among the ancient Celts was quite miserable (Dottin, 138). Seized with the passion of war, the Gauls often abandoned the cultivation of the soil to the women ('feminæ res domesticas agrorumque culturas administrant, ipsi armis et rapinis serviunt' [Justin, xliv. 3]; cf. also Sil. Ital. iii. 344). Later on, however, under the domination of the Romans, the men developed a great interest in agriculture (Strabo, IV. i. 2). Although there are instances of women governing tribes in the British Isles (such as Cartismandua, who was queen of the Brigantes c. A.D. 50 [Tac. *Ann.* xii. 36]), the statement of Aristotle (*Pol.* II. vi. 6), that the Celts were free from the domination of women, holds true for the Continent. That they were not without influence, however, is confirmed by Plutarch (*de Mul. Virtut.* vi.), who says that they were admitted into the councils of war as arbiters of the differences between tribes; and Hannibal agreed with his Celtic allies to let all difficulties between them be judged by the women of the Celts. The women of the Gauls were beautiful and courageous (Diod. V. xxxii. 7; Athenæus, xiii. 80); they encouraged their husbands to fight, and accompanied them on the field of battle (Polyb. V. lxxviii. 1; Tac. *Agricola*, xv., *Ann.* xiv. 34, 36); at times they even displayed greater physical strength than their husbands (Ammian. XV. xii.); and, according to Strabo, they were good mothers and could do more work than the men (IV. i. 2, iv. 3).

5. Cruelty.—The cruelty of the Gauls in war terrified the Greeks and Romans (Dottin, 114). According to their national custom, they cut off the heads of the dead and wounded on the battle-field, to offer them up afterwards to the souls of their ancestors or to the gods (Jullian, *Recherches sur la relig. gaul.*, Bordeaux, 1903, p. 82). Oftentimes they sacrificed captives, and they are also accused of having massacred old men and little children (Diod. V. xxxii.; Pausan. X. xxii. 3 f.; Athenæus, iv. 51). The heads of dead enemies were sometimes attached to the necks of their horses or fastened on the end of their lances (Livy, V. xxvi. 11; Diod. V. xxix., XIV. cxv.), while at Entremont, near Aix, trophies were raised with heads exposed on them (Reinach, *Catalogue sommaire du Musée des antiquités nationales*, Paris, 1889, p. 40). They displayed with pride the heads of their chiefs or other illustrious personages, which they preserved in a preparation of oil (Strabo, IV. iv. 5; Diod. V. xxix.). In battle their attacks were characterized by a savage fury (Pausan. X. xxi. 3; Florus, II. iv.; Dion. Hal. xiv. 10, 17).

Probably the most striking example of their savagery is in one of the early Irish sagas, the *Scél mucci Mic Dáthó*, or 'History of the Pig of Mac Dáthó.' Conall Cernach, the foster-brother of the great hero Cúchulainn, replies to the opposing hero Cét in the following manner: 'I swear by the oath that my people swear: since the day when I first took a javelin in my hand, it did not often happen to me that I was without the head of a Connaught-man under my head as a pillow when I slept. Not a day or night passed without that I killed some enemy (. . . *nach menic ro bá cen chend Connachtaig fó-m-chind oc cotlud, ocus cen guine duine cech óen lá ocus cech óen aidchi*).' When Cét regrets that Ánlúan is not present to fight with Conall, the latter replies: 'He is here, however,' and 'drawing from his girdle the head of Ánlúan, he threw it upon the bosom of Cét with such force that a stream of blood burst upon his lips (*atá imorro, ar Conall ic tabairt chind Ánlúain as-sa chriss, ocus no-s-leice do Chét ar a bruinni, corroimid a loim fola for a béolu*' [Windisch, *Ir. Texte*, i. 104, lines 15–23]).

However convincing these accounts may appear, it is, nevertheless, true that the Gauls were no more cruel or savage than other barbarous nations, although they inspired the Greeks and Romans with such great fear that the classical authorities do not hesitate to attribute to them all possible crimes and vices (Jullian, *Hist. de la Gaule*, Paris, 1907, i. 332, etc.). Diodorus accuses them of violating tombs (XXII. xii.); Pausanias says that they did not bury their dead, and outraged and massacred women and children (X. xxi. 1, 7); Livy asserts that they continually used false weights (X. xlviii. 9); while Plutarch states that the only right known to them was that of strength and of the sword (*Camill.* xvii.). Such accusations are only what we should expect from a people in constant dread of a powerful enemy.

6. Human sacrifice.—Probably the most serious accusation of cruelty borne against the Gauls by classical authorities is that they practised human

sacrifice (Lucan, *Pharsal.* i. 443–445; Diod. v. xxxii. 6; Livy, XXXVIII. xlvii.). Cæsar (VI. xvi. 2 f.) states that those of the Gauls who were afflicted with grave diseases either sacrificed human victims or made a vow to do so, for they believed that, if a human life were not given for a human life, the wrath of the gods would not be appeased. He adds that they were accustomed to construct immense wooden statues, which they filled with living beings and burned in honour of their gods ('quorum contexta viminibus membra vivis hominibus complent; quibus succensis, circumventi flamma exanimantur homines' [VI. xvi. 4]). Cicero, who was always very bitter against the Gauls, exclaims in his defence of Fonteius: 'They have preserved to this day the barbarous custom of sacrificing human beings. What can be the good faith of a people who think they can appease Divine wrath by crime and human blood' (*pro Fonteio*, xii.)? This rite was practised mainly in war; and before the battle, if the omens were unfavourable, they would even kill their wives and children in order to assure themselves of the victory (Justin, xxvi. 2). If they were victorious, they sacrificed their captives as a thank-offering to the gods (Diod. XXII. ix.; Pausan. X. xxiii. 6). Dionysius of Halicarnassus, who finished his *Roman Antiquities* (i. 38) about 8 B.C., maintained that human sacrifice was still practised among the Gauls, although it was prohibited by the Romans as early as 97 B.C. Under Tiberius (A.D. 14–37) this rite was suppressed (d'Arbois de Jubainville, *Cours*, ii. 376–381), although it survived in certain parts of Britain as late as A.D. 77 (Pliny, *HN* XXX. iv. 13). According to Diodorus (V. xxxii.), the Gauls kept criminals for five years before burning them on enormous pyres. That the belief in the immortality of the soul was one of the prime causes of these sacrifices is supported by the statement of Pomponius Mela (III. ii. 19) that relatives of the dead person often threw themselves into the funeral pyre, in the hope of living with him in the hereafter. The article of the *Dinnsenchus*, written about the 6th cent. A.D., contains an account of the 'plain of prostrations,' showing that the bloody practice of human sacrifice was continued in Ireland probably at a very late date; and the author of this treatise states that at some period previous to his time the people were accustomed to sacrifice their firstborn to an idol called *Cromm crúach* ('bloody crescent') which stood on this field (*Book of Leinster*, p. 213, col. 2).

With human sacrifice is closely allied the love of suicide, which, according to the belief of the Gauls, was a kind of personal and spontaneous sacrifice to the gods. Some of the finest examples of self-sacrifice in antiquity occurred among the Celts. Brennus, believing that he was the cause of the misfortunes of his soldiers, committed suicide in order to appease the wrath of the enemy's god Apollo (Diod. XXII. ix.; Pausan. X. xxiii. 12; Jullian, *Hist.* ii. 359). Livy (XXXVIII. xxi.) states that the Gauls scorned their wounds, enlarging them in order to make them more apparent.

7. Courage.—Among the more important doctrines taught by the Druids (*q.v.*) were the scorn of death and the obligation of courage (Cæsar, VI. xiv. 5; Mela, III. ii. 19). In other words, the Gauls made their theology accord with their temperament. Their very great courage, so highly lauded in antiquity (Polyb. II. xxx. 4, xxxiii. 2; Dio Cass. xii. 1. 2 f.; Livy, XXXVIII. xvii. 7; Plut. *Camill.* xli.), was rather a sort of fury (*rabies Gallica*) than a form of will. They considered it shameful to be attacked first (Plut. *loc. cit.*). On the battlefield, they were filled with anger, confidence, and pride, as they cast defiance against the enemy (Diod. V. xxix. 3); but the resistance of an adversary quickly dispelled their confidence (Pausan. X. xxiii. 12), and not infrequently they were victims of panic (*ib.*; Sil. Ital. xv. 719: 'patrius genti pavor'). It was their great desire to enjoy the esteem of posterity—'posteris prodi pulcherrimum' (Cæsar, VII. lxxvii. 13). Furthermore, the brave were recipients of many tokens of esteem from the tribe. For them were reserved the finest pieces of meat at the feasts, and the honour of carving was always left for the great hero (cf. the *Hist. of the Pig of Mac-Dáthó*, mentioned above, and the *Feast of Bricriu*; d'Arbois de Jubainville, *Cours*, v. 71–78, 86–146, 35–47).

8. Intemperance.—The Gauls were celebrated for their intemperance (Diod. V. xxvi. 3; Ammian. XV. xii. 4; Posidon. iv. 36; Cic. *pro Fonteio*); and, according to Pliny (XII. ii. 5), it was the love of wine that caused them to make their incursions into Italy. The southern heat, combined with their excessive activity, aroused in them an irresistible desire to drink alcoholic liquors (Polyb. II. xix. 4; Livy, XXXIV. xlvii. 5: 'minime patientia sitis'). Cicero, with his usual acerbity, says that wine mixed with water was regarded as a poison by the Gauls (*pro Fonteio*, xv.). They delighted in the invention of liquors of all kinds ('ad vini similitudinem multiplices potus' [Ammian. XV. xii. 4]). Although they prepared a beer called *corma*, they preferred the wines of the south, which they drank until they were insane (Ammian. *loc. cit.*; Diod. V. xxvi.); and it was this excessive indulgence in alcohol that finally undermined their vitality and rendered them weaker than women ('postrema minus quam feminarum' [Livy, X. xxviii.]; Florus, II. iv. 1).

9. Avarice and cupidity.—The thirst of the Gauls for booty was insatiable (Plut. *Pyrrhus*, xxvi.; Livy, XXI. xx. 8). They violated tombs in order to secure gold (Diod. XXII. xii.; Plut. *loc. cit.*); they did not even hesitate to rob the most sacred temples (Pausan. X. xxii. 6); they were so venal that they would become mercenaries of any purchaser, and were willing to engage in long expeditions merely for the sake of pillage (Livy, *loc. cit.*; Justin, xxv. 2; Diod. V. xxvii.; Polyb. II. xxii.). Yet, in spite of their love of gold, they amassed great quantities of it in their own temples as an offering to the gods, and no one dared to touch it (Diod. *loc. cit.*).

10. Justice.—While Cicero assures us that the Gauls were entirely lacking in the sentiment of justice (*pro Fonteio*, xii.), Cæsar (VI. xxiv. 3), on the contrary, states that certain tribes were renowned for justice and moderation; and Strabo extols their equity (IV. iv. 2). Tradition relates that the Senones marched against Rome to avenge the right of the people, which had been violated by certain patricians (Livy, V. xxxvi.; Diod. XIV. cxiii.; Plut. *Camill.* xvii.).

11. Hospitality.—Though indiscreet at times, the Gauls practised all the laws of hospitality (Diod. V. xxviii.; Caesar, IV. v. 2); and, even in dealing with the most warlike tribes, Rome had no complaint to make of the reception accorded her ambassadors (Livy, XXXIX. lv., XLIII. v., etc.). Anxious to learn about other people, their homes were always open to bards and strangers (Diod. *loc. cit.*).

12. Piety.—At first the conquered Greeks accused the Gauls of lacking piety, making of Brennus the type *par excellence* of sacrilege (Pausan. X. xxi.; Diod. XXII. ix. 4); but later, when they began to study their enemies, they not only admitted that they were religious, but even declared them to be the most pious of men (Justin, XXIV. iv. 3; Livy, V. xlvi. 3; Dion. Hal. vii. 70). Cæsar (VI. xvi. 1) calls them a people much addicted to religious practices, for which they are praised by classical

authors (Livy, V. xxxvi. 3; Arrian, xxxiv.; Dion. Hal. vii. 70). Religious scruples, for example, prevented Dumnorix from accompanying Cæsar to Britain (Cæsar, V. vi. 3).

13. **Obedience and devotion.**—Especially before a common enemy, the Gauls showed absolute obedience to their chiefs, whom they loved as one would a father (Fustel de Coulanges, *La Gaule romaine*[2], Paris, 1891, pp. 35–44); and the bonds that unite the chief to his followers are described by Polybius (II. xvii.) as ἑταιρεία, *i.e.* fellowship. Cæsar did not fail to admire the devotion of the *Soldurii* to their chief (III. xxii.). These men share the good or bad fortune of the one to whom they have given themselves; and, if he dies, 'there is not an example of one in this case who would wish to remain alive.' It is to their generous and sympathetic nature that this sublime devotion is due. Thus, two sons of the Galatian king Adiatorix vie with one another as to which shall die with their father (Strabo, XII. iii. 35). Prompt in responding to all appeals for help, they rush to the defence of their neighbours (Strabo, IV. iv. 2); even an army making an invasion into Italy stops at the Alps to free a tribe besieged by another (Justin, xliii. 4), while their haste to respond to a request which excites their sympathy often leads them into war. The chief, on his part, never suffered his followers to be tormented or oppressed; if he did so, he lost his authority among his people (Cæsar, VI. xi. 4).

14. **Pride.**—Though the Gauls were characterized by their devotion and obedience, they had little regard for discipline, owing principally to their excessive vanity (Diod. XXIII. xxi.; Polyb. II. xxi. 2–5, V. lxxviii. 1–3; Arrian, *Anab.* I. iv. 6). It was this pride that rendered them incapable of profiting by experience; for, even though defeated, they were too haughty to admit their mistake and change their manner of fighting (Strabo, IV. iv. 5; Cæsar, I. xiii. 3–7, xiv. 7). They defied the elements, and believed themselves dishonoured if they sought to avoid the fall of a wall (Ælian, *Var. Hist.* xii. 23; Stobæus, *Anthol.* xliv. 41). Their vanity led them to boast (Strabo, IV. iv. 5; Diod. V. xxix.), and before battle the chiefs lauded the exploits of their ancestors and their people, and cast insults at the enemy (Sil. Ital. iv. 279; Cæsar, VII. xxix. 6, xxx. 1).

15. **Perfidy.**—Though the Gauls were inconstant, changeable, and not inclined to reflexion (Cæsar, IV. v. 1; Strabo, IV. iv. 2; Polyb. II. xxxii. 8, xxi. 2–5; Sil. Ital. iv. 49 f.), few of the classical authors have reproached them with perfidy. This accusation has been brought against them only in an informal way (Polyb. II. vii.; Cic. *pro Fonteio*). Nevertheless, as we might expect, ruse and treachery flourished to some extent, especially in times of war. It is true that we have such traitors as Divitiacus and Dumnorix, while some of the acts of Vercingetorix are certainly not above suspicion; yet, with few exceptions, they were so open and frank that they did not even use strategy, a method of warfare so honoured among the Greeks (Jullian, *Hist.* i. 346). Their constant happiness and the levity of their humour seem to have been a proof against those worse defects of character (Livy XXI. xx. 3; Cæsar, IV. v. 2; Diod. V. xxviii.); and this gaiety, which so frequently manifested itself in face of death, seems to have been aroused in part by their firm belief in the immortality of the soul as well as by the pique of personal honour.

16. **Anthropophagy.**—From the evidence we have from different authors, there is little doubt that anthropophagy prevailed to a certain extent among the primitive Celts. While we may have reason to refuse to accept the statement of St. Jerome (*adv. Iovin.* ii. 7) that the Atticoti of Britain relished certain parts of the bodies of shepherds and women, Cæsar (VII. lxxvii. 12) makes the formal accusation that the Gauls, at the time of the invasion of the Cimbri and the Teutons, ate the bodies of those amongst them whom age had rendered useless for war. Pausanias (X. xxii. 3) states that the Celtic invaders of Greece often ate the flesh and drank the blood of little children; and Strabo (IV. v. 4) maintains that certain tribes of Ireland had a special predilection for the bodies of their fathers.

17. **Frugality.**—It is obvious, from lack of evidence to the contrary, that Polybius (XII. iv.) is correct when he states that at least the Cisalpine Gauls were very frugal. Their principal food seems to have been hog-meat.

18. **Murder.**—It is worth noting that among the Gauls the penalty for the murder of a stranger was greater than for that of a fellow-citizen (Stob. *Anthol.* xliv. 41); in the first case, it was death; in the second, exile. From the scanty information found in the classical authors, it is impossible to state how frequently murder was resorted to among the primitive Gauls (see, further, below, II. § 13, III. § 15, IV. § 4).

19. **Theft.**—Although the Greeks accused the Celtic invaders of all kinds of theft and brigandage (Jullian, *Hist.* i. 337 f.), it is highly improbable that this was a common practice in times of peace, if we believe what the same authors say of the frankness and simplicity of their character. Furthermore, the punishment for theft and brigandage was extremely severe—the criminals were burned alive (Cæsar, VI. xvi. 5). If a Gaul concealed a part of the booty of war, or stole some object from those deposited in sacred places, he was put to death after undergoing severe torture (Cæsar, VI. xvii. 5). The severity of these punishments must have tended to curb any desire of individual Gauls to appropriate to themselves the property of others (cf. also above, § 9).

20. **Punishments.**—It is important to note here that, whereas in later times the *éric*, or compensation for murder, and the punishment of thieves and other criminals, were definitely established by the legal statutes, according to the rank of the person killed, or according to the value of the thing stolen, in earlier history it was left to the Druids to decide in such cases and to determine the punishment (d'Arbois de Jubainville, *Cours*, i. 165–189). As they were reputed to be the most just of men, the individual was obliged to accept their sentence; if he did not, he was forbidden to take part in the sacrifices (Dottin, 281). In order not to receive any injury from their contact, the society of those suffering such excommunication was carefully avoided—in other words, the criminal became an outcast from his tribe, so that, if he had any complaint to make, no justice was rendered him.

II. *IRISH.*—Giraldus Cambrensis, who completed his *Topography of Ireland* about 1187, presents a moral portrait of the Irish of that time which is far from attractive (*Opera*, ed. Dimock, London, 1867, v. 19, etc.). He asserts, for example, that the Irish are 'indeed a most filthy race, a race sunk in vice, a race more ignorant than all other nations of the first principles of the Faith' (xix.), and yet, when not influenced by religious prejudices, he is a very valuable source, inasmuch as he was a contemporary of an obscure period of Irish history.

According to this authority, the Irish are not only inconstant, but perfidious. 'This race is inconstant, changeable, wily, and cunning. It is an unstable race, stable only in its instability, faithful only in its unfaithfulness' (v. 21, p. 166). The following sentence is characteristic: 'Their arts are, therefore, more to be feared than their arms, their friendship than their fire-brands, . . . their malignity than their martial spirit, their treachery than their open attacks, their specious friendship than their spiteful enmity' (*ib.*). Through this oratory,

however condemning it may be, we can readily see that, in the main, Irish character of the 12th cent. was practically the same as that of the early Celt.

1. Marriage, immorality, etc.—On this subject, Giraldus is as severe as St. Jerome, for he asserts that the Irish 'do not contract marriages or shun incestuous connexions' (*ib.* v. 19, p. 164). 'Nay, what is more detestable,' he continues, 'in many parts of Ireland, brothers (I will not say marry) seduce and debauch the wives of their deceased brothers, and have incestuous intercourse with them' (p. 164 f.). Here, without doubt, the author is attacking the community of women which apparently continued to exist (see above, I. § 2). Elsewhere (v. 35, p. 181), he speaks of the Irish as 'gente adultera, gente incesta, gente illegitime nata et copulata, gente exlege.' Notwithstanding these statements, it is manifest that marriage continued to exist in Ireland in much the same form as in primitive times, from the following remark in the *Book of Leinster* (190, col. 27; O'Curry, *MS Mat.*, Dublin, 1861, p. 15): 'It is from this circumstance that in Erin it is the men that purchase the wives always: while it is the husbands that are purchased in all the rest of the world.' We have already seen the attitude of the *Senchus Mór* towards divorce. As for concubinage, suffice it to say that it continued unrestricted, especially among the higher classes (Joyce, ii. 12 f.). Until the reforms effected by Adamnán at the end of the 7th cent., female slaves were treated with the coarsest brutality (Stokes, *Tripartite Life*, London, 1887, Introd. p. xxii). Polygamy persisted even in Christian times. Dermot, who was king of Ireland from 544 to 565, had two queens (Joyce, ii. 7); and, a century later, Nuada the Sage, king of Leinster, also had two wives (*da banchéle* [Stokes, *Lives of Saints*, Oxford, 1890, p. 237]). Adultery, which was probably not very uncommon among the Irish at a later period (cf. Giraldus' account of the wife of Tiernan O'Rourke, king of Breifny, A.D. 1152, in his *Expugnatio Hibernica*, i. 225), was very severely punished. Cormac's *Glossary* (p. 59) derives *drúth*, 'prostitute,' from *dír*, 'right,' and *aod*, 'fire,' *i.e.* 'as much as to say to burn her were right.' In the story of Corc Mac Lugdach in the *Book of Leinster*, it is stated that 'it was the custom at first to burn any woman who committed lust (*dognid bais*) in violation of her compact' (*RCel* ii. [1873–75] 91). In the *Fotha Çatha Cnucha*, 'Cause of the Battle of Cnucha,' Tadg, the Druid of Cond Cétchathach (king of Ireland from A.D. 122 to 157), wishes to have his daughter, Murni, burned for having eloped with Cumall (*ib.* p. 86). According to the Ancient Laws, children begotten illegitimately of a woman who had been abducted belonged to the woman's family, who might sell them if they chose (d'Arbois de Jubainville, *Cours*, vi. 312; *Anc. Laws*, iv. 231, 12, v. 357, 11, v. 439, 5). Under Christian influence, chastity and modesty come to be admired (Stokes, *Lives of Saints*, 239).

2. Cruelty.—A most ferocious act of cruelty is found in the story of the sons of Eochaid Muigmedoin, king of Ireland from A.D. 358 to 366 (*Book of Leinster*, 190, col. 3, line 1). When one of the sons, Fiachra, dies of the wounds received in the victory over the Munster-men, the fifty captives taken in the battle are buried alive round his grave. As this seems to be only an isolated account, it is quite probable that the custom was not much in vogue in ancient Ireland. Decapitation, however, is so frequently mentioned in the Irish saga that it is needless to cite examples. Carnage in battle is often designated *ár-cenn*, 'slaughter of heads' (not 'slaughter of chiefs,' as Stokes translates, *ZCP* iii. [1896] 207). Heads of dead enemies were carefully preserved by individuals, inasmuch as they attested the fact that the family obligation of killing the murderer who refused to pay compensation had been fulfilled (d'Arbois de Jubainville, *Cours*, v. p. xxx). Giraldus (*Expug. Hib.* iv. 233) states that, after the victory of Ossory (A.D. 1169),

'about two hundred of the enemies' heads were collected and laid at the feet of Dermitius, prince of Leinster, who, turning them over one by one, in order to recognize them, thrice lifted his hands to heaven in the excess of his joy, and with a loud voice returned thanks to God most High. Among them was the head of one he mortally hated above all the rest, and taking it up by the ears and hair, he tore the nostrils and lips with his teeth in a most savage and inhuman manner.'

3. Human sacrifice.—Although Joyce (i. 239) maintains that human sacrifice was not practised at all in Ireland, we have already called attention (above, I. § 6) to the account of the *Mag Slechta*, or 'Plain of Prostrations,' to which there is another reference in the account of Taillten (now Teltown, Co. Meath) in the *Dinnsenchus*, where it is stated that Patrick preached at the great fair there 'against the burning of the firstborn progeny' (Joyce, i. 281–284). This would be in accord with the Celtic law giving the father the right of life and death over his children (d'Arbois de Jubainville, *Cours*, vii. 244 f.; Cæsar, VI. xix. 3).

4. Courage.—Giraldus (*Top. Hib.* x. 150) states that the Irish 'go to battle without armour, considering it a burden, and esteeming it brave and honourable to fight without it'; and this accords with the accounts of the bravery of the early Celts as mentioned above. It may be noted here that among the Irish those soldiers who lacked courage were usually fettered in pairs, leg to leg, leaving them free in other respects. In A.D. 250, Lugaidh Mac Con, fearing defection among his Irish allies in his invasion of Ireland against Art Oenfer, supreme king of Ireland, had them fettered to the Britons; and at the Battle of Moyrath in A.D. 637, Congal, the leader of the rebels, resorted to the same measure (Joyce, i. 143 f.).

5. Intemperance.—In spite of the fact that Cormac's *Glossary* (p. 116) indicates that *mesci*, 'drunkenness,' implied 'more of reproach than sense,' intemperance was such a common vice that it is unnecessary to give examples here. We shall merely mention the *Mesca Ulad* in the *Book of Leinster* (ed. by Hennessy, *Proc. Roy. Ir. Acad.* [1889]), which is an account of a drunken raid against Munster. Giraldus (xxvii. 172) accuses even the Irish clergy of excessive indulgence in drink.

6. Hospitality.—As among the Gauls, hospitality was one of the principal virtues of the Irish. According to the *Senchus Mór*, chieftains were bound to entertain guests without asking questions (iv. 237); and elsewhere (iv. 337) cases are specified wherein a king may be excused for deficiency of food if an unexpected number of persons should arrive. The *Glossary* of Cormac (p. 66) gives the word *enech-ruice*, 'face-blush,' for shame at not being able to discharge the due rites of hospitality; and the *Senchus Mór* mentions a 'blush-fine' to be paid when one felt ashamed of the scantiness of his food (i. 123, 11). In accordance with this admiration for hospitality, free lodging-houses were established all over the country at a later date (Joyce, ii. 167).

7. Cupidity.—According to Giraldus, the Irish had a great love for gold, which they still coveted in a way that showed their Spanish origin ('aurum enim . . . quod adhuc Hispanico more sitiunt' [*Top. Hib.* x. 152]).

8. Discipline.—The Irish seem to have had a certain scorn for discipline in the field, and were in this respect much inferior to the Anglo-Normans (Joyce, i. 132); but the monks, on the contrary, were characterized by their unquestioning obedience (Adamnán, 343).

9. **Perfidy.**—In this respect, Giraldus is exceedingly severe on the Irish of his time.

'They are given to treachery,' he says, 'more than any other nation, and never keep the faith they pledged. Neither shame nor fear withholds them from constantly violating the most solemn oaths, which, when entered into with themselves, they are above all things anxious to have observed' (xx. 165); and he concludes: 'From an ancient and wicked custom they always carry an axe in their hands instead of a staff, that they may be ready promptly to execute whatever iniquity their minds suggest' (xxi. 165).

It is probably true that, because of the frequency of its requirement, the oath fell into disrepute, with the exception of that sworn on religious relics in Christian times (Giraldus, ii. 52–54, iii. 33 f.) and the one known as the *cró-cotaig*, or 'blood-covenant.' The latter consisted in drinking each other's blood, which they shed for this purpose (*ib.* iii. 22), and was absolutely binding. The kings of Ulidia and Ireland entered into a 'blood-covenant' in A.D. 598, when they united against Branduff, king of Leinster, at the battle of Dunbolg (*RCel* xiii. [1892] 73); and as late as 1703 this oath was so firmly respected in the western islands of Scotland that one who violated it utterly lost character (Martin, *Western Isles*, London, 1716, p. 109). In primitive times the oaths by the elements and by arms were the most revered (*Atlantis*, i. [1858] 371; Joyce, i. 383 f.).

10. **Chivalry.**—In spite of the accusation of perfidy borne against the Irish of later times, it is apparent from the early literature that they were little inclined to this vice. It is true that there are examples of those who did not hesitate to resort to ambush (*etarnaid*) or other stratagems in war, but these are rare. Thus in the battle between Aed Mac Ainmirech, king of Ireland, and Branduff, king of Leinster, the latter smuggled into Aed's camp 3600 oxen carrying large hampers, in each of which was concealed an armed man (Joyce, i. 140–142). But, on the other hand, according to O'Curry (*Manners and Customs*, Dublin, 1873, ii. 261), the Irish warriors never sought to conceal intended attacks, either letting their adversaries know beforehand or coming to an agreement with them. At the first battle of Moytura, the Firbolg king had to consent to the demands of the invaders for battle each day with equal numbers on both sides, although he had a much larger army (O'Curry, i. 238). Before the battle of Moylena, about the end of the 2nd cent., Owen-More, being hard pressed by Conn, the supreme king, sent to ask him for a truce of three days, which was granted (O'Curry, *Moylena*, p. 23); and in the year 1002, Brian Boru granted King Malachi a delay of a month in which to muster his forces (Joyce, *Short Hist. of Ireland*, Dublin, 1893, p. 208). So much for history. In literature we have the beautiful story of the two intimate friends Cúchulainn and Ferdiad, forced by circumstances to fight one another to death. During their duels they show each other great affection, and, when Ferdiad is slain, Cúchulainn falls on his body in great grief (O'Curry, *Manners and Customs*, ii. 415). A noble example of self-sacrifice is shown in the account of the death of Ailill, king of Connaught, in A.D. 549, for Columkille relates, in the *Annals of Ulster*, that, in order to protect his fleeing army from pursuit and slaughter, Ailill turned his chariot and plunged amidst his foemen, by whom he was slain.

11. **Vengeance.**—The Irish, like the Gauls, were always quick to avenge any insult. 'Woe to brothers among a barbarous race!' exclaims Giraldus (*Top. Hib.* xxiii. 167), 'Woe also to kinsmen! While alive, they pursue them to destruction; and even when dead they leave it to others to avenge their murder.' Every tribe had its *aire-échta*, or 'avenger of insults,' who was not slow in acting, as when Aengus of the Terrible Spear, the *aire-échta* of the Déise or Desii, killed in open court at Tara the son of king Cormac Mac Art who had insulted a woman of that tribe (Joyce, *Soc. Hist.* i. 92; see, further, BLOOD-FEUD [Celtic]).

12. **Slavery.**—It is evident that slavery existed in Ireland from very early times to a comparatively late date. There were three classes of serfs or non-free men, called the *bothach*, the *sencleithe*, and the *fuidir*. Of the *fuidir*, the lowest of the three classes, there were two kinds—the *sáer-fuidir*, or 'free *fuidir*,' and the *dáer-fuidir*, or 'bond *fuidir*,' the latter being escaped criminals, captives taken in war, convicts respited from death, and purchased slaves. That traffic in slavery was still very great in the 12th cent. is evidenced by Giraldus' account of the Synod of Armagh in 1170, which dealt with this question.

According to Giraldus (*Expug. Hib.* i. 18, p. 258), the Irish 'had long been wont to purchase natives of England as well from traders as from robbers and pirates, and reduce them to slavery. For it was the common practice of the Anglo-Saxon people, while their kingdom was entire, to sell their children, and they used to send their own sons and kinsmen for sale in Ireland, at a time when they were not suffering from poverty or famine.'

13. **Murder, etc.**—Murder is the principal topic in the Irish law, which means that it was probably the most common of crimes. Capital punishment, however, was known and practised only outside the courts. 'At this time,' says the writer of the commentary on the *Senchus Mór*, 'no one is put to death (by judicial sentence) for his intentional crimes as long as *éric* is obtained' (*Anc. Laws*, i. 15). But, if the family of the murderer wished to avoid the *éric*, they were required to give up the criminal to the family of the victim, who might then, if they pleased, kill him, or use him, or sell him as a slave (*ib.* iii. 69). Sometimes the murderer was drowned by being flung into the water, either tied up in a sack or with a heavy stone attached to his neck. It was thus that the Danish tyrant Turgesius was executed by King Malachi in A.D. 845 (Joyce, i. 211 f.). It should be noted that bodily harm as well as personal injury of any kind, such as a slight on character or an insult, was punishable by a fine called *díre*—a term that is very frequently used in the Ancient Laws. Furthermore, according to the Ancient Laws (v. 313), if a person wounded another or injured him bodily without justification, he, his family, or his clan was held responsible for 'sick-maintenance,' i.e. *othrus* or *folach-othrusa*, meaning the cost of maintenance until cure or death. There are seven different kinds of injury enumerated by law, which, if inflicted on a wife by her husband, gave her the right to separate from him (*Anc. Laws*, ii. 357, 359, 361, 381, 383).

14. **Old age.**—The respect for old age shown by the ancient Irish is praiseworthy. According to the Ancient Laws (iv. 373), 'the old man is entitled to good maintenance, and the senior is entitled to noble election' (O'Curry, *Manners and Customs*, ii. 30 f., 479, etc.). Furthermore, if the old person was destitute and had no children, it devolved upon his tribe to see to his wants; 'it is one of the duties of the *fine* (tribe) to support every tribesman' (*Anc. Laws*, iii. 55, 2; 57, 9).

15. **Idleness.**—Giraldus (*Top. Hib.* x.) states that the Irish of his time were a pastoral people, living like beasts. 'Abandoning themselves to idleness, and immersed in sloth, their greatest delight is to be exempt from toil, their richest possession the enjoyment of liberty' (*ib.* 152); and elsewhere (p. 173) he states that 'this people are intemperate in all their actions, and most vehement in all their feelings.' 'Thus the bad are bad indeed—there are nowhere worse; and than the good you cannot find better.' Finally, as for jealousy, in the opinion of Giraldus (*ib.* xxvi. 172), 'they are also prone to the failing of jealousy beyond any other nation.'

16. **Cleanliness.**—Giraldus speaks of a tribe of

Connaught 'who did not wear any clothes, except sometimes the skins of beasts, in cases of great necessity' (xxvi. 171). This was not true in the main, for the Irish, like the Gauls, took great pride in their personal cleanliness. The people bathed daily, usually in the evening (Joyce, ii. 185). Kings and chiefs were in the habit, even before battle, of bathing and anointing themselves with scented herbs (for references to baths, see *Ir. Texte*, i. 295, 6; *RCel* xiv. [1893] 417; Hull, *Cuchullin Saga*, London, 1898, p. 130, 12, etc.). According to the Ancient Laws (iv. 373), the head of a family who had retired because of age was to have a bath at least once every twentieth night, and his head was to be washed every Saturday. Long hair was much admired, and baldness was considered a serious blemish (O'Curry, *Manners and Customs*, ii. 144). Women dyed their nails crimson (*Ir. Texte*, i. 79, 11); men and women reddened their faces (Meyer, *RCel* xiii. 220); and oftentimes the women dyed their eyelids black (O'Curry, *MS Mat.*, 309, 595, 6). At table, they ate with their hands (*Vision of Mac Conglinne*, p. 64), though napkins were introduced as early as the 8th or 9th cent. (Zeuss, *Gramm. Celt.*[2], Berlin, 1871, pp. 653, 45), being called *lambrat*, or 'hand-cloth.'

III. *WELSH*.—The general conclusion that can be drawn from Giraldus (*Descrip. Kambriæ*, i. ch. 8, etc.) and other authorities is that in the 12th cent. the Welsh, like the Irish, were a warlike pastoral people, who were farther advanced in matters of intellect than in regard to material prosperity and higher morality. Giraldus states further that, in his time, they were a wild and turbulent race, dangerous neighbours, and impatient of settled control from any quarter. Wynne, in his *History of the Gwydir Family* (Oswestry, 1878), shows how late these disorderly habits continued. According to Giraldus, the Welsh were a light and active people, entirely bred up to the use of arms (i. 8, p. 179). The serious defect of their character was evidently the continual litigation about land among themselves, and their tendency to resort to the common violence of trespassing on the lands of others, that of relatives not excepted.

'Hence arise suits and contentions,' says Giraldus (*ib.* ii. 4, p. 211), 'murders and conflagrations, and frequent fratricides, increased, perhaps, by the ancient national custom of brothers dividing their property amongst each other,' adding that the habit of princes of entrusting their children to the care of the principal men of the country was also the cause of 'frequent disturbances amongst brothers, terminating in the most cruel and unjust murders.'

1. Marriage, divorce, etc.—In regard to marriage, it may be stated at first that even in later times there were customs of a barbaric character which it is surprising to find surviving in a country where the Church had been established for many centuries (Rhys and Brynmor-Jones, *The Welsh People*, London, 1900, p. 212 f.). According to Giraldus (ii. 6, p. 213), the Welsh did not engage in marriage until they had tried, 'by previous cohabitation, the disposition, and particularly the fecundity, of the person' to whom they were engaged. As in Ireland, the marriage tie was loose, the wife having far greater freedom than was afforded to her by the law of the Church or by the English Common Law. Whenever the husband and wife separated, which they were allowed to do if one or both so desired, there was apparently no legal method by which they could be brought together again. The woman usually married very early—'from her fourteenth year unto her fortieth year she ought to bear children,' say the Ancient Laws (100, sec. 5); and after her marriage she enjoyed the greatest liberty—she might go 'the way she willeth freely, for she is not to be home-returning' (*ib.*). The Laws of Gwyned, or North Wales, recognize the influence of the Church as establishing the sanction of marriage, requiring legitimacy in the sons, and introducing a law of primogeniture in the succession to land which did not exist in the Irish system (Skene, *Celtic Scotland*[2], Edinburgh, 1890, iii. 198).

There were three good reasons for which the wife might separate from her husband without any loss of property: 'If he be leprous, or have fetid breath, or be incapable of marital duties' (*Anc. Laws*, 88, sec. 10). But, on the other hand, 'if a married woman committed any heinous crime, either by giving a kiss to another man, *vel praebendo se palpandum vel stuprandum*,' the husband could separate from her, and she forfeited all of her property rights (*ib.* 40, sec. 19). That this did not operate as a complete divorce, however, is obvious from the following passage in the Venedotian Code (*ib.* 40, sec. 17 f.): 'If the husband take another wife, after he shall have parted from the first wife, the first is free; but, if he part from his wife, and she be minded to take another husband, and the first husband should repent having parted from his wife, and overtake her with one foot in the bed and the other outside the bed, the prior husband is to have the woman.' But, if the wife left her husband and slept away from home for three nights during the first seven years of their marriage, and they separated at the end of the seventh year, she lost all right to her dower (*ib.* ii. sec. 9, p. 39). There is an article in the Venedotian Code (ii. sec. 70, p. 48) which shows the exceptional ease with which divorce was obtainable as well as the very great emphasis laid upon the dower: 'If a woman be given to a man, and her property specified, and the whole of the property had, except one penny, and that be not had, we say that the man may separate from her on that account, and she cannot reclaim any of her property; and that is the single penny,' the Law adds, 'that takes away a hundred.' Without entering into further details concerning divorce, it is obvious from the articles cited above that each party had a right of separation, exercisable without any liability, except a loss of *da* (possessions), varying with the time and circumstances of the parting (for further details, see *Anc. Laws*, pp. 38–50, etc.).

Polygamy was not permissible according to law, and the Venedotian Code states succinctly that 'no man is to have two wives' (*Anc. Laws*, ii. sec. 46, p. 54). As for the *jus primæ noctis*, suffice it to say that, if it was not exercised in Wales, we have at least an indication of it in the transmission of the purchase-price (*gobyr* or *amobyr*) by the bride's father into the hands of the king (*brenhin*) or lord (*arglwyd*) (*Anc. Laws*, p. 258 f.), this signifying that the right was bought back by the bride through her parent or guardian. The payment of this sum could not be avoided, for the Laws (iv. sec. 26, p. 405) state that, if a man asserted that a woman was pregnant by him and the woman denied it, nevertheless he should pay the *amobyr* of the woman to the lord.

2. Adultery.—Provisions against adultery were made at the time of the marriage, when the kindred or parent of the bride gave sureties that she would do nothing culpable against her wedded husband (Rhys and Brynmor-Jones, 211). After that, the restrictions were not severe, for the penalty imposed in the case of adultery was insignificant in comparison with that imposed for other crimes. According to the Dimetian Code (ii. sec. 18, p. 257), 'if a man commit adultery with the wife of another, he is to pay the husband his *saraad* ("disgrace-price") once augmented, because it engenders family animosity.' Apparently this was in the case of violence, for later on it is stated (p. 258, sec. 37) that a man who has committed adultery with the wife of another with her consent 'is to pay him (the husband) nothing while she is consenting; and, if the deed be notorious, the wife is to pay *saraad* to her husband, or the husband may freely repudiate her.'

It is sufficient to say that the Law did not consider this question a very serious one, for it states that, if a woman 'of full age' committed adultery with a man and was afterward deserted, 'upon complaint made by her to her kindred and to the courts, she is to receive, for her chastity, a bull of three winters having its tail shaven and greased, and then thrust through the door-clate; and then let the woman go into the house, the bull being outside, and let her plant her foot on the threshold, and let her take his tail in her hand, and let a man come on each side of the bull with goads to propel the bull; and if she can hold the bull, let her take it for her *wynebwerth* ('face-worth,' or fine for insult) and her chastity; and if not, let her take what grease may adhere to her hands' (*Anc. Laws*, p. 367, sec. 42). The penalty for adultery, like that for murder, was most

frequently some kind of compensation paid by the man committing the act to the offended husband; for, according to the Law, there were three women whose husbands were not to have right from them for their adultery: 'one is a woman taken clandestinely; if she do what she may please with another man, she is not to do right to the man who took her clandestinely; the second is, a woman slept with as a concubine, and that publicly known; though she do what she may please, the man she slept with is to receive no right; the third is, a woman of bush and brake; her paramour is to receive no right from her, though she may commit fornication by taking another paramour' (*ib.* sec. 54, p. 260). Finally, if a man committed fornication with a virgin, the Law required that she be paid the compensation that he might have promised to give her (*ib.* sec. 9, 52).

3. **Incest.**—Although Giraldus speaks of this crime as most common among the Welsh, the only formal accusation that he brings against them is that they were not 'ashamed of intermarrying with their relations, even in the third degree of consanguinity,' which, he adds, was due principally to their 'love of high descent' (*Descrip. Kamb.* ii. 6, p. 213).

4. **Concubinage.**—Concubinage does not seem to have flourished to the same extent as in Ireland—possibly because of the greater freedom of the woman in the married state. In all probability the relations with the concubine were of short duration; for, if a woman lived with a man until the end of seven years, 'thenceforward,' says the Law, 'he is to share with her as with a betrothed wife' (sec. 31, p. 42).

5. **Prostitution.**—An important difference from the Irish system with regard to the regulations concerning prostitution is that if a 'female of grove and bush'—the common term for a prostitute—gave birth to a child, its father was obliged to rear it, for the Law (sec. 33, p. 42) enacted that she should not 'suffer loss on account of the man.' The same was true with regard to the household servant, with the addition that the man had to supply her master with another to take her place during her pregnancy (*ib.* ii. sec. 51, p. 45). Otherwise, the prostitute had no privilege; and, even if violence were committed upon her, she could not obtain compensation (*ib.* ii. sec. 80, p. 49).

6. **Abduction.**—Abduction was not dealt with seriously by the Law; for, if a man abducted a virgin, 'her lord and her kindred are to take her away from him, though it may annoy him'; but, if she were not a virgin, they could do nothing without her consent (*ib.* sec. 38, p. 44).

7. **Violence.**—That the punishment for violence or rape was castration is evident from the article in the Dimetian Code (ii. sec. 20, p. 255) which states that this regulation was not enacted in the law of Howel.

8. **Cruelty.**—According to Giraldus (*Descrip. Kamb.* ii. 8, p. 220), the Cymry gave no quarter in warfare, usually beheading their captives.

9. **Courage.**—The Welsh were a very patriotic and courageous people in the opinion of Giraldus (i. 8, p. 180):

> 'They anxiously study the defence of their country and their liberty; for these they fight, for these they undergo hardships, and for these willingly sacrifice their lives; they esteem it a disgrace to die in bed, an honour to die on the field of battle.'

They were so bold and ferocious that, when unarmed, they did not fear to encounter an armed force (*ib.*). Daring in their first onset, they were unable to bear a repulse, being easily thrown into confusion and flight; but, though defeated on one day, they were ever ready to resume the combat on the next, dejected neither by their loss nor by their dishonour. Unlike the Irish and the early Celts, they continually harassed the enemy by ambuscades and nightly sallies (Giraldus, ii. 3, p. 210). They were able and willing to sustain hunger and cold, showing great resistance against fatigue, and were not despondent in adversity—in fine, they were 'as easy to overcome in a single battle as difficult to subdue in a protracted war' (*ib.*).

10. **Intemperance.**—Though the Welsh were little inclined to drunkenness and gluttony at home, where they were accustomed to fast from morning till evening (Giraldus, i. 9, p. 182), they were immoderate in their love of food and intoxicating drinks whenever they found themselves surrounded with plenty (ii. 5, p. 212)—'as in times of scarcity their abstinence and parsimony are too severe, so, when seated at another man's table, after a long fasting (like wolves and eagles, who, like them, live by plunder, and are rarely satisfied), their appetite is immoderate.' The Ancient Laws prohibit the chaplain of the royal household, the judge of the palace, and the royal mediciner from ever becoming intoxicated, for 'they know not at what time the king may want their assistance' (ii. sec. 19, p. 215). The only other mention of inebriates in the Ancient Laws is where it is stated that they are not amenable to law, and that all their acts are invalid (pp. 389, 587, 604, 656).

11. **Hospitality.**—Giraldus (i. 10, pp. 182, 183) says:

> 'No one of this nation ever begs, for the houses of all are common to all; and they consider liberality and hospitality amongst the first virtues. When water is offered to travellers, if they suffer their feet to be washed, they are received as guests; for the offer of water to wash the feet is with this people an hospitable invitation. Those who arrive in the morning are entertained till evening, with the conversation of young women and the music of the harp. In the evening, when no more guests are expected, the meal is prepared according to the number and dignity of the persons assembled, and according to the wealth of the family which entertains. While the family is engaged in waiting on the guests, the host and hostess stand up, paying unremitting attention to everything, and take no food till all the company are satisfied; that, in case of any deficiency, it may fall upon them.'

12. **Piety.**—The Cymry were, at any rate outwardly, very religious. 'With extended arms and bowing heads' they asked blessing of every passing priest or monk, and they also showed 'greater respect than other nations to churches and ecclesiastical persons, and to the relics of saints which they devoutly revere' (Giraldus, i. 18, p. 203). According to the Ancient Laws (p. 301), religion was one of the seven legal qualities which a judge ought to possess.

13. **Pride.**—Proud and obstinate, the Cymry refused to subject themselves to the dominion of one lord and king (Giraldus, ii. 9, p. 225). They greatly esteemed noble birth and generous descent, so that even the common people retained their genealogy and could readily repeat the names of their ancestors back to the sixth and seventh generation (i. 17, p. 200).

14. **Perjury.**—According to Giraldus (ii. 1, p. 206), the Cymry were constant only in acts of inconstancy, cunning and crafty.

> 'They pay no respect to oaths, faith, or truth; and so lightly do they esteem the covenant of faith that it is usual to sacrifice it for nothing. They never scruple at taking a false oath for the sake of any temporary emolument or advantage; so that in civil and ecclesiastical causes, each party is ready to swear whatever seems expedient to its purpose.'

This was a necessary result of a legal system which made an oath an incident of ordinary transactions, and which multiplied the number of compurgators to an unusual degree, sometimes six hundred being required. So the trial depended on a complicated method of swearing and counter-swearing, each party concerned not by what he had actually seen or heard, but in standing by a kinsman in trouble (Rhys and Brynmor-Jones, 258).

15. **Murder.**—The principal indictment borne against the Welsh by Giraldus (ii. 7, p. 216) is that of murder and fratricide, and it is obvious from the lengthy treatment accorded to these crimes in the Ancient Laws that they were among the most frequent to be dealt with.

'They revenge with vehemence the injuries which may tend to the disgrace of their blood,' says Giraldus (i. 290), 'and, being naturally of a vindictive and passionate disposition, they are ever ready to avenge not only the recent but ancient affronts.' 'It is also remarkable that brothers show more affection to one another when dead than when living,' adds the same author elsewhere (ii. 4, p. 212), 'for they persecute the living even unto death, but revenge the deceased with all their power.' According to the Dimetian Code (*Anc. Laws*, p. 197), *galanas*, or murder, with its nine accessaries, is one of three columns of the law.

The important fact in regard to murder among the Cymry was whether the murderer killed a kinsman or not, for the slaying of a man outside one's community might or might not be counted for righteousness, but was not thought of as wrong. While no particular penalty was attached to the killing of a member of the same tribe, the murderer forfeited his rights of kinship, and became a *carl-lawedrog*, or a kin-wrecked man, which meant that he became an object of hatred and was obliged to flee. The cause for this was that in the tribal system the status of individuals depended upon the theory of blood-relationship. 'Since the living kin,' state the Ancient Laws (i. 791), 'is not killed for the sake of the dead kin, everybody will hate to see him.' It is worthy of note that, if an innocent man were accused of murder and neglected to seek justice, 'should he be killed on account of it, nothing is to be paid for him, though innocent' (*Anc. Laws*, p. 200, sec. 33). Furthermore, if a woman killed a man, she received the spear-penny; 'and this is the person who receives, but does not pay' (*ib.* p. 49, sec. 77).

16. Theft.—'This nation conceives it right,' remarks Giraldus (ii. 2, p. 207), 'to commit acts of plunder, theft, and robbery, not only against foreigners and hostile nations, but even against their own countrymen.' Theft (*lladrad*), with its nine accessaries, is one of the three columns of the law, according to the Dimetian Code (p. 197). Afterwards there is supplied a collection of rules relating to moveable property, as well as rules for the punishment of theft and interference with a man's right of possession. In the Ancient Laws, theft is distinguished from surreption, violence, and error (p. 124). Theft, or *lladrad*, is to take a thing in the owner's absence, with a denial of the act. Surreption, or *anghyfarch*, is to take a thing secretly, but without denial of the act. Violence, or *trais*, is to take a thing in a man's presence and against his will. Error, or *annodeu*, is everything that is taken instead of another, *i.e.*, taking a thing one had no right to possess, under the belief that one was acting legally. For error there was no particular fine, only a 'compensation payable to the person for his property' (*Anc. Laws*, p. 124). 'By the law of Howel,' continues the Venedotian Code (sec. 42, p. 123), 'for theft to the value of four pence, the thief is saleable; and, for a greater amount, forfeits his life,' but not his property, 'because both reparation and punishment are not to be exacted, only payment of the property to the loser' (sec. 44, p. 123). If seven pounds were paid by him or on his behalf, he was let off; if not, he was exiled; and, if he remained in the country beyond the time allowed—a day to pass through every *cantref* in the lord's dominions—he might lose his life unless some one bought him. There was no *galanas* (the sum assessed for homicide) for a thief, nor did the Law permit a feud between two kindreds on account of his execution (*ib.* sec. 47, p. 123). To accuse one of theft legally, it was necessary to have seen him with the thing stolen 'from daylight to twilight,' and to swear upon a *rhaith* ('verdict,' usually composed of from 5 to 300 compurgators [see COMPURGATION]) that the accusation was made not 'through hatred or animosity, or for worth, or for reward, but only to show the truth' (*ib.* sec. 21, p. 204). We can readily see, from the severity of the punishments administered, that theft was placed, because of its frequency, no doubt, on an equal basis with homicide.

17. Miscellaneous crimes.—The third 'column of the law,' according to the Venedotian Code, which, it may be said, was written about 1050, was arson (*tan*, 'fire'). The punishment for this was death (*Anc. Laws*, 302). Treason was also recognized by the Law, which states that 'no *galanas* is due for traitors to a lord' (*ib.* sec. 49, p. 124). The punishment was the forfeiture of the patrimonial rights (Rhys and Brynmor-Jones, 239). The third book of the Venedotian Code states with great minuteness the worth of different limbs and members of the human body, etc. As has been pointed out in CRIMES AND PUNISHMENTS (Celtic), the distinction between civil injuries (offences against an individual) and crimes (offences against the State or community) is not developed, though for many wrongful acts the lord had the right to exact fines called *dirwy* or *camlwrw*, and for some the criminal was sold, exiled, or put to death.

18. Sodomy.—Giraldus accuses the Cymry of 'that detestable and wicked vice of Sodom,' to which Mailgon, king of the Britons, and many others were addicted. And he adds that, if they abstained from that vice 'which in their prosperity they could not resist, it may be attributed more justly to their poverty and state of exile than to their sense of virtue' (ii. 6, p. 215). We find additional evidence of the existence of this crime in the Dimetian Code (p. 292), which states that the testimony of 'a person guilty of unnatural crime with man or beast' is of no effect in any case. It is possible that there is further reference to it in the Gwentian Code (sec. 10, p. 380), wherein it is stated that the third shame of a kindred is 'the despoiling of one's wife, being more pleased to spoil her than to be connected with her.'

19. Paternal authority.—The husband was the lord (*arglwyd*) of his household. If his wife uttered 'a harsh or disgraceful word' to him, she was obliged to pay him 'three kine as a *camlwrw*, for he is her lord.' But, if he preferred, he could 'strike her three blows with a rod of his cubit length, on any part he may will, excepting her head' (*Anc. Laws*, sec. 5, p. 252). Furthermore, he had the right of life and death over his children, except the son after the age of fourteen, when he was emancipated (d'Arbois de Jubainville, *Cours*, vii. 244 f., 3). In the 6th cent. St. Teliavus saved the lives of seven children whom the father, being too poor to feed them, had thrown one by one into a river (*Liber Landavensis*, Llandovery, 1840, p. 120). In the 11th cent. (Venedotian Code [*Anc. Laws*, sec. 22, p. 103]), it was common for a parent or kindred to deny a son in order to prevent him from receiving his patrimony. Finally, there were three things for which a wife could be beaten, according to the Venedotian Code, (sec. 39, p. 44), to wit, 'for giving anything which she ought not to give; for being detected with another man in a covert; and for wishing drivel upon her husband's beard.' If he chastised her for being found with another man, the Law did not permit him to have any other satisfaction, 'for there ought not to be both satisfaction and vengeance for the same crime' (*ib.*).

20. Immoderation, cleanliness, etc.—At the close of bk. i. of his *Descrip. Kamb.*, Giraldus, after stating that the Cymry were a quick, impulsive race, wanting in moderation, and indulging in extremes of conduct, resumes their moral portrait in the following manner: 'This nation is earnest in all its pursuits, and neither worse men than the

bad, nor better than the good can be met with.' He notes also their wit and pleasantry. 'The heads of different families,' he says (i. 14, p. 190), 'make use of great facetiousness in their conversation; at one time uttering their jokes in a light, easy manner; at another time, under the disguise of equivocation, passing the severest censures.' They were famed for their 'boldness and confidence in speaking and answering, even in the presence of their princes and chieftains' (i. 15, p. 192). In rhymed songs and set speeches they were so subtle and ingenious that they produced 'ornaments of wonderful and exquisite invention, both in words and sentences' (*ib.*). They loved to boast of their strength, and exulted in their ancient name and privileges (ii. 7, p. 216). In regard to their jealousy, Giraldus states (i. 10, p. 183) that, 'as no nation labours more under the vice of jealousy than the Irish, so none is more free from it than the Welsh.' Finally, the same authority contrasts the Welsh with the Irish in regard to cleanliness (*Top. Hib.* iii. 10). There are frequent allusions to the bath in the Ancient Laws. Both sexes cut their hair short—close round to the ears and eyes (Giraldus, *Descrip. Kam.* i. 11, p. 185). They took special care of their teeth, which they rendered like ivory by constantly rubbing them with green hazel and then wiping them with a woollen cloth. The men shaved all their beard except the moustache (*ib.*). Their only garments were a thin cloak and tunic for all seasons of the year.

IV. *Scottish.*—Fordun, who was favourably disposed toward the Gaelic Highlanders, offers the following moral portrait of them during the 13th cent., in contrast with that of the Teutonic Lowlanders. According to him (*Chron.* ii. 38; Skene, *Celtic Scotland*², Edinburgh, 1886–90, iii. 40),

'the Highlanders and people of the islands . . . are a savage and untamed nation, rude and independent, given to rapine, ease-loving, of a docile and warm disposition, comely in person but unsightly in dress, hostile to the English people and language, and, owing to diversity of speech, even to their own nation, and exceedingly cruel. They are, however, faithful and obedient to their king and country.'

The correspondence of a visitor in 1726 shows that after five centuries their character had little changed (Skene, iii. 324 f.). According to this authority, they esteem it the most sublime degree of virtue to love their chief and to pay him a blind obedience. Next to this is the love of the particular branch from which they sprang, and, in a third degree, of the members of the whole clan, whom they will assist, right or wrong, against those of any other tribe with which they are at variance. And, lastly, they have an adherence to one another as Highlanders, in opposition to the people of the Low country, whom they despise as inferior to them in courage, and whom they believe they have a right to plunder whenever it is in their power. During the first half of the 18th cent., half of the Highlanders passed an idle life, using blackmail as their main resource. Half of the men stole, in order that the other half might be employed in recovery (Lang, *Hist. of Scotland*, Edinburgh, 1902, iv. 375). If we compare this portrait with that traced by Dio Cassius of the Caledonii, or Northern Picts, we can readily see that time effected little change in their character. According to this authority, these tribes were a pastoral people, living principally by hunting. 'Naked and unshod, they had wives in common. They were great thieves, "looted most liberally" . . . and they were steady in combat' (Lang, i. 10).

1. **Marriage.**—In the early period, 'the sanctions of marriage were unknown, and a loose relation between the sexes existed' (Skene, iii. 138). Among the tribes of Northern Scotland, community of women was most frequent, and ten or twelve men—generally brothers or a father with his sons—had wives in common (Lang, i. 4). Annual marriage, or 'hand-fasting,' existed in the Highlands until the 16th century. According to this custom, two chiefs agreed that the son of one should marry the daughter of the other. If, at the end of a year and a day, the young wife had not yet given birth to a child, then they could separate, and each of the parties was permitted to marry again (Skene, *The Highlanders of Scotland*, ed. Macbain, London, 1904, p. 108 f.). The *jus primæ noctis* was exercised in Scotland from very early times; according to Buchanan (*Rerum Scoticarum Historia*, Utrecht, 1697, pp. 99, 200), it was abolished in the 11th cent. A.D. by King Malcolm III.:

'Uxoris etiam precibus dedisse fertur, ut primam novae nuptae noctem, quae proceribus per gradus quosdam lege regis Eugenii debebatur, dimidia argenti marca redimere possent, quam pensionem adhuc marchetas mulierum vocant' (C. J. L. Schmidt, *Jus Primæ Noctis*, Freiburg, 1881, p. 196).

The *merchet*, or 'maiden-fee,' which was paid to the superior on the marriage of the daughter of a dependant, is the equivalent of the *amobyr* or *gobyr* of the Welsh laws mentioned above (III. § 1; cf. Skene, *Celtic Scotland*, iii. 219).

2. **Immorality.**—Bede, who wrote about A.D. 687 or later, noted the immoral condition of the Scots (Lang, i. 72). In later times illegitimacy was prevalent amongst the royal family, the nobles, the clergy, and the people. Robert I., Robert II., Robert III., and James IV. had many natural children, and the Crown was much weakened by the large number of children whom Robert II. had by his two wives, besides many sons and daughters of illegitimate birth (J. Mackintosh, *Hist. of Civilization in Scotland*, Paisley, 1892–96, i. 428). Although, in 1528, Parliament attached a severe penalty to the crime of rape, it was often passed over with a very light punishment. Bigamy and adultery were common offences; and in 1551 Parliament enacted a measure which proposed severe penalties against them. Divorce was also extremely common among the upper classes (*ib.* ii. 229).

3. **Intoxication, idleness, etc.**—Drinking of liquor was always very common in Scotland, and Parliament passed numerous acts against this habit, but to no avail (Mackintosh, i. 415). During the 15th cent. the country was overrun with beggars and vagabonds, in spite of the efforts of Parliament to suppress them (*ib.* 422 f.).

4. **Murder.**—As in Ireland and Wales, there was a system of fines for homicide (Lang, i. 81; Skene, iii. 152 f.; Cosmo Innes, *Scotland in the Middle Ages*, Edinburgh, 1860, p. 192). Until the Reformation, murder and manslaughter were extremely prevalent throughout the Scottish kingdom; and, although many Acts of Parliament were passed for putting an end to these crimes, they seem to have produced little effect. When criminals were convicted, they were often pardoned, and so many pardons were granted that in 1487 Parliament was obliged to interfere (Mackintosh, i. 425, ii. 228).

5. **Theft.**—Gildas, who wrote about 560, calls the Picts 'a set of bloody freebooters with more hair on their thieves' faces than clothes to cover their nakedness' (Lang, i. 15). In the 12th and 13th centuries, if we believe Fordun (*Chron.* iv. [ed. 1872, ii. 251]), the native population would not, for either prayers or bribes, either treaties or oaths, leave off their disloyal ways, or their ravages among their fellow-countrymen. In the 15th cent. theft and cattle-raiding were the most frequent crimes, against which Parliament acted in vain (Mackintosh, i. 427 f., ii. 228).

See, further, the 'Celtic' sections of Children, Crimes and Punishments, etc.

Literature.—This has been sufficiently indicated in the article.

John Lawrence Gerig.

ETHICS AND MORALITY (Chinese).—If we are to write of Chinese ethics, we must have in view only the ethics of the Confucian school; for China has no other system. These moral laws, rules, and principles are found embedded in the classical literature which for ages past has formed the one subject studied by every scholar throughout the length and breadth of China. Not only are they accepted without question by all Chinese, educated and uneducated, but they have helped to mould the social life of the people, and have coloured and influenced the national legislation and administration. As religions, Taoism and Buddhism have established themselves by the side of Confucianism, doubtless because they better satisfy that desire for something beyond the present life which is so common and so natural to the human mind; but the morality which they inculcate is entirely borrowed from the Confucian system.

Though Confucius has given his name to a school, he did not claim to have founded one. He said of himself, probably with much truth, that he was 'a transmitter and not a maker, believing in and loving the ancients' (*Confucian Analects*, vii. 1). Of an eminently prosaic and practical turn of mind, he was never weary of describing the characteristics of virtue or of drawing distinctions between right and wrong in actual life; but he cared little to speculate on the nature of the moral faculty or any such questions. We know, however, that he considered virtue to be a mean between two extremes, to which some fail to attain, while others go beyond it; and he held the fault of excess to be as bad as that of deficiency (*Conf. An.* vi. 27, xi. 15; *Doctrine of the Mean*, iii., iv.).

These ideas are elaborated in the treatise called *The Doctrine of the Mean*, which contains many quotations of Confucius' words, and is believed to have been written by his grandson. The treatise further declares that man receives his nature from heaven, and, when he acts in accordance with his nature, he is following the proper path, from which he must not wander for an instant (*op. cit.* i. 1–3). Here we find a principle disclosed, concerning which Confucius never expressed himself with definiteness, but which for many generations occupied the minds of his followers more than any other question in ethics, namely, that the nature of all men at their birth is perfectly good.

The doctrine of the goodness of human nature had its most powerful advocate in Mencius, the greatest of all the learned men who owned Confucius for their master. In his day a certain philosopher, Kao by name, urged that man's nature is neither good nor bad; but any one may be led to practise either good or evil, just as water, when one makes a hole for it to escape by, has no preference for east or west, but will flow in either direction indifferently. Not so, replied Mencius, when asked his opinion as to this: though water is indifferent to the points of the compass, its tendency is to flow downwards, and only by force can it be made to rise; so the tendency of man's nature is towards what is good, and doing evil is unnatural to him (Mencius, vi. pt. i. 2). Then another theory was brought to his notice—that the nature of some men is good and that of others bad. To this he makes answer with a more serious argument. In saying that man's nature is good, his meaning, he explains, is that 'from the feelings proper to it, it is constituted for what is good'; and, if men do evil, it is not the fault of their natural powers. Every one has the feelings of pity, of shame, of reverence, of approval and disapproval, *i.e.* of appreciating right and wrong. Thus, as he said on another occasion, every one, no matter who, will feel alarmed and distressed if he suddenly sees a child on the point of falling into a well. And this will be a genuine sensation; it will not be merely that he desires to gain either the friendship of the child's parents or the approbation of his own friends, nor yet that he dislikes seeming to be callous. Hence it will be evident that there is no man without the feeling of pity; and it is the same with regard to the other feelings (*ib.* vi. pt. i. 6, ii. pt. i. 6). Mencius further held that a few sages had existed who lived perfect lives; and other men might be like them if they chose, for a perfect life consisted in simple acts which every one was physically able to perform. It was not that men could not do these acts, but simply that they did not do them. People were led into evil because they allowed themselves to be influenced by surrounding circumstances; thus, for instance, in years of plenty the common folk were mostly well-behaved, but in time of dearth they became lawless (*ib.* vi. pt. ii. 2, vi. pt. i. 7).

Though the doctrine of Mencius has found final acceptance among the Chinese, it was not left unchallenged at first. Soon after Mencius' time a distinguished scholar, named Hsün Ching, maintained with much force that human nature is evil. He appealed to experience to show that men are not good spontaneously, and that they are made so only by teaching and by the laws. Eyes can see, ears can hear, naturally; they do not need instruction to enable them to do it; but men acquire righteousness only by learning and hard effort. Again, when a man is tired or hungry, his natural feelings prompt him to rest or to eat: if, instead of yielding to them, he gives place to his father or an elder, he acts rightly, but it is against his natural inclination. Indeed, the mere fact that a man *wishes* to do right shows that righteousness is not natural to him.[1]

There remained one more theory to be brought foward—that our nature is partly good and partly evil. This was upheld by the philosopher Yang Hsiung, who lived about the time of the Christian era. He taught that man's progress in either direction depends on the development of the good or the bad part of his nature, according as he is influenced by his environment.

Besides *The Doctrine of the Mean*, among the recognized Chinese classics there is another ethical work, known as *The Great Learning*, of which the subjects are the practice of virtue and the art of governing. This treatise, which is extremely short, is most highly praised by the Chinese for its profound wisdom, and is perhaps admired by them beyond all their other canonical books. Modern authorities ascribe its opening and fundamental chapter to Confucius himself; but for more than fifteen hundred years, probably with greater correctness, it was held to be by another hand. In any case it is substantially in accord with Confucius' views, and must have been written not long after his time. At its commencement is a description of what was said to be the process adopted by the ancient princes for promoting virtue throughout the Empire:

'With this object they were careful to govern well their own States. In order to govern well their States, they first regulated their own families. In order to regulate their families, they first practised virtue in their own persons. In order to arrive at the practice of virtue, they first rectified their hearts. In order to rectify their hearts, they first sought for sincerity of thought. In order to obtain sincerity of thought, they first extended to the utmost their knowledge. The extension of knowledge lay in the investigation of things.'[2]

The process thus consists of a succession of steps, by the first part of which the individual may arrive at personal virtue, and by the second

[1] Legge, *Chinese Classics*, vol. ii. [1895] p. 79.
[2] Legge, *op. cit.* vol. i. [1893] p. 357; W. A. P. Martin, *Lore of Cathay*, p. 211.

part, the individual being a ruler, virtue may be promoted throughout the land. What is to be understood by the first step of all, the 'investigation of things'? According to the greatest of Chinese commentators, it means 'investigating the principles of all things with which we come in contact' (*Great Learning*, Com. v. 2). This, verily, is no small task to impose upon the seeker after virtue. The third step, sincerity of thought, is explained as being a sincere desire for, and instinctive following of, the good, not a mere doing of what is right from inferior motives (*ib.* vi.). But there seems to be little distinction between this and the next step, rectification of the heart. In the later portion of the chain, one notices how good government is made to spring from the personal excellence of the ruler. This was a favourite point with Confucius, who repeatedly insisted on the necessity of a good example being set by those who govern. Once, when asked by a certain ruler how to deal with the prevalence of robbery, he went so far as to reply: 'If Your Excellency were not covetous, your people would not rob, though you paid them to do it' (*Conf. An.* xii. 19).

It was as a teacher of practical morality that Confucius won his fame. But he left no treatise on the subject; nor did he ever handle it systematically. We have from him merely a quantity of disconnected utterances, which were collected and recorded by his followers or appear as quotations in later writers. The Confucianists hold that there are five virtues (*tê*), or that virtue consists of five parts: *jên* (charity), *i* (righteousness), *li* (propriety), *chih* (wisdom), *hsin* (sincerity). Perhaps the best idea of the sage's teaching will be given by grouping under these heads a few specimens of his more important sayings.

(1) *Jên*—the virtue of man's relation to man, charity (in St. Paul's sense), benevolence, humanity. The descriptions given by Confucius of this quality vary according to the occasion and the questioner. The most concise is that it is 'to love all men' (*Conf. An.* xii. 22); the most elaborate, that it consists in the practice, without intermission, of respectfulness, indulgence, sincerity, earnestness, and kindness (*ib.* xvii. 6). To another inquirer it was said to be found in reverence and the observance of the Golden Rule—'not to do unto others what you would not wish done to yourself.' This great rule is repeated several times by him, and once he gave it as sufficient alone to serve as a guide for one's whole life (*ib.* xii. 2, xv. 23). A man may be pure, be loyal, be capable, and yet not worthy of being called *jên*: Confucius disclaimed for himself any right to be so considered (*ib.* v. 7, 18, vii. 33). Charity is founded on filial piety and fraternal submission; and, if rulers behave properly to their relatives, the people will be roused to charity (*ib.* i. 2, viii. 2).

(2) *I*—righteousness, justice, duty. This is specially the virtue of public life. Thus, to refuse to serve one's country is a failing in duty (*ib.* xviii. 7). The prince must be just in laying burdens upon his people; if he be so, they will willingly submit to his rule (*ib.* v. 15, xiii. 4). If righteousness be absent, courage only leads men of high position into rebellion, and those of low position into brigandage (*ib.* xvii. 23). Without righteousness, riches and honour are but a floating cloud (*ib.* vii. 15).

(3) *Li*—propriety, combining with it an idea of ceremoniousness. It is worth nothing without charity; it must be accompanied by reverence; and it does not consist in gorgeous array (*ib.* iii. 3, 26, xvii. 11). If it be absent, respectfulness will become clumsiness, carefulness become timidity, boldness become insubordination, and straightforwardness rudeness (*ib.* viii. 2). Without a knowledge of propriety a man's character cannot be established; and combined with study it will keep one from erring (*ib.* viii. 8, xii. 15).

(4) *Chih*—knowledge, wisdom. The most important kind of knowledge is the knowledge of men (*ib.* xii. 22). A man ought to know what heaven commands (*i.e.* what is right and what is wrong); he should also know the rules of propriety; and, thirdly, he should know language, in order to estimate the character of those who speak with him (*ib.* xx. 3). When one knows a thing and recognizes that one knows it, when one does not know a thing and recognizes that one does not, that is real knowledge (*ib.* ii. 17). Attempts to acquire virtue will fail if not accompanied by study (*ib.* xvii. 8). One should learn for the sake of one's own improvement, not to win approbation (*ib.* xiv. 25). To study without thinking is labour lost; thought without study is dangerous (*ib.* ii. 15). Confucius once said: 'I have passed the whole day without eating and the whole night without sleeping—occupied with thinking; it was of no use: the better plan is to study' (*ib.* xv. 30). But, after all, knowledge of the truth is not equal to the love of it; and the possessor of literary acquirements is a useless man if he be devoid of practical ability (*ib.* vi. 18, xiii. 5).

(5) *Hsin*—sincerity, truthfulness, belief. The necessity of this virtue is inculcated in many passages. Faithfulness and sincerity should be one's first principles; without truthfulness no man can get on (*ib.* i. 8, ii. 22). In intercourse with friends, one must above everything be sincere; and it is disgraceful to pretend friendship with a man whom one dislikes (*ib.* i. 4, v. 24). Sincerity is one of the requirements of a ruler (*ib.* i. 5).

As we have seen above, Confucius, living in the 6th cent. B.C., inculcated the Golden Rule of our Saviour, which has been described as 'the most unshaken rule of morality, and foundation of all social virtue.' On the other hand, there is one well-known instance where he distinctly falls short of the standard of Christian benevolence. When asked what was his opinion as to the repayment of injury with kindness, he replied, 'With what then will you repay kindness? Repay injury with justice, kindness with kindness' (*ib.* xiv. 36). On another occasion, also, in reply to an inquirer, he declared that, in the case of the murder of a parent, the son must be ready to slay the murderer whenever and wherever he may meet him. This conversation is no doubt authentic, though it does not rest on such a high authority as the *Analects*.

Filial piety cannot be left unmentioned by any one dealing with Chinese ethics. It is often coupled by Confucius with the somewhat similar, but less important, fraternal affection or submission which a younger brother owes to an elder. These two duties formed the corner-stone of both the ethical and the social system of Confucius. For in his view, not only are they the foundation of charity, the greatest of all the virtues, but it is by practising them that the people learn to be obedient to the government and the laws. Filial piety is said to consist in serving parents, when alive, according to propriety, and, when they are dead, in burying them according to propriety and in sacrificing to them according to propriety. Reverence and willingness in service are requisite; mere performance of duties is not enough (*ib.* ii. 5, 7–8).

The *worship of ancestors*, that great offshoot from filial piety, was, as practised by Confucius, merely a commemorative rite. There is no sanction from his authority for its more objectionable features at the present day, namely, the transformation of the deceased into tutelary deities,

and the absurd doctrine that the fortunes of a family are determined by the location of its tombs.[1] One charge which foreign critics have not been slow to make against ancestor-worship is that it sanctions and encourages concubinage. There is truth in this. In China the practice of taking concubines is extremely common among the wealthy; but persons of strict morality view it with disapprobation, except where a wife is not likely to bear a son. In such a case the necessity of having male descendants to continue the ancestral sacrifices, in the opinion of all Chinese, completely justifies concubinage, even though it is possible to avoid the practice by the introduction into the family of an adopted child.

LITERATURE.—The Chinese 'Four Books': (i.) The *Lun Yü*, or *Analects of Confucius*; (ii.) Mencius; (iii.) The *Ta Hsüo*, or *Great Learning*; (iv.) The *Chung Yung*, or *Doctrine of the Mean*. The best translations of these are by Legge (*Chinese Classics*, vols. i., ii., Oxford, 1893, 1895). With the translations there are prolegomena and exegetical notes of great value. See, further, E. Faber, *The Doctrines of Confucius*, Hongkong, 1875; J. J. M. de Groot, *The Relig. System of China*, Leyden, 1892 ff.; W. A. P. Martin, *The Lore of Cathay*, Edinburgh, 1901.

T. L. BULLOCK.

ETHICS AND MORALITY (Christian).—I. *HISTORY*.—There is no formal science of Ethics in the NT. The presence of a life-giving Personality, the Source and Norm of Christian Teaching, is dominant. His teaching is not limited to His spoken words; it is an ever-present continuous work. This is taken for granted by the NT writers. Hence we can speak of a real progress in Christian thought concerning conduct. Because Christ is the Fulfiller of Hebrew revelation, the OT is of special, though subordinate, value. As Christianity spread to Græco-Roman soil, Christians, because of their cosmic view of Jesus' Person, appropriated from their new surroundings whatever helped their spiritual life. The history of Christian morality is thus a record of how the Spirit of Christ has been endeavouring to redeem all life to its own service, and the record is still unfinished.

The *Didache*, the *Epistle of Barnabas*, and the Apostolic Fathers show the predominance of the religious-ethical interest, but the beginnings of legalism and externalism are also manifest (*Pastor* of Hermas). The dogmatic interest gradually submerged the ethical; and ascetic withdrawal from the world and superiority of knowledge to faith introduced a division of labour into morality. Hence the distinction between *honestum* and *utile*, between *consilia* and *mandata*.

In Clemens Alexandrinus, and in Ambrose in the West, the ideas and terminology of Hellenism are influential. The organized Church became a law-giving source (Cyprian), and legalism suppressed spiritual spontaneity. The recognition of Christianity by the State deepened this influence. In Justin, Clement, and the Alexandrians generally we see the rationalistic and inclusive tendency of Christian thinking; in Tertullian and the West, its legalistic and exclusive tendency. Notwithstanding the recognition of asceticism, virginity, baptism, and the Eucharist as means of salvation, there existed a vigorous new life of brotherly love and martyr courage.

Augustine is the greatest of the early moralists. His conversion had supreme influence on his teaching. In him are found the germs of the various mediæval tendencies. His teaching on sin and grace, on the Church and on conversion, on God as Highest Good, and on virtue as *ordo amoris*, influenced not only Gregory the Great, Isidore of Seville, and more especially Aquinas, but also the preachers of repentance, the Mystics and Quietists.

The Middle Ages elaborated classifications of sins and virtues, discussed the freedom of the will (Thomists and Scotists), and were rich in casuistic and penitential books. Petrus Lombardus' 3rd book of *Sentences* was an influential moral treatise. Aquinas summed up mediæval teaching. In him the terminology and thought of Aristotle supply the foundation for evangelical Ethics, and the distinctiveness of Christian morality is regarded as a revealed overplus to the Ethics of the world.

A new era began with the Reformation. Faith became personal trust in God, the value of the individual was recognized, and ordinary vocations were regarded as the true sphere of moral life. But its greatest work was the placing of the Scriptures in the hands of the common people. Problems as to the relation of the individual to the State, and of the State to the Church, now arose. There was also a tendency to separate philosophical and Christian Ethics (Melanchthon and Keckermann), though Amesius insisted on Ethics as purely theological. The Counter-Reformation produced Jesuistic casuistry (*q.v.*)—against vigorous individual protests (Pascal). The verbal inspiration theory of Scripture developed in the post-Reformation period a new dogmatism, and Christian Ethics was a part of Dogmatic. The merit of having separated the two is usually ascribed to Danæus and Calixtus.

While Rom. Cath. Ethics largely followed tradition and casuistic refinement in dealing with 'cases,' Protestant Ethics tended to be moulded, from this time onwards, by the current philosophies, and, within the various Churches, by the authorized Confessions of Faith.

Rationalism and Deism (Wolf, Lessing, English Deists) made reason supreme, and the source of indubitable truths; Christianity was an awkward republication of innate moral principles.

Theories as to the origin of the moral sense, natural rights, and sanctions exclusively interested moralists. Biblical Ethics was neglected or confused through the equal valuation of the OT and the NT. Butler deserves mention, because of his insistence on conscience; but it was Kant who routed rationalism and individualistic utilitarianism. Hegel objectified morality in the customs and institutions of the community, and may be regarded as the father of modern socialism. His influence tended to make the Church a part of the State and to intellectualize and externalize morals. Schleiermacher laid stress on the distinctiveness of the Christian consciousness, and on the value of feeling; he occupies in modern Christian Ethics the place that Kant occupies in the philosophical. Rothe is largely influenced by him; Martensen occupies a mediating position; while I. A. Dorner is speculative and Biblical. The Ritschlian school aims at safeguarding the Christian ethical values—against the scepticism of history, the conservatism of dogma, and the lack of finality introduced by science.

The influence of the inductive sciences and of evolution raised questions as to the origin of conscience, and attempts were made to explain morality genetically and associationally. The question of origin is, however, distinct from that of value. The historical study of Scripture has cleared up difficulties in the Ethics of the OT, and has enabled moralists to distinguish between principles and their historical setting in the NT, while it has helped to reveal the distinctiveness of the Christian life. Dogmatic disputes called forth protests in favour of an ethical basis for united action in dealing with grave social problems (Ethical Societies). The Unitarian school emphasized the supremacy of conduct over dogma, and can claim many distinguished names in the ethical field. The various revivals of religion made prominent the power of Christianity in renewing life, and at

[1] W. A. P. Martin, *op. cit.* pp. 269, 277.

present the stress is laid on the psychology of the Christian moral life and the supremacy of the will, while it is also felt that education and State control can do not a little to develop and safeguard morality.

Till recently there was a general tendency even among non-Christians to regard the moral teaching of Jesus as perfect, as far as individual life was concerned, though defective on its social and political side. Lately this has been denied from without and within (Nietzsche and the *Interimsethik* school), on different grounds. Christian moralists are coming to see that the Christian life is bound up with the Christian revelation, and that the ideas of philosophic Ethics or historical theories must not be used so as to crush out the distinctive vitality of the Christian life of faith. Recognition of spiritual facts is more valuable than systematic completeness, and defective views of Christ's Person are found to revenge themselves on Christian morals.

II. *DEFINITION AND SCOPE.*—(α) Christian Ethics, analytically defined, is the science which deals with (1) what the Christian man (individual and social) should desire and what he should avoid (*summum bonum*), (2) what he ought and ought not to do (Duty), and (3) what moral power is necessary to attain end and accomplish duty (Virtue). The Christian life, however, is an organic continuum, and any analysis of its contents must be to some extent artificial; but, if we guard against overlapping and repetition due to this trichotomy, we may, for clearness of exposition, adopt it. [Schleiermacher, Paulsen, and A. J. Dorner adopt this analysis for philosophic Ethics; Rothe, Lange, Krarup, and others, for Christian Ethics.]

(β) Classificatorily viewed, Christian Ethics is defined by its place in the theological encyclopædia, its boundaries delimited, and its organic relations with the totality of Christian thinking determined (Flint, art. 'Theology,' in *EBr*[9]; cf. artt. in theological encyclopædias). We cannot do more here than mention this way of looking at the science. The present age is anti-dogmatic and anti-metaphysical, and the central position of Christian Ethics, as of Ethics in general, is more and more recognized. This tendency is against confessional and dogmatical Ethics. Men ask rather, 'How much must we believe to live the Christian life?' (Krarup). Christian Ethics, however, presupposes the Christian revelation—the matrix alike of both Ethics and Dogmatics—and is organically bound up with it (see Findlay, *Fernley Lectures*, London, 1894, for a fine treatment of Christian Ethics from this point of view).

(γ) The science may be defined also by comparison and contrast with other views of life. Some views of life are inimical to Christian morality, others are preparatory and propædeutic. The task of the Christian moralist is in this region wider to-day than was that of Clement or Tertullian, Augustine or Aquinas, Melanchthon or Calvin, because, thanks to the vast missionary labours of modern times, new systems of life have come before the mind of Christendom. As a practical science, Christian Ethics must take note of earnest ethical speculation, both past and present, outside the Christian Church. In this way it becomes conscious of itself and of the magnitude of its evangelistic task. The analytic method adopted here is not exclusive of the others, though different from them.

1. Christian virtue.—Under this heading we deal (1) with the objective, (2) with the subjective, dynamic of the Christian life.

(1) *The objective dynamic of the Christian life.*—What is needed to initiate Christian morality is not ethical synthesis (Plato), or discipline (Aristotle), or inhibitive control (Stoics), or culture (Goethe), or development (Spencer), or 'the fulfilment of a capability given in human nature itself' (Green), but creation. All the others are needed once we get a beginning; but a beginning is imperative, otherwise man is left within the circle of his own impotence. It is because ethical systems often neglect this that the Christian thinker feels dissatisfied with them. 'It is their main defect not that they conflict with Christianity, but that they fail to touch the problem with which it most directly deals' (Wace, *Boyle Lectures*, v. [ser. 1], 1874–75, cited in *Lux Mundi*, p. 504). The same objection applies to the Ethics of Rabbinic Judaism, where the highest good depends on works, without any real reference to the grace of God (Oesterley, 'Grace and Free will,' *Expos.*, Nov. 1910). The objective dynamic of Christian Ethics is the Holy Spirit, or God exerting moral creative power. The Holy Spirit is not simply the immanent Spirit of God, as that is generally viewed. Its character is revealed and its power acts through Jesus. A great novel activity of God has been manifested in the earthly life of Jesus, consummated in His death, and exhibited as completed in His resurrection, which makes the beginning of specific ethical Christian experience possible. Hence Christianity is a gospel of God (even as an ethical system), not the product of man's working or thinking, but an offer of life impinging on man for acceptance. Christian moral experience, then, takes for granted the Holy Spirit of God uniting His help to our weakness (Ro 8[26]). Christian Ethics is thus primarily neither individual nor social, but theological, and that in a specific sense. Any other ethical basis is synthetically incomplete. 'Ethics must either perfect themselves in religion, or disintegrate themselves into Hedonism' (Martineau, *Study of Religion*[2], 1889, i. 24). The Holy Spirit is viewed here not dogmatically, but as a condition of ethical power.

(*a*) *Relation of the Holy Spirit to human freedom.*—Christian Ethics, like Ethics in general, postulates freedom in the sense that man is not moved simply by instinct or impulse, but can choose between presented alternatives, that his choice depends on himself—at least, as far as to make him responsible for it. Christian Ethics admits freedom in this sense, but it recognizes as a fact of historic experience the moral impotence of man and the necessity of the gift of the Holy Spirit.

(α) This gift is a moral one, because its acceptance is based on a receptive response by the human spirit. However deadened the human πνεῦμα may be, in this region the Holy Spirit has its point of appeal. Thus the offer is to all men irrespective of class, disposition, temperament, or past history. It is just the love of God attempting to gain the human heart, and so the Spirit is not an alien power, but the very substratum of the human personality. Before this offer the Stoic distinction of the wise man and the fool, the Aristotelian cleavage between free men and slaves, vanish; the dubiety as to whether virtue can be taught and the bad man made good disappears. This is not simply because the moral ideal has been realized in Jesus, but because the Holy Spirit is offered to man as man.

(β) The gift is moral also, because the offer implies a task. We are to work out our own salvation with fear and trembling. Things are not 'offered to our acceptance but to our acquisition' (Butler, *Analogy*, ch. iv. [p. 75 in Bernard's ed., London, 1900]). The task set before men is now a greater one than ordinary Ethics conceives. The demands made on human responsibility are higher than ever before. The moral life is not

first a gift and then a task, but from beginning to end these two moments are combined in one real human experience. Christian Ethics, then, does not desire to disparage man's freedom, to overlook his natural virtues and regard them as *splendida vitia*. The question before us is the practical one of how man can begin the attaining of Christian perfection, and of how the race of man can start embodying in itself the Kingdom of God. It is the old question of ἀκρασία, which Plato practically denied, and which Aristotle found a surd in his thinking. In this initiation men historically have failed, and a new activity of God was necessary to meet the bankruptcy of human effort. This is the gospel, which is not the destruction of freedom, but its re-creation.

(*b*) *The Holy Spirit and conscience.*—Christian Ethics also postulates conscience in the sense that man distinguishes between one action as good and another as bad, one conduct as right and another as wrong, and that the good and right ought to be done and the bad and wrong avoided. What conscience needs is the certainty that its laws are those of the absolutely good, and that its judgments are not simply critical but constitutive of conduct. It needs to be freed from its own bewildering perplexity, as freedom needs rescuing from moral impotence. To Christian Ethics, history is a resultant of two moments—one the Divine purpose, the other human free actions; and, as far as the former is concerned, history is a training and a test of conscience. Conscience is thus historically made aware of its own worth (Stoicism and elsewhere), and brought to an impasse when its vision is focused on itself alone. It may act as human before it is discovered to be Divine (cf. Martineau, *op. cit.* i. 22), but it needs to make this discovery. To St. Paul it was one function of the Law and of pagan experience to bring about the ἐπίγνωσις ἁμαρτίας (Ro 3[20] 7[7-13], Gal 3[19-22]). Through the love of God seen in the death of Jesus this happened. Conscience discovered its own divinity, its 'range of sensibility' was infinitely extended, its perplexity abolished, its aberrations condemned. Its authority was placed in the bosom of God Himself, its fear purified in the tragic tenderness of a Redeemer crucified for sin, and its hope rekindled in the free offer of God's saving love. Thus the enthusiasm necessary for the generating as well as for the safe-guarding of virtue arose, and conscience and freedom were emotionally reconciled, the one enlightened as to its true function, the other set free to carry out its real purpose. The two great questions, 'What must I do to be saved?' and 'What ought I to do after I am saved?' are now answered. The Holy Spirit does not disregard conscience, but, on the contrary, enthrones it.

(*c*) *The Holy Spirit and varieties of temperament and conditions.*—Christian Ethics recognizes the infinite variety of human conditions and temperaments.

(*α*) There is a class which cannot accept *ab initio*, through a personal moral act, the saving power of God. To the demoniacs our Lord had to apply βασανισμός before moral relations between God and the sufferer could be established. Here we cannot theorize so as to attribute personal responsibility in all cases, yet we are not altogether helpless. Intercessory prayer is open, and it is not without power. Perhaps the name of Jesus is of greater power than we realize (cf. Nevius, referred to by Ramsay, *Expos.*, Feb. 1912). Christian Ethics is not without hope even here.

(*β*) There are many, in all civilized countries even, who have bartered much of their power of response to the Divine through their own sin, or through the pressure of social evil upon them, or through both. In all such cases the Christian moralist must search for some point of receptive response and seek to remove all hindrances. The appeal of Christianity should be made unreservedly. Responsibility depends on and is proportionate to opportunity, and it is the duty of Christians to present opportunity to all—to heathen, to depraved, to children—through education and training, for the Spirit of God works through means. Hence our Lord healed bodies for the sake of the spirit, fed the hungry in order to reach their souls, and cast the seed of His word everywhere.

(*γ*) The varieties of temperament are not accidental, but, proleptically viewed, fields of opportunity for the exercise of the manifold Spirit of God, natural bases for its varied *charismata*. Thus the gift of the Holy Spirit is ethically conditioned, not generally, but specifically and individually. Different individuals and different nations have thus been prepared for Christianity, and their varied gifts find here their explanation (πάντων μὲν γὰρ αἴτιος τῶν καλῶν ὁ θεός [Clem. Alex. *Strom.* i. 5]; cf. Calvin, *Inst.* bk. ii. ch. iv. 8). What Christianity aims at is thus not the destruction of natural endowments, but their moral potentiation. Negatively viewed, the Holy Spirit may be resisted not simply by positive moral repugnance, but by neglect, by contentment with life without it, and by searching for the highest along false lines; hence the necessity that the character of the Redeeming Spirit be made known through proclamation, through holy moral living, through the removal of stumbling-blocks in the fabric of society, and through the consecration of all natural endowments and graces. The Holy Spirit is thus the objective dynamic of the individual moral life and of social life as well. It is the condition of social progress.

(2) *The subjective dynamic of the Christian life.*—The subjective dynamic of the Christian life is *faith in God.* This admits of many stages, according to the individual concerned, ranging from the barely reflective movement (often mingled with gross superstition) of the needy heart towards the offered love of God, up to the highly conscious, intensely emotional, and pressing, volitional soul-grasp of the Redeemer. Through faith, ethically viewed, the soul is converted (see art. CONVERSION); it condemns its own past, abandons it in motive (repentance), resists its re-assertion, and finds itself changed in its view of life and duty, and equipped with power to realize the Kingdom of God. It is said that such a theory is wrong because it breaks the law of ethical continuity. But continuity in the moral life is permanently secured only by the presence of the power of God in the character. The false character, fashioned without the aid of the Holy Spirit, is brittle all along the line. Continuity must not be applied to chain the soul to its evil past, but to safeguard the gains of holy living. Hence Christianity takes a view of the past which is distinctive. By the aid of God the individual can break through his evil past and, by resistance to it, 'rise on stepping-stones' of his dead self 'to higher things.' Christian faith does not energize *in vacuo*; it is orientated in Christ as the revelation of God's love to men. Christ is the 'handle by which we lay hold on God' (cf. Rothe, *Theol. Ethik*, iii. 359).

Faith, then, brings the soul into a world of new values, and by it the individual values himself and others after a new fashion. There arises here the sense of the value of the individual. The individual is one for whom Christ died. This, personalized—'He loved me and gave Himself for me'—is now the constraining motive of action.

The will acquiesces in this love, and finds itself reconciled to God. Peace follows which the world cannot give or take away. The individual is garrisoned with the peace of God and rejoices in the Lord. It is impossible to exaggerate the amount of pure joy and calm serenity that Christianity brings to a man. The enthusiasm for virtue it generates is unique. The great danger to the Christian is contentment with the old world which Christ abolished, and which, by believing, he himself has repudiated. This is the world of sin. It is alienation from the life of God through wicked works, the consequent darkening of the conscience and understanding, the deterioration of the will, the deadening of the spiritual affections, and the quasi-cosmos of evil in which men's subjective and social energies act, and which acts through them. It is the destruction of freedom, the darkening of the conscience, and the devaluation of the individual. The Cross shows sin to faith in its true light. It is no longer an error of judgment merely, or a lack of harmony in ourselves, or a crime against society, but a revolt against holy love; and it is all the rest because it is this. Sin is thus not in the actions but in the will, and sins are graded according to this inwardness of view. The Pharisees—the proud, haughty, humility-lacking—are more hopeless than the miserable, restless in their sins.

Faith thus calls upon itself to a battle *à outrance* with sin, and here begins the problem of the formation of character. Christian character-building is just the soul of man habituating itself to the active presence of God, and transforming the natural endowments into spiritual instruments to carry out the will of God (sanctification).

Faith is accompanied by humility, which arises from the sense of God's great love in Christ to us. It is due not simply to a sense of our finiteness and of God's infinity, but much more to a sense of God's activity of saving love so utterly undeserved by us. Intellectually viewed, it is adoration, as we see God's infinite patience with men in history and His provision for their salvation (cf. Ro 11[33-36]). It is the outlook of the soul on its own sinful past, and the recognition of God's forgiveness of it. It is the remembrance also of our present frailty and future difficulties, and the knowledge that we need God every hour. Towards men, humility arises as we realize our indebtedness to others—to Greek and Jew alike. God's varied gifts are meant for common blessing and common service; hence humility condescends to men of low estate. It is the death of pride and vainglory. It expels indifference to the common needs of men. It is the disposition which makes advance in knowledge possible, makes self-sacrifice in action easy, and keeps open the windows of the soul in adoration towards heaven. It also consecrates the meanest service because it is done for God (cf. the widow's mite), and fills the humblest life with sweetness and dignity. One can hardly call it a virtue; it is rather the aroma of a life lived in the sense of God's amazing love (so free and undeserved) to men in Christ. Closely associated with it are the gentle graces of character—regard for the needs of others, sympathy with suffering, respect for the lowly, an eye for the glory of the commonplace, compassion, tenderness, pity, gentleness, obedience, lack of ostentation, thankfulness, a forgiving spirit. When it becomes conscious of itself and tries to ape itself, it loses its peculiar flavour, and thus the monastic conception of humility (doing menial tasks, etc.) tended towards the destruction of this spontaneous Christian grace.

The synthetic character of faith is seen in the fact that in it is also the germ of the manly virtues—independence, courage, endurance. Because faith is sure of God's forgiveness, the character is strengthened into fidelity to God against all odds. Thus is generated an independence based on God, far surpassing anything found on the heights of Stoic *αὐτάρκεια*, and a courage which is not an ebullition of natural temperament, but a 'habitual mood' of the soul. Faith lifts man above the tyranny of the customary and the accidents of fortune, for it is loyalty to Christ. This loyalty finds sufficient exercise in our ordinary callings: Luther was true to the Christian spirit when he rescued common vocations from the stigma of inferiority implied in the meritorious life of the cloister. The patient endurance (*ὑπομονή*) of pain and suffering and of the flux of earthly blessings, whether that be directly due to providence or to the hostile opposition of society, is a result of faith. Hence follows contentment. It is neither the *ἀταραξία* of Epicurus nor the *ἀπάθεια* of Stoicism. It does not shun difficulties, but it does not create them unnecessarily (Ro 12[18]); it feels pain and injustice keenly, and, where possible, removes them. Patience is the knowledge of what is to be endured and what is not (Clem. Alex. *Strom.* ii. 18). It is thus gentle and stern, passive and active (Rev 2[2]). Patience must never fail, and hence suicide is never allowable. Patience may lead to death, but such a death is the gateway to life.

As the Christian has to live his life in his vocation, he is impelled to exercise discretion in trying to find out God's will. He is a member of society with definite calls on him, involving the welfare of others and the progress of Christ's Kingdom. Hence knowledge is a virtue. Such a knowledge is determined by the interests of the new life. It is practical, and must avoid foolish questionings. It is for the sake of service to men, and must not puff up, or separate the possessor of it from his brethren and the pathway of ordinary duties. It is never perfect in this world, but is a growing intensity of penetration into the active purpose of God.

Faith is thus the personal bond which unites the human person to the Divine redemptive Spirit and submits itself to the dictation of that Spirit. The Christian virtues are implicit in it.

'We may only speak of Christian "virtue" if we keep constantly before us what has been said of the reception of faith as the fountain of all Christian morality; were that fountain dried up, the moral life could not longer be maintained. Christ is and remains the principle, rather the personal originator, of holiness, as He is of that conversion which lays the foundation of the Christian life' (Häring, *Ethics of the Christian Life*, p. 247).

Hence the end of Christian virtue is to be a perfect man in Christ, to live with a sure hold of the world of values which Christ revealed, and to convert these values into reality. Its great means of subsistence and progress is prayer. Prayer is faith seeking and finding power from God, thankfully acknowledging its privilege, becoming conscious of its task, renewing itself to follow the path the Spirit of God indicates. The Church as means of grace is valuable as it helps this, for it is a house of prayer, and all other so-called means of grace should ever be used in holding Christ up before the soul as the Power and the Pattern of Holiness. Prayer is not simply negative and protective, but positive and constructive. It is the Spirit of God re-creating man in God's image, and the work of man's spirit working out his own salvation.

'The Spirit is not merely, in St. Paul's view, an aggressive force leading the human spirit against the flesh, or a defensive power shielding it from attack. Stoicism, as interpreted by Seneca and Epictetus, was able to go some way in that direction. St. Paul opens another door of hope; his indwelling Spirit is also a constructive power which builds up a new life within, co-operating with the spirit of man in the work of restoring human life to the image of God' (Swete, *Holy Spirit in New Test.*, 1909, p. 344 f.).

Faith issues in *hope*, according as it experiences the power of Christ in the pressure of temptation and affliction. Hope rests itself on Christ's victory and on the promise of the victory of His kingdom. It is cognizant of the might of sin and its energy, it knows the tribulation that accompanies righteousness, but it has counted the cost and tasted the worth of the new life. Hope never fails; hence the continual optimism of the Christian character, touched with a seriousness and gravity unknown elsewhere. Hope can 'reach a hand through time to grasp the far-off interest of tears' (Tennyson, *In Memoriam*, canto i.). It is, like prayer, focused in Christ. Christ is the atmosphere of its life and the limit of its longings. It thus faces life with a spontaneity of assurance which sin in all its potent resistance can neither demoralize nor overcome.

Because faith and hope are orientated in Christ, they energize in *love*, and all the virtues and graces are thus determined as to their inner quality. For emotion, intellect, and will are apt to become self-centred. Hence the need of love, lest the emotions should rest in themselves. Thus the 'gift of tongues' has to be used for the benefit of all, the intellect must become conscious of its social task, and the great deeds of self-denial must not become monuments of selfish display (1 Co 13). Christ is the perfect embodiment of love, and the aim of the Christian man is to know the love of Christ which passes knowledge (Eph 3^{19}), and to give himself no rest till all men are made participants of the same love (2 Co $5^{14ff.}$). Prayer then becomes intercessory and social, for it knows that common blessings issue from common prayer; and the Christian man, in all his inner and outer activities, feels the worthlessness of all if love be lacking. Christian perfection consists in the possession of such a love as is seen in Christ. This is eternal life.

2. The Christian ideal.—The Christian ideal is, individually viewed, eternal life, and for all men, organically viewed, the Kingdom of God. These two are inseparable and interchangeable, yet are distinguishable as the individual and the common good. What is the content of this good? Christianity makes no attempt to give an exact definition, but seeks to communicate it and let it reveal its nature by its presence and possession.

(*a*) Eternal life is not existence infinitely prolonged. Dives may live after death, but his existence may be a curse. Yet, clearly, eternal life implies immortality. To say that the good is good, however short its existence, 'admits of no answer but produces no conviction' (Hume's *Works*, ed. London, 1854, iv. 176). The tremendous reality of death must be faced by all earnest, ethical thinking. Heartless banter, Stoical indifference, perplexed uncertainty towards it, cannot satisfy serious men, and any ethical ideal limited by death stands self-condemned. Thus Plato thought extinction too good for the unrighteous. Kant postulated immortality in order to harmonize virtue and happiness (see also Green's *Proleg.*², 1890, p. 195). The worth of eternal life is not, however, in its duration; its duration is implied in its worth. Immortality, as bare existence after death, may be as Sheol or the realm of Hades—both so hazy that one day of labour on earth is preferable to them (cf. *Od.* xi. 489 ff.).

(*b*) Eternal life does not depend on a healthy body or pleasant surroundings, otherwise many would *in limine* be cut off from its possibility. Aristotle could hardly conceive it possible for deformed persons, or slaves, or even artisans to possess the *summum bonum*. The Christian ideal is open to all. We must not forget this truth in our ardour for economic improvement and our advocacy of a living wage. The man clothed in purple and fine linen and faring sumptuously every day may be unaware of what eternal life is, while he who has not where to lay his head may have it. Even though 'friends, leisure, and means' were for ever possessed, the Christian life might still be lacking. Thus the Christian ideal conflicts with all ideals summed up in earthly pleasures, pursuits, and interests with no outlook beyond (cf. Browning's *Old Pictures in Florence* for the difference between Greek and Christian art in this respect).

(*c*) Eternal life is communion with God. Man was created in God's image, re-created in the image of the Son. Hence man's aim is moral likeness to God. The great task of Christian teaching is to awaken in man the practically lost sense of sonship; for, when the prodigal returns to his Father, then he who was dead is alive again. This communion is not the absorption of mystic contemplation or Nirvāna. Such an absorption negates moral values and personality. It is not simply the communion of τὸ λογικόν in man with the eternal reason, as Plato tends to make it in the case of Socrates (*Phædo*). That would leave behind the varieties of personal temperament and character in its sublimation. By communion, Christianity does not mean breaking the limits between the Infinite and the finite. These are not moral distinctions at all. They are not barriers to communion. What is aimed at is freedom from sin, and the acquisition of holiness. This communion is a moral life, and it aims at perfection through moral activity. It is, ideally viewed, a real ethical personal communion, in which all endowments and characteristics are morally potentiated to their highest degree. It is a personal life of righteousness saturated in the atmosphere of a Personal Holy Presence. The Christian ideal is at the same time the Highest Good. Viewed as Ideal, it waits its full realization; as the Highest Good, it is a present possession. Thus, while it awaits its full realization, it must be morally operative now. It is otherworldly, but it demands all reality as its content.

(*d*) Eternal life is a fellowship dependent on the possession of a righteous character, and it is maintained in the living of a righteous life. 'Be ye holy, for I am holy.' The way to attain it is not, as Orphism taught, to escape from matter *per se*, through acts having little moral reference in themselves and valuable only as means. The moral life is not a *vita purgativa* or *scala perfectionis* simply, but a permanent moment of the Christian ideal. This aspect of communion and the way to attain it break down the false asceticism and subjectivism that dog Mysticism. For eternal life is a righteousness that demands all for the service of God.

(i.) Eternal life demands Nature. Jonathan Edwards declares that he saw a new beauty in Nature at his conversion; so Lacordaire and many besides. In the light of the ideal, this world is God's world and a theophany, as it was to ancient Psalmists. To make this universal through the æsthetic side of our nature should be the aim of art—to make the lily and the bird bring us to our Heavenly Father. True art should thus be a means of righteousness, and so should true science. Neither material needs, nor pains, nor privations should obstruct this communion by focusing attention solely on themselves. Their pressure should lead us beyond themselves. Nor should the soul attempt to satisfy itself in worldly possessions, to the exclusion of God. That is why Jesus warns against anxiety and riches, because the affairs of business and pleasure, exclusively pursued, turn the will into channels divergent from

the will of God; because ideals through these influences are truncated, and the singleness of aim which ought to characterize conscience becomes blinded by the false lights of the world. Experience in this, as in every age, proves that there are no more certain ways of falling out of fellowship with God than these. To act thus towards Nature is to be ruled by it—not to rule it, as is the Christian ideal. Christ's Lordship over Nature is a pledge of ours. There is thus truth in Rothe's view that morality is the gradual spiritualization of Nature. Every advance in science, every subjugation of natural forces, every great work of art, should make righteous communion more easy. When these advances are suborned into the service of injustice, then communion is more difficult. One of the great tasks of Christianity is to convert the material gifts of civilization into means of righteousness, and not suffer them to be held in the bondage of non-moral or immoral purposes.

(ii.) Eternal life demands the whole of mankind and of every man. Just as Nature becomes a theophany in the light of this ideal, the bodily members become ὅπλα δικαιοσύνης τῷ θεῷ. Even in the future perfect communion, Christianity does not offer the abolition of the body.

'Not the destruction of the body but its liberation was the hope which it held forth to the world. Human nature is to be perfected, not by the abandonment of one of its factors, but by the emancipation of the whole man; humanity is to be preserved in its entirety for the coming Christ' (Swete, 355).

Thus righteousness includes care for the bodies of men and for their proper surroundings. Sickness is due to sin, and our Lord's ministry of healing is an integral part of the Kingdom. Hence Seeley (*Ecce Homo*, ch. x.) rightly points out that, on the one hand, Christians cared for the body passionately, while showing, at the same time, a more than Stoic apathy in regard to personal suffering. The passion for social reform, the crusades against disease and degeneration, the desire to regulate labour hours and conditions that would breed weaklings and fill our hospitals, ought to find in Christianity their warmest recruits. Every slum is a dead weight on the Christian heart, making communion with God more difficult. The same applies to nations sunk in superstition and paganism. Righteousness, rightly understood, is the nerve of missionary effort. Till the whole of humanity, intensively and extensively viewed, is in the Kingdom of God, there is something lacking in the fullness of the ideal.

(iii.) Eternal life demands an interpretation of history, for righteousness is the substratum of history. It is the highest good in history; but, because it has not been fully entrenched in any society or any institution, it is an ideal to be realized, though present from the first, and all along moving towards realization. The truth of history is the Kingdom of God. This culminates in Christ, and unfolds itself under His control. We are thus given a standard to evaluate individuals, societies, and movements, and it helps us to fill in concretely the Ideal itself and gain guidance for the future.

(*e*) The inner nature of eternal life, of the Kingdom of God, is thus seen to be love, because it culminates in Christ. Love is not a baseless psychological experience that can be made or forgotten by individuals. It is the Reality. God is Love. Love is the inward spirit of righteousness in man, of order and beauty in Nature. Men may appreciate order in Nature, purpose in history, and righteousness in conduct before realizing the inner nature of all as Holy Love. This is Dorner's justification for contrasting righteousness and love, but the contrast is one of human appreciation, not of inward nature (see R. Law, *The Tests of Life*, 1909, p. 80). To have the love of God shed abroad in our hearts, to see it preparing a world for itself and realizing itself in human relationships, is to have eternal life and to be in the Kingdom. Love tries to reproduce in men a character in which it is itself the inner principle of life and conduct. It takes on itself men's burdens and sins so as to abolish them. This ideal is a historical reality in Christ. Love is the very nature of God, and the aim of the Divine Spirit is to reproduce it in men, just as it is the highest task of faith to make it a reality in the world.

3. Christian duty.—When the Christian acknowledges, through faith, the infinite worth of the Ideal, and is in motive reconciled to it, he imposes on himself the duty of actualizing it. The ideal is a criticism of the actual, and has its own motives and sanctions. These are intrinsically bound up with the ideal itself; hence the charge of hedonism is a misapprehension, though so-called Christian conduct has often justified the charge (cf. Westermarck, *MI* ii. 660). To say that virtue is its own reward, and that duty should not be determined by consequences, is a noble truth; to make that mean that there is no reward and no consequences is to make the moral life unreal. The 'purity' demanded by Kant is consistent with Christian sanctions, because no false sanction can ever be appealed to. The 'medicinal lie' is not a Christian sanction, although Clement and others recognized it. But Christianity can use the fear of punishment if the punishment is the consequence of outraged holiness. Even Christians themselves are not exempt from holy law, *i.e.* from judgment. Those who build with wood, hay, stubble shall have their work destroyed in fire (1 Co 3^{12-15}). That our Lord denounced hypocrisy and brought God's holiness to bear on the issues of human conduct is not immoral. For evil is so self-confident and often so successful in this world that it is a duty to tear the mask off its face and let the light of eternal holiness expose and confound it.

The brevity of life may be appealed to as emphasizing the duty of buying the opportunity. Positively, the appeal can be made to the blessedness of the pure in heart and to the sure reward of persecuted righteousness. In all this, however, we have but coloured spectral rays of the real inward motive and sanction of Christian duty, which is the redeeming love of Christ to all men, constraining us to personal holiness and public righteousness. To lose this love or be faithless to it supplies deterrents more awful than any conceivable punishments, and to have it is a motive compared with which the uncertain promises of the natural life are trifling. There is, thus, no division of duties into commands and counsels; for duty is obligatory love, and merit is excluded. Yet duty is coloured by the position and condition of the individual and society. That we abstain from things offered to idols is no duty for us, but it is a duty to exercise our freedom with a regard to the welfare of others. We cannot thus have an exhaustive classification of duties. It is more important to note that duty is single—the determining of life from the side of God. Hence fidelity to Christ is the primary duty. 'Follow me' is the first as it is the last word of Christ to His people (Mt 4^{19}, Jn 21^{22}).

(1) *Duties to ourselves.*—Self-regarding duties are not prudential, as in Greek Ethics, but Christ-determined. A conflict, thus, cannot arise between them and service for others, as A. E. Taylor (*Problem of Conduct*, 1901, chs. vii., viii.) supposes. For self-regarding duties are not consciously directed towards self, but are the reflex influence on the person of his fidelity to Christ. The duty of self-love has to be qualified in this way, or it may become a misnomer. The question of the 'neces-

sary lie' is also solved by this principle. In actual life either the falsehood or the necessity is lacking. A list of self-regarding duties is impossible. One Christian finds his vocation in science, another in politics; and all may labour in these spheres from a sense of Christian duty. What is important is fidelity to Christ in each sphere. Because of division of labour it is not a Christian duty to cultivate all potentialities, but rather to limit oneself to one's vocation; for fidelity in our vocation does not impoverish but enriches the character and makes it more effective for all providential calls (cf. Dewey, *Outlines of Ethics*, 1891, p. 40). Because self-regarding duties are determined by reference to Christ, not by prudence, the body and bodily actions have spiritual value. The members of the body become instruments of righteousness to God. Hence the duties of chastity and moderation in all things. There is also the duty of work, for the upkeep of the body, for the support of dependants, for the sake of a good example, and in order to have wherewith to exercise charity. St. Paul lays it down as an inexorable duty to support the weak and helpless bound to us by family ties (1 Ti 5[8]). To be conscientious in our work, to keep our souls pure and our minds alert, are duties incumbent on us because we are servants of Christ and are here to advance His Kingdom. A lively interest in all real human questions and an understanding of God's will in our tasks rise before us as obligations.

(2) Thus self-regarding duties merge imperceptibly into *duties to others*. In the family we learn, by working for others, to realize Christ's claim. The family is a nursery of discipline in self-sacrifice and in working for a common good. Here we see the Kingdom of God spiritualizing natural conditions, for marriage is in the Lord. Parents appreciate the love of the Heavenly Father, the need for the correction of natural partiality, and the value of authority and law in dealing with their children, while children are trained to reverence moral values, to understand the need of obedience and the value of common service. The family is of extreme value in the eliciting of sympathy and mutual co-operation. Wider than the family are the community and the State. Through these we learn our dependence on others—the value of division of labour and the possibility and duty of contributing to the common good. For society places so many gifts before us that we are bound to be thankful and to strive for the common welfare with all our might. The gifts of society are not to be exploited for selfish ends, but for the enrichment of Christian character, and for the advancement of the Kingdom of God. The individual is thus constrained to contribute to its welfare. Contribution not acquisition, emulation in service not competition, should be the watchwords of all.

(3) *Duties of institutions to the individual.*—The individual in Christianity is of infinite value; hence the Church, which is the specific Christian institution, should keep this in view.

(*a*) The Church should be the guardian of freedom. Institutions were made for man, not man for institutions. The rights of conscience are inherent in Christian faith, and cannot be ignored in the interests either of despotism or of democracy. Thus the Church must supplement the workings of the general laws of the State and of communities, as well as the customs of societies through the ἐπιείκεια which Aristotle saw was necessary. Christian freedom subserves itself, as St. Paul and Luther saw, to service for all; hence the Church must enlighten all natural institutions as to duty, and supplement their shortcomings. She must not wait for the State or municipality, nor must the real living Church wait for the Church itself as an organized institution. For this reason the Early Church recognized duties of benevolence, of hospitality, of finding work for her members. It may be said she was by necessity a labour bureau. These, of course, are duties for some individual Christians, but they are corporate duties as well. Above all, she should aim at removing stumbling-blocks from the way of righteousness, but her weapons are love, not physical force.

(*b*) The paramount duty of the Church is evangelization. The unrest and suspicion between classes and between nations, the unification, through discovery and commerce, of the whole world, make this most imperative in our time. Lord Acton, referring to Ac 16[6f.], says: 'It is not harder to believe that certain political conditions are required to make a nation fit for conversion than that a certain degree of intellectual development is indispensable' (*History of Freedom*, 1877, p. 202). The passage in Acts may also mean that single individuals may not be fitted to go to certain places evangelizing. If both qualifications hold, yet the Christian Church has not acted up to these limitations. She is in arrears of duty as regards evangelization.

(4) *The State and the individual.*—The State is a limited natural institution, but a Divine ordinance and a real entrenchment of the Kingdom of God as the common good. Christian Ethics should insist on the duty of the Christian State in administration and legislation to look after the welfare of all classes, and to make all contribute to the common good. The means of education and an honest livelihood should be within the reach of all; hence poverty and its causes should be abolished as far as possible. The weak should be protected against aggression and exploitation—possibly against themselves. The Christian conscience is certainly coming to make greater claims on the Christian State in the way of providing work for all, in demanding a living wage, in looking after the aged and the helpless young; and the science of Economics is rapidly providing a basis for scientific legislation. These demands carry with them the corollary that the State has greater control over private interests than was once recognized, whether the interests be those of capital or labour, money or work, land or commerce. What we need, however, both in the State and in the various minor institutions that compose it, even more than legislation, is the spirit of devotion to the common good by all, and the spirit of self-sacrifice among those who have special spiritual and material endowments. We need the Christianizing of the public conscience which determines the State. It is to be deplored that there is no recognized mouthpiece to give voice to the duties of State to State. 'Si vis pacem, para bellum' has converted Europe into arsenals. But war is incompatible with Christianity, and its incompatibility with State duty should be more and more recognized.

We have not, owing to the limits of this article, entered into details. Suffice it to say that the Christian ideal of the Kingdom of God, which is also the Supreme Good, lays on all who accept it duties of brotherhood, service, and self-sacrifice; that, as far as natural institutions are Christianized, the same services are demanded of them; and that the hope of Christianity should make us fall back more and more on the Eternal Spirit who originates, sustains, and shall perfect, through human endeavour, the Kingdom of God.

DONALD MACKENZIE.

ETHICS AND MORALITY (Egyptian).—

1. Introductory.—The opinion of the Greeks, that the Egyptians were a profoundly philosophical and reflective people, has been shown by the contemporary inscriptions and monuments to be false. The bent of the Egyptians was essentially practical; and, if they attained some proficiency in mathematics, astronomy, and medicine, it was for the sake of the uses to which these sciences could be put. For the things of the mind, as such, they had little taste; hence their ethical views were without depth, and they had no opposing schools of ethical thought. Nevertheless, it cannot be denied that the Egyptians took a very keen interest in the moral aspect of the world. They were never tired of boasting of their virtues, and the popularity of the Osirian worship bears witness to their strong moral feelings. To put the matter shortly, the Egyptians, though not ethically speculative, were in a high degree ethically minded.

2. Terminology.—Language usually provides a rough criterion of the mental state of a people with regard to any given topic, since thought tends to create its own adequate expression. The Egyptian expressions for moral concepts are neither numerous nor precise. For 'right' the word is *ma'et* (Copt. ⲘⲈ : ⲘⲎⲒ; the older Egyptologists write *maāt*, *ma*, etc.), which seems to be derived from a verb meaning 'to be straight,' 'to move in a direction.' Thus *ma'et* signifies conformity to an ethical norm,[1] though it has also, and perhaps even more frequently, a purely intellectual connotation; it then means 'truth.' The contradictories of *ma'et* are *'iesfet*, 'wrong,' and *'oze*, 'guilt'; *gōrg* more often means 'untruth,' 'falsehood.' For 'good' and 'bad,' *nūfer* and *bo'in* are the commonest terms; they also stand for 'beautiful' and 'ugly' respectively. *Bōte* means 'crime'; for 'sin' is used the phrase *bowt nūter*, 'what God detests.' There is no verb corresponding to 'ought'; 'duty' is represented by *'ere-t*, 'that which is reckoned as against' a man, his debt to the community.[2] The will as a psychological entity is unknown, and is not distinguished from the agent ('I', 'me').[3] The word *'ieb* (=Heb. לֵב), 'heart,' is often found in Egyptian texts for the intellect or reason; but it appears sometimes to mean more than the mere instrument of cognition; it means the faculty which recognizes and suggests the right course of action, 'the conscience.' So in the following passage, which is a good example of Egyptian modes of expression in ethical matters:

> 'Thus saith he. This is my character to which I have borne witness, and there is no exaggeration therein. . . . It is my *heart* (*'ieb*) that caused me to do it through its guidance unto me. It was an excellent prompter unto me; I did not infringe its commands; I feared to transgress its guidance. Therefore I prospered exceedingly, and was fortunate on account of that which it caused me to do; I succeeded by reason of its guidance. Of a sooth, true is that which is said by men: "It (namely the heart) is *the voice of God* that is in every body; happy is he whom it has led to a good course of action!"' (K. Sethe, *Urkunden des äg. Altertums*, Leipzig, 1908 [hereafter cited as *Urk.*], iv. 973 f.; cf. iv. 119, and W. Wreszinski, *Wiener Inschriften*, Leipzig, 1906, p. 160).

The 'thoughts' of men are 'that which is in the body (*'imiu-khat*) or 'the concerns of the heart' (*khert-'ieb*). The very concrete way in which psychological facts were expressed is here conspicuous; for more complex ethical concepts, such as 'motive,' 'responsibility,' 'scruple,' abstract names were wanting.

The moral predicates were represented in language in an equally concrete way, an adjective or participle, metaphorically used, being combined with such substantives as *'ieb*, 'heart' (for qualities of mind or temperament), *ḥor*, 'face' (for qualities that can be detected or conjectured from a man's look or expression), *rō*, 'mouth' (for qualities that manifest themselves in speech), or *'a*, 'arm' (for qualities that manifest themselves in action). Thus *waḥ 'ieb*, 'enduring of heart,' was the phrase used to convey the notion 'kindly,' 'indulgent'; *spad ḥor*, 'sharp of face,' for 'intelligent,' 'clever'; *ḥap rō*, 'hidden of mouth,' for 'reserved,' 'discreet'; *'aw 'a*, 'extended of hand,' for 'generous,' 'liberal.' The difficulties which imagery of this kind makes in translation into a modern language may easily be conceived; in particular cases hieroglyphic scholars are often at a loss to decide precisely what qualities are meant.

3. Destiny and free will.—The Egyptians were strong believers in 'Fate' (*shay*),[1] which was occasionally personified; as a rule, however, it is 'God' (*nūter*) in general, or some god in particular (*e.g.*, Rē [*Urk.* iv. 943]), who is supposed to determine the events of a man's career. The uncertainty of human projects is often alluded to:

> 'What men have devised never comes to pass, it is what God commands that comes to pass.' For instance, 'One man plans to plunder another; he ends by giving to him he knoweth not' (*Papyrus Prisse*, 6. 9–10). On this account the precept is given: 'Take no counsel for to-morrow ere it be come' (*Petrie Ostracon*, 11; *Prisse*, 6. 8).

Luckily the Egyptians did not, as a general rule, go on to conclude that their own actions were unchangeably predestined; the influence of Fate seems to have been restricted to the things that might happen to men, and did not extend to their actions (cf. FATE [Egyptian]). We have seen that 'conscience' was compared to the 'voice of God' speaking in men; but there was no compulsion to listen to the voice.

> It is quite an exceptional case when Sinuhe in the tale excuses himself for his flight to foreign parts by attributing it to the 'will of the god' (*Sin. B*, 43), 'who decreed this flight' (*ib.* 156). And, when the magician disclaims responsibility for the formulæ he pronounces by saying, 'It is not I who say them, it is not I who repeat them; it is Horus who says them, it is Horus who repeats them' (*Pap. Turin*, 136. 8), this is a statement governed by quite special conditions.

That men are free agents is a necessary assumption in everyday life; that the opposite is true has often appeared to men as a necessary deduction

[1] Very often the best rendering is not 'right' but 'justice.'

[2] The word *'ere-t* is derived from the preposition *er*, 'towards,' 'against'; cf. ⲚⲈⲦⲈⲢⲞⲚ, 'our debts,' in the Coptic versions of the Lord's Prayer, lit. 'those things that are against us.'

[3] The elusive word *ka*, which is usually translated 'double,' may sometimes conveniently be rendered 'will'; so, too, *ba'u*, lit. 'souls.'

[1] Cf., too, the masculine *p-ši*, ψαις, which is rendered in Greek by Ἀγαθὸς Δαίμων.

from the notion of causality or fate. The practical-minded Egyptians accepted the first view without hesitation, and ignored the second.

4. **The range of responsibility.**—The extent and limits of responsibility are questions on which there is but little Egyptian evidence. It is very probable that madness was attributed to possession by demons—a belief now universal in the Orient; we know for a fact that illness was thought to be due to the presence of haunting spirits of the dead (cf. art. DEMONS AND SPIRITS [Egyp.]). Again, it may have been held that families were jointly responsible for the acts of their individual members, though this cannot perhaps be quite legitimately deduced from the assurance given that a man's children benefit by his good deeds (*Urk.* i. 129), and will have to bear the consequences of his bad ones (Petrie, *Koptos*, London, 1896, pl. 8, 6; Lepsius, *Denkmäler*, Berlin, 1849–59, iii. 140*c*).

5. **The question of disinterestedness.**—Egyptian moralists may now and again have caught a glimpse of the loftiest heights of ethical thought—the conception of right as its own sufficient reason, regardless of consequences; but in general their teaching was on a lower plane.

'Excellent is right,' exclaims the wise Ptahhotep, 'and endureth and prevaileth'; upon this irreproachable sentiment there quickly follows a prudential consideration which completely spoils its elevated tone:—'Never has wickedness brought its venture safe to port; wrongdoing stealeth away riches' (*Pap. Brit. Mus.* 10509, 2, 7–9 = *Prisse*, 6. 5–6).

The Egyptians were very sensitive about their reputation, and often boasted of having won the approval of their fellows.

'I did what all men approved,' says one noble (*Urk.* i. 75); a hackneyed phrase of the funeral stelæ is, 'I did what men loved and what the gods approved' (e.g. *Urk.* iv. 131, 484). It was an ancient proverb that 'the good deeds of a man are his monument, an evil nature is oblivion' (*PSBA* xviii. [1895–96] 196).

In the desire for a good reputation the extreme limit of Egyptian disinterestedness is reached; it was deemed the highest possible virtue for a man to 'raise up a good name' in his city (*Shipwrecked Sailor*, 159), though, of course, the desire for approval is a self-seeking motive only a little less crass than other selfish motives. Naturally it was more profitable to a man that he should stand well with the king than that he should be respected by the people at large; the Egyptian noble, in the *naïveté* of his soul, esteemed himself even more for the good opinion in which Pharaoh held him than for his fair fame among his equals. Blended with protestations of his generosity, his love of justice, and so forth, we frequently find him describing himself as 'beloved of his master,' or as one 'with whose excellence the lord of the two lands was content.' In such a high degree was the Pharaoh considered to be the patron and recompenser of virtue that he was known as 'the good God,' and 'the lord of Right.'

Thus an official relates, 'I did right for the lord of Right, for I knew he is pleased at it' (*Urk.* iv. 941). To Rameses II. it is said: 'Thy tongue is the shrine of Right' (*Kuban Stele* 18).

Yet, in spite of the absolute form of the government under the Pharaohs, the popular verdict was held of high account. The speech of king Thutmosis III. in appointing his Minister of Justice illustrates this point in rather a remarkable way; among other things it is said:

'If a man inspire fear overmuch, there is some injustice in him in the opinion of men'; and again, 'As for the chief scribe of the Vizier, Scribe of Righteousness is what he is called' (Newberry, *Life of Rekhmara*, London, 1900, p. 10).

6. **Virtue rewarded upon earth: Egyptian pessimism.**—It was very generally believed that virtue reaps its own reward upon earth. A man who has favoured us with a long catalogue of his virtues ends with an address to mankind:

'I speak to you, O mortals; listen and do the good deeds that I have done, and to you shall be done the like' (*Urk.* iv. 61, cf. 65). To a king it is said: 'Do the right that thou mayest live long in the land' (*ZÄ* xiv. [1876] 108).

The theological expression of this idea was as follows:

'God returns evil to him who does it and right to him who brings it' (*Urk.* iv. 492).

'The fear of God' (*ib.* 64) might also be a powerful inducement to good conduct, inasmuch as

'God knoweth that which is in the body . . . his eyes perceive men's characters in their livers' (Newberry, 8. 39).

Of course the Egyptians were well aware that often it is the bad and not the good who prosper, and a passage in a literary satire illustrates the fact that rank and comfort were sometimes obtained without any superabundant merit (*Anast.* i. 9. 4–6). That all men are sinners is assumed as axiomatic in a passage of the Book of the Dead (ed. Naville, Berlin, 1886, pp. 17, 44). The wickedness of the world and the predominance of vice over virtue form the theme of a whole class of pessimistic writings, of which several specimens have survived. Here social conditions are depicted as topsy-turvy—the slaves have usurped the place of the rich, murder and rapine prevail, the righteous dwell alone and in misery. From this state of affairs one author draws the conclusion that life is not worth living (A. Erman, *Das Gespräch eines Lebensmüden mit seiner Seele*, Berlin, 1896); another gives as the cause the impiety of mankind and the callousness of their ruler (A. H. Gardiner, *The Admonitions of an Egyptian Sage*, London, 1909); for a third writer, anarchy and moral dissolution are but a stock literary theme (*Brit. Mus.* 5645, in *op. cit.*). In all these books the present calamities are either explicitly or implicitly contrasted with a happier condition of Egypt which is clearly regarded as normal, and it seems evident that Egyptian pessimism was less the outcome of philosophic meditation than the literary reflexion of disturbed historical periods like those that followed upon the VIth and XIIIth dynasties. In any case, the ethical thought underlying these writings is that wickedness and misery are things inseparable alike in thought and in reality.

7. **Virtue rewarded after death.**—That happiness after death depended upon a life of virtue and uprightness was a belief of gradual growth, which ultimately crystallized in the doctrine of the *psychostasia*, or weighing of the heart before Osiris. This doctrine had at all periods to contend with a contrary theory of a more primitive and no less tenacious kind, namely, that funerary rites and the knowledge of potent formulæ were the sole passports to eternal bliss. The stage of opinion that is found in the Pyramid-texts[1] (the oldest religious books of the Egyptians) is almost exclusively of the latter type. Certain passages have been quoted to show that ethical considerations were already beginning to influence the conceptions of the future life (Erman, *Äg. Rel.*[2], Berlin, 1909, p. 110), but they still play a very unimportant part. It must, however, be remembered that the Pyramid-texts originally applied only to the king, who in a certain sense stood above morals, and it is not quite legitimate to argue thence to the case of private individuals. The stelæ and the tomb-inscriptions of the Old Kingdom display to us the elements from which the later doctrine sprang. On such monuments the virtues of the deceased are very often commemorated—evidently in the hope of inducing passers-by to recite the funerary formulæ, if not actually to bring offerings to the tomb; it was but a short step to the conclusion that virtue upon earth is the necessary condition of happiness in the after life. Again, there was always the danger that a tomb would be damaged or destroyed by enemies or thieves in search of plunder; against

[1] Our most ancient copies date from the Vth and VIth dynasties, but the archetype of many of the chapters may be hundreds of years older.

The Psychostasia, or Weighing of the Heart.
From a papyrus in the Cairo Museum.

such risks the dead man had but one weapon, namely, the curse. An oft-repeated formula, current in the Old Kingdom, threatens the violator of tombs with 'judgment through the great God in the place where judgment is given' (e.g. *Urk.* i. 117, 122, 150); and we read of 'the great God, lord of judgment' (A. Mariette, *Les Mastaba de l'ancien empire*, Paris, 1881-84, D 19). These phrases give us the conception of a Divine being who to some extent is the champion of the virtuous dead against wicked enemies. Whether Osiris is here already meant is perhaps open to some slight doubt; but the Osirian cult was now rapidly gaining ground, and it was not long before a certain episode in his history acquired a wide-spread funerary application. It was narrated that Osiris himself had been accused by his wicked brother Seth before the Divine conclave in Heliopolis, but by the aid of Thōth had issued 'justified' from the ordeal (Erman, 41, 116).[1] Soon every Egyptian found pleasure in identifying himself with Osiris, and in regarding himself as destined to share the fortunes of the god, and at last after death and judgment to attain everlasting life; hence we find the epithet *ma'khrow*, 'justified,' appended to the names of all deceased men from the early Middle Kingdom onwards[2] (Maspero [*Études de mythologie*, Paris, 1893 ff., i. 93 ff.] takes a wrong view of the word).

8. Chapter 125 of the Book of the Dead.—In the doctrine of the *psychostasia* the identity of the judged man with Osiris is nearly, though not quite, lost to sight; Osiris here is the Divine judge, the king of the dead, and the 'prince of eternity.' The famous chapter of the Book of the Dead known to Egyptologists as ch. 125 comprises a picture of the scene of judgment (see preceding page), and a long text giving the words supposed to be spoken on the occasion.

In a great hall,[3] the roof of which is crowned with flames of fire alternating with the symbol of Right, sits Osiris enthroned under a canopy. He is accompanied by his sisters Isis and Nephthys, and the sons of Horus are also present. At the back of the hall are seated the dread assessors of Osiris, forty-two in number, corresponding, as some have supposed, to the forty-two nomes or provinces of Egypt. In the foreground is the great balance, with the heart of the deceased in one of its pans and the feather of Ma'et (Right) in the other. The dog-headed Anubis examines the tongue of the balance, and the ibis Thōth, the 'scribe of the gods,' announces the result to Osiris. Hard by there squats a sinister-looking animal, 'a crocodile in its fore-parts, in the midst a lion, and behind a hippopotamus'; it is the 'devourer of the dead' who fail to support the test.

Neither the picture just described nor the text belonging to it has come down to us in copies earlier than the middle of the XVIIIth dynasty. That the text at least is far older is proved by the corruptions it contains, as well as by the very obvious fact of its composite origin. The kernel consists of two Negative Confessions, or Repudiations of Sins, as they would be better called. The older of these (A) contains simple denials of a number of specific sins. The later version (B) has derived a few of its details directly from A, but shows a marked preference for denials of evil qualities rather than for denials of evil deeds; it also increases the number of sins repudiated to 42, one of the forty-two assessors of Osiris being invoked in each case. The two Confessions were, of course, at one time independent; in ch. 125 they have been welded together, and are accompanied by prayers to Osiris and to his assessors. The variants of the MSS show that there was no unanimity in the interpretation of the particular denials, many of which are still obscure to Egyptologists. The following rendering contains all the more interesting parts of the chapter.[1]

(*Title*): *What is said on arriving at the Hall of Righteousness* [lit. *the double Right*, a common but unexplained expression], *the purging of N. from all the evil he hath done, in the sight of the gods.*

'Hail to thee, O great God, lord of Righteousness. I am come to thee, my Lord, I have drawn nigh to see thy beauty. I know thee, and I know the names of the forty-two gods who are with thee in the Hall of Righteousness, who live on the Harbourers (?) of Evil, and who gulp down their blood on that day of the reckoning up of characters before Onnophris [*i.e.* Osiris, 'the good Being']. Behold, thy name is "the twin daughters Merti" [*i.e.*, perhaps, the two all-seeing eyes of God]. Behold, I am come to thee; I have brought Right unto thee, and I have removed wickedness from thee.'

(*Confession A*): 'I have done no wickedness to men. I have not brought misery upon my fellows. I have not wrought injuries in the place of right. I have not known what is not [*sic*; probably corrupt]. I have not done mischief. I have not made the beginning of every day laborious in the sight of him who worked for me. My name has not approached the ship of him who is First [? *i.e.* men have not cried out to Rē execrating my name]. I have not slighted (?) God. I have not impoverished the poor. I have not done what the gods abominate. I have not traduced the slave to him who is set over him. I have not caused hunger. I have not caused weeping. I have not slain. I have not commanded to slay. I have not made every one suffer. I have not decreased the meals in the temples. I have not diminished the loaves of the gods. I have not taken away the oblations to the blessed dead. I have not committed fornication or impurity in the service of the god of my city. I have not added to or taken from the corn-measure. I have not diminished the palm [an unit of measurement; some MSS 'acre']. I have not falsified the cubit of the fields. I have not added to the weights of the scales. I have not tampered with the plummet of the balance. I have not taken away the milk from the mouth of the child. I have not driven the flocks from their pasture. I have not snared the birds, bones of the gods [*sic*; quite obscure]. I have not caught the fish of their pools (?). I have not diverted the water in its season. I have not dammed running water. I have not quenched fire in its (appointed) time. I have not neglected the feast-days in respect of their sacrificial joints. I have not held back cattle from the perquisites of the god. I have not hindered the god in his goings forth (*i.e.* his processions). I am pure! I am pure! I am pure! I am pure!'

(*Confession B*): 'O Broad-of-Gait, coming forth from Heliopolis—I have not done wickedness. O Fire-embracer, coming forth from Kher-Ahau—I have not robbed. O Possessor-of-the-nose, coming forth from Khmūn—I have not been grasping (?). [From this point onwards the names of the demons are omitted.] I have not stolen. I have not slain men. I have not diminished the corn-measure. I have not done crookedness. I have not stolen the property of the god. I have not spoken falsehood. I have not taken away food. I have not been resentful (?). I have not been neglectful. I have not slain any sacred animals. . . . [obscure]. I have not robbed the *ḥnb-t*—loaves. I have not been an eavesdropper. I have not been a gossip. I have not made mischief in matters not my own. I have not lain with a married woman. I have not committed impurity. I have not laid schemes. I have not been neglectful [*sic*]. I have not been hot in reply. I have not been deaf to words of truth. I have not made disturbances. I have not made another weep. I have not . . . the copulator who was copulating. I have not made suppressions.[2] I have not reviled. I have not been violent. I have not been hasty. I have not neglected the nature of the god's satisfaction. I have not multiplied words in speaking. I have not done harm to the doer of evil. I have not railed against the king. I have not waded over the water [*sic*]. I have not been loud of voice. I have not railed against the god. I have not been puffed up. I have not made comparisons with myself [*i.e.* compared myself with others]. I have not made a show with possessions not my own. I have not slighted (?) the god in my city.

Praised be ye, ye gods! I know you and I know your names. I fall not a prey to your swords. Ye shall report to this god whom ye follow nothing evil concerning me. I have had no fault towards you. Ye shall speak the truth concerning me before the Universal Lord. For I have done Righteousness in Egypt, I have not railed against the god, and I have had no fault towards the king of my time.

Praised be ye, ye gods who live in the Hall of Righteousness, in whose body is no lie and who live upon the truth. . . . I have done what men command and that wherewithal the gods are pleased. I have given bread to the hungry, water to the thirsty, clothes to the naked, a ferry-boat to the boatless. I have made offerings to the gods, and oblations to the blessed dead. Save me and protect me. . . .'

9. Comments.—The importance of the two lists of sins contained in this chapter has often been grossly exaggerated. From the observation that no reference is made to family duties, it has been

[1] It was doubtless on this occasion that Osiris received the 'wreath of righteousness' (*woḥ n ma'khrow*) often named in Egyptian texts; hence the wreath depicted on so many Græco-Roman tombstones, and also the 'crown of righteousness (στέφανος δικαιοσύνης) of the NT (see Cumont-Gardiner, *RHR* lxiii. [1911] 210, 214).

[2] The posthumous pilgrimage to Abydos (see below, § 10) is said in at least one place (Thebes, tomb of Amenemhet, no. 83) to have had as its object the 'fetching of justification' (*ma'khrow*).

[3] The vignettes vary considerably; the above description does not adhere to any one particular example.

[1] Another translation, differing considerably from that here given, will be found in art. CONFESSION (Egyptian).

[2] Erman is wrong in translating, 'I have not felt remorse.'

argued that these were not specially emphasized at the time when the lists were drawn up; and the prominence accorded to certain petty offences against religion is urged as a proof that they were considered as heinous as calumny or murder. Far worse than such deductions is the comparison of the two versions in order to distinguish an earlier from a later condition of ethical thought.[1] All such arguments are based on the unproved and wholly unwarranted assumption that the 'Negative Confession' is, as it were, a canonical repudiation of *all* the sins that were considered heinous. The very existence of two lists differing in their details is in itself an indication that neither possessed any high degree of authority; moreover, both exhibit all the signs of careless and hasty compilation. We may be sure, too, that, if great weight had been attached to the precise text, more trouble would have been taken to preserve it from corruption. The truth is that the nature of the sins denied was not the central point of interest to the author or authors of the chapter. Their aim, so far from being an ethical one, was essentially, though perhaps not quite consciously, anti-ethical. Accepting the prevalent belief that happiness in the hereafter is conditioned by a previous life of innocence upon earth, they proceeded to elaborate an incantation such as might hoodwink the Divine Judge and enable the dead man to evade the natural consequences of his sins. Chapter 125 of the Book of the Dead claims to impart knowledge of the words to be spoken on entering the Hall of Righteousness; the tacit assumption is that a knowledge of the names of the judge and his assessors and of what sins to deny was as serviceable a means of attaining eternal felicity as the cleanest of consciences. Whether the sins repudiated had actually been committed or not was a matter of comparative indifference; the main point was that the deceased should be ready with his denials. Nor was it necessary for him actually to commit the chapter to memory; he in whose tomb it was inscribed, or with whom a papyrus containing it was buried, might feel himself perfectly safe as regards the judgment to come. Chapter 125 is, in fact, just such another magical document as that Leyden papyrus (no. 347) which contains spells for aiding a man who had been taken before a court of justice 'to issue thence justified' (*ma'khrow*).

To sum up: it has been seen how a non-ethical theory of the future life, whereby it was contingent on the performance of certain rites and the recitation of certain formulæ, gave rise to a theory in which ethics was of paramount importance; and it has been seen how ch. 125 of the Book of the Dead, while acknowledging the truth of the latter view in principle, finds a means of subordinating it to the earlier view in practice.

10. The story of Osiris.—In the doctrine of the *psychostasia*, Osiris appeared as the perfect judge, the arbiter of human character and ruler of the virtuous dead. The origin and the early nature of Osiris are shrouded in obscurity, but at a very ancient date he became the prototype of the beneficent Pharaoh. Mythology told how Osiris had succumbed, after a long and prosperous reign, to the machinations of his wicked brother Seth, who mutilated his body and scattered his limbs. At length Isis, the faithful wife of Osiris, succeeded in collecting his remains, and infusing new life into them by dint of her magical power; but henceforth Osiris was a shadowy being ruling among the dead, while his son Horus, having taken vengeance upon Seth, sat upon the throne of the living. It is, doubtless, owing to its human interest and pathos that the story of Osiris took so firm a hold on the imagination of the Egyptians; and, as we have seen, every Egyptian who died claimed to be another Osiris, destined at last to conquer the powers of evil, and to awake to a happier and never-ending life. Pilgrims flocked to Abydos, which had become (though not much before the Middle Kingdom) the traditional burial-place of the god; and, as every one sought to establish for himself a cenotaph in that city, it was sometimes called 'the island of the Just' (Gardiner, *Literary Texts*, Leipzig, 1911, i. 7, note 1).[1] In the temple-cults all the other gods were gradually assimilated to Osiris; and the Pharaoh, whom a fiction always represented as the chief officiant, played the part of the 'loving son' Horus (A. Moret, *Le Rituel du culte divin journalier*, Paris, 1901). In Ptolemaic times, Osiris was blended with a newly introduced god, Serapis, and henceforth his importance waned; but at the same time the popularity of Isis increased, and it was in her shrines that the Osirian faith was kept alive throughout the length and breadth of the Roman Empire.

11. The gods as guardians of morality.—As the personification of all that is good, Osiris acquired the title of *Onnofre* (Onnophris), 'the good being,' besides which he was known as 'the great God, the lord of Right.' Seth came to be regarded as the essence of evil; and, though his cult persisted in certain places where the secondary antithesis to Osiris had not been able to dislodge the primitive cult, his image was generally held in abhorrence, and at certain periods was obliterated from the monuments. The gods of the Egyptians were collectively regarded as good, though individually they might be bad or neutral: thus, in narrating his virtues, a noble says, 'I did what all the gods loved' (*ZÄ* xlv. [1908] 125). We have seen above that 'God'—the vague entity which not seldom takes the place of more explicitly named divinities in Egyptian texts—was looked upon as the dispenser of rewards and punishments. This conception was, doubtless, a generalization due to the importance of the local gods. Every Egyptian felt himself specially dependent upon and bounden towards the 'god of his city'; and that deity, whatever his individual name or characteristics, was at bottom nothing but the personified feeling of the community, and hence, as a matter of course, also the guardian of the ethical code. Besides Osiris there were other specific deities, who were thought of as judges or patrons of virtue. Amen-Rē is called the 'Vizier of the poor, who taketh not the bribes of the guilty' (*Pap. Bologna*, 1094, 2, 4). Thōth, the scribe of the gods, is also 'the Vizier in heaven,' and Ptah is the 'lord of Right *or* Truth.' On-hor (Onuris) also was frequently appealed to as arbitrator (Gardiner, *Literary Texts*, i. 16, note 4). That the gods were regarded as righteous judges is indicated by the frequent recourse that litigants had to them; numerous ostraca of the New Kingdom, from the Theban necropolis, tell how cases of petty theft, debt, and commercial disputes were decided in the shrines of the local deity, the deified king Amenhotep, who nodded in answer to the questions put to him by his priest (Erman, *Sitzungsb. d. kön. Preuss. Akad.*, 1909; cf. DIVINATION [Egyp.]). This mode of obtaining justice seems to have superseded all others in the XXIst and following dynasties; and, since

[1] It will be noted that the passages quoted throughout this article are of very various dates. The reason is that it is seldom possible to trace any development of Egyptian ethical ideas, and a historical treatment is therefore precluded. It is likewise impossible, with the evidence at our disposal, to distinguish between the different moralities of different grades of Egyptian society.

[1] Not seldom the pilgrimage was not performed during a man's lifetime, but his mummy was taken to Abydos before the final burial rites.

this is the period at which the power of the priests was paramount, we shall probably not err in interpreting the frequency of trials by oracle as due to a deliberate policy of the priesthood, who would naturally wish to bring secular matters, as far as possible, under their own control. Ma'et, 'Right' or 'Truth,' was from the earliest times conceived of as a goddess (see Lanzone, *Diz. di mitologia egizia*, Turin, 1881–86, pp. 276–280); for the Egyptians, like the Romans, were by no means averse to creating deities out of abstract concepts. Many nobles, and especially the judges, received the title of 'priest of Ma'et'; and in the New Kingdom we even hear of a 'temple of Right.' Whether this was an actual shrine or another name for the law-courts is not certain; it is not unlikely that Ma'et enjoyed a regular cult. The sole significant epithet given to her is 'daughter of Rē'; this relationship is explained by the pleasure that the sun-god was supposed to take in virtue, it being even said that 'Rē lives upon (*i.e.* eats) right' (*ma'et*). In this connexion may be mentioned a ceremony daily practised in the temples: the king (or his substitute, the high priest) offered to the god a small image of Ma'et, seated upon a basket or basket-like vessel, a feather on her head, and the sign of life in her hands. The meaning of this offering is not established; it is not even clear whether Ma'et, in this case, is the goddess of Righteousness or that of Truth, the personification of ethical or of intellectual rightness.

12. Law and punishment.—A few words must be said about Egyptian conceptions of law and punishment. For 'law' the word was *hap*, a term also employed for 'custom'; the etymology is unknown. The Egyptians codified their laws, as indeed everything in Egypt was committed to writing. Of the laws themselves we know little beyond what the Greek writers have to tell us. In the two central courts of justice the vizier sat with the forty parchment rolls of the Law open before him (Newberry, 2); still it was apparently enjoined upon him to pay no less attention to equity than to law (*ib.* 10. 4). The Egyptian word for 'punishment' (*sbōyet*) literally means 'teaching,' punishment probably being regarded in the light of a lesson and example to others. Egyptian punishments seem, on the whole, to have been less severe than those inflicted in Babylonia; but magistrates prided themselves on making penalties proportionate to the offences. Thus, one official states that he 'inflicted hurt on him who inflicted hurt' (*Urk.* iv. 969), and that he 'punished the evil-doer in accordance with his evil-doing' (*ib.* 971).

13. Specific moral concepts.—We now turn to the special side of our subject—the moral judgments concerning particular vices and virtues. The field to be covered is so large that it has been found impossible to emphasize any but the most salient facts; what is here given must be supplemented by the information to be found in special articles.

(1) *Homicide* was, of course, forbidden: 'I have not slain, I have not commanded to slay' (Conf. A). That in certain cases magistrates possessed powers over life and death is implied by the statement of an official: 'There was none who died by my counsel' (*Hannover*, 11 = *RTAP* xvii. 4). Later, in the XVIIIth dynasty, the king reserved to himself these powers; the vizier might inflict only such punishments as did not involve the cutting off of a limb (Newberry, 2. 13). How absolute was the might of Pharaoh is shown by the advice that is given to the king in a St. Petersburg papyrus: 'Do not kill a man whose excellence thou knowest' (*ZÄ* xiv. [1876] 108). In a case of high treason, the condemned were allowed to make away with themselves (T. Deveria, *Le Pap. judiciaire de Turin*, Paris, 1868). To kill an adulterous wife seemed to the Egyptians quite legitimate (*Pap. d'Orbiney*), and a similar punishment might justifiably be exacted from her paramour (*Pap. Westcar*, p. 3 f.). That capital punishment was not unfamiliar to the Egyptians is shown by the phrase which describes any heinous crime as 'a great crime of death.' No compunction was felt in putting captured foes to death (*Amada Stele*); such an act had, indeed, a religious sanction as a sacrifice to the god who had sent Pharaoh forth to war. Magicians made waxen images of those whom they wished to destroy (*Pap. Lee*); but this practice was, of course, condemned by law.

(2) *Human sacrifice* was undoubtedly practised in ancient Egypt, notwithstanding Herodotus' explicit statement to the contrary (ii. 45). The monumental evidence still needs collection and sifting, but there is little doubt that it will confirm the affirmations of the classical writers. Diodorus (i. 88) speaks of offerings of human beings made upon the tomb of Osiris; and Plutarch preserves a tradition (which is not likely to have been invented) to the effect that red-haired men were burnt alive in Eileithyiaspolis (*de Is. et Osir.* 73, with Parthey's valuable note, p. 272 f.). We hear, too, of similar sacrifices in Heliopolis, for which, however, King Amasis caused waxen images to be substituted (Porphyry, *de Abst.* ii. 55). The models of servants who were buried together with their lords very probably exemplify the same kind of substitution. It has been thought that the ceremony of the *tiknu*, which was practised at funerals, involved human sacrifice; but this is by no means certain.

(3) *Cruelty.*—Some of the facts that have already been mentioned might be thought to indicate that the Egyptians were cruel of disposition; but the treatment of enemies, the punishment of criminals, and religious immolations were, in all lands of antiquity, equally ruthless and barbarous. It may be added in this connexion that in warfare the Egyptians were accustomed to cut off the hands or the phalli of the slain. Criminals were frequently deprived of their ears and noses (*Decree of Haremheb*; *Inscr. of Mes*). The ordinary punishment, however, was the bastinado, which was as freely used under the Pharaohs as in the Egypt of one hundred years ago. Not even men of rank were exempt from chastisement of the kind; an official of the Old Kingdom asserts: 'I have never been beaten before any magistrate since I was born' (*Urk.* i. 75). The general impression gained from the inscriptions is that the Egyptians were too easy-going and good-tempered a people to be cruel. The infliction of unnecessary pain was deprecated: when a Pharaoh suggested to a magician who claimed to be able to replace a severed head that he should try his skill on a condemned prisoner, he was asked to rest content with an experiment on a goose (*Pap. Westcar*, 8. 16).

(4) *Kindness and benevolence.*—Egyptians often claim to have been 'kindly, lovers of men' (*Louvre*, C 41; *Anast.* i. 2, 6). The proverbs of Ptahhotep praise the man who is conciliatory and friendly; he will find his reward in days of misfortune (*Prisse*, 11. 1 f.). 'I have not oppressed (my) fellows,' 'I have not caused weeping,' are assertions made in the Negative Confession (A). The poor and afflicted were held to be particularly in need of kindness:

> 'I was father to the orphan, a husband to the widow, a shelter to the cold' (*Hannover*, 11 = *RTAP* xvii. 4); 'I saved the miserable man from him who was more powerful than he (Petrie, *Dendereh*, London, 1900, p. 8).

Suppliants were to be treated with exceptional patience:

> 'If thou art a ruler, be willing to listen when a suppliant speaks. Do not repel him until his body is rid of that which he

intended to tell thee. He who is in trouble loves to pour out his heart concerning that on account of which he is come. When a man repels petitions, people say, "Why does he disregard them?"' (*Prisse*, 9. 3-6).

(5) *Charity.*—No virtue was more incumbent upon the rich than generosity to the needy:

'I gave bread to the hungry, clothes to the naked' (*Urk.* i. 122), and like phrases, encounter us at every turn. 'I caused the peasant to carry home corn together with his wife, and the widow together with her son' is the boast of a noble of Syut (F. L. Griffith, *Siût*, London, 1889, pp. 15, 9-10). An ostracon of the New Kingdom bitterly reproaches a rich and childless old man with not having adopted a son (*Berlin Pap.* 10627).

(6) *Hospitality* is partly covered by the quotations already given. In one passage we read:

'Do not make a funeral feast without thy neighbours, in order that they may stand round thee mourning on the day of burial' (*Petrie Ostracon*, 11). In another passage it is said: 'Do not sit at meat while another stands, but stretch forth for him thy hand towards the food'; for 'one is rich and another poor,' and 'he who was rich last year is a wayfarer this' (*Any*, 7. 3-6).

(7) *Regard for old age.*—To succour the aged was regarded as highly meritorious; but it would appear that this was looked upon less as a duty towards a highly respected class than as an act of charity towards the feeble. The disadvantages of old age were vividly present to the Egyptian mind (*Prisse*, 4. 2-5. 3); but, on the other hand, length of years brought with it high honour and esteem (*imakh*). The Egyptians frequently expressed the hope that they would attain the age of 110 years. The vizier Rekhmere says of himself: 'I tended the old man, I gave to him my staff; I caused aged women to say, "This is a happy time"' (Newberry, 7. 23). 'To bury the aged' was a virtuous deed (*PSBA* xviii. [1895-96] 196); to scoff at decrepit old people, a very wicked one (*Petrie Ostracon*, 11).

(8) *Regard for parents and close relatives.*—A Theban high priest thus describes his behaviour towards his father:

'I was a staff-of-old-age by my father's side while he was yet upon earth. I went in and out at his command, and transgressed not the utterance of his mouth. I did not make little of that wherewith he charged me. . . . I did not pierce him with many glances, but my face was downwards when he spoke to me. I made not bold to do that whereof he was unaware. I knew not the handmaid of his house; I lay not with his serving-maid. I did not curse his butler; nor did I enter in before him violently' (*ZA* xlvii. [1910] 92). Another great man of the XVIIIth dynasty quaintly remarks that he 'did not strike his father or curse his mother' (*Urk.* iv. 490).

Filial obedience was rigorously inculcated:

'An obedient son is as a follower of Horus; it fares well with him in consequence of his obedience; he groweth old and attaineth reverence, and telleth the same to his children, renewing the teaching of his father' (*Prisse*, 17. 10-12).

It was the duty of a son to take his father's place in his office when the latter had grown old; a son who did this received the honorific title of 'staff-of-old-age' (see the first quotation above, and the references there given). A father had the obligation to treat his son well, as being of his own flesh and blood, but only if he showed obedience; if he neglected this duty, his father was bidden to 'turn him out; he is not thy son, he was not born to thee' (*Pap. Brit. Mus.* 10509, 3, 17). The god Horus, son of Isis and Osiris, was the pious son *par excellence*, and hence earned the epithet 'protector of his father' (*noz hir iotef*). Every son had the obligation to officiate in the burial ceremonies of his father, though it appears that, in the absence of an heir, a priest, called 'his loving son,' could act as a substitute. Even long after the death of the parents, it was considered right for the children to 'pour water to' their 'father and mother who rest within the Valley' (*Maxims of Any*, 3. 4). In return, the deceased parent would come back 'to visit his home of the living, and to be a protection to his children' (*Urk.* iv. 491).

Though, as has been shown, the duties towards the father were considerable, the mother was accounted nearer of kin; the maternal brothers ranked before brothers by the same father only (e.g. *Prisse*, 10. 3); and heirship, at least in the royal and princely families, was reckoned in the line of the mother. But it was, above all, the mother's tender care to her children that gave her so great a claim upon their affection; the Egyptian moralist pleads the cause of the mother in eloquent words:

'Give back twofold the sustenance that thy mother gave thee. Support her as she supported thee. Long did she bear the burden of thee, and forsook thee not. When thou wast born after thy term of months, she carried thee on her shoulder; three years long her nipple was in thy mouth. . . . She put thee to school when thou shouldst be taught thy letters, and waited upon thee daily, bringing food to the hungry ones in her home. Thou becamest a stripling and didst take to thee a wife, and art established in thy house. Cast around thine eye for one who hath borne thee, seek the man who hath nurtured thee as did thy mother! Let her not find cause of complaint in thee, or lift up her hands to God, lest he hear her cry!' (*Any*, 6. 17-7. 3).

So sacred was the maternal tie deemed, that we find the command, 'Do not regard a woman as thy mother who is not' (*Petrie Ostracon*, 11).

A kindly, affectionate spirit in the family was esteemed above other virtues; often in the Old Kingdom a man claims to have been 'loved of his father, praised of his mother, and beloved of all his brethren' (e.g. *Urk.* i. 122). Under certain circumstances the elder brother might take the place of the parents, and in that case exacted complete obedience from his juniors (*d'Orbiney*, pp. 1 and 2).

(9) *Wedlock, love, and the position of women.*—'Get thee a wife while thou art yet a youth' is the advice given by a moralist of the New Kingdom (*Any*, 2. 1); the reason there given is 'in order that she may bear thee a son,' who is to receive a careful education; for 'happy is the man whose household are many; he is respected in proportion to his children.' From the point of view of the man this was the customary condition of opinion; a peasant whose wife has been drowned tells us that he does not regret her for her own sake, but only for the sake of the children she might have borne (Erman, *Lebensmüde*, 79). The wife was, nevertheless, to be well treated and loved:

'If thou art well-to-do, found a house, and love thy wife studiously. Fill her stomach and clothe her back; oil is the medicine of her body. Gladden her heart thy lifetime long. She is a field that is profitable unto its lord' (*Prisse*, 10. 6-8).

The Egyptian monuments everywhere depict husband and wife in attitudes of affection, and the phrases 'his wife whom he loves' and 'his sister whom he loves' are amongst the commonest expressions found in the hieroglyphs. Forbearance is to be shown to the woman who is wayward and given up to amusements: 'Be kind to her for a season, send her not away, give her food to eat' (*Prisse*, 15. 6-7). How tender and passionate the love of an Egyptian could be is shown by the love poems that have survived (see Max Müller, *Die Liebespoesie der alten Ägypter*, Leipzig, 1899). Polygamy seems to have been permitted, but to have been unusual; brother-and-sister marriage was not rare. Divorce seems to have depended on the caprice of the husband; but the latter bound himself by contract, at least in late times, to pay an indemnification if he exercised the right to repudiate his wife without valid reason (see Griffith, *Rylands Papyri*, London, 1909, iii. 116). The divorced woman, like the widow, often stood in sore need of protection (*Eloquent Peasant B 1*, 63); but, since women were allowed to possess property, either position was doubtless often very tolerable. The lady of means, from the most ancient times onwards, bore the title 'mistress of a house' (*nebt pēr*). The position of a woman was higher than in any other land of antiquity; not only could she administer her own possessions, but she had testamentary rights and the power to go to law (see Gardiner, *The Inscription of Mes*, Leipzig, 1905). Egypt had many great queens, of

whom several reigned independently and with great prestige, *e.g.* Hatshepsut of the XVIIIth dynasty.

(10) *Sexual morality* (for adultery, see above under the heading '*Homicide*' and art. ADULTERY [Egyptian]).—Pre-nuptial immorality was very lightly regarded; we find no prohibition concerning it in the Negative Confession, and a lord of Elephantinē in the VIth dynasty even boasts of 'having had a good time with women' (*ZÄ* xlv. [1908] 130. Loose women abounded; and the dancing girls who attended the feasts given by grandees doubtless belonged to the prostitute class. The moralist gives a warning against women of this type:

'Beware of the strange woman, who is not known in her town. Approach her not . . . and know her not in bodily wise. A deep and unfathomable water is the woman who is apart from her husband' (*Any*, 2. 13–15).

Religious prostitution is attested by Strabo (xvii. 1. 46) for the priestesses of Amon of Thebes until the age of puberty, when they were given in marriage. The monuments afford no direct confirmation of this statement, but certain indications make it probable that it is no mere invention. Amon was a sensual god, represented, like Min, as ithyphallic; numerous 'chantresses' (*shemayt*) constituted his *harîm* (*khenr*), and the wife of the high priest bore the title 'chief of the ladies of the *harîm* of Amon' (*ZÄ* xlv. [1908] 127). In the New Kingdom most ladies of rank, married to men in high stations, called themselves 'chantresses' of one god or another; even goddesses had their *harîms* (*ZÄ* xlviii. [1910] 50). The Pharaohs had large *harîms*, and it is improbable that concubinage on a considerable scale was confined to the royal house; but we are ill-instructed on this point. The papyri of the New Kingdom give the impression that the lower orders, as, for example, the workmen of the Theban Necropolis, usually formed loose temporary connexions in lieu of legal marriages (see Erman, *Life in Ancient Egypt*, tr. Tirard, London, 1894, p. 154). An erotic papyrus (at Turin), full of pictures of the coarsest kind, shows that few of the sexual vices of the Orient were unknown to Ancient Egypt. In a magical papyrus of the XIIth dynasty, Seth appears as a pæderast seeking to tempt his brother Horus (Griffith, *Hieratic Papyri from Kahun*, 1899, p. 3; cf. *Sphinx*, xiv. [1910] 39–41); and it would appear that this crime, like adultery, was a stock charge in the indictments brought before the law-courts (see *Pap. Turin*, 55. 4). In both versions of the Negative Confession, impurity (masturbation ?) while serving as a lay priest of the god is denied.

(11) *Purity.*—Cleanliness, both of the person and of the clothing, was scrupulously observed; and the houses of the wealthy seldom lacked a bath-room (*Sinuhe B*, 285). The washing of face and hands was considered the necessary preliminary to a meal (Griffith, *Stories of the High Priests*, Oxford, 1900, p. 44), and sexual acts of all sorts were regarded as defiling. Purity in the service of the gods was strenuously insisted upon (Herod. ii. 37); and all grades of priests, professional and lay, shared the name of *wēb*, 'the pure priest' (see, further, PURIFICATION [Egyp.]). The concept of ethical purity was also known, though it did not play a very important part; we find it at the end of the earlier Repudiation of Sins (A); and *wa'b* in the metaphorical sense means 'to be innocent' (*Pap. Mayer B, passim*).

(12) *Slavery.*—On this subject we have strangely little precise information. Prisoners of war were often presented as slaves, both to individuals (*e.g. Urk.* iv. 2. 11) and to the gods (*e.g.* Newberry, 21). There can be little doubt that slaves were very numerous, but we have no early evidence as to the sources whence they were recruited, or as to the question whether they were ever emancipated. From the XXVIth dynasty legal deeds exist recording the sale and transfer of slaves; also voluntary contracts of servitude, involving not only a man's person but also his children (Griffith, *Rylands Papyri*, iii. 50 f.).

(13) *The right of property.*—The official theory in Ancient Egypt was to the effect that the Pharaoh is the sole owner of property; if his subjects hold lands, houses, cattle, and valuables, it is because the king has granted them leave to do so; even the tombs of the dead were 'the gift of the king.' The temples of the gods, too, were the castles which the Pharaoh, their son, had built for them; and each successive monarch confirmed to the gods the possessions accorded by his ancestors (see Moret, *La Royauté pharaonique*, Paris, 1903). Similarly, the booty captured from foreign tribes was theoretically regarded as tribute which rebellious subjects had failed to render. In practice, this theory of property corresponded with the reality just in the degree in which the royal power was on the rise or on the decline. Conquerors who (like Amenemmes I. and Amosis I.) reduced the land to order after a period of anarchy rewarded their subjects with grants of land pretty much as they chose. In periods of prosperity the king had to content himself with a show of confirming (*smīne*) already existing rights; or the latter might, as in the first half of the XIIth dynasty, be actually under the control of feudal families, or, as in the XXIst dynasty, be usurped by a ruling priesthood. The official formula remained the same throughout Egyptian history, and might doubtless have been used to justify taxation, if, indeed, this question was ever raised. In actual fact the land was parcelled out among a variety of proprietors, all tenacious of their proprietorship, which was attested by title-deeds and carried with it rights of testamentary disposition and alienation by sale. The elaborate care with which the land was surveyed and registered is only partly explained by the Egyptians' inveterate love of committing things to writing; documentary records were an absolute necessity in a land where the annual inundation was apt to sweep away all boundary marks. It was a primary duty for those in authority to protect proprietary rights, and the nobles frequently recorded the fact that they had 'succoured him who was debarred from his property by one more powerful than he' (*Urk.* iv. 972), and that they had 'never deprived a man of the estate of his father' (*ib.* i. 123). A great portion of the land was in the hands of the priests, being theoretically considered the property of the gods. To such limits did the encroachments of the priesthood go that, in the XXth dynasty, Amon of Thebes possessed no less than 864,168 *stat* of land, 421,362 head of cattle, 433 gardens and groves, and 86,486 serfs and slaves (see Breasted, *Anc. Records*, Chicago, 1906–7, iv. 97).

The crime of robbery is frequently mentioned:

'Never have I taken away the property of any man by robbery' (*Urk.* i. 75); and the subject of a well-known tale of the Middle Kingdom is a peasant who has been robbed of his ass and its load on a trumpery pretext, and who demands justice from the administrator of the province (Vogelsang-Gardiner, *Die Klagen des Bauern*, Leipzig, 1908).

Robbery is distinguished from theft in Confession B; it is curious that A makes no reference to either sin. Many ostraca and papyri deal with cases of petty theft, but throw no light on the penalties imposed on account of it.

The decree of King Haremheb mentions some stringent reforms carried through by that Pharaoh; the official tax-gatherers had been abusing their opportunities in order to rob and oppress the peasants; these offences were thenceforth to be punished by banishment to the frontier fort of Zaru, after the

offender's nose had been cut off, or, in less serious instances, by a hundred blows of the bastinado inflicted so as to leave five open wounds.

The rich equipment of furniture and jewels buried with the wealthy dead was an easy booty to unscrupulous men, and tomb-robbery was committed on a large scale.

In the XXth dynasty it was found that many royal tombs had been tampered with, and the legal investigations then instituted form the subject of some of the most interesting documents from Ancient Egypt (see Newberry-Spiegelberg, *Excavations in the Theban Necropolis*, London, 1908).

(14) *Regard for truth and good faith.*—Truthfulness was highly esteemed and was barely distinguished from 'right,' both concepts being denoted by the same word *ma'et*. In Confession B the deceased says: 'I have not spoken falsehood.' But Egypt would not be the Orient if lying had not been both practised and regarded in many cases as venial. To lie for one's own advantage without harming others was doubtless regarded as clever; it is the root-idea of the Negative Confession and of no small part of magic. Sinuhe tells us that he wilfully misinformed the Syrian prince who was showing him hospitality (*Sin. B*, 61). On the funeral stelæ it is frequently stated that what is there inscribed contains no falsehood and no exaggeration; in Confession B we find the 'suppression' of the truth denied. In ordinary conversation, asseverations were reinforced by such oaths as 'By Ptah, lord of Truth' (Right), 'As Month praises me'; in the law-courts the ordinary oath was 'As Amon liveth, and as the Prince liveth,' but often there were added long and circumstantial self-curses specifying the penalty to be incurred if what is said proves to be untrue (see W. Spiegelberg, *Rechtswesen*, Hanover, 1892, and Gardiner, *Inscription of Mes*). Lying became a serious offence when it involved the interests of others:

'I have not said lies concerning another,' an official maintains (*Urk.* iv. 120); and 'I have not traduced the servant to his master' (A) is a frequent claim.

To render messages faithfully was thought a desirable habit (*Prisse*, 7. 3; *Urk.* iv. 120), and reliability and obedience towards one's masters are virtues everywhere praised. Honesty in commercial transactions is emphasized in those statements of Confession A which refer to the units of measurement and to the balance. The stemming or diverting of running water (A), in a land where irrigation played so important a part as in Egypt, was, of course, a common way of obtaining an unfair advantage over other persons.

(15) *Justice.*—The endeavour of the magistrate was not only to 'cause the two parties to go away satisfied' (Newberry, 4), but to administer the laws fairly and in accordance with the command of Pharaoh (*ib.* 10). Great stress was laid on impartiality:

'Regard him whom thou knowest like him whom thou knowest not.' Again it is said, 'To put upon the one side'—the metaphor seems to be from overweighting one scale of the balance—'is the abhorrence of God' (*ib.*). The judge must, of course, be wholly incorruptible; 'I have not been deaf to the empty-handed, I have not received the bribe of any,' says the vizier Rekhmere (*ib.* 8. 24). In the only civil case of which we have full details (XIXth dynasty), a commissioner was sent out to make some investigations, and came back with a false report to the chief court of which he was a member; it is clear that he had been bribed by one of the parties (Gardiner, *Inscription of Mes*).

The insistence with which the inscriptions refer to incorruptibility and impartiality suggests that these virtues were less common than was claimed; nor does the analogy of modern Egypt discourage this supposition. The ideal picture of the judge drawn in Thutmosis III.'s charge to Rekhmere is up to a high standard of moral enlightenment. Besides the indispensable qualities of justice and incorruptibility, he is required to possess patience, tact, and discretion; not to be over-lenient or over-stern, allowing the litigants to have their say, and making it quite clear on what grounds the verdict is given (Newberry, 10).

(16) *Demeanour in everyday life.*—*Good-temper* was enjoined and admired.

The chief butler, Thuti (Tomb in Gurna, no. 110), takes credit to himself for having been 'of pleasant character, self-restrained, and free from passion.' 'I have not been hot of mouth,' *i.e.* hot in reply, is one of the statements in Confession B.

Pharaoh, indeed, might allow himself to 'be enraged like a leopard of the South' (e.g. *Urk.* iv. 139), but his subjects had no such licence. *Contentiousness* was considered a fault.

One moralist gives the precept, 'Do not persist in fighting with thy neighbours' (*Petrie Ostracon*, 11), and another advises, 'Enter not into the law-court, lest thy name stink' (*Any*, 2. 17).

Rancour was blamed, and men are bidden not to store up memories of small wrongs (*Petrie Ostracon*, 11); and the words 'I have not done harm to the doer of evil' (B) may refer to the virtue of *forgiveness*. Among the fatalistic Egyptians of to-day, *gratitude* is said to be almost unknown. There is no exact phrase for gratitude in the old Egyptian language, for 'to praise God' (*dowe' nūter*) for some one is rather to congratulate him than to thank him; in Coptic 'I am grateful' is rendered by ⲟⲩϩⲙⲟⲧ ϣⲏⲡ, 'a favour has been received.' The forgetfulness of benefits received, however, calls forth bitter comment in several old texts:

'Yesterday is not remembered, and to the doer is not done again in these times' (*Lebensmüde*, 115). 'A man has no household on the day of troubles, . . . he who ate of my food conspired against me' (*Millingen*, 2. 5).

On the subject of *friendship* the ethical writers have much to say.

The reflexion contained in the words last quoted should teach the king to place no confidence in any one (*Millingen*, 1. 2). If a man wishes to keep his friends, he must avoid too close familiarity with their women-folk (*Prisse*, 9. 8–11). If he wishes to ascertain a friend's real feelings, he should commune with him privately, and not seek information from others (*ib.* 14. 6–9). Egyptian dignitaries often assert that they have not had evil associates (e.g. *ZÄ* xlvii. [1910] 93).

Eavesdropping, *gossiping*, *mischief-making*, and *excessive talkativeness* are faults named in the Repudiation of Sins (B). *Self-ingratiation* by improper means is condemned: 'Do not make straight what is crooked in order to win love' (*Petrie Ostracon*, 11). *Deference to superiors* was a duty imposed on all: 'Bow thy back to thy superior, thy overseer from the Palace' (*Prisse*, 13. 9–10). Distinctions of rank were jealously guarded, and etiquette prescribed a strict order of precedence.

The pictures in the tombs, as well as the inscriptions, prove that nobles were approached in deferential attitudes. Before Pharaoh all his subjects grovelled in the dust, touching the earth with their foreheads; and it was deemed the highest favour to be allowed to kiss the king's foot instead of the ground (*Urk.* i. 52).

Courtesy and *tact* were prescribed, especially in the company of men of position:

'If thou art seated at the board of one greater than thee, take what he offers thee. . . . Look straight in front of thee, pierce him not with many glances. . . . Speak when he addresses thee, and laugh when he laughs; it will please him greatly' (*Pap. Brit. Mus.* 10509, 2. 18–16).

That *obedience* was exacted from inferiors goes without saying; but even so high an official as Ineni affirms (*Urk.* iv. 62): 'I was one who hearkened to what my superior said.' *Pride* is very often spoken of as a failing: 'Do not be proud, lest thou be humbled' (*Prisse*, 12. 1). Of intellectual pride it is said:

'Do not exalt thy heart on account of thy knowledge; take counsel with the ignorant as with the wise. For the limit of a craft is not to be reached; there is no perfect craftsman. A good saying lies hidden more than an emerald; it is to be found with slave-girls grinding at the mill' (*Prisse*, 5. 8–10).

The poor man is not to be treated haughtily (*Pap. Brit. Mus.* 10509, 3. 6), for 'he who possesses virtue possesses riches' (*Prisse*, 7. 5). Nor should contempt be shown to him who has no children, for 'there is many a father in misery, and many a mother, and other women are happier than she' (*Prisse*, 7. 6). The Negative Confession has several references to pride and vanity: 'I have not been

puffed up,' 'I have not compared myself with others.' No quotations are required to illustrate the great love of ostentation characteristic of the Egyptians. Like their modern descendants, the ancient people were incurable braggarts, never so contented as when airing their virtues and displaying their own cleverness.

One of the favourite books of the XIXth and XXth dynasties has as its subject the rivalry of two scribes, each of whom tries to demonstrate his superiority over the other by boasting about himself, and depreciating the merits of his fellow (Gardiner, *Hieratic Texts*, Leipzig, 1911, i. 1).

Discretion was very highly valued; of many men we are told that they were 'closed of mouth concerning what their eyes saw' (Benson-Gourlay, *Temple of Mut*, London, 1899, p. 326), or 'secretive in the business of the Palace' (*Urk.* iv. 47). The utility of silence was very well understood, and it was prescribed as the best method of coping with many difficulties (*Prisse*, 1. 1; 7. 5; 11. 9). So, too, in B, 'I have not multiplied words in talking.'

(17) *Qualities and defects of character.*—Under this heading we deal with the self-regarding virtues and with various traits of character of which the ethical nature is more or less clearly defined. *Drunkenness* was the invariable ending of feasts, and seems to have been looked upon as a good joke rather than as something culpable. In the tomb-paintings, men are shown being carried home drunk on the shoulders of their companions; and not seldom we are allowed to see a fashionable lady who has been overcome with nausea, while an attendant rushes to her assistance. Drunkenness is, however, sometimes deprecated as a bad habit, as in the following passage:

'Do not corrupt thyself by drinking beer. . . . A speech issues from thy mouth, and thou knowest not who says it. Thou fallest and thy limbs are broken, and no one lendeth thee a hand. Thy companions in drinking stand and say, "Away with this drunkard!" Some one comes to seek thee to speak with thee, and thou art found lying on the ground like a child' (*Any*, 3. 6-11; see, too, *Anast.* iv. 11. 8-12. 5).

Gluttony is blamed only in so far as it constitutes a breach of good manners:

'If thou sittest together with many others, reject the food thou likest. It is but a little moment of self-restraint, and gluttony is bad. . . . A cup of water quencheth the thirst . . . and a little trifle does as a substitute for much' (*Prisse*, 1. 1).

Sexual morality has already been discussed. The Egyptians occasionally preached *moderation* and the curbing of the appetites, as we have seen; and certain restrictions in diet were demanded by religious usage and the rules of purity. Among the subjects of the Pharaohs, however, there is to be discovered hardly a trace of that asceticism which was later to become so marked a feature of Egyptian Christianity. On the whole the *quest of pleasure* was encouraged. Ptahhotep says:

'Follow thy desire as long as thou livest; do not do more than has been enjoined so as to shorten the time of thy enjoyment' (*Prisse*, 7. 9); and the well-known Song of the Harper gives similar counsel, for life is short and death is but decay and annihilation (Max Müller, *l.c.*). But preparation for the hereafter should be made by the building of a tomb (*Any*, 3. 14), for no man can tell when he will die (*Any*, 4. 2-3).

The value of *industry* was not ignored.

One official claims to have been 'a foreman vigilant on behalf of the king's mother, not distinguishing night from day' (*Urk.* iv. 47); another speaks of himself as 'not slothful concerning the things entrusted to him' (*ib.* 959). An ostracon that has often been quoted contains the maxim: 'Do not spare thy body whilst thou art young, for food cometh by the arms and provisions by the legs' (*Petrie Ostracon*, 11).

Courage in battle was always highly rewarded by the Pharaoh, the 'gold of bravery' and lands and other possessions being given to the officers who so distinguished themselves (see *ZÄ* xlviii. [1910] 143). The Pharaoh himself is described as a miracle of valour, and is compared with the lion for prowess and with the bull for strength. The *pursuit of wisdom* is the last personal attribute that will be mentioned under this heading; it falls within the province of ethics as being dependent on voluntary effort, and as being an object of general approval. The man 'who knows things' (*rakh ikhet*) was held in high esteem by the Egyptians, and they often speak with pride of their intellectual attainments.

Thus Rekhmere informs us that he was 'clever in all undertakings, ardent in inquiry, and a ready listener'; 'I was skilled,' he says, 'in the ways of the past, and the things of yesterday caused me to know to-morrow' (Newberry, 8. 35-36).

(18) *Duties towards the dead.*—In view of the care and forethought which the Egyptians expended on the construction of their tombs and on the continuance of their funerary cult, it is strange that public opinion imposed on the living no adequate obligation to fulfil the intentions of the departed. It is an undoubted fact, and one not untinged with tragedy, that magnificent tombs, ornamented with exquisite skill and equipped with the costliest furniture during the life-time of their owners, were within a few years suffered to fall into decay, and even to become the undisputed prey of tomb-plunderers. Filial piety, as we have seen, demanded that the son and heir should accomplish his parent's burial rites; and it may be assumed that none but a few shirked this duty. But this first perfunctory service by no means assured the permanent welfare of the dead; offerings had to be made at the periodical feast-days, not for a few years only, but in perpetuity. It seems certain that the attentions paid to the dead seldom extended beyond a single generation; and in this respect Ancient Egypt stands in signal contrast to China, with its universally-recognized cult of ancestors. The Pharaohs, it is true, were more assiduous in their veneration of their forefathers than the bulk of the people; but, with a little qualification, it may fairly be said that in Egypt the cult of the dead existed only in demand, not in supply. See, further, ANCESTOR-WORSHIP AND CULT OF THE DEAD (Egyptian).
